That many of the poets and artists of China have been credited with a knowledge of magic is no matter for surprise when we know how frequently their passionate love of wild nature brought them into contact with the Buddhist and Taoist monks and hermits, whose favourite dwelling-places have always been the caves and forests and ravines of the mysterious mountains. These mountain-dwelling ascetics have been for ages regarded as the discoverers and guardians of occult secrets of various kinds, and, though their disciples and biographers endowed them with faculties which they never possessed and which the best of them never pretended to possess, it is highly probable that there were some who, in the course of their own heart-searchings and their solitary communings with nature, not only made valuable discoveries as to the properties of plants and herbs, but were also successful pioneers in various untrodden fields of psychology and mysticism. To some extent, at least, the popular belief in their supernatural capacities and attainments was justified.

When Buddhism first came to China, and for some centuries afterwards, the relations between Buddhists and Taoists were often strained to breaking point. The victories of the Buddhists—if we may credit the Buddhist historians and biographers—were often brought about by miraculous occurrences which non-Buddhists would perhaps describe as magic if not as mere conjuring tricks. It is difficult, perhaps, in some cases, to draw a distinction between miracles and magic. A miracle, as E. S. Hartland remarks, is 'legitimate magic,' while magic is 'a forbidden

miracle.'¹ However this may be, many of the marvellous doings attributed to Buddhist monks and hermits bear a close resemblance to those recorded of Christian saints. But we know from the earliest Buddhist scriptures that the brethren were not encouraged to perform miracles, and it was certainly not by the help of miracles or of magic that the Buddhists achieved their most substantial successes in China. The Taoists, however, did not scruple to ally themselves with various forms of magic and sorcery, and it is their fatal readiness to meet the popular demand for signs and wonders that is largely answerable for their present degeneration (see TAOISM).

If we had space to deal with matters of detail, it would be necessary to describe the various magical uses made of plants and animals and also of manufactured articles such as metal mirrors and weapons. An authority has stated (see *EBR* xlviii. 577) that magic mirrors are mentioned in Chinese literature of the 9th cent.; but they are mentioned and their uses fully described much earlier than that. The curious book known as *Pao P'o-tai*, which was written by the famous wizard Ko Hung in the 4th cent. of our era, contains full accounts of how to detect the presence of evil spirits and other dangerous beings by the use of magic mirrors. The belief once prevalent in the British Isles that a witch could turn herself into a hare is paralleled by the Far Eastern belief (still extremely common in China) that demon-witches can assume the form of foxes and other beasts.² A book could be filled with the magical notions and theories which in China are based on the habits and peculiarities of animals. Even insects are not exempt from the necessity of making a contribution to the treasury of magical lore. There is in China a destructive little insect known to Europeans as the silver-fish (*Lepisma saccharinum*), which is a most unwelcome visitor to libraries. It is believed that, if one of these insects gets into a Taoist classic and eats the two characters *shen-chen* ('spiritual-immortal'), its silvery body will become five-coloured. If the coloured insect be subsequently caught and eaten, the man who eats it will have the happiness of attaining the goal of Taoist ambition—he will overcome death and develop into a spiritual being. As to trees, plants, and herbs, large numbers are believed to possess some magical property or to be adaptable to magical uses. The cypress, pine, and similar trees are supposed to be conducive to immortality, and, when we learn that a noted hermit was in the habit of sleeping on a bed of pine-needles, we may be sure that this was not done merely as a means of mortifying the flesh.³ The willow is much used as a rain-charm. In times of drought in Shanai and neighbouring provinces adults and children may be seen going about with willow-wreaths on their heads. The peach-tree is famous for its magical properties, and for this reason peach-twigs and peach-blossoms are frequently mentioned in Chinese fairy-lore. The use of peachwood for the exorcism of evil spirits is very ancient, for the brandishing of peach-wands was part of the recognized procedure of the professional *shu* at royal courts under the Chou kings and probably at a much earlier date.

That large and important subdivision of Chinese magic which concerns itself with charms and amulets and divination is dealt with elsewhere (see LITERATURE below). Here it must suffice to mention that the principal purveyor of charms is

¹ *Altitude and Relief*, London, 1914, p. 81.

³ See Johnston, *Buddhist China*, London, 1912, p. 255, and *Life and Legend in Northern China*, pp. 221-2, 276-282.

Recherches, Leipzig, 1908, pt. 18, 13-16). Conversely, the Book of Overthrowing Apep (Budge, *Egyptian Hieratic Papyri*, London, 1917) was a liturgy intended for daily recitation in the temple of Amen at Thebes. Apep being the mythical snake that was supposed to be the eternal foe of the sun-god Ra, the recitation of this Book overthrew Apep and it will prove of the greatest advantage to the private individual who recites it in the presence of the god. It may be added that the word *hkr* is quite common in all parts of the Book of the Dead, as well as in such temple rituals as the Book of Overthrowing Apep just mentioned.

It may therefore be taken as proved that *hkr* was as intimately associated with the presumed existence of the gods and the dead as it was with the real existence of the living. But, further than this, a greater or less element of *hkr* may have been inherent in all the dealings between men on the one side and the gods and the dead on the other. The two last elements of being were, after all, creatures of a world apart, elusive in their nature and hard to reach by ordinary, matter-of-fact means. The very idea of their existence puts a strain upon the imagination, and for this reason the forms of words, indicative of an effort to break down mystical barriers, had to accompany even such simple deeds of homage as the presentation of food-offerings. In other terms, the gods and the dead could hardly be approached save by the medium of what is known as 'ritual,' and the attributes which distinguish ritual from ordinary performances may have been just that attribute which the Egyptians called *hkr*. The point is not susceptible of dispute, for it was actually only in the more serious cases, where the cause of mystery and miracle-working had to be explained, that the term *hkr* was actually applied, but the view that *hkr* underlies all ritual is favoured by the close resemblance between the divine and human rites, on the one hand, and the rites performed for human benefit (self-protection and similar rites), on the other. The formulae of the Book of the Dead differ neither in form nor in substance from the incantations which the Egyptians used to heal their own sickness, and the same general similarity also runs through the daily liturgies of the temples and the temple (see A. Moret, *Le rituel des cultes des dieux-jouisseurs en Egypte*, Paris, 1908).

From the Egyptian point of view we may say that there was no such thing as 'religion'; there was only *hkr*, the nearest English equivalent of which is 'magical power'. The universe being populated by three homogeneous groups of beings—the gods, the dead, and living human persons—their actions, whether within a single group or as between one group and another, were either ordinary or unusual (*hkr*). But the gods and the dead were somewhat anomalous themselves, so that all dealings with them or performed by them were more or less *hkr*. It was only when men treated them ordinarily, and as man to man, that this quality of *hkr* was reduced to a minimum, as in the case of spontaneous prayer and the letters to the dead—in fact, just in those rare instances where the solemn phraseology of ritual was avoided.

3. Magic defined for Egyptological purposes as private religion.—We shall hardly be able to avoid rendering *hkr* in English by the words 'magic' or 'magical power'; but, if the Egyptian conception of *hkr* be taken as the criterion of what is magical and what is not, we shall have little or no use for the word 'religion,' and a multitude of facts which the common parlance would more naturally describe as 'religious' will fall under the head of 'magic.' It is advisable, therefore, in defining 'magic' for Egyptological purposes, to strike a compromise between the Egyptian connotation of *hkr* and the English connotation of 'magic.' Taking our cue from the former, we shall restrict the sense of 'magic' to those actions which clearly have the implications of mystery and the miraculous; at the same time we shall attempt to maintain the distinction between magic and religion, or, rather, between magic and other kinds of religious acts. It is fully in accordance with the practice of Egyptologists, instinctively adopted but inconsistently carried out, to contrast 'magic' with the 'cult of the dead' and the 'cult of the gods,' as referring exclusively to those rites which deliberately and in the first instance aimed at the advantage of living human beings, the cults of the dead and of the gods being in this division implicitly claimed together as 'religion.' Magical actions may therefore, for our purposes, be defined as those actions which men performed for their

own benefit or for the benefit of other living men, and which demanded certain miraculous powers for their performance. Warning must be given against two misconceptions: in the first place, it must be clearly understood that the gods and the dead may, as indeed they usually do, enter into the dramatic persons of the magical rite; the principle of division is not *de quibus* but *res bone*; in the second place, magic as thus defined did not differ essentially in its mechanism from the cults of the dead and of the gods, nor was it necessarily regarded with feelings of moral reprobation.

For a similar definition see A. H. Gardiner, 'Notes on Egyptian Magic,' in *France, Third Internat. Congr. Hist. Sci.*, Oxford, 1905, I, 338-418. Breton (*Apprentice Magicien*, Berlin, 1909), though forming a very different estimate of magic from that here adopted, accepts the same tripartite division of the active aspect of religion into *Osirionisme*, *Yemadisme*, and *Ischisme*. Magic as thus defined has a whole native literature of its own: various *hkr* papyri in Leyden, Turin, London, Berlin, Cairo, Rome, Vienna, and elsewhere, mostly dating from the New Kingdom; several smaller papyri of the Middle Kingdom, in the *Sammlung* and of 1859, still unpublished and in the author's hands; numerous others in various collections. Besides these must be named the magical papyri (see *act. Duménil am. Minus* (Egyptine), and the so-called *Copie of Horus*, of which the type is in the *Museum des. W. Göttingen*, Leipzig, 1877).

The abstract concept of *hkr* is once or twice found defined, apparently in something like the restricted meaning assigned to 'magic' in this section. Two physicians of the Old Kingdom bear, besides the honorific title 'priest of Horus in Hundred-town,' also that of 'priest of Hkr' (A. Mariette, *Les Mastabas de l'ancien empire*, Paris, 1880, p. 98; H. Lepsius, *Denkmäler*, Berlin, 1840-50, II, 91a).

The defined concept of *hkr* is found in the form of a man in some scriptures of the VII dyn. (L. Borchardt, *Das Grabdenkmal des Senebti*, Leipzig, 1912, II, pt. 39), and is of occasional occurrence also in the texts (cf. p. 60). A funerary inscription whereby it was sought to confer upon the deceased the power of Hkr himself has recently come to light (P. Lemaire, *Textes religieux*, Paris, 1910, no. 12711). Here *hkr* is described as a creation of the sun-god in primordial time, when as yet nothing else existed.

4. The purposes of magic.—In theory the domain of magic was as wide as men's desires themselves, magical art supplying all those things that were not procurable by simpler means. Our existing materials, which illustrate only a limited number of purposes, are probably very one-sided. The Egyptians believed, or feigned to believe, that their wizards could work all kinds of wonders; in a late tale a charm is made to bring the viceroy of Ethiopia up to Egypt, to the place where Pharaoh dwells, where he is to be beaten with five hundred blows of the stick, and returned to the land of Ethiopia again, 'all in six hours thither' (Griffith, *Stories of the High Priests*, p. 60). It is said to have been related at the court of Cheops how one magician fashioned a crocodile of wax that devoured an adulterer, how another parted the waters of a lake into which a jewel had accidentally fallen, and how a third cut off a goose's head and replaced it in a twinkling (Erman, *Die Märchen des Papyrus Westcott*, Berlin, 1891, I, 81.). The magical content of Moen with Jannes and Jambres (Ex 7-9, 2 Ti 3) is thus quite Egyptian in spirit. Passing from such fabulous reports to practical magic, we may classify the attested uses under a comparatively small number of heads:

1. *DEATH*.—How important this class was may be judged from the fact that in a general panegyric of God an oracle is said to have 'made magical spells for men for defence against things that happened' (Pap. Ptolemaeus 1118 & 1201, Göttingen, 1912, nos. 121 & 122).

(1) *PROTECTION*.—To avert death, W. Flayn and P. Bredt, *Papyrus de Turin*, Leyden, 1899-1901, pt. 1201, W. H. F. Petrie, *Glean and Rife*, London, 1907, pt. 570, against serpents, Pap. Paris, 120, Pap. Leyden 120, against lions, hyenas, and 'all long-tailed animals that eat flesh and drink blood.' *Le Papyrus magique Harris* (ed. F. J. Choisy, Chalon-sur-Saône, 1901) also Budge, *Egyptian Hieratic Papyri*, vol. II, against crocodiles and other dangers of the river, such as drowning, &c. recto against snakes, L. Stern, *Papyrus Stern*, Leipzig, 1912, pt. 67, 68.

(3) *Preventive*.—‘To prevent a woman from conceiving,’ *Demotic medical*, unpublished; ‘to prevent rats from devouring the grain in a barn,’ *Shro*, 95, 2.

(4) *Counter-charm*.—‘To lay a spell (or) on him whom one fears,’ *Leuven, Hier. Ostr*, 604, no. 1; ‘to banish magic from the body’ (exorcism of drugs), *Shro*, 24, 2, 7, 10; against a complaint named ‘the affliction of spells,’ *Shro*, 26, 12. A book containing ‘formulas for repelling the evil eye’ (EIEP-BUM) of the *Pap. Anast* 11, 4, 4) was preserved in the library of *Edfu* 12, 15 (18), 24).

(5) *Curative*.—Spell to cure scorpion-stings. *Pap. Turin*, 11, 17; *hieratic*, *Pap. Leyden* 34, verso 1, 6; *hieratic*, *Shro*, 24, 2, 6; *Pap. Leyden* 34, verso 1, 1, to cure pain, *Shro*, 24, 2. For the results of magic and medicine see below, § 2.

(6) *Psychological*.—‘A book for repelling fear which comes to beset a man by night or day, from front or behind,’ *Pap. Leyden* 34, verso 1, 1.

II. *PAPEIR*.—(1) *Obstetric*.—To facilitate birth, *Bruch, Zaubersprüche für Mutter und Kind* (Berl. 1901), p. 1, 2, 3, 4; *Pap. Leyden* 34, verso 1, 1, to bring a child to a woman who is having a child; *hieratic*, *Shro*, 27, 10, ‘to keep a child warm,’ *Zaubersprüche*, p. 1, 2, 3.

(2) *Weather-charm*.—‘Thou shalt perform these ceremonies when a storm rages in the east of heaven, or when it is in the West, to prevent storm-clouds in the east of heaven. . . . Thou shalt perform these ceremonies every time against bad weather, that the sun may shine, and Apep be overthrown in truth’ (*Book of Overthrowing Apep*, 10, 14).

(3) *Love-charm*.—A spell to secure sexual enjoyment, occasionally used for funerary purposes, has been alluded to in § 2. Erotic charms must have been frequent, but those that are known are of late date, i. e. demotic, see F. L. Griffith and H. Thompson, *Demotic Magical Papyrus*, London, 1904, p. 14; in Greek, C. Wessely, *Orientalische Zaubersprüche*, Vienna, 1898, lines 1024 and 1077.

(4) *General*.—‘He who recites this book is blessed every day; he hangers not, shivers not, lacks not clothing, and is not molested. He does not enter into the law-court, nor does judgment go forth against him. But if he enters the law-court, he goes forth vindicated, praise being given to him like a god. Nor does his popularity depart from him’ (*Pap. Leyden* 34, 13, 10-12).

III. *PAPYRUS*.—Many cases that fall under this head are on the border-line between magic and the technique of ordinary life.

(1) *Obstetric*.—To know whether a child will live, *Shro*, 95, 12; to know whether a woman will give birth, W. Wronski, *Medizinischer Papyrus des Northern Nubians*, Leipzig, 1900, verso 1, 2, 7, 6, etc.

(2) *Divination*.—A number of magical modes of divination are detailed in the *Demotic Magical Papyrus*, ed. Griffith-Thompson (see p. 14), but these instances do not seem to be of ancient origin. Oracle-asking does not come under the head of magic, as here defined.

(3) *Death*.—In the tale of Unamun (*ETAP* and [1890]) there is related a case of a young man being ‘cursed by the god’ and giving a solemn warning while in this condition.

(4) *Prophecy* may perhaps be brought within the sphere of magic, as it postulates supernatural power in its human mouthpiece, and usually involves the welfare of human beings. There is only one very ancient book of predictive prophecy, in a Ptolemaic papyrus (see A. H. Gardiner, *Journal of Egyptian Archaeology*, I [1916] 1022).

There seems to be no Pharaonic evidence for horoscopes, oracles, and other forms of prognostic magic.

IV. *MALEVOLENT*.—See next section. Ominous and evil (conditional self-curses) are magical in quality, but cannot be dealt with in this article.

5. *Magic and law*.—The Egyptians themselves seem to have made no distinction between ‘black magic’ and ‘white magic,’ but, when magical arts were used for wicked purposes and to injure others, they naturally came within the category of legal offenses.

Thus papyri of the XXIII dyn. (*Les Papyrus des Égyptiens*, published by Z. Davéria, *Œuvres et fragments* [Bibliothèque égyptologique, v.], Paris, 1897, II, 97 ff.) record the case of two baron-comptrollers, one of whom ‘made magical writings to lead away and work mischief, and made certain gods of wax and incense incantations to weaken the limbs of men,’ while the other procured ‘writings for giving himself fortuitum and majesty,’ and made ‘men of wax and writings in order that they might be introduced into the harum . . . so as to lead away the one faction and so as to bewitch the rest.’ Both these criminals were condemned to death.

6. *The magical rite*.—A characteristic example of a magical spell, translated in *extenso* from the original, will give a truer impression of the methods of Egyptian magic than any amount of mere description.

‘Flow out, thou poison, come forth upon the ground. Horus seizes thee, he cuts thee off, he splits thee out, and thou risest not up but liest down. Thou art weak and not strong, a coward and dost not fight, blind and dost not see. Thou livest not thy face. Thou art turned back and findest not thy way. Thou moorest and dost not rejoice. Thou creepst away and dost not appear. So speaketh Horus, *incantation of magic* |

The poison which was rejoicing, the hearts of multitudes grieve for it; Horus has slain it by his magic. He who secured it is joy. Stand up, then who wast prostrate. Horus has returned thee to life. He who came as one carried is gone forth of himself; Horus has overcome his him. All men, when they behold it, praise the son of Osiris. Turn back, thou snake, secured in thy poison which was in any limb of N the son of M. Behold, the magic of Horus is powerful against thee. Flow out, thou poison, come forth upon the ground.

To be recited over a hand with the two fingers on its hand, being made of incense and painted. Upon its mouth and over its head and over its breast. Place it in the face of one suffering from the bite of any snake and recite from beginning to end. It will repel the poison. A successful spell’ (*Pap. Turin*, 121, 1-4; *Metternich Stela*, 2-4).

7. *Analysis of the magical rite*.—Except in certain border-line cases (prognostic, medical treatment, etc.), the magical rite is always twofold and comprises (1) an oral rite, consisting of certain words to be recited, and (2) a manual rite, consisting of certain actions to be performed. These two portions must be discussed in detail.

(1) *The oral rite*.—The task that lay before the magician usually involved a struggle with some difficulty, which might consequently be regarded as a hostile and aggressive force. This force is not always completely personified, but more often than not it is treated personally, being commanded, persuaded, enjoined, warned, threatened, or cursed, just like a human being.

A leading idea in defensive magic, which centres on small part of our material, is that of ‘possession.’ The possible analogies are often enumerated in a long formula—e.g., ‘the essence of a god, the essence of a goddess, the essence of a male pain, the essence of a female pain, the essence of a dead man, or the essence of a dead woman,’ etc. (*Shro*, 20, 10; ‘every male or female, dead man or female, adversary male or female’ (*Pap. Turin*, 121, 6). Any god could doubtless attack human beings, but magic or goddesses, like the murderer of Osiris, or Sakhmet, the ‘body of pestilence’ (no. 4 ‘dead’), were doubtless most to be feared. The dead were specially to be feared; for was it only those dead who were unhappy or unburied that might torment the living, for the magicians sometimes warn them that their souls are endangered (*Zaubersprüche*, recs 2, 7-8; *Pap. Turin*, 121, 12-13). The possessing spirit was particularly likely to be of foreign origin, a negro or an Asiatic woman (*Zaubersprüche*, recs 1, 7-8), and it was wont to come secretly, ‘arriving in darkness, gliding in, its nose backwards and its face turned’ (G. I, 81). Its mode of taking possession is, as a rule, vague; the ‘demon’

(2), Bohetia [3] doubtless often dwelt ‘with’ or in the afflicted one (*Bakhten Stela*, 11, 19—*Badger, Egyptian Reading Book*, London, 1904, p. 12), but sometimes it was to be repelled by some kind of poison, such as to be seen, upon the ‘*Shro*, 24, 16, 34, 10, etc.). Or else again the hostile power might attach with arrows (*Pap. Leyden*, 34, 1, 5). The evil influences were most easily ejected through the excretions of the body, such as the sweat or urine (*Zaubersprüche*, recs 1, 6-10, or they might come out in the form of words (*Pap. Leyden* 34, verso 1, 1). All the members of the body were subject to attacks of the evil, whence their frequent enumeration in magical texts (see below); hence they are not seldom named as to be upon their mouth and recite forth what is in them’ (*Pap. Leyden* 34, recs G 2, 2, 14-2, 1).

The malignant force was sometimes merely informed of its defeat:

‘Thou stand before the overseer, before the servant of Horus, as soon as he mentions the name of Horus, or the name of Seth, the lord of heaven. He rebuketh his adviser, and smiteth thy forehead and thy throat. Thou liest upon the ground on which thy kilt-cloth is spread, and there thou gropest in quest of thy heart. So dost thou die, and the report goes forth to the house of M that Horus has conquered the disease’ (*Pap. Leyden* 34, recs G 2, 13-4, 1).

Sometimes the magician frustrates the aims of the enemy by a simple veto:

‘Dost thou come to him this child? I suffer thee not to him’ (*Zaubersprüche*, recs 2, 1).

Elsewhere, as in the example quoted in § 6, the poison is bidden to flow forth upon the earth. Warnings frequently supplemented and reinforced such commands, as:

‘Fall not upon his tongue; it is a serpent at the mouth of his hole’ (*Zaubersprüche*, recs 1, 11, in the midst of a long series of similar phrases).

Commands and warnings failing in their effect, a more persuasive means is tried:

‘Come, lay thee down, departing to the place where thy

loosest women are, on whose hair is myrrh, and fresh incense on their shoulders' (*Lebenwörterbuch*, recto 2, 6-7).

Or else the demon is made to understand that in delaying to obey the magician he holds the whole order of nature in suspense:

'If wait for thee in order to drink, and Adam to eat, that thou mayest quit the arm of H son of M. The chief of the Westerners waits for thee in order to enter in triumph, that thou mayest quit the arm of H son of M' (*Pap. Leyden 246*, verso 6 & 7-8).

In the last resort curses are employed:

'Every god curses thee, every goddess curses thee. . . The [great] demon curses thee, the little demon curses thee' (*Pap. Leyden 246*, verso 1, 1-5).

It often happens, indeed almost in every spell, that gods are summoned to the sorcerer's aid. They are invoked with salutations and praise:

'Hail to thee, Horus, thou that art in the town of Hundera, thou sharp-horned one, who shootest at the mark. . . I come to thee, I praise thy beauty; destroy thou the evil that is in my limbs' (*Pap. Leyden 247*, 2, 10-15).

A trait characteristic of Egyptian magic, noted already by Iamblichus (ed. G. Parthey, Berlin, 1857, p. 248), is the threatening tone often adopted towards the gods; examples are very common:

'On the night that the wife of Horus (Sakhmet, the scorpion goddess) shall bite thee, I suffer not the Nile to burst upon its bank, I suffer not the sun to shine upon the earth, I suffer not the seed to grow, I suffer not cakes to be made, I suffer not fowls of beer to be brewed for the 365 gods, who are hungry by both day and night—on that night of the burial of Osiris' (*Pap. Turin*, 137, 1-4).

The most daring menace of all is the following:

'I will throw fire into Baubris and burn up Osiris' (*Pap. Turin*, 138, 10; cf. *Shora*, 50, 5).

On such occasions the magician is apt to disclaim his responsibility:

'It is not I who say it, it is not I who repeat it; it is Isis who says it, it is Isis who repeats it' (*Pap. Leyden 246*, recto 11, 7; *Pap. Turin*, 138, 8-9; *Pap. mag. Harris*, 9, 11).

Elsewhere the gods are referred to in the third person, and the more numerous they are, the more efficacious the rite is likely to be. Thus, when the limbs of the body are enumerated, it often happens that each separate limb is identified with, or said to belong to, some special deity; and the list ends with the words,

'There is no limb of his without a god' (*Pap. Leyden 246*, verso 8, 8).

Origen (e. *Coloss.*, viii. 38) asserts that the Egyptians divided the human body into thirty-six parts, and placed each one of them under the charge of a god; 'and so,' he says, 'invoking these, they heal the diseases of the limbs.' The divine names mentioned by Origen are those of the gods of the decans, or ten-day periods.

The magician often speaks of himself in the first person, but sometimes identifies himself with a particular god whose assistance he desires—e.g.,

'I am H in this his mysterious name "He who was in the Sun," shooting his arrows against his foes' (*Pap. Leyden 247*, 4, 11).

or else with some god who, like the person for whom the rite is performed, had once been menaced by some imminent danger:

'Avast thou, for I am Horus; retire thou, for I am the son of Osiris. The magic of my mother (Isis) is the protection of my limbs' (*Harper's Medical Papyrus*, 11, 41).

At other times he merely claims to be 'the servant of Horus' (*Pap. Leyden 246*, verso 7, 1; *Pap. Turin*, 134, 1).

Often a mythical precedent was alluded to or narrated at length, and the mere mention of a parallel case seems to have been considered a useful expedient for ensuring the success of the rite. Thus the magician declares:

'I will banish all bad and evil things which come to fall upon H son of M, even as H saved himself from his enemies, even as Khnum saved himself from Sobk, even as Horus saved himself from Seth, and even as Seth saved himself from Sobk' (*Pap. Turin*, 112, 9-10).

¹ For similar examples from the Smaragdine books see H. Grapow, *St. xli.* (1911) 48-49.

² See Homan's remarks, *Lebenwörterbuch*, p. 28.

More often the point of the narrative is merely implied; in the following short incantation against burns even the names of the interlocutors, namely a messenger and Isis, are omitted:

'Thy son Horus has been burnt in the desert. "Is water there?" "There is no water there." "There is water in my mouth, and a Nile between my legs; I am come to quench the fire"' (*Shora*, 50, 2-4; see H. Schiller, in *St. xxi.* (1908) 129-131).

Many valuable fragments of myths have been preserved to us by this means.

Especially frequent are tales that turn upon the revelation of the true name of a god; a well-known instance is the story of how Isis devised a stratagem by which the sun-god H should be compelled to divulge his name; this she brought about by causing him to receive a snake-bite which none could cure save herself (*Pap. Turin*, 131-133). Less well known is the narrative of the attempts made by Seth to provoke Horus into betraying his real name, which would have given the mischievous god power over his nephew; Horus, however, invents various absurd names, and so manages to elude his wicked uncle (*Pap. Turin*, 134 f.).

The importance of names in Egyptian magic was very considerable; the knowledge of names gave control, whether for good or for evil. It was not a rare proverb that 'a man lives who is conjured by his name' (*Pap. Turin*, 133, 8, 11, 134, 7, 9, etc.). Thus to be familiar with the names of the apogonimal days (*Pap. Leyden 246*, 2, 8) was a safe method of protecting oneself against their perils. This is a topic that might be greatly elaborated (see art. NAMES (Egyptian)).

Closely akin to the question of the importance of names is that of the importance of language. Certain formulas were supposed to possess particular efficacy, such as the words 'Protection behind, a protection that comes, a protection!' (*Lebenwörterbuch*, recto 2, 2). The magical potency of anything depends in a large degree on its mysteriousness, and it is therefore but little wonder that cabalistic gibberish (*Pap. mag. Harris*, verso C) and foreign spells were held in high esteem (*Der Londoner medizinische Papyrus*, ed. W. Wreszinski, Leipzig, 1912, nos. 27, 28, 32, the last being in the Kopti language).

The significance attached to names and language is an aspect of the doctrine of *sympathy*, by far the most fertile conception of all those underlying the magical rite. This doctrine holds that things that have once been associated in any way remain henceforth connected and almost interchangeable for practical purposes; its chief varieties are (1) the principle of *contagion*, which affirms that things that belong together or have once been in contact continue to influence one another even when separated; and (2) the principle of *homoeopathy*, according to which like has special power to affect like. These and other forms of sympathetic magic not so easily classified are of constant recurrence in the Egyptian magical books, both in the oral and in the manual rites; the recital of mythical precedents also clearly comes under this head. The very idea of the oral rite is an instance of homoeopathic magic, for language may be said to imitate and image the things which it expresses, and in so far verbal references to a desired effect may have been considered instrumental in producing it.

Sympathetic magic takes curious forms at times; one or two instances may be singled out. In connexion with the importance of language reference may be made to the significance of puns. A magician says:

'I make a charm for him against thee of 'u/si-plant, which does injury, of onions, which destroy thee, and of honey, which is sweet to man and sour to the dead' (*Lebenwörterbuch*, recto 2, 4).

The virtues here ascribed to the 'u/si-plant and to honey are of obscure origin, but the destructive

property of onions is clearly due to the fact that the Egyptian word for onions was *šdg* (the vowel is merely guessed), while 'to destroy' was *šdg*. In order to tell whether a new-born infant would live or not, its first articulate cries were to be noted:

'If it says *ay*, that means it will live; if it says *mbt*, that means it will die' (Horn, 97, 127).

the sound *mbt* resembles the emphatic Egyptian expression for 'no' (see *EA* xliv. [1907] 122).

A widely different example of the supposed influence of like upon like is illustrated by the following words, addressed to a demon that is causing sickness:

'Thy head has no power over his head, thy arms have no power over his arms, thy legs have no power over his legs' (A. H. Gardiner, J. O. Mills, and H. Thompson, *Phoenician Ostraca*, London, 1914, p. 141).

A conditional curse that runs upon similar lines may also be quoted:

'He who is deaf to this decree, may Osiris pursue him, may his pursue his wife, and Horus pursue his children' (H. Goette, *Präparation des Propriétés Funéraires*, Paris, 1912, p. 129).

The mystical potency attaching to certain numbers doubtless originated in associations of thought that to us are obscure. The number seven, in Egyptian magic, was regarded as particularly efficacious. Thus we find references to the seven Hathors (Pap. med. Berlin, 21. 8; Pap. Turin, 127. 12; cf. *al ḥrē ṭṭṭu rēd adjarēd* [A. Dieterich, *Eine Mithrasliturgie*, Leipzig, 1910, p. 71]):

'The seven daughters of H', who 'stand and weep and make seven knots in their seven tunics' (Pap. Turin, 126. 122); and, similarly, we read of

'the seven hawks who are in front of the barque of H' (ib. 126. 12).

Oral rites have occasionally to be recited seven times (ib. 126. 9, 10), but the more usual number is four (Pap. Leyden 348, verso 3, 5, 4, 10, etc.; Pap. mag. Harris, 7. 4), a number doubtless associated with the 'four pillars of heaven' (cf. *ṭṭṭu rēd adjarēd* [Dieterich, p. 71]), or, as we should say, the four cardinal points.

A characteristic feature of the oral rite is its complexity. This is shown in various ways, and not least in the love manifested for enumerations. Reference has been made to the long lists of parts of the body, and to the formulae naming all the possible enemies from whom attacks are to be feared. Similarly, lists are found of the various ways in which a man might meet his death (Pap. Turin, 120-121; Petrie, *Gish and Ryeh*, pl. 37c), and of the various excretions through which the demon might transmit his baneful influence (Pap. Leyden 348, verso 6. 6f.). This quasi-legal tautology is to be explained partly by the desire to cover all eventualities, and partly by the necessity of compelling respect for the learning and skill of the magician.

(2) *The manual rite.*—(a) *Active elements.*—The employment of images played an important part in the manual side of magic. Sometimes it is the hostile power to be destroyed that is thus counterfeited and done to death; so, in the *Book of Overthrowing Apophis*, the words of the oral rite are 'to be recited over an Apophis made of wax or drawn on a new sheet of papyrus and thrown into the fire' (ib. 20; cf. 21. 7).

More often the object imitated represented a means of effecting the purpose of the rite.

Thus in a spell to assist child-birth there was made 'a dwarf of clay to be placed on the forehead of the woman who is giving birth' (Pap. Leyden 348, verso 12. 6).

Miniature hands, seals, and crocodiles were powerful to ward off evil, doubtless by slaying it, sealing it up, or devouring it (*Zaubersprüche*, verso 2. 4; cf. *EA* xxxix. [1901] 57). A great number of the amulets found in such abundance in Egyptian tombs were of a magical nature, all, indeed, except those whose purpose was exclusively funerary. Like the images mentioned above,

amulets can, if explicable at all, always be interpreted by the principle of sympathetic magic in one or other of its various forms (see Petrie, *Amulets*, London, 1914).

The materials of which such images and amulets should be made are nearly always specified, and it is evident that this was considered a matter of vital importance. Here we meet with a new aspect of sympathetic magic, namely the doctrine of properties; every plant, stone, metal, and colour possessed its own peculiar virtue, which prompted its use in the diverse cases. Wax and clay were very commonly employed, and perhaps not only because they were easy of manipulation; their plasticity may have been thought symbolic of a wide adaptability. Aetiological myths assign a divine origin to various substances; thus the bees that supply the wax are said to have sprung from tears shed by Hs (Pap. Salt 225, 2. 5-6, [unpublished]), and the cedar-tree emanated from the sweat of Osiris (*EA* xlvii. [1910] 71).

Images were not immediately potent of themselves, but had to be charged with magical power in one way or another. The oral rite is usually recited over them (*ad sedis hr*, *passim*), and this transitory and intangible kind of contact seems to have ensured their continuous efficacy.

In a fabulous story the magician Hs, the son of Ptah, made a lion with four hooves and 'pronounced writing upon them, gave them breath of respiration, and made them live' (Griffith, *Stories of the High Priests*, p. 16).

Elsewhere the ceremony of 'opening the month,' familiar from the funerary ritual, was performed over the magical figure (Pap. Turin, 121. 7), and offerings and incense were presented to it in token of its now animate condition (ib.; Pap. Leyden 346, 2. 3). Drawings upon papyrus or rag were treated in exactly the same way, and seem to have been equally effective (Pap. Leyden 346, ib.; Pap. Turin, 21+77. 3); or the figures of the gods whose help was invoked could be sketched on the patient's hand, and licked off by some one (Pap. Turin, ib.). At times the mediating image could be dispensed with; the magician pronounced his spell, and then spat on the diseased limb (*Edw.*, 30. 17).

Magically charged amulets, images, or beads were often attached to the person whom they were designed to protect or heal; some kind of contact was a prime necessity of Egyptian magic; e.g., we read of spells that were fastened to the left foot (Pap. Leyden 348, verso 4. 3); but the neck was naturally the spot where most charms were worn (*Zaubersprüche*, recto 1. 2, 2. 3, and *passim*). The string or strip of rag employed for this purpose was usually tied into magical knots (q.v.), seven being the favourite number. Such knotted strings have often been found and are to be seen in many collections (Erman, *Zaubersprüche*, p. 31). In other lands than Egypt the idea of the magical knot is frequently to 'bind' the hostile force; but, though references to binding demons can be found in Egyptian magical texts (Pap. mag. Harris, verso A 6), it is not in connexion with knots. One view that seems to have been taken of knots is that they were obstacles, as, e.g., in the following words put into the mouth of a magician:

'If the poison pass these seven knots, which Horus has made on his body, I will not allow the sun to shine,' etc. (Pap. Turin, 126. 6).

Particularly interesting is a spell where twelve gods were invoked.

These were drawn 'on a rag of fine linen to be tied into twelve knots. Offer to them bread, beer, and burnt incense. To be placed on the neck of a man' (Pap. Leyden 346, 2. 3).

Here evidently each knot was put under the guardianship of a special deity, and thus formed a divinely protected barrier between the malignant influence and its possible victim.

Imitative or significant actions were frequently performed with the apparatus of the magical rite; we have seen how a waxen image of Apophis was thrown into the fire and so destroyed, and similar cases could be multiplied.

At this point may be mentioned the composite stele known as *Cippi of Horus*; these are of comparatively late date (Saite period and after), and are covered with magical texts of the kind described above, and with sculptured figures, chief among which is the figure of Horus with his feet on two crocodiles. Such steles seem to have been placed in buildings for their protection, and especially to rid them of snakes and scorpions (see Golenishcheff, *Metternichstele*; G. Darcey, *Toutankhamon's magic steles*, Cairo, 1903).

(b) *Negative or precautionary elements*.—Magical rites could not be performed at any time and under any conditions, but strict rules and restrictions had to be observed. Of these some, like the injunction to the magician to stand 'with his face to the East' (*Pap. Leyden 347*, 12. 10), are of so many different types that they elude classification. *Times and seasons*, like everything else in ancient Egypt, had their own specific properties; some days were lucky and others unlucky, in part at least through mythological associations (for such calendars on papyrus see art. *CALENDAR* (Egyptian), § 2). Such considerations had to be taken into special account where magical rites were concerned, and perhaps more attention was paid to the question of time than is indicated in the brief instructions usually given as to the performance of the manual rites.

Of one spell we learn that it had to be recited 'at eventide, when the sun is setting' (*Leubergstele*, verso 2. 7). In another case seven knots have to be tied, 'one in the morning, and another in the evening, until seven knots are complete' (*Leubergstele*, verso 2. 3).

Magical rites were also in demand for safeguarding men against dangerous periods of the year. As in ancient Mexico (*UB*², pt. iv., *Uris, Atis, and Adonis*, London, 1914, il. 20, a. 3), the intercalary days, in Egypt known as the five *spagomenal* days, were fraught with exceptional risks, against which enchantments were employed (*Pap. Leyden 346*); the user of these had to refrain from all work during the period in question (*ib.* 3. 4).

Purity was requisite in him who would be benefited by magic (*Book of Overthrowing Apophis*, 24. 19, etc.), just as ch. lxiv. of the *Book of the Dead* was ordained to be recited by 'one pure and clean, not having eaten venison or fish, and not having been near women.' In another place the user of a spell is charged to purify himself for nine days, and his servants are to do the same (E. Naville, 'Destruction des hommes', line 79, in *TSBA* iv. [1876] 16).

Secrecy was essential in dealing with magic. In reference to a spell written on a strip of fine linen the warning is given that 'it is not to be looked at' (*Pap. Leyden 348*, recto 2. 7); of another it is said that it must not be used for any one except him for whom it was prescribed (*ib.* verso 2. 6). For similar instructions in the *Book of the Dead* see J. Baillet, *Idées morales dans l'Égypte antique*, Blois, 1912, pp. 72-75.

3. *Magic and medicine*.—Magical spells are often recommended on account of their proven efficacy; 'a true remedy on many occasions' is a formula extremely frequent in the magical papyri (e.g., *Pap. Leyden 347*, 12. 3-5). This appeal to experience indicates a desire to justify magic as a science, and hints at the possibility of a real science arising out of it. There cannot be the slightest doubt that Egyptian medicine is the direct offspring of Egyptian magic, and that it

never became really emancipated from its parent.¹ The medical books are seldom free from incantations, and the magical papyri are leavened with medical prescriptions (e.g., *Zaubersprüche*, recto 7. 2). In the selection of drugs the doctrine of properties undoubtedly played a great part, though the defectiveness of our evidence and the fact that medicine was in process of becoming an empirical science tend to conceal this from our observation. It is no argument against the thesis here supported that many of the herbs and drugs prescribed were actually, and were known to be, wholesome. In the first place, magic itself is not necessarily irrational in its methods, and, in the second place, even the utility of many wholesome things like onions was based upon essentially magical conceptions (see above, § 7 (1)). The exotic and abhorrent nature of many drugs cannot conceivably be explained except as due to superstitious reasons; how else could one account for the use of 'the bones of an oxyrhynchus-fish' (*Ebers*, 6. 3), or 'the urine of a male ass that has begotten another' (*Griffith, Petrie Papyri*, London, 1898, pl. 2, l. 13)? It is significant that the latter medicament occurs in a treatise on midwifery and kindred topics. One can often make a shrewd guess at the meaning of a prescription. To cure a complaint called 'the working of charms' (*Am-r*) the following is prescribed:

'A large beetle (*ḥpr*), whose head and wings have been cut off. To be burnt and put into fat, and then applied' (*Ebers*, 62. 12).

The point of this must surely be that, the word for beetle being derived from the verb *ḥḥpr* (*ḥpr*), 'to become,' a mutilated beetle would symbolize the frustrated achievement of a purpose; the purpose here to be frustrated was 'the working of charms.'

It must not be imagined that there was no distinction between a medical prescription and a magical rite. The former consisted mainly, if not wholly, of what may be considered as a specialized development of the manual rite, namely, the enumeration of drugs and directions for their use. The diagnosis, which is ushered in by the words 'so shalt thou say' (*dd-ḥr*), and which sometimes precedes the list of drugs, may owe its origin to the oral rite of magic—just as the magician sometimes declares that he knows the name of the enemy. A difference is made in the medical papyri between an 'incantation' (*shmet*) and a 'remedy' (*pakhet*); the latter is, in the main, an enumeration of drugs. In the same way the physician (*swnw*) was not quite the same thing as the magician; the physician might be a layman, while the magician was a priest (below, § 9).

That even in the 'remedy' (*pakhet*) magical ideas were latent may be proved by some additional evidence. The following is explicit enough:

'Formula for drinking a remedy: Welcome, remedy, welcome, which destroyed the trouble in this my heart and in these my limbs. The magic (*shmet*) of Horus is victorious in this remedy' (*pakhet*) (*Ebers*, 1. 1-4).

We also find formulae to be recited in applying remedies generally (*Ebers*, 1. 1-11), in using the medicine-measures (*Pap. med. Hearst*, 12. 14), in using animal fat (*ib.* 14. 4), and so forth. These formulae seem intended to supply the place of the incantations of which most medical prescriptions have purged themselves; their reintroduction was a reactionary step.

Where, then, does medicine begin and magic end? There is no definite boundary-line. Medicine may be said to begin when incantations are no longer used. At that point medicine becomes a technique, though using means which it does not understand, and which, if it passes to give ex-

¹ The writer thus agrees with the views of E. Thiermer (in art. *HEILKUNST UND GEBETZ* (Greek) against F. von Oefele and H. Schneider.

planations, it explains by superstitious reasons. So far as medicine was practiced without a sense of mystery and without making appeals to faith, it was a technique of ordinary life like any other; but, wherever there was consciousness of its exceptional, occult nature, it might be said to lapse back into the domain of magic. Egyptian medicine was at its best in diagnosis and in its physiological speculations; the *magical medicine*, on the other hand, remained permanently under the influence of magical conceptions.

9. The magician.—A Greek alchemical treatise quoted by Maspero (*PSBA* xiii [1891] 507) exactly defines the difference between the physician (*sumu*) and the practitioner of magic. The former exercises his craft *ἀπὸ φύσεως* . . . *μεχανικῶς*, 'mechanically and by book,' while the latter is a 'priest' (*lepos*), 'acting through his own religious feeling' (*ἀπὸ τῆς ἑαυτοῦ θεοσεβείας ἐνός*). There appears to be no common word for 'magician' (*sm*, 'charmer,' e.g., in *Ebers*, 80, 8, is very rare), and magicians certainly formed no caste of their own. It is in accordance with the homogeneity of religion and magic emphasized above (§ 3) that the priests should have been the chief repositories of magical knowledge, and particularly those priests whose function it was to be versed in the sacred writings. The subjects of many of the books kept in the library of the temple of Edfu cannot be described otherwise than as magical (see H. Brugsch, *Aegyptiologie*, Leipzig, 1890-92, p. 166; cf. Clem. Alex. *Strom.* vi, 206). The 'lector-priest' (*chri-ḥab*) is specially named as empowered to perform cures (*Pap. med. Berlin*, 8, 10), as having discovered incantations (*Pap. med. London*, 8, 12), and as being endowed with the gift of prophecy (*Pap. Petersburg II 10 B*, recto 9); and the wonder-workers at the court of Cheops in the tale were all 'chief lecturers' (see Erman, *Märchen des Papyrus Westcott*, i, 21). A passage in the *Ebers Papyrus* (100, 8) singles out the 'priests of Bakhmet' (*ḥt Bakhmet*) for special mention as skilled members of the magic-medical profession; this is because Bakhmet was a baleful goddess who manifested her wrath in inflicting disease; her priests were likely to know best how to cope with her. Priests, doctors, and sacred scribes alike received the final touches to their education at colleges called 'the house of life' (*per-ankh*); of these we know but little.

A 'chief physician' of the time of Darius describes how he was summoned by Pharaoh to remove the *per-ankh* (in *Smith's Dictionary* the value of this (i.e. the medical) art is given as 1000000). There was a *per-ankh* at Abydos, apparently attached to the temple (*Levi*, *A 10-11*, 1881, [1881] 110). The word is especially in the bilingual document recorded in the demotic as 'chief of the house of life' (see Griffith, *Sphinxes Papyrus*, Manchester, 1900, p. 21, n. 15, *Stories of the High Priests*, p. 19). Magic could be learnt at the *per-ankh* (cf. *Pap. med. Harris*, 6, 10).

On the whole, we receive the impression that less importance was attached in Egypt than in other lands to the personality of the magician; his powers might in some cases be due to special gifts, but, broadly speaking, the belief in magic was a tribute to knowledge, and not to the supernatural powers of certain men. The instructions appended to magical incantations usually presuppose that private individuals could use them for their own profit if only they observed the right precautions. Thus the magician's presence was not essential, and his authority lay solely in the fact that he was the possessor of magical knowledge; the epithet 'knower of things' (*ḥt ḥt*) was commonly applied to him (*Bakhmet Stele*, 11; *Ebers*, i, 9). This point is well brought out in a passage describing the all-wisdom of the Pharaoh Amenhotep:

'An unique king, whom Sethis taught, possessor of the goddess of writing, the reverence of Thoth is beside him, and he gives to him knowledge of things, so that he guides others according to the true rule. He is one great of *ḥt*' (*Sethis, Urkunden*, iv, [Leipzig, 1898] 102).

10. Celebrations in magic.—Egyptian-wise, we will begin with the gods. Thoth was the most powerful of all magicians; in the end this qualification of his gave rise to the fame of Hermes Trismegistus (e.g., see Griffith, *Stories of the High Priests*, p. 26). The skill of Thoth as a magician is associated with his reputation as the inventor of hieroglyphs and the sciences of astronomy and mathematics; in the myth of Ostris he played the part of 'physician of the eye of Horus' (*Pap. med. Harris*, 14, 6). Isis enjoyed great fame as a sorceress, mainly on account of the charms which she devised to protect her infant son Horus (*Pap. Turin*, 31 + 77, 6; *Ebers*, i, 12 and *passim*). Horus himself was not devoid of magical ability, though it was mainly in his skill in warding off attacks that this was displayed; the Horus of Letopolis is described as the 'chief physician in the house of *ḥt*' (*Pap. Turin*, 194, 5). The eye of the sun-god, which was subsequently called the eye of Horus and identified with the Uræus-snake on the forehead of *ḥt* and of the Pharaohs, the earthly representatives of *ḥt*, finally becoming synonymous with the crown of Lower Egypt, was a mighty goddess, Uto or Bato by name; she is often referred to as Wret-hike, 'she who is great of magic' (*Sethis, Untersuchungen zur Gesch. und Altertumskunde Ägyptens*, v, [Leipzig, 1912] 126).

According to Manetho, King Athothis of the 1st dyn. practiced medicine and composed anatomical books. Under King Zoser of the IIIrd dyn. lived the wise Imhotep, whose skill as a doctor led to his identification by the Greeks with Asclepius; like Amenhotep, son of Hapu, a famous man of the reign of Amenophis III. (XVIIIth dyn.), Imhotep was in late times worshipped as a god (see art. *HERMES AND HERM-OOPS* [Egyptian], II, 3). The prince Hardedef, a son of Cheops, was similarly noted for his deep learning and wise utterances; he was the reputed discoverer of various books of *ḥt* incorporated in the *Book of the Dead* (see Erman, *Märchen des Papyrus Westcott*, i, 18). Another royal prince, who was high priest of Ptah, became the hero of many tales in which he appears as a great magician; this was Khamwese, one of the innumerable progeny of Ramesses II. (see Griffith, *Stories of the High Priests*, p. 22). In the later Greek and patristic literature reference is made to various Egyptian magicians of note, Sothos, Pannocaris, and, above all, Neotanebo, the last native Pharaoh, who plays an important part in the legend of Alexander the Great.

11. The nature of Egyptian magic.—The magical rite, as described in § 7, was by no means wholly irrational in its methods; indeed, granting its premises, namely the existence of gods and demons, the theory of possession, the principles of sympathy, and the doctrine of properties, its manner of setting to work was perfectly logical and businesslike. Here, at first sight, we are face to face with a paradox; the essence of *ḥt* we stated to reside in its opposition to the mechanism of ordinary action (§ 1), yet now the methods of magic are declared to be simple and straightforward. The fact in that no explanation of the magical rite is afforded by the consideration of its parts either severally or collectively; its explanation can be sought only in the concept of *ḥt*, which is a thing apart from, and, as it were, superimposed upon, the methods and premises of the magical rite, a sort of pervading vital principle making this what it is. Without the concept of *ḥt* the magical rite would doubtless have seemed to the Egyptians no more than what to us it appears to be, a puzzle, though not wholly meaningless.

¹ For the great of this assertion see H. Hubert and M. Mauss, 'Esquisse d'une théorie générale de la magie,' in *Annales* vii, [1904-05], esp. pp. 67-103.

combination of words and pantomime. There was perhaps once a period when even the most gifted were utterly ignorant of the limitations of their own power and that of the world outside; they saw forces which they treated personally in all kinds of external phenomena, and the law of sympathy seemed to them very good logic indeed. In this hypothetical period magic and science were undifferentiated. Later on, a distinction became gradually discernible between the simple techniques of ordinary life and the less successful or, at least, less trustworthy means by which men sought to achieve more difficult aims, and the notion of *hikē*, or magical power, was precipitated. *Hikē* gathered round itself just those less matter-of-fact preconceptions which were found unserviceable in ordinary life, and these became its methods. Now, the simple techniques are always able to detect, amid the complex environment in which acts are necessarily performed, the actual determining factor in their results; not so *hikē*, which is therefore apt to regard the whole complex environment as essential to the achievement of its purposes. This is the reason for the meticulous attention that *hikē* pays to detail, the set form of words to be recited, the restrictions as to time and place, the purity of the officiant, etc. The more restricted the domain of *hikē* became and the less successful it was, the greater the necessity which it felt of insisting on its own inherent efficaciousness, and of diverting attention from its methods; hence its love of secrecy, and its use of mystic, incomprehensible jargon to enhance the impression of the wisdom lying behind it. In this context mention must be made of two more ways in which it was sought to obtain credit for *hikē*, namely the appeal to antiquity and the appeal to authority.

Such and such a rite was 'found at nightfall in the Enclosure of the temple of Osiris as a secret of this goddess (Isis) by a lover of that name, the earth was in darkness, but the moon shone upon this book, illuminating it on every side. It was brought to a wonder to King Cheops' (Pap. med. London, 8. 11-15).

The papyrus from which this quotation comes was written in the time of Amenophis III., more than a thousand years after the reign of Cheops. A mythical origin is assigned to other spells.

One was said to have been 'invented by Geb on his own behalf' (Pap. med. Leiden, 8. 11); while others were devised by Set or Isis on behalf of Ra (ib. 8. 13, 14).

A more reputable way of appraising the value of a magical rite was by appealing to the test of experience; it is often claimed for a particular spell that it has been successful on many occasions (see above, § 5). Where the claim has proved justifiable, or where it has seemed sufficiently so for the rite to pass into general use, the more mysterious elements rapidly disappear, and the rite becomes an ordinary technique; so in the case of medicine and, it may be here added, of legal oaths.¹ Nothing can better illuminate the nature of *hikē* than the alterations which it undergoes in the course of its transformation into some ordinary technique.

INTERTEXT.—This has been indicated in the body of the article. Of general treatises may be named E. & W. Budge, *Magical Texts*, London, 1901; A. Erman, *Ägyptische Religion*, Berlin, 1909, ch. vii.; A. Moret, *Le Magie dans l'Égypte ancienne* (*Bibliothèque de vulgarisation du Musée Guimet*, xi.), Paris, 1907; A. Wiedemann, *Magie und Soudjourn im alten Ägypten* (*Der alte Orient*, vol. vi., pt. iv.), Leipzig, 1908.

ALAN H. GARDINER.

MAGIC (Greek and Roman).—I. INTRODUCTORY.—It is practically impossible to extract anything from the great mass of magic theory and practice as certainly the particular contribution of any given people. There is no system of human thought which, in its unchanging essential

¹ Legal oaths are, of course, a fairly effective way of guaranteeing truthfulness; but less because the implied curse is feared than because perjury is a criminal offence.

principles, is more primitive and, for that very reason, more cosmopolitan, more literally devoid of distinguishable national traits, than magic. Anything which might be considered indigenous is usually secondary as well as comparatively unimportant, and, in any case, can rarely be identified with certainty. This is especially true of the two great nations of classical antiquity. Here, as elsewhere, magic was believed and practised by the common man, and even the literary record of magic theory and practice begins with Homer and continues with increasing volume and particularity until the latest times. But, rich as they are, the records of classical magic are too incomplete and the possibility of filling the lacunae is too remote to warrant us in hoping that a search for the indigenous would meet with any success. We shall therefore omit all reference to this aspect of our subject. For this reason, too, as well as on account of the intimate cultural relations between Greece and Rome, it seems best to deal with the two nations as one.

2. **Magic and religion.**—From more than one point of view the civilization of classical antiquity is still quite justified in challenging comparison with that of any other period in history. No civilization has shown such remarkable ability to observe, reflect, organize, and create in so many great departments of human thought and action. And yet among all the higher civilizations of the world there is none in which magic—of all things the most relentlessly and essentially primitive—had such an abiding influence, none in which men had such a perennial interest in the subject, none in which the progress of magic from the lore of the farmer to the incubations of the philosopher is more clearly marked and more profusely illustrated.

The paradox, however, is only apparent. Owing to its exaggerated conservatism, the religion of both nations always remained amazingly primitive, so primitive that it was always impossible to distinguish it from magic on the basis of any essential details of ceremonial or of the generalizations from which they were derived. Even the doctrine of incarnation, with all the conclusions for which it is ultimately responsible, was never distinctive of the one as opposed to the other. It is obvious, therefore, that the Greeks and Romans were always in the position of their primitive ancestors—they were utterly unable to differentiate clearly between magic and their religion on the basis of this or of any other criterion which, when seriously applied, would have left their religion unimpaired, and at the same time would have transformed their once redoubtable magic into an interesting but harmless fossil. Their only course was to cling to the ancient distinction of official recognition.

According to this distinction, 'religion is prescribed, official, an organized cult. Magic is prohibited, secret; at most it is permitted, without being prescribed' (E. W. Thomsen, *RSB* ii. xvii. 505, commenting H. Hubert).

Magic cannot be distinguished from religion by the doctrine of sympathy, or by any supposed necessary sequence of cause and effect, or even by its maleficent character. Religion, then, is the orthodox, magic is heterodox, it being understood, of course, that for the Greeks and Romans the criterion of orthodoxy was the official recognition of their own State. The god must be officially recognized by the State, and his ceremonial must be the one prescribed by the official experts of the State. Other gods, and therefore their ceremonials, are heterodox. Even orthodox gods must be approached only by prescribed ceremonials.

This Græco-Roman retention of the primitive distinction between magic and religion is our only guide in establishing meaning and coherence in

the bewildering array of phenomena with which we have to deal. For instance, it will be seen at once that the only effect of this criterion, so far as magic itself is concerned, is, as to speak, to define its social position. It does not necessarily destroy or even impair the belief in the reality and power of magic as such; on the contrary, from the very nature of the distinction, it takes them both for granted. Hence the persistence of magic in a civilisation otherwise so advanced as was that of classical antiquity.

We must assume this test of orthodoxy, e.g., in the case of Cato's cure for a sprained hip (*de Agr.* 180). By any other test it is patently magic; but Cato did not consider it magic, or he would not have recommended it. It was orthodox, i.e., it was Roman, it had an immemorial tradition in the Roman countryside; at the most, it had become secularized. By the same test the old Roman ritual for calling out and appropriating the gods of a conquered city (*Maarob.* III. ix. 7) is religion, and the operation known as 'calling down the moon' is magic. Again, the same criterion is responsible for the well-known method of raising the heterodox to the orthodox by official recognition. This device of naturalising foreign cults and thereby embracing within the sphere of their influence heaven and hell as well as humanity, is several times illustrated in the religious history of the Romans.¹

All foreign religions, therefore, were classified as magic. The foreign cult, as such, was occasionally despised, but quite as often it was thought to be full of terrible possibilities in the way of mysterious knowledge. This was especially the case if its possessors were an older nation or a nation far away in space or time. Despite their native good sense, the Greeks were much impressed by the pretentious wisdom of the East, as after them were the Romans by the complicated mummeries of the Etruscans. Nations living far away, particularly those who live at or near the places where the sun rises from the under world in the morning or goes down into it at night, are notable for their knowledge of magic. Under such circumstances as these whole nations may be endowed by nature with magic power, especially for some given thing. Remoteness in time is, if anything, a more powerful factor than remoteness in space. When a faith has been superseded, it thereby becomes magic. In Italy the term *laecus religionis* is known to be used as a synonym for 'magic.' So the older and alien race is apt to be looked upon, especially by those who superseded it in the same country, as a race of formidable magicians—so formidable, in fact, and, by reason of their antiquity, so much nearer the days of the gods, that they themselves are sometimes believed to have been of supernatural origin. But they are still heterodox, they belong to the old order of things, they are more or less allied to the Lords of Miracle.

One of the most characteristic features of magic is a direct result of this persistent association of the heterodox and the foreign. From the very first, there is no magician like the one from foreign parts (*Theocr.* II. 162 and often), no magic like the imported brand. Helen's nepenthe (*Hom. Od.* iv. 210), as the poet is careful to tell us, was 'Egyptian'; the very word 'magic' suggests the influence of Persia; and to the end of the Empire the native practitioner had no vogue as compared with that of his rival who was, or pretended to be, from Egypt, Chaldaea, Colchis, India, or any other place but Rome.

It is true, of course, that 'magic is prohibited, secret; at the most, not prescribed.' But, so far as classical antiquity is concerned, these distinc-

tions seem to be secondary and derivative. Magic was prohibited because it was heterodox. The Romans, in particular, disliked secret rites of any sort, above all, foreign rites with *magisteria*, like those Greek cults so much affected by the Greeks themselves. If the Greeks objected to the secrecy of magic, it could only have been because magic itself was heterodox. So far, then, as secrecy was felt to characterise magic as opposed to religion, the ultimate source of the distinction in Greece as well as in Rome was the criterion of orthodoxy. To the same criterion is due the fact that, as a rule, men turned to magic for the things which they could not or would not ask of religion. Nor, of course, was magic necessarily malevolent; on the contrary, it might be distinctly otherwise. So long as orthodoxy was the test, magic was magic whether it happened to be white or black—and this, of course, explains why the Roman law never made any attempt to distinguish between the two.

2. Magic and legislation.—The general reputation of magic at all times was due to the same criterion; it was always illicit, it was always distrusted, it always had a bad name. And when the law stepped in—as it did at an early date in both Greece and Rome—the orthodox and the legal, the heterodox and the illegal, became synonymous terms. Magic was then criminal, and punished accordingly. The history of magic before the law began at an early period, but, as far, at least, as Greece is concerned, our records are too incomplete to give a very satisfactory idea of the question. In Greece, however, as in Rome, it concerned itself most seriously with the matter of strange religions—a burning question as soon as communication with the outside world became more intimate and extensive; still more in Rome when, owing to rapid expansion after the Second Punic War, alien beliefs and rituals came pouring in from every side. From the Decemviri to Theodosius and beyond, the Roman laws against magic were affirmed and reaffirmed, the domain of magic was at once particularized and extended, new laws were frequently passed, and the jurisprudence of the subject grew steadily in volume and importance. And, so far as the legal aspect of magic is concerned, it may be emphasized anew that, whether in Greece or in Rome, the ultimate foundation and guide of procedure was always the old criterion of orthodoxy. It is clear, for instance, that the characteristic tendency of the law to extend its scope was both suggested and guided by this criterion. It was particularly useful whenever the law felt obliged to take cognisance of some system of activity more or less mental that was 'good in parts'—such, e.g., as divination (g.v.), which stands on the border line between magic and religion, or alchemy (g.v.), which hovers in like manner between magic and science, or, again, certain types of mysticism (g.v.), which were more or less an amalgam of magic and logical thinking. In every case what was to be considered legal and what illegal was determined by official recognition. Above all, the inclusion of foreign rites and religions within the legal concept of magic was an obvious and entirely logical deduction from the test of orthodoxy. Not only so, but by the same test it was equally obvious that precisely those foreign rites were the most serious question in magic. How, e.g., shall we define the legal status of the native religions of the provinces? The final solution was again entirely logical. The Emperor was the civil and religious representative of the State. He was therefore entitled to investigate them and to make such use of them as seemed proper. But this privilege was his alone, and only by virtue of his office. In the hands of private individuals it was

¹ E. Schmidt, 'Kultübertragungen,' in *ZVF* VII. 2 (1900).

considered dangerous, and no doubt it was largely for this reason that magic was so rigorously proscribed and its illegality so catatonically kept alive.¹

The recorded history of Roman legislation on the subject of foreign rites begins with the census of 439 of its type, the *Summus consultum de Doctianatibus* in 180 A.D. (Livy, xxxix. 8-10),² in connexion with which it was ordered that all books of divination and magic should be destroyed. The history of Roman legislation on the subject of magic, whether directed against specific practices or against the art as a whole, begins with the *Decemviri (Leges XII. Tab. viii. 83)*.³ Notable in later days was the *Lex Cornelia de Sicariis et Veneficis* in 82 A.D. Dio Cassius (xlix. 48) tells us that in 32 A.D. the triumvirs, Octavian, Antony, and Lepidus, banished the magicians and astrologers, and refused (ib. 36), to a speech by Maecenas against foreign religions and secret societies for purposes of magic. In A.D. 18 Tiberius banished the magicians and mathematicians, and in the same reign L. Pittianus was thrown from the Tarpeian Rock and P. Marcius was executed 'more priusco' outside the Porta Regulina (Tac. Ann. ii. 32), and Mamercus Bannus committed suicide to escape a suit for magic (ib. vi. 29). Under Nero, Surrilla, the young daughter of Soranus, was accused of selling part of her dowry to procure the means to save her father's life by magic rites (ib. xvi. 31). The prescriptions of Tiberius were renewed by Claudius (ib. xii. 52) and Vitellius (Suet. Vitell. 14), and the end of official paganism was marked by the laws of Diocletian against the *magici, Novachii, and mathematici* (Coll. xv. tit. 1 [Huschke]). Sometimes the law prescribed special and severe punishments, and how far the law itself had extended by the 3rd cent. A.D. may be seen from the *Sententia* of Julius Paulus⁴ on the *Lex Cornelia de Sicariis*:

'Qui adhaerens aut amplexum populum dant, cum id dote
non habent, necesse est coniugii reus sit, homicidium et metallum,
homicidium in iuribus omnium pars honorum reprobatur. qui
id non facit autem non pariter, minime expellitur adhaerens
qui seorsum impio coniugio et quomodo obtemperat, delictorum
delictorum, fuerunt in iuribus autem reus, sed et adhaerens
aut hostis obtemperat. Qui homicidium in iuribus reus est
conjugio in iuribus, necesse est coniugium hostis obtemperat
autem, vel si homicidium cum coniugio populum. Hicque etiam
conjugio coniugio expellitur obtemperat, id est, hostis obtemperat
et adhaerens. Hicque etiam coniugio reus coniugio. Hicque etiam
autem expellitur autem coniugio reus, id est, coniugio reus
populi sunt, bonis obtemperat autem hostis hostis homicidium
in iuribus deportatur homicidium coniugio reus. Non
tamen bonis autem reus, et etiam autem reus. Non
autem autem. Qui. Thucydides in 10. et 10. Qui. Thucydides in 10.

Doubtless the object of the law was or, at least, ought to have been merely to punish the abuse of magic (Plato, *Lapp.* 903 D), but it went much further than that. All the old laws were revived and reinforced by new legislation as soon as, under Constantine, Christianity succeeded paganism as the official religion of the Empire. Of course, the moment the change was effected Christianity became the plaintiff and paganism the defendant in the ancient process of Religion v. Magic. It was Christianity now that was responsible for the welfare of the State in this world. But, among other things, Christianity differed essentially from paganism in the fact that it had also a keen interest in the welfare of every member of the State in the world to come. Between the two, the new representative of orthodoxy—in the hands of those who do not understand or appreciate its message and meaning, the most intolerant of all religions—thought fit to

¹ T. Magerus, 'Religionsverordnungen Rönneboer Bistum,' in H. von Sybel's *Hist. Sachsen* 1211 (1890) 288-289, reprinted in *Germanische Rechts/Ges. Berlin*, 1906 I, II, 282-283.

[illegible]

proceed against its professor with a zeal worthy of a better cause and a rigour that amounted to persecution.¹

The practice of the courts naturally went hand in hand with the law and was regulated by it. The charge of magic in one form or another was always a cause of action. It was perhaps most common in cases in which our plea is 'undue influence.' In Greek testamentary law, e.g., this plea was specified either as *trò phantasia* or as *tròs velleitias* (i.e., 'dragm,' in the ancient sense of the word, or 'permeated by one's wife').

The best known case of this kind is the one brought against Apollonius, the famous rhetor and author of the treatise *de arte*, by the revival of the impracticable old writing, *Phocastille*, which he had jumbled up. The struggle was then, he has sufficient by length, and quantity of phrases, ever alleged. The legal basis of the action was perhaps ultimately the *Lex Cornelia de Socraticis* at *Phocastille* passed by Sulla in a.d. The defendant constructed his own case and won it by a speech, the *de Negata*, which still survives and is a valuable contribution to our knowledge of magic in that period. It cannot be said, however, that for the most part the great rhetor does not touch upon the real points of magic.

Considering the comparative frequency of such litigation in everyday life, we can understand with what interest the Athenian audience listened to the famous scene in the *Andromache* of Euripides in which she is charged by Hermione, the wife of Neoptolemus, with winning his affections by the use of pithers. Her dignified and stinging reply,

Not of my phillies thy lord hateth thee,
But that thy nature is so made for him.
That in the love-changes women, tis not beauty
That witheth bridgrooms, nay, but goodness.

(THE W. A. & W. Way, Proprietors, London, 1886-88), is doubtless the post's own protest against the folly of such a charge. But, if one may judge from cases still occasionally reported in the daily press, it is a charge which, old as it is, will never cease to be preferred in one form or another.

3. *Derivation and definition.*—All the words for 'magic' in Greek and Latin record some real or supposed fact in the history of the subject or else indicate that some particular manifestation of it was sufficiently prominent to stand for the whole.

The ordinary Greek words for 'magic' are *manteia*, *pharmakia*, and *deipnomenon*. The last two are old and popular. The former, according to the derivation offered by the Greeks themselves—*deipho yaiw kai lai aphrodis yaiw di rai rhytous pharmanon*—was specifically a pharmacum or the religious action of that word, i.e., like the Witches of Brierley, he called up the dead (*psuchas-psucha*)—a thing which in all ages has been one of the most important specialties of the magic art. It is true that this derivation just quoted is on the same of it equally descriptive of professional emetics, and, as Huxford observed, "the two conceptions are not incompatible." The *yaiw* may very well have been both, and, so we shall assume, the old *pharmakon* in such things as medicine, he is giving a very gross distortion of a spiritual and particular type of magic with which he himself is acquainted quite familiar. The other two, no doubt, much feared by the multitude in general, had he was also much, and less a reliable character, and in other respects the association with a power of his type were such that of the three ordinary names of 'magic,' *pharmakia* appears always to have been the most distinctly mysterious. The preeminence of *deipnomenon* in this connection is due to the primitive idea that the action of any drug (*pharmakon*)—using that word in its most extended application—is due to magic power. In its original sense *deipnomenon* means the medicine which deals with the magic properties of plants and charms. Hence the *deipnomenon*—in all countries the primitive character of the doctor, the apothecary, and the magician (*magician* or *pharmacist*)—was the magician whose specialty was this genuine branch of the subject, and the *deipnomenon*, i.e., the 'drug' which he prepared, was a magic charm. As such, the efficacy of the *deipnomenon* is enhanced, if not actually conditioned, by the incantation which generally is associated with some stage of its history. In most cases, too, it must be discovered, prepared, or given under certain conditions or in a certain way. Of course, its effect may be helpful or harmful according to the intentions of the giver. Hence the secondary use of the word in the sense of either a 'poison' or a 'remedy.' Homer himself generally distinguishes by the use of an adjective (*Oios ioi* = evil). The origin and use of *pharmakion* (Lat. *magica*), from which, through the ecclesiastical adjective (*drugs magici*), our own word is derived, are not

milde Kerkerei,' in *SVV* iv 2 (1900) pp. 70-84.

* In Darmstadt, South, ca. 1900. P. 1000.

excellent illustration of the Greek and Roman attitude towards an alien faith to which attention has already been made. In its original and restricted sense *magia* meant nothing more than the religion of the Persian Magi (see, e.g., Plut., *Alibi* 1. 12 A). It is well known that this faith, which was imported to Greece by the Magi (q.v.), takes rank as one of the great religions of the world. But it was imported, and had no official standing; even though impressive, it was unestablished. Between these two facts *magia* became a general term for 'magic' as early, at least, as the 4th cent. B.C., as we see from Theophrastus, *Met. Phys.* 12. 17, and, perhaps, Aristotle, *frag.* 351 (though this is only an indirect quotation by Diog. Laert. *proem.* 1. 5), and thereafter retained no apparent trace of its specific and prehistoric origin. *Magia* is perhaps the most colourless of the three words *magia*, except when it returns to its original and distinctive use, in a pejorative term for magic in general; *goetia*, when used generally, is possibly fuller than the others of vague and doubtful associations; but otherwise there seems to have been no great difference between them in current speech. Herodian, e.g., defines *magia* by *goetia*, and for Porphyry the general term for 'magic' is *goetia* (superior) and what ever may be denoted from it is *magia*. The *Myrica* (q.v.) Porphyry de *Abstin.* 11. 67) distinguished theoretically the use of these words: they distinguish between good magic and bad magic, and enter into all sorts of subtle speculations regarding the hierarchy of demons through whom aid the good or the bad magic, as the case may be, is able to accomplish its purpose. The Alexandrian school of philosophers undertook to draw a distinction between *magia* and the particularly profane *goetia* of later days. But Augustine (de *Civ. Dei* 2. 6) is too much of a practical, clear-headed Roman not to see the essential weakness of the entire theory. The worship of God, he says, is a matter of 'simpliciter scilicet aliquid placuisse, non incantationibus et carminibus necesse est curantibus arte compositis, quam vel magica vel deusdemonum nomina possint vel honorificentibus theurgis vocant, qui quasi conatur ista docere et illis artibus docit, alio deusdemonum, quos et maleficia vulgo appellat (non enim ad goetia pertinet docere), alio autem deusdemonum videtur volent, quibus theurgis docentur, cum et utique ritibus habundant, dumtaxat obsecrant et sacrificia angelorum.' In other words, Christianity is orthodox, therefore all else is heterodox, i.e. magic. And, whatever we call it, however we disguise it, magic is magic. This, of course, is nothing more or less than our familiar old criterion of orthodoxy, unimpaired and unshaken by the fact that Christianity instead of paganism happens to be the official and legal standard of comparison. For the Romans themselves—at least, after the 1st cent. A.D.—the difference between the magician, the magician, the enchanter, and the sorcerer was only difference of degree.¹

Pliny's opinion (*HN* xxx. 9) is that magic began with medicine, and that the chief causes of further growth were the admixture of religion and astrology (*ars mathematica*)—all with intent to deceive. In the same way magic is extended to alchemy and divination (Tert. de *Idol.* 9, de *Cultu Fem.* 11, etc.). Hubert rightly observes² that, in spite of the fact that the Chaldei and the plain magicians are in the same class, a sharp distinction should be made between astrology and magic. The business of astrology is to foretell the very things which it is the business of magic to prevent or, at least, to modify. If, therefore, magic enters into astrology, it is for that purpose (*Pap. Paris*, 2591, 2601, 2610). Hubert does acknowledge, however, that the astrologer's ceremonial in consulting the stars derives no small part of its efficacy from the fact that it has so much in common with the incantations of magic. We might, perhaps, add that the whole 'science' of astrology is based upon a type of reasoning so primitive, so nearly akin to that upon which magic itself is based, that one might be excused for failing to see sometimes where magic begins and astrology ends. There was at least one large and especially popular class of astrologers about whom there could be no doubt: the so-called *laryngomantes*, or astrological quacks, whose entire practice was founded on speculations regarding the mystic properties and powers of mere numbers. The Roman legislators were quite justified in believing that, if there was any distinction between this theory and the theory of magic incantation, it was a distinction without a difference.

It is also quite true, as Hubert insists, that alchemy should be reckoned *per se* as a science. We might add, however, that alchemy never had

a chance to be reckoned *per se*. Not until it assumed the *alias* of chemistry was it able to escape from the old associations with magic (see ALCHEMY).

It has already been noted that divination, even by the old criterion of official sanction, occupies a more or less indeterminate position between magic and religion. Indeed, *magia* and magic are so thoroughly commingled that even in antiquity parlance the one is often merely a synonym for the other.³ In others a fairly sharp distinction is supplied by official sanction. *Nekyomantia*, for instance, was religious if used in a family cult, i.e., it was presumed that a man has the right to call up his own ancestors if he pleases. By a somewhat similar presumption it was also sanctioned in the cult of the heroes.⁴ Under any other circumstances it is not only magic, but one of the most formidable and characteristic operations of magic. The same distinction holds good in another very important and extensive branch of divination, one in which every one was interested and which all the schools of philosophy, especially the Stoics, investigated and discussed at great length—the *nocturnal*, valuation, and interpretation of dreams (*oneirocritica*; see DREAMS AND SLEEP, vol. v. p. 301, and cf. Artemidorus, *Oneirocritica*, a curious treatise of the 2nd cent. A.D. which still survives). The method officially sanctioned for securing true and prophetic dreams (*oneirocritica*, *oneirocritica*) was *incubatio*, but the magic papyri (esp. the *Pap. Lugd. Batav.*, Leyden, 1843-56, v. vi) are full of *oneirocritica*, formulae and charms for obtaining such dreams. Hubert would also include within the sphere of magic such practices as divination *per sortes* with various of Homer, Vergil, or the Scriptures, *pyromancy* (Athen. vi. 80 (261 F)) and, in general, any ceremonial for purposes of divination which implies the use of magic rites in our sense of the word. By that criterion, of course, we should agree with Hubert that divination in private cults was strongly tinged with magic. The same was true even of official divination, although this was when the oracles were revived in the 2nd cent. and was for historical reasons. In all these cases, however, magic was distinguished from religion by the usual criterion of official sanction.

II. MYTHOLOGICAL PERIOD.—Until the age of Pericles the history of our subject is largely confined to what Hubert calls the 'mythology' of magic. This is partly due to the fact that our record is so fragmentary and that what survives belongs to types less likely to be concerned with such a subject. But it is fairly certain that not far from the time of Pericles magic itself rapidly assumed greater importance in the everyday life of the nation. By that time the average man's faith in the old gods was rapidly diminishing; and among the factors contributing to the growth and spread of magic and kindred ideas in any people the decay of orthodox belief is by no means the last to be considered.

1. The magicians.—Among mythical magicians, the Telechines (or Telechini), the Dactyli, the Carates—and in connexion with the Carates the Corymbantes (see KORYMBES AND KORYMBANTES)—hold a position which amply illustrates the fundamental ideas about magic already mentioned. The first three were reckoned the primitive pre-Hellenic inhabitants of Greek lands—the Telechines, of Rhodes (Strabo, p. 472; *Diod. Sic.* v. 55, though here, as with the others, there is a tendency to confusion in names and places of origin); the Dactyli, of Crotan or Phrygian Ida (Strabo, p. 265; Apoll. Rhod. 1. 1129); and the

Curtes, of Acarnania.¹ As such, they were all regarded as servants of the gods and, indeed, as themselves more or less divine; and, in some cases, they actually had a cult.² Even the Telchines, a synonym of spitefulness in the folklore of Greece, were in their time founders of cults (Diod. Sic. v. 58; cf. Paus. ix. 19. 5). But they all belong to the old order, they are all heterodox, they are all classed as *tytēres* (Nonn. xiv. 38 f.; Strabo, p. 801).³ Indeed, the Telchines are inimical to the gods and spiteful towards men. They use the water of the Styx in their charms (Nonnus, *Despys*. xiv. 38); they are malignant sorcerers, who wither the plants, ruin the crops, and make barren the domestic animals.

Most notable is the position of these clans in the history of the arts. As the Cyclopes were the servants of Hephaestus, so these semi-divine corporations of smiths were the first workers in iron and copper, gold and silver; in fact, they were the inventors of metallurgy. Hence the Telchines in particular are aptly compared by W. Pape⁴ to the *Kobolds* of Germanic mythology. These clans of demoniac master magicians know all the secrets of nature. The Daedyl were masters of music and of the healing art. They taught Orpheus (Diod. Sic. v. 64) and, long afterwards, Pythagoras. Palaeus, Iasius, Akemides, the three great physicians of the epic, are all Daedyl. Later, they were regarded as inventors of the famous *Ephesia Grammata* (Clem. Alex. *Strom.* i. 15 (PG viii. 781)). The Centaurs Chiron and Nessus are also masters of the healing art. The gift of prophecy, though naturally common to all by reason of their magic powers, is especially associated with the Curtes. Among all nations the most notable symptom of the power to prophecy is an ecstatic state of mind. The assumed origin and pattern of the Corybaean worship, the best known and most widely spread cult of this nature among the Greeks and Romans, was the wild noise and clatter of the armed dances of the Curtes around the baby Zeus—really a primitive spell, an *atroposion*, to keep the child from harm (see KOURTES AND KORYBAETES).

The great individual magicians of Greek mythology are Prometheus (Apoll. Rhod. iii. 245; Val. Flac. vii. 266), Agamedes,⁵ Melampus (Apollod. ii. ii. 2), Cleone (id. iii. xii. 6), Pamphae (id. iii. xv. 1), Agamede or Porimede (Roscher, s.v.; Theocrit. ii. 16 and schol.), Circe (Roscher, ii. 1183), and Medea (id. s.v.). The special, though not the exclusive, interest of all is *pharmakia*. Prometheus, the wise and kindly Titan, belongs to the old régime. Melampus comes from Themely, the distant land of magicians. All the rest (except Cleone, and even she is a water-nymph) are in some way connected with the sun or—which amounts to the same thing—with the sea or the moon. Agamedes is the grandson of Poseidon. The rest are descendants of Helios. Agamede is also the beloved of Poseidon. The greatest of all are Circe and Medea—both of the seed of Helios and Poseidon, both from Colchia, the distant land where the sun-god himself rises at dawn from the ocean stream.

Circe.—In the Homeric account—the most marvellously correct and sympathetic portrayal in all literature of her curious, abnormal, not quite human type—Circe dwells far away in the mystic and trackless seas. Cruel, but no more consciously cruel than the child who separates some luckless fly from its wings, this *pharmakia*, whose special power is metamorphosis, amuses herself with sending such wandering mariners as come within her reach to drink magic potions which straight-

way turn them into swine. Like any other queen of the mermaids, Circe is unmoral rather than immoral. Nothing could be more in harmony with her type than her first meeting with Odysseus and their subsequent life together, or than the fact that, in the long run and all things considered, the Wanderer never had a more disinterested friend among women.

Medea.—Medea is a relative of Circe and, like Circe, was sometimes worshipped as a goddess (Hes. *Theog.* 906 ff.; Aleman, cited by Athenag. *Legas. pro Chrest.* 14); in fact, the Romans identified her with Angitia and the Bona Dea (Macrobi. i. xii.; Serv. on *Aen.* vii. 750). Of all mythical magicians she is most distinctly the sorceress, and her powers as such are the most varied and terrible. As Hubert says,⁶ she is evidently the most highly developed personality in a group of homonyms. It was therefore the constant tendency of tradition to make her the originator of rites and charms which previously had no definite pedigree at all or were attributed to some more obscure rival. At all events, in song and story, in the long annals of magic itself, there never has been a sorceress to compare with Medea. Medea, the beautiful and awful Colchian, as awful as her mistress the goddess of the crossways, Medea *rephaima*, daughter of Aletes and granddaughter of the sun-god, is still the arch-enchantress of all the Occident. She is first and foremost a *pharmakia*. It is therefore particularly, though not exclusively, from her knowledge of *pharmakia* that her power is derived. Her box of magic simples is often mentioned (Apoll. Rhod. iii. 92, iv. 26), and in art she is often represented as holding it in her hand. Her charms are innumerable.⁷ She can restore youth, bestow invulnerability, lull the dragon of the golden fleece to slumber, quiet the storms, make the rivers pause in their courses, call down the moon from heaven, etc. Indeed, Apollonius's description (iv. 1065-72) of her procedure when, from the deck of the Argo, she cast the evil eye on the giant Talus far away on the cliffs of Crete and brought him down to his death is enough to chill one's blood. But Medea is also beneficent, and K. Saenger (in Roscher) even suggests that this was really her primitive character. She heals the wounds of the Argonauts, cures Hercules of his madness, frees the Corinthians from a famine, and is even a prophetess.

Even in the fancy of the unlettered her memory never fades. On the contrary, the popular tradition of her continued to grow in its own way (Tib. i. ii. 51, note, ed. K. F. Smith, New York, 1913). Special feats of magic were supposed to have been her invention (e.g., Paus. ii. xii. 1), and, as the line just cited from Tibullus suggests, we may be sure that the *Neri*

¹ *scandium valentinum*

Medea minor divaricat aditu

of Canidia to which Horace refers (*Epod.* xvii. 4) contained more than one charm claimed to be Medea's own. So, too, the magic plants and simples for which Themely was so famous were supposed to have sprung up in the first place from the box of charms lost by Medea as she was passing over that land with her winged dragons (schol. Aristoph. *Nubes*, 746; Aristides, i. p. 76 (Dindorf)). Her fame in the written word is unique. We are obliged to agree that she never lived among men; she was merely a child of popular fancy and the foster-child of a long line of literary artists few of whom were men of transcendent genius; and yet she emerges as perhaps the most wonderful woman in all classical antiquity. Poets, historians, orators, philosophers, even unimpassioned grammarians

and commentators—few fail to mention her. Ovid never escaped from her spell. From Homer to the last feeble echoes of rhetoric, and again in the renaissance of the modern world, here is a dominant personality, and the story of her love and her lover, her betrayal and her terrible revenge, has never grown old or lost its interest and charm.

As we might guess, Medea is the typical Græco-Roman enchantress. Her connexion with Hecate, her methods of discovering, securing, preparing, and administering her *pharmaka*, and the large preponderance of *pharmaka* itself in her theory and practice of magic are all typical of every other enchantress both in literature and in life from Homer to the end of the classical world.

2. Their methods.—*Pharmaka* are either to be swallowed or to be applied outwardly as salves or plasters. The distinction is medical, but it is also Homeric, and applies equally well to magic at any time. Circe uses a salve to restore her victims to human shape (*Od.* x. 301 f.); Medea uses another to render Jason invulnerable (*Apoll. Rhod.* iii. 1041 ff.), and still another—in the form of an aspersum—to put the dragon to sleep (*ib.* iv. 188); in the old Lesbian folk-tale Aphrodite gave Phaeon a box of salve which, when applied as directed, gave him youth and surpassing beauty (*Ælian, Var. Hist.* xii. 18; *Serv.* on *Æn.* iii. 279; *Palaeph.* 49; *Lucian, Dial. Mort.* ix. 2; *Roscher, a.v.* 'Phaeon'). The shirt of Nessus and the robe of Circe belong to the same type. Pamphele (*Apul. Met.* iii. 21) went so far as to have a box filled with little caudata, each containing a special salve for a given metamorphosis.

Quite as ancient and characteristic is the *pharmakon* taken as a drink. So Helen, herself a sorceress, administered her Egyptian nepenthe (*Od.* iv. 220-223); so Circe effected all her transformations (*ib.* x. 237); so Medea performed some of her feats. And here, again, the method is typical of later times. One branch of it—the use of *pharmaka* or *potula amatoria*, i.e. drinks to inspire love—is perhaps the commonest and most characteristic feature of all ancient magic. It is to be noted here that in Circe's case the process is not completed until she touches the victim with her *pharmakon*, or magic wand. In art Medea is frequently represented with a wand; with a wand Athena makes Odysseus look young again (*Od.* xvi. 172); so Hermes overpowers our senses (*Æl.* xxiv. 343; *Od.* v. 47); and, as every one knows, to this day no magician's outfit, even if he is nothing more than an ordinary sleight-of-hand performer, is complete without this ancient and dramatic accessory. The use of the wand seems to be an application of the doctrine of sympathy. It facilitates the transfer of the magician's power to the object upon which he wishes to exert it. But in all cases the wand is a help rather than an actual necessity. Except, perhaps, in the case of the gods just mentioned, who, as such, are too powerful to need it, the really essential thing is the *pharmakon*, and, as we have seen, the Græco-Roman theory of magic presupposes that Circe had already prepared her *pharmakon* to the accompaniment of the proper charm, and that Helen's nepenthe had been similarly treated either by herself or by the specialists from whom she had procured it.

The same rules hold good for *pharmaka* in the art of healing. The sons of Autolycus bind up the wound of Odysseus, and stop the flow of blood with an *ambrosia* (*Od.* xix. 457); the divine physician, Asclepius, follows the same methods (*Pind. Pyth.* iii. 53; *cf.* iv. 217; *schol. Isthm.* vi. 53; *cf.* *Soph. Oed. Col.* 1194 [Jebb]), and at all times the use of incantation with a remedy was as characteristic that one of our richest sources for the study of *pharmaka* as magic is the works of the physicians

from Hippocrates to Marcellus. Not that men like Hippocrates and Galen were much impressed by the magic of medicines; but their patients were, and any good doctor learns that his most powerful allies are the patient's own determination to recover and his belief that he is going to succeed. In popular medicine, of course, the survival of magic is much more marked. Here, too, the practice of pre-Periclean times is typical. The case of Iphiclus (*Apollod.* i. ix. 12; *Roscher, ii.* 308) is an excellent example.

For ten years Iphiclus could have no children. At last he consulted Delaëpus the seer. Delaëpus, whose specialty, like that of Moyses the Argonaut (*Apoll. Rhod.* iii. 914 ff.), was the language of birds, consulted the crows. The crows said that ten years before, while constructing a tomb, Iphiclus had discovered his father Phryonius with the knife. It was then discovered that the knife had, at that time, and presumably by Phryonius himself, been struck into the tree with which the life and well-being of Iphiclus were bound up; and that it had smothered there ever since. The knife was removed, the rust scraped off and prepared as a *pharmakon*; and, when Iphiclus had taken it as prescribed, he immediately recovered his power. Similarly, the wound of Telephus could be cured only by the rust on the spear of Achilles by which the wound had originally been inflicted. The principle is, of course, frequently illustrated in the later history of Græco-Roman magic, and still survives in our own homely saying that 'the hair of the dog cures his bite.'

Other branches of magic referred to in this period are equally typical. According to Homer (*Od.* x. 518 ff.), Odysseus learned from Circe how to call up the dead, and the ceremonial of *necyomantia*, as the poet pictures it, always remained practically the same. Indeed the antics of Empedocles, as described by Diog. Laert. (viii. 89, 92 ff.), show clearly that the type of the *nekyia* became finally fixed at a very early period. Again, the bag of winds given by Æolus to Odysseus (*Od.* x. 16 ff.) repeats the symbolism of wind and weather magic in all times and countries.⁶ The same is true of the primitive rustic magic attributed to the Telchines. Finally, the love-charm known as 'drawing down the moon' was certainly familiar long before the time of Sophron, who, according to Suidas, was a contemporary of Xerxes. Presumably this charm was from the first looked upon as the special property of the Thessalian witches. At all events, the idea was firmly fixed in the time of Aristophanes (*Nubes*, 740) and was never afterwards forgotten.

III. FOREIGN INFLUENCES.—We have seen that, in conformity with the law of distance in time or space or both, the early Greeks attributed special magic powers to their alien predecessors, the Telchines, Dactyls, and Curetes—apparently, too, the Pelasgi—and that unusual activity and ability in magic were attributed to what at the time were felt to be such distant countries as Colchis, Egypt, Thessaly, and even the Islands. As time went on and the horizon of the known world became correspondingly wider, such local centres became *per se* more and more distant, and the strange tribes of the African deserts, the mysterious nations of the Far East, and the still more mysterious peoples of the Far North took their turn as redoubtable magicians.

But the primary always remained with Thessaly. In the time of Aristophanes as in the time of Apuleius, Thessaly was *par excellence* the realm of magic and magicians. The literature is full of it, and evidently the literature was in this respect a faithful reflexion of average opinion in the world at large. Numberless passages might be cited to show that in the Athens of Pericles, as long afterwards in the Rome of Augustus, the average professional enchantress found it 'good business' to advertise herself as a 'genuine Thessalian.'

Orphism.—Thrace too, though Pliny (*HN* xxi.

¹ W. Mannhardt, *Antike Wald- und Feldkulte*, Berlin, 1897, p. 20 f.

² *OSB*, pt. i, The Eagle Art, London, 1911, p. 519 ff.

11.) denies it, was another famous locality for magic. But Thracian magic, as Hubert warns us,¹ was really another name for Orphic magic. Now Orphism itself was not essentially magic; on the contrary, it was not only a religious movement but a religious movement of the most momentous importance in the spiritual development of classical antiquity and ultimately of the entire Western world (see ORPHISM). But it was heterodox and, therefore, 'magic.' This seems to be the first great and definite example within historical times of the impingement of a strange religion on Greek orthodoxy. Aristophanes and his fellow poets make all manner of fun of the Orphics, and such a passage as Euripides, *Cyclops*, 336 ff. (cf. Plato, *Rep.* 364 E), shows that Orpheus, like Minerva, had already become an inventor of magic, a sort of protomagician and doctor.² Finally, Orpheus the magician, as he appeared to the popular mind of the 5th cent. B.C., became a character of great importance in the mystic magic of later days,³ the rites of the Orphics were associated with those of the Chaldei, the Orphics claimed Orpheus as their founder, and he was even made one of the founders of astrology and alchemy. Indeed, as Hubert says,⁴ it is often difficult to distinguish between Orphic texts and magic texts. Further confusion was caused by the lustral ceremonies peculiar to Orphism, and to the association of Orpheus with the cult of Selene and Hecate. So far as the average man was concerned, the distinction between the *sympota* and the *adversus* and the unattached priests of Orphism (Plato, *Rep.* 364 B; Theophr. *Char.* xxx [xvi])⁵ was practically negligible. The standing charge against them was their emphasis on mysteries. But Orphism itself suffered from the fact that, being a strange religion, it was at once claimed as mere magic. As such, it had no standing and inevitably began to deteriorate. It justified more and more its new name of ordinary magic, and its adherents assumed more and more the habits and point of view of ordinary magicians. On the other hand, ordinary magic was enriched and enlarged, as usual, by contact with new principles and methods of procedure. Here, of course, we have one important reason for the incomparable wealth and variety of Graeco-Roman magic.

The Magi.—But of all these foreign influences on native magic the religion of the Persians, i.e. of the Magi, was perhaps the most important. At any rate, in the ordinary opinion of later times it was the type of all such influence in general. An almost immediate result, e.g., of absorption by its native rival was the designation of the new combination as *perusia*. As we have seen, this was not later than the middle of the 4th cent. B.C.; we are therefore safe in assuming that by that time the Greeks had already drawn the inevitable corollary, afterwards generally accepted, that the original fountain-head of the new combination was Zoroaster, the Persian. The intrusion of Zoroaster upon magic is characteristically reflected in the later history of the subject. Thus, as it was popularly believed in the ancient world that great scholars and sages—especially if, like Pythagoras, Epimenides, Democritus, and even Plato, they had also travelled in foreign parts and had been vouchsafed the ineffable mysteries of the Oriental religions—were thereby mighty magicians, if not actually the first to reveal their wondrous art to the world at large (Val. Max. VIII. vii. 7, art. 2; Solinus, 2; *HN* xxx. 31, xxiv. 106 ff., xxv. 13 ff.;

Plut. *Sympos.* viii. 9; Aul. Gell. x. 12; Apul. *de Mag.* 27, 31; Diog. Laert. ix. 7; Lucian, *Nyctomachia*, 6; Apoll. Tynn. Ep. xvi), we now hear that Pythagoras was a pupil of Zoroaster; indeed, we are told still later that he was also a pupil of Zaratas the Chaldean (Lobeck, *Aglaophamus*, p. 471). Democritus broke into the tomb of Dardanus in order to secure the wondrous MSS buried with the defunct; and others say that, after being initiated by the Persian Osthanes, he became one of the fountain-heads of the tradition of alchemy.

Of these Persian magi associated with the tradition of Graeco-Roman magic the most famous was Osthanes (*HN* xxx. 8, etc.). His special prominence was partly due to the belief that he had committed to writing all the voluminous and unutterably precious but, until his time, entirely oral tradition of ancient magic (ib.). The first book on medical magic was attributed to him (ib. xxviii. 6), and also certain apocryphal books on alchemy.⁶ Of all the authors on magic he is the most frequently referred to, and his name may be found cited as an important authority in 'dream-books' still for sale.

As we shall see, all this foreign influence on magic was much discussed by the philosophers (Diog. Laert. *proem.* 1). One of the most notable contributions must have been the so-called *Mayeiai*, usually attributed to Aristotle (*Frag. Aristot.*, ed. Ross, frag. 32 ff.). Suidas (s.v. 'Antisthenes') does well to doubt Aristotelian authorship, for the symptomatically childish statements referred to it are eminently uncharacteristic of that residuary legatee of Hellenic thought, the hard-headed and highly intellectual Stagyrta.

IV. ITALIC MAGIC.—The traditional history of Italic magic is not so well attested, but the assumption that, generally speaking, it was quite the same as that of Greece is fully supported by such testimony as survives. The first Roman reference to magic is the law of the Twelve Tables ('QVI FRIGES EXCANTABIT . . . NEVE ALIENAM SEGETEM PELLERETUR')⁷ which forbids the transference—by magic—of the crops growing in other people's fields to your own. This primitive and universal explanation of the reason why the wheat-crops in your neighbour's field are full of grain and yours are not never died out among the Romans. It is illustrated by Pliny's typical anecdote of one Furius Chresimus (*HN* xviii. 41), and as late as the 6th cent. A.D. we are told by Agobardus of Lyons, *de Grandine et Tonitruis*, 2 (*PL* cliv. 146), that in his time the belief was current that the witbes had formed a sort of trust and were transporting all the crops in air-ships to a land with the significant name of 'Magonia.'

A certain amount of magic of this primitive type is preserved by the Elder Cato (*de Agr.* 70 f., 73, 96, 102, 137, 156-160) and Varro (*de Re Rust.* I. ii. 27) and is more or less discreditable in later authors (e.g., *HN* xi. 5, xxviii. 4; Sen. *Quaest. Nat.* iv. 7; Serv. on *Eccl.* viii. 88; Aug. *de Civ. Dei.* viii. 10; Pallad. I. 36). It will be observed that the only difference here between magic and religion is that religion is officially sanctioned, while magic is not. The effect of the law of the Twelve Tables is simply to establish this distinction from the legal point of view.

Divination, as usual, occupies a more or less indefinite position between religion and magic. Hence *nepymantia* was practised to a certain extent by private individuals, and Cicero's accusation of Vatinius (in *Vatin.* vi. 14) is not so extraordinary as it sounds.

⁷ Lobeck, p. 68.

The usual term for a magician is *magus*, but the word does not come in the law until Diocletian.¹ *Magus* is the generic name for any magic ceremony, whether legal or illegal, and sometimes or sometimes as the epithet of a magician is used in the same way. The *magus* in Cicero's time was still more or less associated with his Persian origin, but with the first year of Tiberius² he comes under the ban of the law, and after Trajan's time the word was applied to any one who practiced illegal magic (Cic. *Flaccus* 12. 16. 4; Cic. *Pisces* 12. 16. 7). *Magus*, 'wise woman,' is probably one of the oldest words for a 'witch' in the language, and the fact that it also means a 'bard' is a sufficient indication of the *magus*' magical position as well as of her specific functions as a magician. She is one of the standard characters of the Roman stage (*Terence* (*Truculentus*, 11. 1. 10; *Andria*, 1. 1. 10; *Phormio*, 1. 1. 10; *Terence* (*Truculentus*, 11. 1. 10; *Andria*, 1. 1. 10; *Phormio*, 1. 1. 10)). It is a name for which records the popular Roman explanation of *Terence*.

As the Greeks looked upon Themis, so the old Romans appear to have looked upon Etruria, as a land of magic and magicians. Among other accomplishments, the Etruscans knew how to call up the dead, bring on rain, and discover hidden springs (Wilmow, in *Pauli Wilmow*, s.v. 'Aquila'). So, too, such ancient and mysterious peoples as the Sabines, Marsi, and Falisci were particularly famous for certain magic powers (Var. *Ag.* vii. 786; Hor. *Epod.* v. 78, xvii. 20, 60, Sat. i. 12. 20 f.; *HN* xxi. 78; Ovid, *Fast.* vi. 141 f.). The Romans moved the Etruscan *haruspices* at an early date by naturalizing it. Cato (*de Agr.* v. 4) classes it with the rituals of the *augures*, *haruspices*, and *Chaldei* as a matter which any solid farmer would do well to avoid; but, although he himself was doubtless unwary of it, his own charm for a sprained hip has a suspiciously foreign sound. Even then Roman magic had been exposed for some time to the influx of foreign religions which set in soon after the Second Punic War; the overpowering influence of Hellenism began still earlier; and, as we have seen, Greek magic itself had been thoroughly commingled and overlaid with foreign elements. Finally, our principal Roman source for the details of magic practice is the poets—and the poets confine themselves for the most part to the Greek tradition. The result is that after Cato's time we are dealing not so much with Greek magic or Roman magic as with the magic of the Graeco-Roman Empire.

Before referring to the ancient literature connected with this subject—originally enormous and still formidable—it should be observed that no small amount of magic of a certain type had already passed into the category of what Hubert aptly calls 'magic eternal,' i.e. magic too old to have a definite origin, and so common that the fact that it was ever magic at all has long since been forgotten—in short, magic that has been secularized and is reckoned merely as much scientific knowledge already acquired. This explains why Pliny, a hard-headed Roman who had no use whatever for what he would define as magic, is for us a principal source for those magic formulae and incantations which long usage had made a part of medicine and the various sciences with which he deals. And to a greater or less extent similar material may be found in any other ancient authority who deals with the same matters. One of the most important themes of Graeco-Roman science was the tradition of the given subject. Perhaps this explains the curious fact that in the course of time the very word *magia* itself acquired the secondary meaning of 'magic.'

For these as well as for other reasons already given, few sources are so valuable to the student of Graeco-Roman magic as the ancient treatises concerned with medicine, especially if, like Pliny, the author is an inveterate collector of useful information, or if, like the *de Medicamentis* of Marcellus, the book is intended for home use. One of the most notable and characteristic develop-

ments of antiquity, especially during and after the Alexandrian age, was the extent to which every conceivable subject of a scientific or quasi-scientific nature was treated as literature, particularly as a theme for verse. In such cases whatever magic there was in the subject was rarely forgotten. Valuable sources for the magic of medicine, therefore, are the *Theriacae* and *Allopathicae* of Nicander (even more famous were the lost poems on the same subject by *Emilius Macer*) and the long passage on snakes in Lucretius, ix. 807-887, which doubtless owed much to Macer. Particularly valuable, too, are those writers who deal with some homelier branch of medicine, such as the art of the veterinary—like *Palladius* and the authors of *Hippiatrica* and the *Medicamenta*. Especially notable among physicians are *Altius* of Amida, *Theophrastus* of Nemea, and *Alexander* of Tralles, but, above all, *Cyranides* and *Dioscorides*. *Scribonius Largus* and *Serapion* of Sammonia also might be considered. In short, any ancient doctor, however wise or learned, is likely to contribute something to medical magic.

The writers on agriculture and kindred themes (e.g., *Cato*, *Varro*, *Columella*, the author of the *Geoponica*, *Gargilius Martialis*), the writers on botany, beginning with *Theophrastus* (*Historia Plantarum*), the naturalists, and the writers of *pericula*, like *Neptunia*, are valuable. The same is true of antiquarians like *Gellius* and *Macrobius*, of the *Paradoxographi*, of the *Agrimensores*, and of the *Pericographi*. In short, omitting for the present that large and important class of writers who deal with the subject merely as a literary asset, any ancient author, no matter what his theme may be, is likely to contribute something to our knowledge of contemporary magic.

It is the philosophers, however, especially the philosophers of a certain type, who are most intimately associated with the most remarkable phase in the history of our subject. We have already seen at how early a date the spiritual life of antiquity began to feel the impact of foreign ideas and systems. The Orphics, the Magi, the worship of *Mithra*, the *Assyrians*, the *Babylonians*, the *Phoenicians*, the *Egyptians*, the *Hebrews*—these are merely the most important. And the process was facilitated to an indefinite extent by the conquests of Alexander, as it was again later by the extension of Roman power to whatever seemed worth while in the way of territory. Laws were passed and, as we have seen, were severely enforced. But they appear to have been practically powerless. The classical world was a babel of creeds, and in the time of Augustus the great capital was alive with a dozen different kinds of magicians, from the lowly *sage* to the impressive *Chaldei*. As yet the average man of birth and education was not, as one might say, dangerously afflicted by these different varieties of heterodoxy; but already powerful disintegrating influences had long been at work. As early as three hundred years before Augustus, the great tide of mysticism and related ideas was already rising. Orphism was prominent in it. But Orphism (and, for that matter, any other specific creed that one might name) was perhaps quite as much a symptom as a cause. Spiritual unrest was world-wide. Men needed new wine, and the old bottles could not contain it. The craving which for generations had been more or less vague grew in volume and intensity, and finally reached its acme not far from the beginning of the 2nd cent. of our era. There were creeds then—like those of *Lais* and *Mithra*—that would seem to have just missed becoming great religions of the future. There were men, too, in that period—e.g., *Apollonius* of Tyana and the *Peripatetics* of *Lucian*—who were philosophers of the contemporary type,

¹ *Monum.*, *Strabon.*, p. 610, n. 2.

² *Id.* p. 610, n. 7.

³ *Op. cit.* p. 281.

and passed as the more or less inspired founders of creeds—all charlatans, of course, but not entirely so; and it is not altogether inconceivable that the names of some of these men might have gone ringing through the ages instead of being merely an object of occasional scholastic contemplation.

Mysticism.—The unusual prominence of magic in this period is symptomatic and due to a number of causes. There was, of course, the ignorant lower class, who always believe in magic. But there was also a higher class, fairly well educated—heavily recruited in a period like this—who had lost their faith in orthodoxy, but who lacked the character to seek the truth elsewhere and the continuity of purpose to attain it. They preferred to give themselves up to whatever promised the incredible—in a way sufficiently dramatic and interesting to gratify the taste for novelty. Under such circumstances there is always another class ready to enter to this form of intellectual and spiritual dissipation. Both these classes—the willing deceivers and the willingly deceived—are pictured to the life in Lucian's admirable skit, the *Philopseudos*, i.e. 'Liar for the love of it.' A few, of course, ridiculed the whole matter; the most notable example is Lucian himself, who has been well named 'the Voltaire of antiquity.' Others undertook to demolish magic by argument; chief among these were the Sceptics, the Cynics, and the Epicureans, i.e. those who did not believe in orthodoxy, and therefore, by our familiar criterion, were not logically driven to accept the reality of heterodoxy. Finally, however, there were also others—especially the Gnostics and the Alexandrian school of philosophy—who, after honest and conscientious investigation, became responsible for the most remarkable development of magic in Graeco-Roman times. This is the magic of mysticism in its various forms. Among the most important authorities for this aspect of the Alexandrian school are Porphyrius (*de Abstinentia* and *de Mysteriis*) and Proclus (*de Sacrificiis et Magia*). The theory, as Hubert observes,¹ is one in which the philosophical and the religious elements are still imperfectly differentiated. It is a synthesis of all the known methods of acting on the powers of the supernatural world. It is halfway between religion and ordinary magic, and capable of moving in either direction. The philosophers, of course, emphasized the religious character of the combination, but, as Augustine (*loc. cit.*) saw, and as Porphyrius himself acknowledged (quoted by Euseb. *Præp. Evang.* v. 10), they could make no satisfactory distinction between *gōstia*, magic, and *theurgy*. Their principal criterion was the character and intentions of the individual performing the given ceremony—a criterion hard to apply and of no real value in itself. Their *theurgies* became dissociated from religion; its position in society, like that of the *theurgies* of the old Egyptians, was not such as to give it the character of a religion; in fact, even without it the Alexandrian philosophy had all the outward appearance of magic. The attack on Apuleius was supported more by the various initiations of which he was so proud and the sanctity of the traditions which he invoked than by any specific acts of magic with which he was charged. *Theurgies* did afterwards enter religion, but it entered by the Gnostics, not by the philosophers—and this only in so far as the Gnostics who transformed it into a cult were recognized as a religious organization. So, too, the cult of Mithras gave a religious character to theories and ceremonies that in Pliny's time (*HN* xix. 17 f.) were described as magic. On the other hand, it was always difficult to distinguish between the Ophites and the regular associations of magicians.²

¹ Op. cit. p. 1201.

² Dinterik, p. 110.

Theurgical philosophy was violently attacked by the Sceptics, Epicureans, and Cynics (Philostr. *Apoll. Tyann.* vii. 30). Among the most important works were the *Kerá Méγw* of the Epicurean Celcus (probably the adversary of Origen, and the one to whom Lucian dedicated his *Pseudomantis*), and the *Tetraw Théw* of the Cynic Ennomus. The *Hphē Mathurōtēs* of Sextus Empiricus still survives, and it is unusually dreary reading. Like Lucian (e.g., in his *Alexander seu Pseudomantis*, *Demonax*, *Philopseudos*, etc.), they attacked not only magic, but everything marvellous in either religion or mythology. Lucian feels that the wandering priests of the Syrian goddess are no better than any other magicians. All magic is a mere pretence, all magicians are hypocrites, rascals, and charlatans, whose object is to play on the credulity of the average man.

The Christians.—The attitude of the Christians, as we have seen, was different. According to Origen, Celcus had no right to deny the reality of magic; Augustine was quite certain that the rites used for summoning demons were efficacious (*de Civ. Dei*, xxi. 8); and, indeed, the Church Fathers in general are far from denying the existence and power of magic (Epiph. *Har.* xxiv. 1; Tert. *Apol.* 25, *de Anima*, 57; Euseb. *Præp. Evang.* v. 14), especially in those early days when it seemed necessary to make the sharpest possible distinction between the Christians and the Gnostics. All heretics in general and Gnostics in particular were magicians and their faith was magic (Iren. *Har.* i. 13 ff.; Justin Martyr, *Apol.* i. 26). Paganism in any form was magic. For the Alexandrian *theurgists* the difference between gods and demons was merely a difference in degree; for the Christians there was an absolute opposition between the two: God was good, all the demons were evil; the pagan gods were all demons, therefore all the pagan gods were evil. Any and all marvels which did not happen to be orthodox were the work of the demons.

It will be seen that this is really the familiar old distinction between the orthodox and the heterodox, with a much greater emphasis on the secondary conclusion, also ancient, that the one was good and the other evil, *per se*. And the same old distinction carried with it the same old assumption that the one was just as real as the other. The Christians never seem to have realized any more than did their pagan forefathers that the difference between their gods and other people's gods might conceivably be the difference between gods who are and gods who never were. The only way to deal with the pagan gods was to classify them as evil demons (Tatian, *Orat.* viii.). They were just as real as ever; the marvels and prodigies attributed to them were just as real and just as readily believed as ever; it was merely insisted that the same had been wrought with intent to deceive. The 'idols' still nodded and gave signs from time to time, just as they had always done; but that was a *magica operatio* wrought by the demons of the old religion (Iren. *Har.* v. 26. 2; Euseb. *HE* ix. 3). The persistence of this old prodigy of nodding, etc., is an interesting proof that the Christians still clung to the old pagan idea, more or less generally entertained by the less educated class, that the gods actually inhabited their statues. Many a priceless example of ancient art has been destroyed for this reason, and the idea still survives in the famous medieval story of the 'Ring of Venus.'

Of particular interest to the student of magic of this strange period are such surviving treatises as the *Pimandros* of Hermes Trismegistus, the *Asclepius* or *Dialogus Hermetis Trismegisti*, the *Hieroglyphica* of Horapollo, and the astrological works

of Nochopos and Poteirria.¹ The literature of the magic oracles belongs to astrology as well as to magic. Another important source is the *Tabellae Deseioniae*, so many of which have come to light in recent years.²

The magic papyri.—But most important of all are the magic papyri which continue to turn up from time to time in Egypt. Hubert³ gives the list of those published down to 1904; for later finds and their discussion, the reader is referred to Von Christ (*op. cit.*), L. Mittels and U. Wilcken, *Papyriusakunde* (Leipzig, 1912), the *Archiv für Papyrusforschung*, and the occasional reports in *Bursian's Jahresbericht des klassischen Altertums*.

The magic papyri belong for the most part to the period between A.D. 300 and 500. Their discovery is peculiarly fortunate in view of the fact that they belong to a type which came under the ban of the law, and which some of the later emperors, notably Diocletian, made sedulous efforts to destroy. They are not original and independent works, but merely handbooks of magic, and, as might be expected, the editorial tradition is very poor. There are often different versions of the same thing; sometimes the hymn or formula in one version will be considerably abbreviated as compared with the same hymn or formula in another version; again, certain habitual formulae are often merely indicated. It is therefore extremely difficult to reconstruct any complete and trustworthy text of this type.

The authorities habitually quoted and the sources, so far as we can trace them, seem in some respects to bear out Pliny's statements in his account (*HN* xix. 1 ff.) of the growth and development of magic. Pliny distinguishes three principal sources of ancient magic: (1) the Persian school, founded by Zoroaster; his 2,000,000 verses on this important subject (note the childish exaggeration characteristic of this sphere) were revealed and explained to the Greeks by Othanes. Pythagoras, Empedocles, and Democritus belonged to this school, and also certain ancient Medes, Babylonians, and Assyrians. Democritus explained the magic books of Dardanus, which he had found in his tomb; they were written in Phoenician. (2) The second is the Jewish school, descended from Moses, Iannes, and Iotepas (*Pop. Mag.* p. 766; *Apul. de Mag.* 9; *Ex* 7th-12), and (3) the third is a Cypriote school.

It will be observed that Pliny makes no reference to the Egyptian school, which was particularly important and which, of course, is often mentioned in the papyri themselves. One of the most important authorities in magic alchemy is Maria, the Jewess, but the papyri also refer to real philosophers like Thales, Anaxagoras, Heraclitus, and Diogenes. The genuine magicians, i.e. the contemporary or recent authorities, are generally referred to under such names as Zosimus, Synesius, Olympiodorus, Pelagius, and Iamblichus. Now and then we find such curious and characteristic documents as a letter of the magician Nephotes to Psammetichus, a charm of Solomon, or a letter of Pitye, the Thessalian, to Othanes. This gives some idea of the attitude of the Alexandrian magicians towards the tradition which they followed.

It is no longer possible to trace the Persian, druidical, and Brâhmanical elements in this strange compound. Assyro-Chaldean influence must have been strong, but it appears to have been indirect. Jewish influence, on the contrary, was both strong and direct, the magic papyri being strongly affected by Judaism. Jewish magicians were in evidence,

and they doubtless encouraged the impression that they were the only depositaries of the genuine tradition of real magic. But, as Hubert remarks,⁴ they brought no organized system to bear upon the Græco-Roman type, but merely introduced certain powerful elements of magic. Especially important here was the Bible, which was presented in Egyptian by way of the Hermetic tradition, after being translated from Greek, and furnished part of the more or less peculiar mythology of magic at this time. Their god, as we should expect, is frequently mentioned in incantations, especially the different forms of his name (Aoth, Abaoth, Arbathas, Abrian, Adonai, etc.). Especially frequent, too, are the names of Moses, Abraham, Jacob, Solomon, and the various archangels. F. G. Kenyon⁵ has explained 'Abraxas' as a corruption of the Hebrew benediction *Ab-brahâhâ dâk-k'rahâ*, 'pronounce the blessing,' which still survives in the magic of modern times as the familiar 'abracadabra.' Hebrew words more or less corrupted are frequent in the papyri, and Christian influence is also evident; it followed in the wake of Judaism, and, though naturally not so strong, is of the same general type.

But one of the most remarkable contributions of all is that of Egypt, as we might expect of a country so ancient, so full of pretentious wisdom, with a language so utterly strange, and an alphabet which to the ordinary outsider seemed as hopelessly complicated and mysterious. The last two qualifications alone—both sovereign for charms—are enough to establish the reputation of any country as a land of magic and magicians. It may be observed, however, that, unlike the Jews, the Egyptians contributed a complete, organized system of magic to the combination. The fact that, as we learn from the *Book of the Dead*,⁶ a magician could be presented shows that the old Egyptians had long since separated magic from religion by the familiar criterion of official recognition. So far as the Greeks and Romans are concerned, the great name here is Hermes Trismegistus. He is not only the principal vehicle and interpreter of Egyptian magic, but, as we have seen, the Hermetic tradition is quite as powerful in the articulate presentation of the Hebrew contributions.

All these foreign influences on the theory and practice of Græco-Roman magic of this later period are more or less clearly traceable in the magic papyri. But it is to be observed that they are never clearly differentiated. Isis, e.g., reveals the wonderful art of magic to Horus. This is all well enough; Horus was one of the family. But Isis learned all her magic from one of the Hebrew archangels. It is equally surprising to see Sabaoth approached with Greek rites. Often special efficacy is gained by using a sort of general call to all the pantheons or—which, thanks to the doctrine of sympathy, amounts to the same thing—by adding to one god the names of the most revered gods in a number of nationalities. Magic naturally turns to the foreign religions. It also believes that the plural is more redoubtable than the singular. Hence the more or less chaotic pantheon of magic, especially in its more advanced stages, the symptomatic tendency to multiplication and mixture for purposes of power, which reflects to a certain extent the fact that magic is an outlaw, that it is not subject to official control, and that it has no assured position in the body politic.

V. THEORY OF MAGIC.—The procedures of magic, especially of magic so highly developed as was that of Greece and Rome, are, at first sight, bewilderingly complex. But the main ideas, the essential principles from which they all derive and upon which they

¹ See W. von Christ, *Gesch. der griech. Literatur*, Munich, 1898, § 210, for additions, etc.

⁶ Cf. E. A. W. Budge, *London*, 1893, p. 61.

are all loaded, are simple, universal, and eternal. The fundamental purpose of magic is to compel by supernatural means; the primary object and supposed result of every charm is some form of constraint. Possession or obsession (*ἀρεσμός*) is a constraint, any form of metamorphosis (such, e.g., as lycanthropy) is a constraint, *fascinatio* in all its numerous forms is a constraint. The ancients habitually associate the processes of magic with the ideas of binding, tying up, nailing down, and their opposites. A magic act is a *κράδαιμος*, a *κράδαιμος*, a *δέσμιος*, a *δέσμιος*; the removal of its effect is an *ἀδελφός*, a *ἀδελφός*, and the corresponding verbs are, e.g., *κράδαιμι*, *δέσμιος*, *ἀδελφός*, *ἀδελφός*. The language of charms and the details of ritual are largely suggested and guided by some form of this fundamental idea. One sees it most clearly in such symbolic acts as the tying of knots, the driving of nails, and the binding of images.

The object of every magic act is to put things or things into or take them out of a state in which certain movements, certain changes, certain phenomena must infallibly occur. A character or condition is either produced or suppressed, a spell is either imposed or removed.

1. The doctrine of sympathy.—One of the great fundamental principles of magic art is the doctrine of sympathy; but, while the doctrine of sympathy explains much, it should not be forced to explain all. This would be expecting too much of such a phenomenon as magic, in spite of the fact that its deductions are, in their way, so amazingly logical. It is also true that magic is supposed to work in two different ways; it either reaches its object independently and directly and acts at once, as it were, automatically, or—and this was the prevailing theory of the Greeks and Romans—it reaches its object indirectly through the agency of some intervening power to whom its behests are addressed and by whom they are executed. The distinction is important and enlightening; but here, again, we must not apply it too rigidly. There are cases in which the characteristic features of both methods are more or less traceable. We must not expect too much of the magician; he is not always a clear thinker, and he has an inveterate habit of calling all known powers to his aid, whether they happen to be logically related or not.

The doctrine of sympathy is most clearly seen in the direct method. The simplest and most common form among the Greeks and Romans is that in which the magic power possessed or acquired by a given thing works upon the desired object by contact. The virtue of the amulet (see CHARMS AND AMULETS) is shared by the person who wears it, the virtue of philtres and *pharmaka* of any kind is appropriated by those who take them as directed. It may be observed, however, that even here, so far as the Greeks and Romans were concerned, the supernatural power had already intervened in the preparation of the given article; and the magician's characteristic method of pluralizing for power is naively illustrated by the rule that in preparing a *pharmakon* one should combine ingredients which individually are capable of producing the desired effect. The reasoning is evident. The large use of magic of this type, i.e. *pharmakia*, helps to explain the magician's particular interest in the properties of plants and simples. For a similar reason the alchemist is particularly interested in the properties of stones and gems; some of them are sovereign for certain diseases, if ground up and taken inwardly with the appropriate ceremonial. Primitive medicine is a fearsome adventure for the patient. In rare cases the *mons inhorrens* in the object as such, but this is generally a secondary conclusion. As a rule, the *mons* is acquired, or merely accidental. Some objects are only conductors of *mons*—which explains why they can be

used for apparently contradictory purposes. Other staple ingredients in a large number of charms—such as honey, flour, rain-water, etc.—have lost their original significance. Objects are selected according to the usual rules—some real or fancied resemblances, especially the association with some god, etc. A certain thing, e.g., is yellow, therefore it is good for jaundice. Such odd names for plants as 'Jove's Beard' or 'Venus' Ears' record associations with gods, and were doubtless originally secret. The place from which an object comes is often a decisive factor: articles found in the public baths were magic. The Christians considered certain filthy animals magic because they were associated with the devil. Certain names of plants and minerals are magic because they correspond to the planets.¹ Sometimes the decision is made from etymology, true or false; the *rasens* owes its power to its name only (*HN* xvii. 131). The virtue of lead for certain purposes is due to the fact that it is heavy or cold or indestructible, etc.

One of the most important applications of the doctrine of sympathy is the use of symbolism.² As we have already seen, symbolism is even more characteristic of magic than it is of religion. Hubert³ defines two methods. In the one, which is particularly dramatic, the person or thing upon which we wish our magic to act is represented by a substitute. The most notable example of this class is the use of clay and waxen puppets. The second consists in prefiguring the desired action and result (Tib. I. vi. 53 f.; Soph. *Aias*, 1175)—

e.g., apply a stone to a wart (contact and sympathy), throw the stone away (symbolism), and the wart goes with it. Or, if you have a pain in the stomach, apply the stomach of a frog to the part affected, and your pain becomes his pain, etc. (*HN* xxi. 149; Macrobius, xiv. 126).

The same idea of contact and sympathy creates the familiar rule of magic homeopathy, that the cause of a given thing is also its remedy.

But, so far as magic is concerned, perhaps the most momentous deduction from the doctrine of sympathy is the rule that the part may stand for the whole, that the two are inseparably connected; the part is able to draw the whole to itself, if aided by magic. What Vergil called the *curae* of Aeneas had a special function and a special significance in the pretended *solatio* omens of the unhappy Dido (*Aen.* iv. 494 ff.). Without assuming the active co-operation of this principle, we cannot appreciate the true inwardness of the most striking performances of magic in classical antiquity. If, for instance, a magician can secure bones of the dead, he has a special and powerful means of calling up the dead to whom those bones originally belonged (Tib. I. ii. 46)—which is one important reason why witches were so often accused of haunting the graveyards (Hor. Sat. I. 9; Lucan, vi. 530), and in primitive times the principal reason why the corpse was so carefully watched until it was safe in the grave (Petron. 63; Apul. *Met.* ii. 21). So, too, if we wish to reach the living, it is very important to possess a lock of their hair, the parings of their nails, a garment, or anything nearly or remotely associated with them. Nothing is more intimately and entirely part and parcel of a thing than its real name. 'Rome,' it is said (Tib. I. ii. 57 f., with the present writer's note; Macrobius, iii. ix. 2; *HN* xviii. 18, iii. 66; Plut. *Quaest. Rom.* 61 [p. 279 A]; Serv. on *Aen.* I. 277; Solinus, I; Lydus, *de Mens.* iv. 73), is only the *alias* of the great city with world dominion. The true name, i.e. the name which would have enabled her enemies to conjure against her with magic, was a religious secret. So the clay or waxen image may be comparatively harmless until it has been

¹ Diderichs, p. 171 ff.

³ *Op.* ch. p. 100 f.

¹ Hubert, *op. cit.* p. 100.

ceremonially named with the true name of the person whom it is meant to represent.¹

Names are not the only words which are an integral part of the things which they represent. A similar relation exists between the verb, or the sentence, and the action described by it. Hence, of course, the theory of incantation as opposed to that of prayer in the modern sense. From this point of view the lines of Euripides (*Hippol.* 678 f.),

ἀλλὰ τὸ δαυδάει καὶ λέγει θεοειδέναι

ἡδυνάει τοι φέρει φάσμασιν ἑσπέραις,

echoed by Horace (*Epist.* 1. i. 34 f.) in

Quasi verba et voces quibus hunc laqueo daturum

Poenis et magnam morbi deponeo partem,

are true not only of magic theory in general, but of the Græco-Roman conception of magic in particular. Incantation is rarely, if ever, absent from some stage of the act. The influence of the indirect method is seen even more clearly in the fact that sympathy is often created by the incantation which accompanies the act (e.g., *HN* xvi. 98). In the exorcism of disease the incantation is often sufficient in itself. Again, a mere verbal comparison is sufficient, especially if accompanied by a gesture.

ἄλκυον ἐκ τοῦ τέρου! ejaculates Triambulo plausily (Petron. 65), to avoid possible consequences when he touches his friend's arm to illustrate where and how the unfortunate character in his story was touched by the witch.

Given, therefore, the right words in the right order and pronounced in the right way, the desired result must ensue. But which words? Ancient formulae connected with or naming the appropriate gods are, of course, valuable, but in many cases nothing can compare with ancient words in an utterly incomprehensible tongue. The most famous example in antiquity was the so-called *Sphæria Grammatea* attributed to the Dactyli.²

But it is by no means necessary that an incantation should consist of what, even in the most general sense, could be termed articulate speech of any sort. Mere music, e.g., as such is distinctly magic. The great musicians of mythology—Amphion, Orpheus, Väinämöinen, etc.—are always magicians. We no longer attribute the power of music to magic in the literal sense, but primitive men can hardly be blamed for doing so. The ancient doctors made a considerable use of music in their practice, and we ourselves have learned that it is sometimes distinctly beneficial in certain obstinate nervous disorders of long standing.

Here, however, our particular concern is with a class of sounds which are anything but musical, but which are mentioned again in the literature of the Empire as being especially powerful and efficacious in magic incantations. Lucan, vi. 686 ff., tells us that all the sounds of nature were imitated by such an expert as Erichthe, and does not fail to add his usual and characteristic catalogue. But Lucan is too anxious to tell us all he has read in his uncle's library to be of any great value in a matter like this. Whatever they afterwards may have become, we can be sure that these phenomena were simpler and more specific, that they were probably inspired by some aspect of the doctrine of sympathy, and used for a special purpose.

The Romans habitually describe them by *stridor* and *stridore*. The sounds to which these words are applied are many, and vary from the filing of a saw to the creaking of a door and the shrilling of a locust. But they are all alike in being inarticulate, high-pitched, and disagreeable. The obvious and instructive parallel is the primitive Greek *γέραια*. The *γέραια* were specifically necromancers and, as we saw above (p. 271^b), they were supposed to have received their name from the most notable

peculiarity of their magic, viz. 'from their wailing and crying among the tomb.' So, long afterwards, in Græco-Roman times the charms described by *stridor* and *stridore* are very characteristic of *necromancia*. If so, and we can hardly doubt it, the inarticulate magic charms connoted by these two words should be just those described as 'wailing and crying among the tomb,' and their purpose should be to call up the dead. Such being the case, the two most common and characteristic uses of *stridor* and *stridore* outside the sphere of magic itself are illuminating. (1) One of these is that squeaking and gibbering of the dead to which the ancients so often refer:

*Ecce inter tumulis stupor cum curvulis bustis Umbrae
Ictus dno stridore minatur* (Petron. *capit.* 157); *caethra
incertum stridit stridant umbræ* (Lucan, vi. 686; cf. Stat.
Thib. vi. 770; *Id.* *ibid.* 800; Ovidian, in *Arg.* i. 130;
Ovid, *Fast.* v. 686; Verg. *Æn.* vi. 686 f.; *Id.* *ibid.* 811;
and *Id.* *ibid.* 812).

By the doctrine, therefore, of sympathy the *stridores* of the necromancers were an imitation of the wailing and crying of the dead, and owed their efficacy to that reason. (2) *Stridor* is regularly used to describe the hoarse of the *stris*, or screech-owl—that long-drawn, shuddering scream that suggests nothing so much as the wail of the banshee, the moaning of souls that can find no rest, the ominous cry of the *phantasmas*, haunting ghosts of those who died before their time (see *HECATE'S SUPREMACY*). No wonder the *stris* is the most remarkable and ill-omened bird in classical folklore. Owls, disembodied spirits, or necromancers calling up those spirits—so far as the cry alone was concerned, how was one to be sure which was which? As a matter of fact, all three were more or less inextricably confused with each other, and there can be no doubt that the cry had much to do with the situation. The *stris* is associated with all sorts of witchcraft in antiquity, but especially and above all with vampirism in its various forms (see the present writer's note on *Tib.* i. v. 68). The elements are rich in examples of the type which happens to be more familiar to us, especially in the erotic sphere. The return of Proteus in a case in point (Roscher, s.v.), also the story of the Lamia (Philost. *Apoll.* Tyam. iv. 26) immortalized by Keats, and the simple and touching tale told by Phlegon of Tralles (*Mirab.* i) which is the prototype of Schiller's 'Braut von Korinth' and Gautier's 'Morte Amoureuse.'

But witches can turn owls whenever they like, and they do so regularly, when their object is some form of necromancy.

Ovid, *Amor.* i. viii. 13-18, speaking of Dipsas, the redoubtable sage with eyes of different colours ('*popula duplex*'), says:

*Hæc ego nocturnum variumque volutans
Serpentem et pluma corpus ante legi.
Serpentem, et tamen, oculis quousque pupula duplex
Palmas et quousque lumen ab orbis micat,
Recent antiquis præteritæque sapientie
Et solidum longe hæc mæne hæc hæc mæne.*

But the ever present and most gruesome side of this idea, as of magic in general, is the sexual side. Most frequently the witch is like Pamphila in Apuleius (*Met.* iii. 21). She assumes the form of a *stris* to fly to her lover; she never comes to him as a human and normal woman. The fires of hell are in her eyes, the fires of hell are in her veins, the taste of blood and death is on her lips. She is the erotic vampire—the *succuba*, as she was called in the Middle Ages—who haunts her victim in his dreams and little by little draws to herself the very marrow in his bones. Hence it is that the Græco-Roman screech-owl, who, even at her best, as Pliny substantially says (*HN* x. 84), seems to make no effort to look or act like a well-meaning and self-respecting fowl of the air, belongs quite as

¹ E. Rieu, *Psychol.* Tithonus, 1897, p. 61; often in the *Suppl.*

² See E. Rieu, in *Fest.-Wissens.* v. 1873-1878, and references.

³ See E. F. Smith, in *Studies in Honor of R. L. Giddens*, Baltimore, 1908, p. 107.

much to the kingdom of dreams as to the kingdom of birds. How can one be sure in any given instance whether the *avis* is a real *avis* or a witch in the form of one (Ovid, *Fasti*, vi. 141)? Indeed, as early as Pinus (*Pseud.* 800; cf. Propert. iv. v. 17) *striges* already meant 'witches' as well as 'screech-owls,' and this designation of what is evidently the Roman parallel of the old Greek *yētrōs* records a popular belief which showed no tendency to diminish in later days.

2. Sources of magic power. — Our surviving testimony is insufficient to give us a very clear idea how the powers of the classical magician were defined or from what sources they were supposed to be derived. For the Egyptians, as Hubert¹ remarks, the magician was like the priest in being closely associated, if not actually identified, with the god whose power he was utilizing,² and perhaps in the ultimate issue this is everywhere the explanation of his power. Particularly notable was the development of this principle among the Alexandrian *theurgists*. Here, of course, the characteristic Greco-Roman preference for the indirect method afforded a favourable soil, but, without doubt, the chief factor was the direct influence of the Egyptian theory just mentioned.

But, granted that he does identify himself with the god, how does he compass it? Is it a gift, or does he acquire it, and, if so, how? The *theurgists* emphasized the theory that it was acquired, and the methods recommended indicate in themselves the effort to raise magic to the level of a religious-philosophical system permeated with the ideas and ceremonials characteristic of mysticism. Asceticism was recommended, but, above all, the magician must be an adept. Such persons may have a revelation coming to them more or less directly by way of the fallen angels or the archangels (Tert. de *Idol.* 9 f., *Apol.* 25). Indeed, Maria the Jewess was instructed by God Himself.³ Gods, kings, great philosophers, and sages of old loom large in this aspect of later magic. The 'Book of Moses'⁴ gives us a good idea of the complicated ceremonial through which the candidate was supposed to pass in order to arrive at the perfection desired. There were purifications, sacrificial rites, invocations, and, to crown all, a revelation of the *Karpourais* (how the universe was made and the secrets thereof). This puts the adept in relation not with certain specific gods, as appears to have been the idea of the Egyptian prototype, but with the stars and planets, i.e. the universal powers. The magician, especially the magnum-alechemist, derives his power from the acquaintance with the forces of nature. He has established rapport with the universe; and, as there is also rapport between all the parts of the universe, he has extended his power over the entire universe as a whole. This, of course, is the old doctrine of sympathy on a particularly grand and impressive scale. The result of the ceremony is that the magician, the *theurgus*, is himself no longer a man, but a god.⁵

This is a conception calculated to appeal to any man whose imagination is still in working order, but it does not emerge clearly in ordinary magic. It belongs rather to mystic magic, which was the special development of curious souls, some of them really great, who believed that this path would lead them to the undiscovered secrets of life, death, and immortality. To speak in terms of the average man and of the history of the art as a whole, the ideas which determined the powers of the magician were much the same as those which dictated the choice of a magic object or the con-

struction of a charm, and which, in fact, are fundamental in the art of magic as a whole. Generally speaking, magic is a gift and, as such, it is often due to some accident of birth or to some special privilege. In some cases it is inalienable; again, it can be outgrown or easily lost. Children, e.g., merely as such, sometimes possess it.⁶ Virginity has always been considered an important condition of the power to prophesy (Geopon. xi. ii. 4; Plin. de *Defectu Crac.* 46).⁷ The idea seems to be that the seeress is, as it were, married to the god and that infidelity to him is punished by loss of the power which he gave her. The entire world seems to be agreed that women, simply as women, are peculiarly gifted in this direction (Dionys. a. *Aristot.* l. 17; Aristoph. *Nubes*, 740; Lucian, *Dial. Deor.* xi. 10, *Dial. Nereidis* l. 2, iv. 4, *De Asina*, 21). We have already seen how important they are in the mythology of Greek magic, and this is true of all magic. They are less prominent in the magic of the mystics and their brethren, but this is itself symptomatic of the ideals and pretensions of the movement. In the genuine, traditional, immemorial magic of everyday life in Greece and Rome they never lost their importance. As a *personae*, Medea was typical of her sex. The knowledge and practice of *personae* as a branch of magic were always more or less confined to women.

The distant, the foreign, the strange, the unusual, even the horrible, are all important factors. 'Magic' is a primitive name for anything abnormal. Those who come from distant countries, especially if, like the Brāhmans (Philost. *Apol.* Tyas. iii.), they are also the priests of strange and remote religions, are magicians. Hence, on the principle of 'omne ignotum pro magifico,' there are distant countries in which all the inhabitants are magicians or possess the evil eye or some such uncanny gift. Any person with the evil eye is a magician; so, too, the ventriloquist (schol. Aristoph. *Vesp.* 1014; Plato, *Soph.* 202 C; Plin. de *Defectu Crac.* 9). Anything abnormal about one's birth or pedigree is likely to give one magic powers. Persons born with a caul have the gift of prophecy. The child of incest, especially of deliberate incest, is bound to be a magician. This was harped on continually in the witch trials of the Middle Ages, but it is also prominent in ancient tradition, especially in connexion with the Magi themselves (Catalan, *sc.*; Xanthus, frag. 38 [*PHG* l. 43]; Sotion, *op. Diog. Laert. praef.* 7; Strabo, p. 735). Sometimes whole peoples, clans, or families are supposed to be magicians (Herod. iv. 105);⁸ some—e.g., the Tibbī (*HN* vii. 17)—owe it to the possession of the evil eye; others have some particular speciality.

The Ophite, the Pythia, the Mares, etc. (Pl. *xviii.* 80, vii. 12-14) can kill snakes simply by breathing on them, or can cure snake-bites merely by touching the wound with their hands. A certain family in Corinth could calm tempests (Heorych and Suidas, s.v. *Artemesia*), and so on. Many similar statements made by Alexandrian authors and others now lost are preserved by Pliny (*HN*, esp. lib. vii. and xviii.).

In the majority of such cases the ability is more or less vaguely conceived of as inborn, in others it is a secret transmitted from generation to generation. But, whether inborn or imparted, magic is a secret. Indeed, initiates were sworn to secrecy in the later days among the mystics.

3. The powers invoked. — But the most characteristic feature of Greek and Roman magic is the universal prevalence of the indirect method and its influence on the development of the art. So far as Greece and Rome were concerned, the theory of demons—those spirits to whose action practically every phenomenon is due—was as characteristic of the world at large as it was of Plato and his

followers (Plut. *de Defectu Oras.* 10). Diseases were caused by specific demons, panic was caused by Pan; such figures as the Erinyes, Nemesis, Poma, Empusa, the Maïas, *Arctyes*, and *Bacchoroi* are not only popular but very old. There are even demons whose only function is to execute the commands of the magic tablets deposited in the baths, and there are others who are merely *Arctyes*, or emanations. The efficacy, e.g., of the *tyr* demands, as Hubert observes,¹ the creation of a demon or of a special god²—a curious but characteristic retention of the primitive view that nothing in this world can happen or be except by the individual exertion in every case of conscious, energizing will.

The magician may find it necessary or advisable to consider other spirits besides the specific agents of the phenomenon in question. He cannot be sure of success beforehand. He may make mistakes, and a mistake in a ceremonial is fatal. And, even if everything is correct, the ceremony may be entirely upset by something unexpected and unforeseen. In addition, therefore, to the specific energizing demon, he considers it prudent to summon to his aid such other powers as he can command. He calls on some appropriate god, e.g., to send him the necessary energizing demon, or he summons the spirit to whom the efficacy of the rite itself is due; hence the theory of the 'familiar,' the magician's own 'demoniac factotum,' which assumed such importance in the Middle Ages.

The object, therefore, of magic was to set upon and use the supernatural powers either as energizing spirits or as auxiliaries. Some of these powers occur only in the tradition of magic itself, but the large majority are common to both magic and religion. Most important here are the demons. Plato himself (Suidas, s.v. *μαγία*), as well as the average man, attributed to them the success of any magic rite.³ The magic charms of the later period are full of invocations to demons—demons of all kinds and descriptions and exercising every imaginable function, but all of varying degrees of inferiority to the great gods. In fact, as time goes on, the realm of the supernatural assumes more and more the aspect of an Oriental despotism with a thoroughly organized bureaucratic government, all in the hands of demons. There are secretaries and under-secretaries, guards, doorkeepers, messengers—a regular hierarchy of demoniac officials, whose rank and functions are established and fixed with meticulous exactness. The only private citizens in this government are the ordinary human man and the occasional person with 'influence,' i.e. the magician; and it is curious to see how soon and easily the latter assumes the methods and attitude of the influential citizen who lives under a similar government in this world. If he wishes to reach the ear of the all highest at the other end of the line, he addresses the demon of lowest rank, the message is transmitted through the appropriate channels, and in time he gets his answer. Indeed, as in all such governments, the first demoniac underling may be so nearly human and, therefore, so much in sympathy with the magician himself as to take a really personal and lively interest in furthering the matter in hand. All this question of rank and functions was carefully discussed by Proclus and Porphyrius (*de Mysteriis Aegypti*), and, in fact, the prominence of it is particularly characteristic of their school and period. This school, it may be observed, made a distinction between good demons and bad demons, attributing the errors of *μαγεία* to the latter. The demons were identified with the Jewish angels in their function of divine messengers, and even the old pagan gods, reduced to

the rank of demons, became messengers of the universal deity (Aug. *de Civ. Dei*, ix. 10), while the archangels, Michael, Gabriel, etc., take rank with the archons of the Gnostics as tutelary gods of the planets (W. Ass. *TU* xv. [Leipzig, 1897] *passim*). With Christianity the old gods became demons, and all were considered evil. But magic, the conservative of conservatism, never gave them up, though all of them now without distinction were in the service of the devil.

One of the most important classes of demons connected with magic are the spirits of the dead, the *πενθόμενοι*, especially those who, like the *Πινδαίονες*, died violent deaths or otherwise before their time, or never received proper burial, and therefore cannot rest in their graves.⁴ The heroes, so to speak, have a somewhat higher social position, but they too are important in magic.⁵

A notable peculiarity of paganism as contrasted with its successor was the inability to make a sharp distinction between gods and demons. The obvious criterion would be power or disposition. Neither were trustworthy. Some demons were greater than some gods, and some gods were as unmistakably malignant as some demons were beneficent. The demons, therefore, were not the only powers to whom the magician addressed himself. The gods themselves practiced magic (Apollod. i. ii. 1, iii. vi. 8); indeed, Pindar says (*Pyth.* iv. 213 ff.) that it was Aphrodite herself who taught Jason how to 'draw down the moon'; and so the magician would naturally turn to them (Apul. *de Mag.* 31). The preference is, of course, for the *di inferi*—Hades, Demeter, Persephone, Hecate, the *Προζιδίαι*, the Erinyes, Gaia, Cybele, especially those who, like Hecate, Selene, and Hermes, habitually pass back and forth between the two worlds.

The greatest of all, the goddess *par excellence* of magic and magicians throughout antiquity, is Hecate-Selene,⁶ the Dea Triformis of the cross-ways, and the queen of the ghosts, who sweeps through the night followed by her dreadful train of quivering spirits. Her power is universal, but she is specially connected with the magic of love, metamorphosis, and *εἰσέλευσις*. The most famous and dramatic incantations of antiquity are associated with her. The *Incantatio*, the *tyr*, the *αὐτομάτις*, the redoubtable *spuma lunaris*, and the *rhombus* are only a few magic objects and properties directly associated with her. The school on Apoll. Rhod. iii. 478 even informs us that Circe was her daughter. At all events, Medea was her priestess, Medea was called her son, etc. Next to her, perhaps, especially in the magic papyri, comes Hermes Chthonius, often confused with Hermes Trismegistus (Diog. Laert. *proem.* 7; Porphyry *de Abst.* ii. 16).⁷

But the *Kéme Oré*, the great gods, are also addressed, and not only the great gods of foreign races—which we should expect—but those of Greece and Rome. This habit, however, belongs more prominently to the babel of the later period. Here the habit of calling on a number of gods at once, or of reinforcing the name of some Greek god with the names of all the strange gods of foreign lands who are supposed to be identical with him, or of using *Idé* as the name of the god of gods, or *Idé*, in the feminine, to sum up, as it were, all the aspects of divinity, or of combining gods in the hermaphroditic form for the same purpose—all these are so many illustrations of the magician's inveterate habit of pluralizing for power. The result is, of course, that the divinities lose all personality and, as Hubert says, 'become mere factors of a divine total.'⁸ Nothing was left but the name, and even

this was more or less concealed or defaced in the magician's characteristic effort to get at the true name, the name of power for the now somewhat vague supernatural force which he wished to utilize. Having the name and also the image of the god, he could use the force for anything desired, it being understood, of course, that such accompanying ceremonials had been performed as were appropriate for realizing the mystic presence of the god.

4. Rites and ceremonies.—Thanks to this habit of pluralizing for power, of summoning from every direction all kinds of strange and, therefore, particularly irresponsible forces, a magic ceremony was even more complex than a religious ceremony. Especially notable in all ages is the number of conditions and precautions which have to be observed. This is characteristic of any cult in which the theory of incantation still survives. Under such circumstances the immediate conclusion always is that religion is a perilous pursuit. Any man who approaches gods with an invocation so worded and presented that it is a command which must be obeyed knows that he is handling an edged tool able to cut both ways. The gods resent the imperative, especially from an inferior, and will destroy him if they can. The Roman account of the death of old king Tullus shows how dangerous it was in their opinion—even in religion, much more in magic—for an amateur to start the complicated machinery of invocation. There was an old Greek saying that 'the witch who draws down the moon finally draws it down on herself.' The saying reflects the general idea, afterwards so strongly emphasized in the Middle Ages, that the magician, of all people, is foredoomed to something like the fate of Tullus Hostilius in the end. The Greek is also apt as a specific illustration. It was generally held that of all charms one of the most difficult and dangerous was 'drawing down the moon'—so dangerous, in fact, that the magician deemed it wise to arm himself in advance with a protective counter-charm against the very power whom he was about to invoke. The *Amphylakē* *zēlē* preserved in the *Papyrus Paris*, line 3622 ff., is an interesting example of what was considered efficacious against the wrath and vengeance of *Hērma Zēlē*, 'Our Lady Moon'—a suggestive forerunner of the 'magic circle' of which we hear so much in the more pretentious magic of the Middle Ages.

The magician must also observe certain rules, likewise characteristic of religion, which, to a large extent, are suggested by the nature of the powers with whom he has to deal.¹ He, or the person in whose interest the charm is being performed, or both, must be in such a condition that contact with the spirits evoked shall be without danger. Regulations vary, but among the most common are *dyōsis*, 'purity,' abstinences at stated intervals, anointings with oil, avoidance of certain foods (esp. flesh), fasting, temporary chastity² (cf. Tib. ii. i. 11 f.; the regular *securitas* so often referred to by the elegiac poets, etc.). More rigorous and more numerous are the conditions attending the performance of the rite itself, and most important is the observance of nudity or its ceremonial equivalent.³ The costume must be flowing, i.e. without knots or fastenings of any kind, or it must be coarse, or of linen, and in the last case, either white or white with purple streamers (the ceremonial significance of colours has already been referred to).⁴ Having gone through the preliminary purifications and donned the appropriate raiment, the operator must then consider the attitude to assume. This

is vital. In most cases there are gestures which cannot be omitted.⁵ Equally important is the magician's own state of mind. He must have faith, he must put all his soul into the accomplishment of the rite (Gargilius Martialis, 10).

The time at which the rite should be performed is also very important. This is largely determined by the habits and associations of the god to be addressed, and is an immediate deduction from the law of sympathy. For magic in general, but in particular for all magic connected with Selene-Hecate, sunset and the few minutes just before sunrise are very favourable; so, too, any phase of the moon, but, above all, the new and full moon. The stars and planets for the most part became important only after astrology gave greater precision to the sort of influence supposed to be exerted by each. As a matter of course, night is a better time than day.⁶

The place is quite as important as the time, and the choice of it is again a direct deduction from the law of sympathy, as regards either the god to be addressed or the person to be affected. Roads, streets, boundaries, and the threshold are all sacred in both magic and religion. The cross-roads suggest Hecate, the graveyard *necromantia*. Both are favourite spots so far as the magician is concerned.

Finally, as we have just seen, there are ceremonies which the operator does not venture to perform unless he is armed with some sort of protective charm against the god whom he is addressing, or against any one who might interrupt the ceremony, or against the effect of possible counter-charms.

The best and clearest description of the ceremony, properly speaking, is given by Hubert.⁷ It involves the use of two kinds of rites. The purpose of the one is to accomplish the object itself of the ceremony by a logical application of the principles of magic action; the object of the other is to manufacture or, at least, to assure the presence of the actual magic power sufficient to work in the way prepared and thus to accomplish the purpose desired. In other words, to state it in terms of modern electrical science—the theory of which is curiously near to that of magic—he must construct the proper machinery and establish the proper connexions; then, before turning on the power, he must see to it that the power is really there.

The first class of rites, the machinery and connexions, calls for the use of a certain number of objects or parts which, in the end, generally come to be considered magic in themselves. One of the most common and dramatic is the magic wand, which is really a conductor of the magician's *mana*. The divining rod,⁸ though used in a different way and for a different purpose, derived its efficacy from a similar conception. The Etruscans used it in searching for hidden springs (Daremberg-Saglio, s.v. 'Aquilox'), and, as the writer of this article can testify from personal observation, as late as twenty years ago a similar method for discovering the best place in which to dig a well was still used occasionally in the American countryside. In addition to the magic wand and the divining rod, we have the apparatus of *dactylomantia* (Amm. Marc. XXIX. i. 30 ff.), the lamps in *technomantia*, the basins of water in *lecanomantia*, keys in their symbolic use, cymbals, the various substances referred to above, threads of different colours, portions of the dead, the *kyrē* (Pind. *Pyth.* iv. 513, and often), the famous *rhombus*, *terba*, or *ortigo*, i.e. the 'witches' wheel,' the rotation of which, by imitation and sympathy, was sovereign to influence the will of the person whom one wished to gain, etc.

⁵ Denker, p. 30, for examples.

⁶ Also, op. cit. p. 302 ff.

⁷ Op. cit. p. 1616 ff.

⁸ The examples of its use in classical literature are collected by H. Hecker, *Jahrb. für Phil.*, Suppl. Bd. xviii. (1894) 217 ff., 219 n.

All these and by being considered magic in themselves, but, in view of what has been said, it will be seen that this idea is secondary. Their real function and purpose was to facilitate or render possible the action of magic power and, at least originally, they were chosen from that point of view.

Sometimes the ceremonial proper needs the assistance of some rite whose object is to put the person interested in a state to receive the benefit of the action desired. A case in point is the ceremonial of *incubatio*.¹ The purpose of *incubatio* is to surround a person with the appropriate conditions to secure for him the true and prophetic dream which he desires. Conditions are, as often, dictated by the law of sympathy. And, except that the nature of dreams was never quite clear to the ancients—and perhaps will never be quite clear to any one—the nameless theorists and thinkers by whom these conditions were first discovered and formulated appear to have been quite familiar with the results of J. Börner's famous dissertation afterwards incorporated and extended in W. H. Roscher's *Epheleis: eine pathologisch-mythologische Abhandlung über die Alpträume und Alpträumen des klassischen Altertums*, Leipzig, 1901.² Börner showed that, among other things, in a healthy person nightmare is usually due to partial suffocation caused by burying one's head in the pillow, coverlet, etc., that the rapidity with which the nightmare, the *incubus*, appears to approach the dreamer is always measured by the rate of suffocation, but, above all, that the appearance of the *incubus* itself is to a surprising extent determined by the sleeper's surroundings, especially by the material and texture of his coverings. Such being the case, though L. Laistner³ goes too far in his theory that the *Uralpträume*, the primeval nightmares, is the father of all mythology, we may at least suspect with Roscher that Pan's legs were the inevitable result of the style of bed quite used by his primeval worshippers (cf. Latinus's method of securing an interview with Faunus in Verg. *Aen.* vii. 81 ff.), and, for that matter, that the *incubi*, *succubi*, *striges*, and all their monstrous brood must have entered this world in the first place by the Ivory Gate. If so, it is certain that some of our most cherished legends, our best and most thrilling stories, and our finest poetry are literally the stuff that dreams are made of.

But of all magic operations none is more common and characteristic, more dramatic and impressive, or a better illustration of the doctrine of sympathy than the casting of spells (cf. Heliodorus, xi. 14, and the examples noted below). The special feature of this operation is due to the theory that, if the person whom we wish to reach with our magic is absent or far away, his place may be filled by a puppet, or some symbolical substitute for him. If, then, the ceremonial is appropriate, whatever we do to the puppet will be exactly repeated, literally or symbolically, as desired, on the person whom the puppet represents. Consecration of the one is immediately followed by consecration of the other (Verg. *Ec.* viii. 74 f.), binding of the one by the desired condition symbolized by it in the other, running needles into the heart of the one by some effect on the other symbolized by such a process—as, e.g., wasting away to death with no apparent cause (Ovid, *Amor.* iii. vii. 29 f., *Heroid.* vi. 21, and often). Sometimes one figure may stand for an indefinite number, as in the spells of Neutanebo (pseudo-Callisthenes, i. 1). One may cast a spell on spirits as well as mortals by this means (Ran. *Prop.* *Keung.* v. 12 ff.).

Hence we have cases in which two puppets are used, one representing the person to be acted upon, the other the spirit by whom the action is to be performed (Hor. *Sat.* i. viii. 26 f.).⁴ Occasionally even three figures appear to have been used (schol. Bern. on Verg. *Ec.* viii. 75). Often they were hollow, and their power was enhanced by putting written incantations inside. As a rule, these puppets must be made of clay or wax, but occasionally other substances were just as rigorously prescribed. Eusebius (*loc. cit.*) speaks of such an image of Hecate made of pulverized lizards and the roots of rue. A sheet of metal or even of paper upon which the figure has been traced is often considered sufficient.⁵ The value and philosophy of *anecia* have already been mentioned. But one may use such arbitrary substitutes as the body of a bird, a sprig of myrtle or of rue, etc.⁶ Indeed, as we have already seen, the name is sufficient in itself. On the same principle, a written incantation placed in a tomb has the same effect as would a puppet (Apul. *Met.* i. 10, *de Mag.* 53).

The verbal portions of a magic rite are of the highest importance. In many cases they are the operator's instructions to the intervening demon in order that he may make no mistake as to the meaning and object of the symbolic rite. The puppet is inscribed with the name of the person whom it represents, and sometimes this is accompanied by a written statement of what is to happen to him. So, when one gathers a medicinal plant, one should be careful to utter the name of the patient who is to be benefited by it. Again, in constructing a *doctio*, one should specify in order each and every part in which it is desired that the proposed victim shall suffer.⁷

The indirect method is also directly responsible for the conclusion that incantations are a special help to the operator in the accomplishment of his second great task—the creation of magic power. Hence the use of the magic hymns and litanies, the object of which is to ensure the presence and active participation of the appropriate spirit, to indicate his duty, and, if necessary, to frighten him into doing it.⁸

We have seen how various objects, plants, simples, etc., originally selected as facilitating in some way magic support, finally came to be considered magic in themselves. Names and incantations underwent precisely the same secondary development. From being a means to an end they became magic *per se*. The further conclusion was then drawn that their power might be indefinitely increased by frequent repetition, by lengthening certain syllables to an extraordinary extent, by abstracting certain syllables and decorating them with affixes and suffixes, by rearranging them in different combinations, and especially by disposing them so as to form certain figures.⁹ Examples still surviving are 'abracadabra,' and 'ator arepo tenet opate rotas' (see *Thesaurus Ling. Lat.*, s.v. 'Arepo'). The *Ephesia Grammate* belong to the same type (Porphyry, *de Myster.* vii. 4). Mystery and power were further enhanced by the use of magic alphabets, by certain sacred inks, and so on. Numbers pass through the same experience and acquire the same magic power *per se*—

e.g., there are seven planets. If, therefore, we wish to invoke them, there is nothing so compelling as the pronunciation of the seven vowels or a careful repetition of a ceremony,

gesture, or word (*Real. Prop. Evang.* v. 16). Odd numbers have always been significant (*Var. Ed.* vii. 78, and often); three and multiples of three are sacred to Hecate, and certain special numbers like four, ninety-nine, etc., have a special importance.

In magic as in religion the object of sacrificial rites is to ensure the actual presence of the gods invoked. And here again the indirect method suggests that these rites are of material assistance to the operator in acquiring the desired power (*Theoc.* ii. 3, 10, 169). In the choice of what shall be sacrificed in any given instance the usage of magic as a rule does not differ materially from that of religion. This, of course, is quite natural. As a rule, the gods addressed are common to both and of equal importance in both; in fact, it is perhaps safe to guess that, so far as sacrifice is concerned, the usage of magic and religion is a common inheritance. For example, the notable preference of magic for black victims is not distinctive of magic. It simply means that, in accordance with the naive analogy set forth, for instance, in the old hexameter quoted by Eusebius (*Prop. Evang.* iv. 9)—

Ἄσκησεν πρὸς ἀσπίαν, ὅστις ἐκ δαδύων ἔσται.
 'dark victims to the powers of darkness, light to the powers of light—'

the gods to whom magic habitually addresses itself are the gods of the under world. So wine, honey, milk, perfumes, meal (*Theoc.* ii. 18, 23), certain cakes dear to these same gods, a cock to Hermes, a white dove to Aphrodite, etc.—all common to both religion and magic—are frequently employed. The use of blood is defined by Hubert as a sacrificial rite; it is at any rate—as in Ballus's account of the oath administered by Catiline to his fellow-conspirators—a striking illustration of the law of sympathy (*Lucan.* vi. 544). The sacrifice of human beings, especially of little children, even of the unborn babe torn from its mother, is a standing charge against magic in all ages (*Hor. Epod.* v.; *Philost.* *Apoll.* *Tyros.* viii. 5); and, for that matter, against any heretical sect with secret rites. The Christians in their time were charged with such abnormalities as infant-sacrifice and promiscuous incest at their meetings—precisely the same charges which, a millennium later, they themselves preferred with wearisome regularity during their long persecution of witchcraft, especially in connexion with the 'witches' Sabbath.' In most cases the charge of human sacrifice is as conventional as it is untrue; but it would be unsafe to deny it in toto. We can hardly expect such an outlaw, such a striver for extraordinary effects, as magic to abstain altogether from what was quite regular in the religion of more than one savage race, and which—in accordance with the familiar theory that extraordinary occasions demand extraordinary sacrifices—has been known to occur more than once at some grave crisis in the religious life of nations which, comparatively speaking, occupied a much higher plane of civilization. Finally, it may be noted that, as was the case with the incantations, names of the gods, etc., mentioned above, the things sacrificed, whatever they were, soon passed into the secondary stage of being considered magic *per se*.

One important aspect of our ceremony—quite as important in religion as it was in magic—remains to be considered. As we have seen, the operator must be careful to follow certain prescribed rules in order to get into the necessary and intimate spiritual relation with the gods whom he is addressing, and, therefore, with the sacrifices which he is conducting. The relation is abnormal and distinctly perilous. To get out of it safely is,

therefore, quite as important as to get into it safely; prescribed rules are as necessary for the one as for the other. The object of these rules is to end the ceremony, to limit the effects of it so far as the operator is concerned, to make it safe and possible for him to return to the conditions of everyday life. Above all, the remains of the sacrifice, unless he wishes to preserve them to produce some lasting effect (as, e.g., in a *devotio*), must be disposed of ceremonially. One may deposit them at some prescribed spot sacred to the god to whom the sacrifice itself was offered. The *raðquara*, for instance, the ceremonial remains of the sacrifice to Hecate (see *HECATE'S SUPPERS*), were deposited at the cross-ways. The more usual method was to eliminate them ceremonially by burning them, burying them, or throwing them into running water or the sea (*Var. Ed.* viii. 102, with the notes of Conington and Forbiger). The *Marræis Epici* (*Pap. Paris.* 3095) shows that, at least in some cases, the ceremony closed with a prayer to the god in which he was invited kindly but firmly to go back to where he belonged:

Ἀντίθε, ἄλυσον, ἀλυσον σπάρδα, καὶ ὑπάγετε ἐς τοὺς ἑσπερίους κόλπους τοῦ οὐρανοῦ. 'Haste back, haste back, sparrow, and go to the western bosom of the sky.'

It will be seen, therefore, as Hubert observes,¹ that among the Greeks and Romans the standard ceremony of magic and the standard ceremony of religion, so far as their essential elements were concerned, were practically the same, even to the point of using the same names for these elements. Furthermore, with some comparatively slight exceptions, the gods of magic are equally important in religion, and, on the whole, they are treated with the same reverence. As we have seen, some of the abnormalities of magic are just as characteristic of religion, and they are generally due to the fact that, at the time when these abnormalities occur, both are specially concerned with the infernal gods. The worship of these gods, whether in religion or in magic, is visibly influenced by the universal idea that the under world is the reverse of ours. It is dark, silent, barren, loveless, childless, eventless, stationary—a complete contrast to the world above, a contrast regularly symbolised in rituals to the dead and their gods by such things as the use of the left hand instead of the right. It is, no doubt, this ancient idea of reversed conditions in Hades that suggested the most striking feature of the famous 'Black Mass' as practised by the early Christian magicians (*Iran. Rev.* i. xlii. 2). The normal 'White Mass' is addressed to heaven; if we reverse it, i.e. if we read it backwards, we address it to hell. But the Christian magician, in so far as he was a Christian, was bound to assume that his Black Mass was a wicked and impious rite. Hence the inevitable deduction was soon established that, the more wicked and impious magic could be, the greater and more terrible its power. For the magician of Græco-Roman paganism there seems to have been no such parodying of religious rites—above all, no such deliberate and malignant denigration of things considered divine as that of which we hear so much in mediæval magic and which appeared again in the modern cult of Satanism (g.v.), as described some years since by Jules Bois² and as utilised for purposes of fiction by J. K. Huysmans.³

Summary.—In so far as there was any real and essential difference between magic and religion in Græco-Roman paganism, the ultimate cause of it was largely, if not entirely, the steady maintenance of the ancient distinction of official recognition as defined and explained at the beginning of

¹ E. Kircher, 'Die sakrale Bedeutung des Weines im Altertum,' in *RPV* viii. (1910).

this article. It is the business of magic, as long as it remains magic, to speak only in the imperative. It must, therefore, retain and emphasise those primitive doctrines—namely the doctrine of sympathy in all its forms—which are supposed to enable it to use the imperative successfully in addressing the gods. It is also the business of magic, partly because it is an outlaw and bound to assert its importance in order to live, to promise extraordinary, if not impossible, things—among them, things which the social and legal restraints of religion would not allow it to promise. In the course of its long and exceptionally brilliant history classical magic promises practically everything from a cure for warts to a receipt for personal immortality—all tried and true. Magic, therefore, was obliged not only to retain but to develop in every possible way those primitive aids to its imperative. It pluralised for power. And religion had done the same. But magic was an outlaw, it had no position in society, it was free to range at will, to gather into one portentous plural strange and terrible gods from the four corners of the earth, to combine them with the native gods, to re-arrange, re-interpret, disguise, mutilate, etc., in the ways described. In the long run, as we have seen, the pantheon of Greco-Roman magic was a pandemonium, and confusion worse confounded, in which the only relating principle seems to be the fact that the doctrine of sympathy in all its forms has been pushed to its uttermost limits.

To the very end magic was obsessed by the old imperative and, therefore, by the time-honoured means for securing it. When it rose in the social scale, it merely learned to be pretentious. Even when it had been adopted, so to speak, by some distinguished family like the mystics, had changed its name, and had been carefully educated and refined, it was still haunted by the old ideas, and generally ended by infecting with them its benefactors and teachers.

The same may be said of the contemporary development of popular magic. Our great authority here is the magic papyri. They all come from Egypt and are much affected by local influences; but, among other things, they show that, under the circumstances, the old rule of official recognition was amply wise. In the civilization of Greece and Rome magic was given a rare, a unique, opportunity to make the most of itself. But, whether it improved the opportunity or not, the final result, as we see it in the papyri, is a striking illustration of its besetting sin. If it had clung to the native gods, as religion was forced to do, it is conceivable that, even with the heavy handicap of the imperative and its attendant vices, magic might have risen to comparative respectability. But its weaknesses were encouraged rather than checked. By the 2nd cent. the number of strange religions available, not to mention the semi-detached religious theories, had increased to an indefinite extent. The result was that from being a thing which, at least, could appeal to the imagination and the aesthetic sense, it steadily degenerated into utter absurdity as pretentious and complicated as it was dreary and commonplace.

But, fortunately for us, Greco-Roman magic in its best days was the familiar possession of all classes in a highly intellectual and highly imaginative people. Men of Ovid's calibre and training may not have believed in it to any extent, but there never was a time when magic as such became unfamiliar to any one. Even the major operations of magic were always being performed somewhere, and, as we have seen, the charge of magic was always kept alive in the courts. Hermione was far from being the only jealous woman to soothe her wounded pride by accusing her successful rival

of resorting to philtres. The charge was quite as characteristic of the Augustan age as it could ever have been of Homer's time (Tib. 1. v. 41; Propert. 1. vii. 78). Nor was the charge by any means always unfounded. *Pecula amatoria* were a regular speciality of the *lena*, or go-between, and they actually were so frequently administered that the average man generally assumed that they were responsible for certain lingering diseases, especially certain mental or nervous abnormalities, for which he could see no apparent cause. Examples in point are the traditional account of the death of Lucretius and the contemporary explanation of the vagaries and perversions of Caligula's tempestuous brain (Jerome, *Chron. Eccl.*, 1994; Sueton. *Calig.* 80).

VI. *MAGIC IN LITERATURE*.—The more or less familiar presence of magic not only in folklore and legend, but also in ordinary everyday life, is reflected to an extraordinary extent in the written word. It is continually turning up in the arts, sciences, and professions, in law, religion, and philosophical discussion, in history, anecdotes, and any other record of everyday life past or present. All this, however, is characteristic of any people among whom magic still survives as an active force, and it appeals for the most part only to such persons as the special investigator and the historian of manners and customs. But the most characteristic and interesting aspect of Greco-Roman magic is the deliberate exploitation of it in the interests of conscious literary art. One is inclined to assume, and perhaps justly, that this was particularly notable of such periods as the Hellenistic age, the time of Augustus and his immediate successors, and the Sophistic revival of the 2nd century. This use of magic was especially characteristic of poetry and of such types of prose as that of the highly rhetorical and semi-Romantic historians of the Alexandrian age, the Paradoxographers, the writers of *novelle* and tales of marvel, even the practice debates of the rhetorical schools, and, in later times, the throng of professional declaimers for whom these schools were ultimately responsible. But this aspect of classical magic is far from being a matter merely of period and department. On the contrary, nothing is more characteristic of it than the extent and variety, as well as the unbroken continuity, of its use in practically every department of artistic literature. No one could be more thoroughly alive to its aesthetic possibilities than was Homer himself, and he created a tradition of its literary use which not even the semi-Oriental and unutterably dreary foibles of the papyri were able entirely to destroy.

In an article like this it is impossible as well as inadvisable to attempt a thoroughgoing investigation of the debt of creative literature to magic in antiquity. We must content ourselves with a passing reference to a few of those magic operations which are most frequently mentioned, and which by reason of their dramatic possibilities are best suited to the purposes of literary art.

One of the most notable of these is *necyomantia*, calling up the dead to ask them questions. *Necyomantia* is rarely absent from that catalogue of magic feats with which so many of the Roman poets seem impelled to supply us (Tib. 1. ii. 42, and note). They also mention even more frequently three other feats which are particularly awesome, but for which the modern reader, at least, can see no adequate reason until it dawns upon him that they are merely a useful, though by no means necessary, preparation for *necyomantia*. These are producing earthquakes, splitting the ground, and making the rivers either stand still or run backwards. The magician uses his earthquake to split the ground; the behaviour of the rivers is

merely a consequence of the quack. He splits the ground so that the ghosts can hear his incantation (i.e. be reached and affected by it) and then can come straight up to him from Hades (Sen. *Œdip.* 671; Lucan, vi. 758). As we have seen, the literary use of *necromantia* begins with the famous passage of the *Odyssey* (xl. 24 ff.). The essential details of the ceremonial as Homer describes it were always the same not only in literary tradition but in actual life. Doubtless, Lucan felt that his own long and lurid description of Erichtho's special performance for the benefit of Sextus Pompeius before the battle of Thapsus (vi. 729 ff.) was the masterpiece of its kind. And so it is. It would be hard to find a more glaring illustration of what can happen to literature in an age when a furious lust for effect is not restrained by any principles of rhetorical self-control or common sense. *Necromantia* had a long and brilliant tradition in the drama. Examples still surviving are *Æschylus, Persæ* (the ghost of Darius), and *Seneca, Œdipus*, 600 ff. Indeed, ghosts were as common, it would appear, in the ancient as in the Elizabethan drama. *Alcaeus Xanthia*, 'Charon's step-ladder,' was the popular name for the regular staircase by which the ghosts appeared on the stage as if from the world below. *Necromantia* was also quite as characteristic of comedy. In the later days of the Roman Republic Decimus Laberius wrote a mime entitled *Necromantia*, and we know that this and similar themes were characteristic of the mime as developed by Philistion and his immediate successors during and after the Augustan age. Brilliant examples in the satirical sphere are *Horace, Sat. I. viii.*, and Lucian's *Necromantia*.

If we choose to emphasize the literary influence as such of the Homeric *Nekyia*, we can say that it is responsible for one of the most notable developments in classical literature. This is the theme of the Descent into Hades. The Homeric passage is directly responsible for the 6th book of the *Æneid* and its numerous echoes in epic and narrative poetry both ancient and modern. Nor was epic the only department to be affected. The theme was a favourite in the Old Comedy of Athens, although, as it happens, the *Frogs* of Aristophanes is the only example now surviving. The same is true of the satirists and popular philosophers of the Alexandrian and Hellenistic ages. It was characteristic of their didactic methods to appropriate for their own purposes the traditional forms and themes of literary art, and one of the most notable was the *Katadesmoi* or *Allos*, which practically became conventionalized as a means for the presentation of doctrines and opinions. Allied to it are such examples as *Horace, Sat. II. v.*, *Seneca, Apocalypstoma*, such works of Lucian as the *Dialogues of the Dead*, and Claudius's attacks on *Eutropius*. The *Epicharmus* of Ennius and probably certain of the lost satires of Lucilius and Varro were illustrations. The poet *Stesichorus* used it to a notable extent.

But, while *necromantia* is the most prominent and pervasive aspect of literary magic, the most famous and picturesque was the love-charm known as 'drawing down the moon.' It is first mentioned in surviving literature by Aristophanes, *Nubes*, 760, again and again by later writers, and still survives, it is said, in modern Greece. It was the theme of no fewer than four masterpieces: a lost mime of Sophron in the time of Xerxes, the lost *Thetis* of Menander (*FN* xxx. 7), the second *Idyl* of Theocritus (founded on Sophron), and the eighth *Eclogue* of Vergil (founded on Theocritus). Certainly, too, Lucian, *Philopseudas*, 14 ff., is a

masterpiece of its kind. The atmosphere reflects to the life that aspect of the 2nd cent. which suggests the modern *milieu* in which theosophy, spiritualism, and kindred ideas are wont to grow luxuriantly.

In this passage of Lucian we have the 'Proteus' story of how his disciple, Glaucias, was saved by the great 'Hyperborean' magician. It seems that Glaucias, a rich young orphan whose father had been dead about a year, fell in love with the disdainful Chrysis—a genuine prototype of *Jenny Grove* and cruel *Barbara Allen*. His condition became so serious that the 'Proteus,' as he says, 'felt it his duty' to secure the services of the great Hyperborean. Four minas had to be paid in advance—to supply the necessary sacrifices—and sixteen more if the operation was successful. By way of preliminary—which showed that the specialist was not only a great man but also a just and scrupulously conscientious man—he insisted on having an elaborate rite of *necromantia*, to call up the boy's late lamented father and ask his consent. The old gentleman was furious at first, but finally told them to proceed. A dramatic description of the ensuing ceremony follows—how the moon came down, how Hecate came up, how the ghosts floated around, how, as the psychological moment, the distinguished operator 'told the sort of little figure of Cupid which he had fashioned out of clay to go and fetch Chrysis.' Away flew the boy thing at once. A few minutes later there comes a knock on Glaucias's door, he rushes Chrysis, throws her arms around him, *as he hyperboreos idios* ('like a girl utterly mad with love'), and there she stays till midnight! Then up runs the moon to heaven, down sink Hecate to Hades, and all the ghosts disappeared.

Was the 'Proteus's' helper not duly impressed. Besides, he knows the girl. He doesn't see the use, he says, of calling on one Hyperborean magician, one godman, and one day ambassador to unite in overcoming the diadem of a girl who, as every one knows, is ready to follow a man to the Hittite Pole and beyond for twenty drachmas.

Such books as the *Metamorphoses* of Ovid and the lost poem of the same name by his predecessor, Nicander, show that change of form was quite as characteristic of classical mythology and folklore as of the *Thousand and One Nights*. Transformation was Circe's speciality, and the Homeric account of her methods (*Od. x. 212 ff.*) has always remained the most famous literary account of the performance. Apart from the Homeric passage, the most vivid and circumstantial accounts of transformation by magic are those in which Apuleius (*Met. iii. 21 ff.*) and Lucian (*Asinus* [the common source of both was the lost romance of *Lucius of Patras*]) tell how the witch, Pamphile, made an owl of herself, and how, immediately afterwards, Fotis, her maid, made an ass of Lucina. But, as a rule, magic as such is not prominent in metamorphoses as a literary theme. This is, of course, quite natural; for in this particular feat the dramatic point is the transformation scene, and all else is likely to be subordinated, even in those cases where the transformation is confessedly due to magic. Vergil's sorceress, e.g., says that she has seen the werewolf transformation with her own eyes and that it was done by magic:

*'Hinc hircus elapsus hinc Pesto mihî laeta venena
Ipsæ dactylis hircinis (mancipat) phrygia Pesto;
Illi ego omne lupum hirci at ex crederet olive
Morsum' (Sat. vii. 25 ff.)*

But in all the famous werewolf stories of antiquity, as in most of the stories told by Ovid, the magic element is either absent, ignored, or referred to so slightly that it calls for no special notice here. Magic command of the wind and weather is often mentioned, and nothing in the way of magic was more common in everyday life, but the one famous passage is that in which *Alois* gives the bag of winds to *Olympos* (*Od. x. 19 ff.*). Also unique—and terrible—is the spell of the evil eye cast by Medea upon the giant *Talus* (*Apoll. Rhod. iv. 1052 ff.*). Ovid (*Met. vii. 100 ff.*) gives a full and dramatic description of her charms for renewing the youth of Jason's father, *Aeson*. More famous was her pretence of doing the same favour for the aged *Peleus* at the instance of his daughter (*Apollod. I. ix. 27*; *Hygin. Fab. 24*; *Macroh. v. xix. 9 f.*). This was the theme of the lost *Phrygionis*

² J. J. Hockenshaw, op. cit. p. 20; Kirby Flower Smith, *JHG*, 1908, *Publ. Mod. Lang. Assn. of Amer.*, 1909.

of Sophocles. Indeed, the lost plays of the Greek tragic poets would have been a wonderful field for the study of the use of magic for literary purposes.¹

Cronus's robe was a famous theme. Euripides (*Medea*, 1158 ff.) merely described the awful effect of it upon the wearer; Seneca (*Medea*, 740 ff.), the preparation of it. Which is the more artistic and effective may easily be seen by comparison.

On the other hand, there are types of magic in which it is precisely the preliminaries, the things which witches do because they have something terrible in prospect, that are full of dramatic possibilities. This is especially true of *necromancy*. As we have seen, the necromancers are always eager to get mortal remains in order to be better able to call up their late owners. Striking examples are Trimalchio's story in Petron. 68, and the dramatic experience of Thelyphron as told by him after dinner in Apuleius, *Met.* ii. 21 ff. So, speaking in terms of magic theory, the dreadful scene of Horace, *Epod.* v., was only a means to an end; the object of the witches was to secure the strongest possible love-charm. The liver is the seat of desire (*Hor. Odes*, iv. i. 12); therefore the liver is sovereign in a charm to produce desire. Now, when a savage wants snake-poison for his arrows, he irritates the snake for some time before he kills it, so that it may secrete more poison and that the poison may be more virulent. So, here, the idea is that the more the liver feels desire, so much the more it actually accumulates desire, as it were, and stores it up within. If, therefore, we can secure a liver still containing a maximum of desire so accumulated, we have a charm of maximum power for arousing desire in others. Hence, in this scene, the poor child who has been kidnapped by the witches for that purpose, is buried to the neck and left to die of a prolonged agonisingly intense desire for food and drink, which is deliberately aggravated as much as possible by always keeping food and drink before his eyes. After the child was dead, his liver was removed, and, upon being prepared with the appropriate ceremonial, became a love-charm of superhuman power, a *pharmakon* secured in a special way for a special purpose.

The gathering of herbs is another preliminary of *pharmakia*, which was fully appreciated for its dramatic possibilities. In literature the process is regularly associated with *Medea* (Apoll. Rhod. iii. 243 ff.; Valer. Flaccus, vii. 223 ff.; Ovid, *Met.* vii. 294 ff.; special emphasis was probably laid on this by Sophocles in his *Philoctetes*). She went out at night and by the light of the full moon cut her plants with a brazen sickle² held in her left hand and behind her back, i.e. *ἀντρέφοντι* (see HEGATE'S SUPPENS).

So far as philtres are concerned, the most notable contribution to literature is what might be called the case of Beauty v. Magic in the court of Love.³ Its first appearance is in the scene between Hermione and Andromache (*Eur. Androm.* 906 ff.), to which attention has already been called. The subsequent tradition of the question at issue is a striking and characteristic illustration of the methods and development of ancient literary art. The topic was announced from the stage, discussed in the boudoir, argued in the schools of philosophy, enlarged upon in the schools of rhetoric (Menander, frag. 646 ff.; Afran. 278 ff.; Lucrot. iv. 1278 ff.; Tib. i. v. 43, viii. 23; Ovid, *Met. Fac.* 36 ff., *Ars Amandi*, i. 206 ff.). At some time in the unrecorded past it was given a new turn and made the basis of a properly illustrative and aptly anecdotal in which the appropri-

ately magnanimous mother of a great conqueror—any great conqueror will do—was in the position of Hermione, but possessed the wisdom of Andromache. In Plutarch, *Comp. prom.* 22, the position is held by the mother of Alexander; the sands of Egypt have lately dimmed the fact that in Satyrus, *loc. cit.*, it was held by the mother of Darius. Others may yet appear.

But for any one who is at all interested in the development of magic for literary purposes the *Metamorphoses* of Apuleius is a veritable treasure-house. Those who have studied this unique book generally gain the impression that its author is a past master in the art of telling a tale of magic. Two examples may be given by way of illustration.

The first (*Met.* i. 11 ff.) is told by Aristomenes, and might be called 'The Witches' Revenge.' While travelling about Thessaly a short time previously, Aristomenes ran across one Sostratus, an old friend whom he had not seen for several years. The man was a monument of rage, anger, and wickedness; he was also in a constant state of abject terror. He had drifted into a *katun* with a *thamnos* but clearly with named *Marce*, and, in fact, had been living with her, slave or less perhaps, for a number of years. Now he was trying to run away. Aristomenes decided to help his friend to see the country. He took a room at the inn, made him presentable with a bath and some clothes, the two ate a heavy dinner, accompanied by too much wine, and retired early so as to be off business in the morning. Aristomenes barred the doors, and his greater mastery pushed up his trunk-bed against them. Sostratus fell asleep at once and snored loudly, but Aristomenes lay awake for hours. At last, about the third watch, just as he had dropped off into a doze, there was a horrid noise, the doors flew open and, indeed, came to the floor with such a crash that the bed with Aristomenes still in it was turned upside down. Then he walked *Marce* and her sister, Penthia, the one carrying a leather bottle, the other a sponge and a naked sword, and gathered about Sostratus, who was still plunged in his magic slumber. Aristomenes could see all this from beneath his trunk-bed and hoped he had escaped observation, but in vain. *Marce* was anxious to kill him at once with the sword, but Penthia thought it better to tear him limb from limb. 'No,' said *Marce*, changing her mind, 'let him live, so that, when the time comes, he may cover his friend with a little earth.' With that Sostratus' head was drawn to one side, and *Marce* drove the sword into his neck just behind the left collar-bone. Then she plunged her arm into the gaping wound, and plucked his heart out. Meanwhile she caught all the blood in her bottle so skillfully that not one betraying drop escaped. When this was done, Penthia pushed her sponge into the wound, with the words:

'Sponge, sponge, born of the main,
Heave ye, heave ye back again!
When you reach the river-side,
In the water dip and soak;
Water, water, flowing fast,
Bury you coward home at last.'

Then, after hanging *Marce* on a tree, Aristomenes, the two women left the room, the doors flew back in place, the bolts shot in (a regular occurrence in *Metamorphoses*, cf. Apoll. Rhod. iv. 41 ff.), and all was as before—all but the murdered friend. How was Aristomenes to explain that in the morning? He tried to smother, but the porter was obstinate and even suspicious. Then he went back to *Marce* and attempted to bury himself from the window-frame. But the rope broke, and, what made it more horrible, he fell on the corpse—*Marce*—the corpse leaped up in high indignation at being so rudely disturbed. After all, it had only been a dreadful nightmare, a warning against too much eating and drinking late in the day. Next morning the friends set out, and, when it was time, proceeded to take their breakfast beside a stream under the shade of a tree. Sostratus was as pale as wax, but he ate heartily, and then, at the suggestion of Aristomenes, knelt down on the bank of the stream to drink. As he leaned over, his back went open, and a sponge, followed by a few drops of blood, dropped out, fell into the water, and was swept away. In a moment he was dead. So then and there Aristomenes dug a shallow grave and covered his friend with a little earth.

The second story (*Met.* ii. 22 ff.) is unique as a satirically exaggerated illustration of what one can accomplish by the doctrine of sympathy when it is really given a fair chance. During his stay at Erytus young Lucius, the protagonist of the book, was entertained by his father's old friend, Milo. The rest of the family consisted of Milo's wife, Pampibia, who was a respectable matron, and Potha, a beautiful slave-girl, with whom Lucius immediately fell in love. One night he went out to a dinner-party, and by the time he started for home it was very late and very dark—and the wine had been very strong. Just as he reached the door, the dim shapes of two great burly figures jumped up against him on either side. Thinking they were thieves, he leaped back, whipped out his sword, and ran them both through. He was barely awake the next morning, with a vague but a vivid memory of what had happened, when all the neighbours appeared, full of fear and often, and accused him for murder.

The trial scene, which begins at once, is a masterpiece. It

seed on some white-ant earth near five pots filled with water. By the time the wedding is concluded, these seeds have sprouted and are called by the pair, taken to the village well, and cast into it—obviously to ensure their fertility.¹ An Idaiyan couple sow nine kinds of grain in seven trays,² and the Mala groom digs with his knife a few furrows, which his bride fills with grain and waters after he has covered it up.³ Apparently the widespread custom of pounding grains at weddings has a similar origin. This is done by five women, e.g., in Bombay.⁴

The grindstone is also used among the Bhondari in Madras; the bridegroom stands on it, while women bring a mill-stone and powder three kinds of grain with it; then he sits on the dala, and a number of married women each touch seven times with a grinding-stone an areca nut placed on his head.⁵ A Bedar couple are invited by the Brahman priest to stand on a grinding-mill placed beneath the *pendal*.⁶

Among the Aganadaiyan a grinding-stone and a roller, representing the god Siva and the goddess Sakti, are placed in the north-east corner at the actual wedding, and at their side pans containing nine kinds of seedlings are set. Seven pots are arranged in a row between the stone and a branched lamp, and married women bring water from seven streams and pour it into a pot in front of the lamp.⁷ The grinding-stone is also used in Bombay.⁸

The future offspring of the union is symbolized among the Komapi by a doll which is rocked in a cradle, but both the prospective parents profess lack of leisure to look after it.⁹ The Parivaram use a stone rolling pin to represent the child, which the husband hands over to the wife, who accepts it as 'the milk is ready'.¹⁰ The Konga Vellala bridegroom takes some fruit and a pestle to a stone, which he worships. It is supposed to represent the Konga king whose sanction to every marriage used to be necessary, and the pestle represents the village; but the fruit is not explained, and the myth is probably etiological.¹¹ A newly-married Bedar or Boya couple sit on a pestle, and are anointed after rice has been showered over them.¹² In Bombay the rice-powder is used to personate the baby.¹³

Fertility can also be communicated to a bride by placing a child in her lap, and fruit is an effective substitute for one.¹⁴ On the same principle women whose husbands are alive are admitted to take part in marriage rites,¹⁵ more especially if they have sons living; whereas widows and those whose children have died should be excluded, at least from the more significant rites.¹⁶ Similarly, widowers are excluded from certain functions.¹⁷ Unmarried girls may, however, take the place of married women; e.g., among the Badaga, married women or virgins, preferably the bridegroom's sisters, go to a stream in procession to bring water for cooking purposes in decorated new pots.¹⁸

Water as a source of fertility also plays a great part in wedding rites. Thus bathing is an essential part of the ritual for both parties at weddings, and visits to a well or stream are very common. The use of pots full of water is to be explained in the same way. Thus among the Alitkar of Bombay a couple already married bring pots from a potter's house to that of each party to the marriage, and after an elaborate rite the boy pours water from a

jar. A jar also plays a prominent part in other rites, including a widow's re-marriage.¹⁹

Fish being an emblem of fertility, they are often caught by the bridal pair—e.g., among the Gudigara of Madras;²⁰ the Holeys let the fish go after taming them.²¹ But the Katriya, in Madras, only pretend to catch them,²² as do the Nambattiri Brahmins.²³

The potter's wheel, symbolical of the creative power which fashions the earth as it fashions clay, is also in evidence at weddings. The clay is formed into a revolving lamp, like a *lampa*, and wheel and clay together bear a strong resemblance to the conjunction of *lampa* and *goni*.²⁴

The Pile-star (Dhruva in northern India) is called Arundhati in Madras, and, as the wife of the *raj* Vasiṣṭha, is pointed out to the bride as the model of conjugal fidelity.²⁵

(3) *Birth*.—Magical rites to procure children are very usual. A typical rite, often resorted to by barren women, consists in burning down seven houses. In Madras a Koyi woman sometimes throws a cock down in front of the cloth on which portraits of ancestors are sewn, and makes oblation to it,²⁶ and this cures her sterility. Bathing is also a cure for this misfortune, especially bathing over a corpse.

In the Andamans a pregnant woman sows seed.²⁷ Pregnancy, moreover, involves peculiar risks necessitating the protection of magic²⁸ and the avoidance of various acts, such as stepping over the heels of a horse,²⁹ which might apparently cause protracted labour, or crossing a running stream, which would result in miscarriage—a common belief in the Panjsh. In Travancore tamarind juice is dropped into a pregnant woman's mouth to cast out devils.³⁰

When his wife's first pregnancy is announced, a Kota husband in Madras lets his hair grow long and leaves his finger nails uncut, and on the child's birth he is under pollution till he sees the next crescent moon.³¹ A Makkuvan husband also lets his hair grow until the third day after the birth. A coco-nut, betel leaves, and areca nuts are laid at the place where he sits to be shaved, and the coco-nut is smashed to pieces by one of his own sept.³² A Nambattiri Brahman also remains unshaven while any of his wives are pregnant.³³

Pre-natal divination to ascertain and magic to determine the child's sex are also common. Thus the Cheraman in Madras employ devil-drivers, who seat the woman in front of a tent-like structure with a coco-nut-palm flower in her lap. When cut open, the fruits predict the child's sex, the birth of twins, and the child's expectation of life or death. The goddess Kali is supposed to be present in the tent, and prayer is offered to her to cast out the devil from the woman's body.³⁴

Another rite which is believed to influence the child's sex is the so-called *amanda* of the Sadrus in Madras. In a first pregnancy, water or human milk is poured over the woman's back by her husband's sister.³⁵

To ensure that the child shall be a male the *puṣkavasa* is performed in the third month of pregnancy, the wife fasting that day until she is fed by her husband with a grain of corn and two beans symbolizing the male organ. Sometimes curd is poured over them before she swallows them, and she also pours juice of a grass into her right nostril.³⁶

Quite distinct from this Brāhmanical rite is one observed in the seventh month in Travancore.

The woman goes to the foot of a tamarind tree, where she receives a thread seven yards long. This she entwines round a tree, and, if it breaks, either she or her child will soon die. Next day the thread is unwound, and her husband gives her a handful of tamarind leaves. On re-entering the house, he also gives her tamarind juice to drink, pouring it through his hands into hers. The priestess employed in this rite then pours oil on her navel, and from the manner of its fall divines the child's sex. As she drinks the juice, the woman leans against a cutting from a mango, which is then planted; and, if it fails to strike root, the child is deemed to be unweaned.¹

Among the polyandrous Kammālan the woman's brother gives her rice gruel mixed with juices of the tamarind, mango, and Hibiscus.²

In protracted labour the washings of a brick from the fort of Chākaba or Chakrabhya Amin near Peboia are potent, or it suffices to draw a plan of the fort and drink the water into which the picture has been washed off.³ The origin of this rite is obscure. The 'fort of Chākaba' is a game played by children; they make a mass on paper, and one child finds his way through it with a pencil. A dot within represents the treasure which it is supposed to contain. Vajpavās of the Vallabha sampradāya, or school, often make their *śrīti* in this shape.⁴

Difficult labour is dealt with in parts of Madras by calling in a woman who has had an 'easy time'; she presents the patient with betel, etc., and, if that fails, a line of persons drawn up pass water from hand to hand until it reaches the woman who had the 'easy time,' and she gives some of it to the sufferer. Here the luck or quality of the one woman is transmitted to the other.

In one caste, the Mīlas of the Telugu country, who are Pariahs, the placenta is put in a pot in which are nine leaves and the whole is buried, lest a dog or other animal should carry it off, which would make the child a wanderer.⁵

(3) *Death*.—A magical rite of resurrection is practised by the Dāsaris, a class of priests who minister to Śādras, in Madras. If a Dāsari is offended, he will revenge himself by self-mutilation or even by cutting off his own head. News of this is miraculously carried to all his caste-fellows, and, when collected, they display their magical powers by frying fish which come to life again on being placed in water, by joining together limes cut in two, and, finally, by bringing the suicide to life again. The rite can fail only if the victim's wife is in pollution or when the rite is not carried out reverently.⁶

2. *Agasta*.—First-born children have power to stop rain. Mīnālums say that they can do so by stripping naked and standing on their heads, heels in the air. In Calcutta they need only make a candle of cloth and burn it.⁷ A first-born son leaning against anything will, it is believed in S. India, attract a thunder-bolt to it.⁸ Girls born in the asterism of Mīla are believed in S. India to place their mother-in-law in a corner, i.e., make her a widow, and so such a girl, if her mother is not already a widow, finds difficulty in securing a husband.

Just as charms are made out of various natural substances, so such substances often possess magical powers. The *acacia* is inhabited by a *jinn*, but its wood is unlucky only if used to make or mend a bed; no one will be able to sleep on it. Here

¹ Thurston, II. 618. This rite cannot be said to correspond to the *parvāṇa*, which is intended to influence the sex of the child.

the spirit in the tree appears to endue it with magical properties; a man who conveys himself in servitude to the spirit of this tree will get all that he wants, but only at the risk of his life. For twenty-one days he must take a pot full of water daily to the jungle, and on his way back cast half of it upon a particular tree; on the twenty-first night he will be irresistibly drawn towards it; the devil will appear to him, and, if he escapes death, he will get all that he wants as the price of his bondage.¹ The tree called *berkhar* (*Callicassia*) has magical properties; any one cutting it down or tampering with it loses all his hair and becomes very ill. It yields a milk which raises blisters, and even to sit in its shade, while it is exuding it, has that effect. Indeed it is dangerous to sit in its shade at any time. This belief is current in the Murree Hills, in the Panjab, but in that very part the Gajars use amulets of *berkhar* (its usual Indian name) to ward off the evil eye (*nazar*) from both men and cattle, and its fruit is also much relished.²

To cure scorpion bite the insect should at once be caught and burnt, and the smoke allowed to touch the bite.³ To cure *soys*, or consumption, in a child (said to be due to enchantment caused by ashes taken from a burning place and thrown over or near the child) the parents should give away salt equal to the child's weight.⁴ Toothache is cured by a magical rite which consists in spreading sand over a clean piece of board and writing on it the first six letters of the Arabic alphabet. The patient then holds his aching tooth between his thumb and index finger, and touches each letter in turn with a pointed instrument. When he reaches the sixth letter, if not before, he will be cured. At each he should be asked if he is cured, and, when he says that he is, he should be asked how long he wishes for relief. He should reply 'two years,' as that is the limit of the charm's efficacy.⁵

After a bad dream, a Gāro, in Assam, collects a reed-like grass and is beaten with it by a priest, who repeats certain exorcisms. Then they carry a cock to the nearest stream, kill it, and let its blood fall into a toy boat; the boat is launched, and as it starts the dreamer bathes in the water. The prayers, the chastisement, and the sacrifice appease the spirits, and the boat is allowed to carry off the ill-luck.⁶

On the first day of sowing sugar-cane, sweetened rice is brought to the field, and women smear the outside of the vessel with it, after which it is given to the labourers. Next morning a woman puts on a necklace and walks round the field, winding thread on a spindle. This custom is falling into disuse.⁷

Magic squares are in vogue among Hindus. Thus one which totals 90 lengthways cures quartan ague; one totalling 100 every way causes excess of milk in cows and women and of *ghī* in a chura; one totalling 130 every way will, if worn round one's neck or in one's *pagri* (turban), bring any person under one's power;⁸ and one totalling 15 each way brings luck and is commonly found on shops. Squares totalling 55 and 90 each way should be placed under one's seat to ensure success at play.⁹

¹ *HNQ* IV. (1896) § 797.

² *PNQ* II. (1894) § 272, and *Soleiman Calcutta Review*, vii. (1898) 134 (*Calcutta Review*, lxxv. (1892) 290). In the latter R. C. Temple identifies the *berkhar* with the *škr. vṛṣa*, or bayonet-tree, but describes the *berkhar* as a low thorny shrub of the *siyphna*, or *jajoba*, family, the fruit of which is the 'fruit of paradise' in Arabic poetry—on which account the tree is much prized in Tripoli and Tunis.

⁸ J. H. 287.

The power of magic is so great that by mere assertion of its potency a *dev*, or demon, may be brought into subjection.

Fast the whole of a ninth lunar day falling on a Friday, and in the evening eat sweet rice milk. At 3 p.m. don red clothes perfumed, and make a circle of red lead on the ground. Sit in its centre with four sandals, some outside, some inside, and eight cloths. Light a lamp and with earnest better and say: 'Incantation can break down the stoutest' 5000 times—and a demon will be at your service.¹

II. *ISLAM*.—Muhammadans classify magic as high ('*al-wal*'), divine ('*raḥmānī*'), low ('*al-f*'), and satanic ('*al-shayṭānī*'). In divine magic perfection consists in knowledge of the greatest of God's names—the *ism-al-aṣṣam*, which is imparted only to the elect, and by which the dead can be raised. But God's other names, and those of Muhammad and of the good *jinn*, are also efficacious, and written charms are composed of them or of passages from the Qur'an, as well as of mysterious combinations of numbers, diagrams, and figures. Satanic magic is condemned by all good Muslims. It depends on Satan's aid and that of the evil *jinn*, who ascend to the lowest heaven and hear the angels so that they can assist magicians. Enchantment (*al-sihr*) is a branch of this magic; but, as it has been studied with good intent and with the aid of good *jinn*, there is a science of enchantment which may be regarded as lawful. Enchantment results in death, paralysis, affliction with irremediable passion, possession, or metamorphosis. Metamorphosis is effected by spells or invocations to the *jinn* accompanied by the sprinkling of dust or water on the object to be transformed. Against enchantment and other evils a talisman ('*ṭisām*'), i.e. mystical characters, astrological or otherwise magical, or a seal or image on which they are engraved, is effective. When rubbed, it calls up its servants.

Divination (*al-kāṣma*), which is also practised by the aid of *Shaitān*, is obtained by magic, by invoked names, and by burning perfumes. Its forms are: *ḥarb al-mandal*, inscribing the enchanter's circle,² *ḥarb al-rum*, the moving of sand,³ *ḥim al-nujūm*, astrology,⁴ and *al-sijr*, or augury from beast and bird.⁵

The *Imām Zamān* rupee is said to be dedicated to that *indm*, and is worn by Muhammadans on the right arm when starting on a journey.⁶

The names of 'All and the *indms* are used in magical squares according to the *abjad*, or letter-value system of computation. Notices of the custom are not uncommon in Indo-Persian histories as having been practised on the Mughal court-ladies.⁷

Islamic medicine is acquainted with the olive of Bani-Irāq, a stone found on the banks of the Indus. It is black with a little red and yellow, or olive-coloured with small white lines, and is used only for sprinkling over wounds and stings by Muslims. Hindus are said to worship it as a god, and to the Persians it is known as the *ang-i-Yāfā*, or 'stone of Jahwah,' or the *hajar al-Hund*, or 'stone of the Hindu,' in Arabia. Jasper (in Pers. *yashm*, Arab. *ḥajar al-yashaf*, or 'hard

stone'), when olive, green-yellow, or opaque green, is used in charms; and, when white, in medicine. The hair of a child will never turn white if a piece of it be tied on his neck at birth. If a piece is tied on the right wrist, he will be immune to witchcraft and the evil eye. Tied to a woman's thigh, it ensures painless labour; and, if by the light of *la'ilat al-qadr* (the night when Muhammad spoke with God) a man be sketched over it and the picture worn over the head, the wearer will be safe from wounds in battle.⁸

III. *MAGIC AND RELIGION*.—It has been held by many scholars that in ancient India the confusion of magic and religion was rife, just as it survived among other peoples that had risen to higher levels of culture. H. Oldenberg⁹ regards the sacrificial ritual of the earliest known period as pervaded with primitive magic, and he tells us that the rites celebrated at marriage, initiation, and the anointment of a king are complete models of magic of every kind, and that the forms employed are of the highest antiquity. Sylvain Lévi¹⁰ observes of the sacrifices prescribed in the *Brāhmaṇas* that they have all the characteristics of a magical operation, effective by its own energy, independent of the divinity, and capable of producing evil as well as good; it is only distinguishable from magic in that it is regular and obligatory, so that both matters are treated in the same works. Thus the *Samavediāna Brāhmaṇa* is a hand-book of incantations and sorcery, as is the *Ādhyātma Brāhmaṇa* portion of the *Jāṇashikā Brāhmaṇa*. M. Bloomfield¹¹ also holds that witchcraft became intimately blended with the holiest Vedic rites, the broad current of popular superstitions having penetrated into the higher religion of the Brāhman priests who were unable and possibly unwilling to cleanse it from the mass of folk belief which surrounded it. W. Caland,¹² in his introduction to the *Kaṭika Sūtra*, enlarges on the agreement between the magic ritual of the old Vedas and the shamanism of the so-called savage. Indeed, some authorities would derive Brāhman from *brāhmaṇ*, 'a magic spell,' so that, if they are right, the Brāhman would seem to have been a magician before he was a priest.¹³

On the other hand, J. G. Fraser¹⁴ also points out how in India, from the earliest times down to the present day, the real religion of the common folk appears always to have been a belief in a vast multitude of spirits of whom many, if not most, are mischievous and harmful. This belief subsists under the great religions, like Brāhmanism, Buddhism, and Islām, which may come and go; and in support of this thesis he cites Oldenberg for the Vedic and Monier Williams for the modern periods. It is to this deep-seated and universal belief in the existence of spirits, which fill all created matter—the sky, the earth, trees, beasts, the earthly waters and clouds—that many, if not all, magical practices are to be ascribed, at least in their inception. At every stage of a ritual sacrifice, e.g., spirits have to be appeased, and the very stake to which a willing victim is tethered for the sacrifice must be cut, shaped, and created

¹ *HSQ* v. § 224.

² *Mandal* is doubtless from the Gr. *mandala*, and not connected with Gr. *mandala*, a circuit or group of villages. The *mandala* was a kind of drum used to conjure up demons; hence an enchanter's circle.

³ It was taught by the two fallen angels Hārūt and Mārūt, who became enamoured of the ungrateful Zuhra, who ascended to the sky and mingled her splendour with the star Zuhra (Venus).

⁴ H. Wilberforce Clark, *Din-e-Ḥaḍḥa*, Calcutta, 1881, II. 616, citing the *Nisābī-ḥaḍḥa*, II. 284, 285, 286, and *Ḥaḍḥa-ḥaḍḥa*, I. 2. For a charm to drive which of two rivals will prevail see the *Ḥaḍḥa-ḥaḍḥa* by Maḥmūd Roshan 'Alī and the *Nisābī-ḥaḍḥa* by Maḥmūd 'Alī al-Lahori, Lucknow, cited in *Din-e-Ḥaḍḥa*, II. 621. It consists in writing the two names in *abjad*, and dividing by nine. Then, if both the quotients be odd or even, the lower in number will conquer; if both are equal, the lower in age; and, if one be odd, the other even, the greater in number will prevail.

⁵ *HSQ* I. § 224.

with the most minute precautions against their sinister influences. Every point in sacrificial ritual is symbolical, but the guiding principle in it is not magical, but religious. By the part of the stake which is dug in the sacrificer gains the lower world of the fathers, by its middle part that of men, and by its top the world of the gods. But this winning of the three worlds is conditional on his success in averting the onslaughts of evil spirits. In the whole ritual of animal-sacrifice at the stake (*yâsu*), as prescribed by the *Satapatha Brâhmana*, there is no trace of magic or of magical practices.¹

A question of minor interest is whether Indian magic was derived from or has influenced that of Arabia and the Near East. The Skr. word *śiṣṭa*, 'black magic,' may be the original form of *sihi*, or, conversely, the Arab word *sihi* may have been Sanskritized as *śiṣṭa*. A typical rite in *śiṣṭa* illustrates the spiritual basis of belief in magic. When performed with the object of destroying an enemy, it is known as *śhiṣṭa*, or *ghāṭi*, in the United Provinces. A vessel is filled with iron nails, knives, etc., and sent by certain incantations through the air until it descends on the victim's head and kills him. But, if a river intervenes, a sacrifice to the spirit called *ghaṭi* (lit. 'ferryman'), which is supposed to guard the river, must be made to induce him to let the vessel cross.² Thus black magic has to reckon with the spirits, however it works and whatever its origin.

Loomis.—4. The Hindu literature is vast, but mostly unpublished. It comprises many treatises on special topics—e.g., the *Kaṇḍikā* (7) *Sūtras*, a *Gurumāhātmya*, contains only magic squares for all kinds of ailments.³ It commences with the *Alphavēda*, upon which and other texts is based Alfred Hillebrandt, *Śikṣā-lakṣaṇa: Vedānta Vyāsa and Śaṅkara* (= *Śikṣā* II, 2), Strassburg, 1897.

5. The *Shīṭa* Mahāmantra, who are prone to occultism, have six books on magic: the *Ja* after *Jāma*, *Śa* after *śāṇḍilya*, *Paśa* after *paśāṇa*, *Maṇḍa* after *maṇḍala*, *Heṭha* after *heṭha*, and *Āṇḍa* after *āṇḍa*. The *Shāṇḍilya* has books on magic, such as the *Heṭha* and *Āṇḍa* and the *Paśa* and *Maṇḍa*.

H. A. ROSE.

MAGIC (Iranian).—I. Religion and magic.—Although religion and magic are two essentially different things, the interpenetration of the two is fairly common; but nowhere are they so intricately commingled as in Mazdaism.

First of all, a clear line of demarcation has to be traced between the real doctrine of Zoroaster, as it is expounded in the *Gāthās*, and the Later Avesta.

In the *Gāthās* hymns we find a religion of a highly moral character. It admits of no deity besides Ahura Mazda except personified moral entities, and it expressly undertakes a struggle against the lower beliefs and the magical practices of the people of the time. The cult of the *dāevas* in general and the nocturnal orgiastic sacrifices in which *Asomā* (g.v.) was drunk by the worshippers were specially condemned.⁴

The Later Avesta also anathematizes the sorcerers (*yēšs*) and witches (*paēvās*), but many of the beliefs and practices which Zoroaster had associated with them have found their way back into religion. The whole subject is rendered all the more intricate by the fact that a coherent system has been formed from a combination of the superior elements of the Zoroastrian creed (sophisticated to a great extent by adaptation to a lower standard of religious thought) and the popular and inferior beliefs of the Iranian people, including much that is in origin magical. As is well known, this is the system called dualism (g.v.). It is based on the assumption that there are two cosmic elements, the one created by

Ahura Mazda, the real god, and the other by his adversary, Angra Mainyu. Every creature of the wise lord is good, but all that has been created by his foe is evil. Each creator has thus communicated to his creatures his own specific nature and power. His creatures both share in their lord's natural and supernatural power and must assist him in the incessant struggle which is going on between the good and the evil spirit—a contest which will not be settled before the end of this world.

It follows that good creatures have a power over evil ones and evil over good. Of course, we may imagine that a good being, when he neutralizes the evil deeds of his opponent, acts, after all, as a depository of his creator's power; but in practice it is as though he had a real and effective power of his own against demons.

A good work is an act of war, capable of helping effectively towards the triumph of good over evil and having, therefore, an efficacy of its own to conjure and oppose the noxious activity of evil creatures such as evil spirits; and this is very much like the efficacy ascribed to magical rites. The only difference between such an activity and magic is that, with the latter, material interests are generally at stake, whereas, in the majority of Mazdaean religious acts, the concern is mostly supra-terrestrial, being the religious purity of the faithful (*āšuvān*) as a preparation for the future happiness of the blessed. The contrary state, the impurity of the limbs of the *drag* (*dragvān*), has to be destroyed.

2. Purification.—For the Zoroastrian the normal means of getting rid of an impurity acquired by sin is to outweigh it by merit⁵—a process which, of course, is far from being magical. Sin, however, being in Iranian eyes not only a breach of order which has to be repaired by repentance and good works, but a positive product of the evil spirits, of the evil creation, produces a substantial, though invisible, pollution—a moral disease like a bodily illness—and death likewise results from some mysterious contrivance of the originators of all evil. A material means of removing that pollution is therefore requisitioned, just as a remedy by its beneficial properties, as a piece of good creation, cures an ordinary disease. The power of purifying man from impurity belongs in the highest degree to water—an eminently good element of Mazda's creation. Besides water, other substances—e.g., *gōmādes* (urine of cattle)—are supposed to have great power to purify. The rites of purification by means of these substances are strictly fixed, as in a magical proceeding: the priest has to sprinkle every part of the body in a definite order, beginning with the head, till the *drag* is expelled from the left toes, which are the last refuge of the evil spirit. Dogs have a specially powerful wholesome influence. More intricate ceremonies tending to the same result existed besides this relatively simple one—e.g., the great purification of the nine nights (*Pahl. barāman* and *šab*) expounded in *Vend. ix.*; the ground is prepared, holes are dug, and furrows are drawn, according to a strict ritual; *gōmādes* is put into the holes, the patient rubs the ground, and is sprinkled with water and perfumes by means of a spoon and a stick of a fixed size, etc. The proceeding cannot, however, be completely identified with magic, because, however material the concept of purity may have been in the thought of the Iranian people at that time, it was, after all, a duty not confined to human interests in this world, because the activity of the purifying substances and acts derives from an essentially beneficent power, whereas the counter-spells, although tending to

⁶ *Newton*, p. 164.

neutralising nervous influences, are regarded as possessing a power of the same kind as the one which they oppose, and, lastly, because the rites, in spite of their magical tendencies, are devoid of all mystery. They are a public and accepted procedure, assumed—wrongly, of course—to date back to the Prophet's teaching, and forming part of the sacred struggle of good against evil. Man is supposed to make use of the weapons which Mazda has put into his hands for a contest in which he is serving the lord's interests. Nevertheless, it is clear that a real degeneration towards magic has taken place in these ceremonies, and also that many an ancient magical prescription for averting evils may have been introduced. This process is analogous to that which we observe in Manichaeism from Zoroaster to the Later Avesta period.

Moral beings, like the *amasha spendas* (i.e. justice, good spirit, piety, etc.), have been turned into—or, rather, identified with—the genii of fire, cattle, earth, etc., and Braccha, 'obedience,' has become a good spirit protecting men during the night against demons and *acrosura*, having the cock and the dog as his assistants in this task (*Bund. xix. 33*).¹

3. *Sacrifice*.—Of sacrifices we may say much the same as of purifications. Neither to the Indians nor to the Iranians was the sacrifice properly a magical act. Oldenberg² is quite right when he says that sacrifice is in Vedic times a gift to the god, which, in the mind of the sacrificer, is to influence the intentions of the deity, not by way of compulsion, but by securing his powerful goodwill. This conception, however, was likely to degenerate, and did. Indra and Agni are sometimes described as being mastered by the sacrificer.

Agni, the fire, is regarded as a miniature of the sun, the great fire, and, by kindling fire, one gets the sun to rise. Indeed, the *Satapatha Brāhmaṇa*³ says that the sun would not rise if the fire-sacrifice did not take place. A similar process can be traced in Iran, where the sacrifice is given its place in the general cosmic conflict, so that it

'is more than an act of worship; it is an act of assistance to the gods. Gods, like men, need food and drink to be strong; like men, they need praise and encouragement to be of good cheer. When not strengthened by the sacrifice, they fly helplessly before their foes.'⁴

Sacrifice has thus a value of its own independently of the will of the gods. It is an act of war, helping God in His struggle against the evil creation, so much so that gods also have to practice cult:

'Atharvans performed the spiritual Yasna ceremony with the archangels (*amashaspendas*) in the Raptvin Gāh, and in the Yasna he supplied every means for overcoming the adversary.'⁵

The value of sacrifice in itself is also to be discerned in the fact that it produces merits independently of the piety and attention of the sacrificer. If he does not obtain them for himself, they are not lost, but are collected in a store (*gany*) of merits.⁶ The sacrifice of the *Asoma* (= *Ind. soma*), although itself not really magical in principle, was specially prone to develop in that direction. The *Asoma-soma*, in the thought of the proto-Aryans, was a plant wherein resided an extraordinary strength of life capable of giving immortality to the gods, who were supposed to live on it like the Homeric gods on *ambrosia*, and of giving a superexaltation of life to man, in whom it

caused intoxication. As was said above, the *Asoma* orgiastic sacrifice had been banished from Gāthic religion in company with the magical procedure of the *datus-ushippars*. In the post-Gāthic period we see it reappear, but it has been deprived of its savage character and turned into a mystical drink.⁷ Not only was it supposed to confer a greater intensity of human life, but it was regarded as a highly beneficial spirit, imparting to man also the gift of spiritual life and a title to the supra-terrestrial reward.⁸ It led to a division into two *Asomas*.⁹ The one, the actual plant, was the yellow *Asoma*, the other, supra-terrestrial, called the white *Asoma*, was identified with the tree *goshvras* (Pahl. *gōshar*) 'that stands in the middle of the sea *Vouru-Kahe* . . . that is called "the All-healer" and on which rest the seeds of all plants.'¹⁰ It is by drinking the *goshvras* that men on the day of the resurrection will become immortal. For that reason it was customary to put a drop of *Asoma* on the lips of a dying Zoroastrian. *Asoma*, having been made the principle of all life and fecundity, was supposed to receive its healing power from Vohu Manah, and to be the son of Ahura Mazda. This mysterious power of the drink of life is an approach to magic, although it is extended to domains to which healing and vivifying power cannot normally attain—e.g., the gift of swiftness to horses in races, of healthy children to pregnant women, and of bridegrooms to girls. Moreover, it is, in the traditions of the Indo-Iranians, closely connected with a mystical bird which took the *soma*-*Asoma* from the place where it lay hidden and brought it to gods and men.¹¹ The Avesta speaks of the bird *Bedna*, which is the Simurgh of the Persians, who make him play the same part as the bird *Varengana* in *Yt. xiv. 35 f.*—a part which is completely magical.¹²

'Get thee a feather of the wide-feathered bird *Varengana*, Oh *Spiritus Zoroastrianus*. With that feather thou shalt rub thy body; with that feather thou shalt cure back thine enemy. He who hath a bone of the mighty bird or a feather of the mighty bird gaineth (divine) favour. No one, (however) magnificent, smiteth him or turneth him to flight; he first gaineth strength, he first (gaineth) glory; the feather of the bird of birds bestoweth help.'

Thus we have here to do with a real amulet.

4. *Spells*.—If the sacrifice is apt to degenerate into a magical rite, prayer may become a spell. The message of Zoroaster to man is a *mantra*, a noble word which properly means 'utterance,' 'word,' 'ordinance,' but has in the Later Avesta the meaning of 'spell' and, indeed, the sermons of the Prophet, instead of being a subject for meditation, are chanted in a dialect obsolete for ages, and have degenerated into mere spells, the exact pronunciation of their words achieving what their author sought by pure life and diligence in a noble calling.¹³ The finest Manichaean prayers, such as the *Asoma Fairya* (i.e. v. *Pārsi, Asomay*)—a kind of profession of faith—have stiffened into a mechanical repetition of formulae, and have acquired an infinite power of their own, so much so that they become a weapon for the Creator Himself. The *Bundahishn* (i. 31) narrates how Atharvans, having recited the *Asomay* and uttered its twenty-one words, confounded the evil spirit and secured the victory over him, in the first days of creation. The power of the same prayer and of some others is also expounded in *Vend. xix.* (cf. also *Yt. xvii. 20*). Recited as many times as is prescribed on every occasion, they help as a spell the purification of man, which is

¹³ Meulen, p. 166.

primarily attained by the marvellous power of the substances and ceremonies mentioned above.

No wonder, therefore, if the *manthra* is mentioned as a regular means of curing diseases. *Vend. xx* distinguishes healing by plants, by the knife, and by the *manthra*, the last being the most powerful. A series of formulae is to be found there for repelling both diseases and evil beings. The prayer contained in *Vend. xx. 11* is supposed to be peculiarly powerful. It is directed to Airyaman, the healing god *par excellence*. *Vend. xxi. 18-23* is also a spell against all kinds of diseases, consisting of some fragments of other parts of the *Vendidad* and of some very well known prayers. These are the means that Airyaman has at his disposal for curing the 90,000 diseases created by Angra Mainyu for the bane of mankind (*Vend. xxi. 1*). Airyaman is an old Indo-Iranian god: in the Veda he is an *asvya* (Aryaman) who is generally found in company with Varuna and Mitra. He is a beneficent and helpful god, but in Persia he has been narrowed down to the character of a healing god. He survives in Pārsiān as the lord of heaven, but, in his quality of healing god, he is replaced by Faridān (= Thraēdāna), who, having killed the dragon Azi Dahāka, is supposed to be a powerful enemy to the works of evil spirits. The Iranians knew, moreover, of a healing fruit which, according to *Bund. III. 18*, Ahura Mazda pounded up before his coming to the ex., 'so that its damage and discomfort from the calamity (*sandā*) might be less.' On the same footing as the *manthra* for healing diseases must, of course, be put the numerous incantations and mystical formulae for removing the pollution inflicted upon anything which has come into contact with a corpse. *Vend. viii. 14 ff.*, e.g., explains that a road whereon the dead bodies of dogs or men have been carried cannot be traversed again by men or *soška*, till the yellow dog with four eyes or the white dog with yellow ears has gone three times across it and an *atharvan* has gone along it, saying aloud the fend-smitting words of the *homaevar*. *Vend. vii. 20 ff.* contains the method of purifying wood which has been in contact with a corpse, and formulae for all kinds of good elements infected by the same pollution (cf. *Vend. x. xi.*, etc.). In such cases the *Godāda* had become a mere spell (cf. *Vend. x. 1 ff.*). The reason of this custom with regard to corpses is originally a magical one, which has been fitted into the general Mandaean system. It is the old conviction of mankind that death, like illness, cannot occur without the malevolent intervention of some spirit, which has therefore to be averted. For a Mandaean to die was to pass into the power of the *drūj* Nasu. Hence it was necessary to minimise the evil produced by this demon by protecting all good beings and substances from its power and freeing, as soon as possible, the beings or substances that had fallen into its hands. The intervention of malevolent beings and the utility of spells were felt in many other circumstances—e.g., in the case of a woman on the eve of child-birth (*Vend. xxi. 8, 18, 16*), or when some accident occurred to cattle.¹

5. Fire.—Among the elements which have to be kept carefully from any pollution, fire occupies a prominent position. It is well known that among the Pārsis it enjoys a veneration which is not far from being superstitious. Here, the process is not a degenerative one, but rather the elevation of an elementary and, to a great extent, magical belief which is common to many nations, but which is specially Indo-Iranian (cf. art. FIRE, FIRE-CODE, § 6 f.). Fire is the great purifier, which illuminates the night, keeps off bitter cold and wild beasts, and, as such, is the great enemy of demons and

the friend and ally of man. It repels diseases, and it plays an important part in the proceeding of Indian magic, as is expounded in the *Atharva-veda*—a name which is taken from the *atharvans*, who were originally priests of fire. The Iranian myth of Atar's victory over the serpent Azi Dahāka (*Yt. xix. 48 ff.*) belongs to the same order of thought. Indeed, fire, in the conception of the Persian *atharvans*, keeps closer to its original part, inasmuch as it does not become, as in India, the agent which conveys to the gods the substance of sacrifices. It remains the great avenger of everything impure, and must on no account be put in contact with anything that is not pure, least of all with corpses or with anything coming from the body. It has become an earthly form of the eternal, infinite, godly light, the purest offspring of the good spirit, the purest part of his pure creation,² the weapon of Ahura (*Ya. II. 9*). It is the principle of all life, in men as well as in plants, the son of Ahura Mazda.³ We can distinguish several forms of it, among which the *hadrām* fire is the most sacred. It is supposed to be an emanation on earth from the fire above and the most powerful protection of the land against foes and demons.⁴ It took its name from Verethraghna (*Škr. vṛthraṇa*), in Indian myth the genius of victory and the slayer of the demon Vṛtra.

6. Influence of stars.—Astrology, as is well known, was the chief concern of the Magi, as the ancients describe them to us; but there is abundant evidence that this element of activity was not of Iranian origin. The proto-Aryan element of astrology was extremely small, in contrast with Babylonian religion.⁵ We have, however, the cult of Tīstiya, the star (Sirius) which was regarded as a good genius that brought rain after having slain the drought demon Apaka (*Yt. viii. 20 ff.*). It is a very good genius which, at the dawn of creation and before man was created, destroyed the noxious creatures by an effusion of beneficent waters. It would be an exaggeration to treat as real magic such beliefs concerning the part of Tīstiya as we find in the Avesta. There is reason to believe, however, that in some parts of Persia rain spells were in use. The *Great Bundahishn* says:

'The plague created against Salsbia is abundance of witchcraft; and that character appears from this, that all people from that place practise astrology: these winds produce . . . snow, hail, spiders, and locusts.'

On the other hand, it was a current belief among Iranians that planets had a malign influence; but this does not oblige us to admit that they had any belief in the influences of stars upon men's fate (cf. art. FATE (Iranian)).

7. Recent superstitions.—Among the superstitions prevalent among the Pārsis and the Muhammadan Persians many customs, no doubt, go back to old Mandaean practices or, more probably, to popular beliefs which persisted beside the official creed.

The great power assigned, among the old Mandaeans, to plants in general, and in particular to some specially marvellous ones, as well as the extensive practice, among the Babylonian Magi,⁶ of natural or magical treatment of diseases by herbs, probably explains the important part played by plants in the superstitious customs attached to the ancient Persian festivals as described by Persian writers—e.g., rubbing with olive oil on the day of Naṛdās as a riddance from sorrows during the new year, eating a pomegranate on the feast of Mihr (Mithra) to avert dangers, hitting

an eating animal with an orange on the day of Adar in November as a way of securing happiness, giving garlic to one's friends on the Gôô rûs (14th Dec.), and boiling herbs on the same day, in order to get rid of demons, fumigation with liquors on the day of Di-mihir rûs in order to avoid starvation or misery, eating apples and daffodils on the same day in order to secure success in one's enterprises, plating betel, walnuts, etc., on a pregnant woman's bosom, to make her fertile, etc.

The power of fire against evil beings is illustrated by the lighting of a fire on the night of the Bahman (Vohu Manah) festival (10th Jan.). This fire, on which perfumes were thrown, was lit under the image of the genius in order to repel wild beasts. During the whole night it was guarded by standing Persians.¹ Anquetil du Perron reports that on 15 Spandarmas the Persians used to hold a spell, written on a sheet of paper, in the smoke of a fire, in which they had put pieces of horn from an animal killed on the festival of Mihr, cotton seed, resin, and garlic, in order to remove the *dêw* (*dæw*) from their houses.² The magic for rain has survived in the custom of pouring out water on 30th Jan. in order to obtain rain during the year.³

In the last days of the Persian year the souls of the departed are said to come and pay a visit to their relatives, who prepare a sumptuous meal for them. The souls—or, rather, the *fravashis* (f.r.)—are supposed to gaze at the food and smell it.⁴ This also, no doubt, is a survival of the beliefs concerning the *fravashis*.

The use of the Gâthâ hymns and of the chief Zoroastrian prayers as spells against diseases or against the evil eye is current to this day among the representatives of the Mândeian faith.

¹ In order to avert the influence of the evil eye or to cure a child of some disease, a parrot will occasionally hire the mobads . . . to read from the Yasna, the Yashts, or the Khordâh Avesta; and when women are childless, they will sometimes pay to have the Vendidad Sadeh recited by the priests, in order that the cause of sterility may be removed.⁵

J. J. Modi knows of charms for diseases of the eye⁶ or for avoiding pollution from contact with all that comes from the human body—e.g., hair or nails.⁷ Amulets are also used for the same purpose.⁸

⁹ *LITERATURE*.—There is no special book on Iranian magic. The general bibliography on Mânâism has to be consulted, especially the translation of the Avesta by J. Darmesteter (*JASO*, Paris, 1893-98). J. H. Moulton, *Early Zoroastrianism*, London, 1914. For spells and charms see literature at end of art. CHARM AND AMULET (Iranian). For Persia see J. A. Decourdemanche, in *RFP* XLIII (1908) 289-92; D. Monast, *Les Perses*, Paris, 1899.

A. J. CARNOY.

MAGIC (Japanese).—Japanese magic is such a vast subject that, if we were to treat it systematically, with all its logical divisions and subdivisions, it would be almost impossible to give even a bare index to the volume that would have to be written to describe it. We shall, therefore, dismiss everything that springs from foreign influences, and even in Japanese magic proper we shall ignore the general classifications under which the innumerable details supplied by the rich literature of the country might be arranged. We shall confine our attention to emphasizing the essential point, viz. the existence of magic in the very heart

of the national religion, in the most authentic documents of pure Shinto.

For this purpose we must apply chiefly to the ancient rituals (*norito*) collected in the *Engishiki* in the 10th cent., although several of these—and precisely those that contain most of the magical element—were certainly composed at a much earlier date, even before the most ancient mythico-historical works, the *Kojiki* and the *Nihongi*, which were written in the 8th century. By glancing over the most typical of these *norito*, and explaining them with the help of certain related passages in the *Kojiki* and the *Nihongi* or in other equally ancient sources, rather than by abstract classifications, we shall gain a vivid idea of what Japanese magic was in its most ancient and most original form.

The old rituals seem to have been not so much prayers as magical formulae, solemn incantations, and we shall see that at the same time they were enveloped in powerful rites by which the magician priests of primitive Japan conquered their gods.

This magical spirit appears at the very beginning of the collection, in the 1st ritual, *Teshigaki no Motowari*, which was said every year at seed time to obtain a good harvest. The chief priest (*nakatsuki*), who recited it in the name of the emperor, addressed the gods in these words:

¹ I believe in the promise of the sovereign gods of the Harvest. If the sovereign gods will bestow in many hundred ears in luxuriant ears the late-ripening harvest which they will bestow, the late-ripening harvest which will be produced by the dripping of foam from the ears and by drawing the ear together between the opposing thighs, then I will fulfil their promise by setting up the first-fruit in a thousand ears and many hundred ears, raising high the ear-jars, filling and ringing in rows the bellies of the ear-jars, in foam and in ear.

Other offerings are then enumerated, among which we notice a white horse, a white pig, and a white cock. Now, a 9th cent. document, the *Kogoshiki*, gives the legendary origin of this detail: *Mitotshi no Kami*, 'the god of the august harvest,' had cast his curse on the rice fields; but the divinity obtained from him, by the gift of these same white animals, the secret of a magical process which enabled them to save the imperilled crop. The ritual is, therefore, based on a history of magic. The main point to remember from this first text, however, is the conditional character of the offerings which are to obtain the desired result. The same precaution is found again, in the same words, towards the end of this document, where the officiant invokes the gods who preside over the departure of the waters on which irrigation depends. This ritual, therefore, is not so much a prayer as a contract, a matter-of-fact agreement, by which the gods receive in advance the remuneration promised in exchange for the services expected from them, and thus find themselves morally estopped to render them. We accordingly see at the very beginning the familiar nature of the relations between these very human gods and the priestly magicians who exploit their power.

In the 2nd ritual, *Kasuga Matsuri*, we again find this idea of the bond which must unite the offerings with the services rendered; for it is 'in consequence' of these offerings that the gods are asked to protect the sovereign and his court. We may also observe that, of the four gods worshipped in the temple of Kasuga, the first two, *Take-mika-damochi* and *Futan-nushi*, were represented by magical swords (cf. *Kojiki*, tr. B. H. Chamberlain, 2nd ed., Tokyo, 1906, p. 26), and that the other two, *Koyasu* and his wife, are connected with the famous eclipse in which that god, by his 'powerful ritual words,' helped to bring back the sun-goddess (*Kojiki*, 84).

There is the same spirit in the 3rd ritual, *Ni-noe Oho-ami no Matsuri*, devoted to the goddess of food.

Her worshippers make a bargain with her; while bringing her various offerings, they promise her others if the harvest is very abundant.

The 6th ritual, *Tatsuta no Kasa no Kami no Matsuri*, is just as characteristic, and, moreover, relates its own legendary origin. For several years unknown gods have bungled all the crops, and the diviners have not been able to discover who these gods are. Then the sovereign himself 'deigns to conjure them,' and they reveal themselves to him in a dream. They are 'Heaven's Pillar's angustness and Country's Pillar's angustness,' the gods of the winds who maintain the order of the world. They require certain offerings, the founding of a temple at Tatsuta, and a liturgy, by means of which they 'will bless and ripen the things produced by the great People of the region under heaven, firstly the five sorts of grain, down to the least leaf of the herbs.' Here it is the gods who state their conditions. The people hasten to fulfil them 'without omission,' but evidently the recollection of past calamities has left some mistrust, for, when making the present offerings, they announce future gifts for the autumn: if, between now and then, the gods have deigned not to send 'bad winds and rough waters,' but to 'ripen and bless' the harvest, they will grant them the fruits of it. This will be their small commission.

We shall pass over the 6th, 6th, and 7th rituals, which are not so interesting, and come to the 8th, *Okoto no Hagaki*, i.e. 'Luck bringer of the Great Palace.' This title itself indicates the magical character of the document, and, in fact, we find the ritual defined in its own text in the words, *omote tsu ikusaki ikaki-goto*, 'the celestial magical protective words.' It is a formula the recitation of which wards off all calamity from the palace, as an amulet would do; this is shown by the importance ascribed to the perfect regularity of the words pronounced; for, in another passage, certain 'corrector-gods (*naoto*) are begged to rectify all the omissions that they may have seen or heard in the rites or the words of the ceremony. This ceremony itself throws abundant light on the magical character of the ritual of which it was a part. We have a description of it in the *Okashiki* of the 9th cent. (see E. Satow, in *TASS*, vol. ix, pt. ii. [1881] p. 192 f.). A priestly retinue, in which we distinguish chiefly the *nakatsumi*, the *imide* ('abstaining priest'), and the *vestals*, goes through the palace in every direction; and in different places, from the great audience-hall to the bath room, even to the emperor's privy, the *vestals* sprinkle rice and *enkō*, while the *imide* hang precious stones on the four corners of the rooms visited by them. We observe here an application of the custom, called *sumai*, which consisted in scattering rice to ward off evil spirits. Whatever is the reason of this custom—whether it is simply a bait thrown to the demons or perhaps a symbolical use of grains whose shape represents one of the aspects of the generative power, of the vital force which combats illness and death—the rite in question was very frequently practised in Japanese magic. Rice was scattered inside the hut in which a woman was about to be confined; in the divination at cross-roads (*tsuji-ure*; see art. DIVINATION [Japanese]), a boundary was sometimes marked on the road, where rice was also strewn, in order to take afterwards as an oracle the words spoken by the first passer-by who crossed this bewitched line; and an old legend tells how, when the son of the gods descended from heaven to Mount Takachiho, grains of rice were thrown at random in the air to disperse the darkness from the sky. Just the same is the magical use of jewels to combat evil influences. Through the whole of Japanese mythology there is the sparkle of jewels, some of which are talismans—

jewels which, at the time of an eclipse, the gods suspended to the highest branches of the sacred *alevere*, and whose brilliancy recalled the sun (*Koyuki*, 64); jewels which, in another famous story, enabled their possessor to make the tide flow or ebb at his will (id. 180); jewels which even aimed at resuscitating the dead, as we shall see below. We can, therefore, easily understand the magical rôle of the red jewels which, paraded in the imperial apartments, caused the dark threats of the invisible everywhere to retire before their brightness. Still another point to be remarked is that, according to the description cited, the *imide* recite the ritual 'in a low voice.' Polynesian sorcerers also said their prayers in a low singing, perhaps even hissing, tone, similar to the hissing, whispering voice which they attributed to their gods; and even in Japan, in the divination by the harp (*hoto-ura*), one of the practices of the officiant was a complicated whistle. All this magical atmosphere which surrounds the ritual suits its text very well. It points out, first of all, the propitiatory rites which the *imide* have accomplished in hewing down the trees intended for the construction of the palace. Then it recalls the mythical recollections which assure beforehand the efficacy of the formula recited. Then the protector-gods of the palace are entreated to ward off certain calamities, several of which—e.g., serpent-bites, or the droppings of birds falling through the smoke-hole in the roof—are ritual 'offences.' Lastly, in the same way as it invokes the corrector-gods for every possible omission, the text insists on this fact—that the 'innumerable strings of luck-bringing grains' have been made by sacred jewellers 'taking care to avoid all pollution and to observe perfect cleanness.' The care in all these details shows the magical importance attached to each of the rites of the ceremony, and to the most insignificant words of the incantation.

We shall omit the 9th ritual, *Mikado Matsuri*, 'Festival of the Sublime Gates,' devoted to the gods who guard the entrance of the palace against the evil influences of the 'crooked' gods (*waga*), and come to the 10th, which is much more important. This is the 'Ritual of the Great Purification' (*Ōe-haruki*). This ritual was recited by the chief of the *nakatsumi*, at the end of the 6th and the 12th months, to blot out all the transgressions, both moral and ritual, that the whole people had committed in the interval. The choice of these dates is in itself significant: the summer ceremony recalls the lustrations formerly practised on the eve of St. John in different countries of Europe, and the ceremony at the end of the year corresponds with the need of renewal experienced by the majority of men at this time, and which, in Japan, still takes the popular form of a dramatized exorcism called *tsuina*, 'expulsion of the demons.' The Great Purification included various rites; but the ritual is often mentioned as if it itself formed the whole ceremony—which proves the magical power ascribed to the words recited. This ritual begins by stating clearly that it is the emperor who 'deigns to purify and wash away' (*haruki-tamaki ayumu-tamafu*) the offences committed—from which we see that the gods who, a little later, are to be invoked to intervene really play a part inferior to that of the emperor, and act only, so to speak, at his command. The right of absolution which he exercises thus arises from the general sovereignty conferred 'respectfully' upon him by the celestial gods at the beginning of the dynasty, as the continuation of the text immediately recalls. Then follows the enumeration of ritual crimes, voluntary or not, which are to be effaced (see Heron, *Anthologie de la littérature japonaise*, Paris, 1910, p. 22 f.). We may select from this list at least two offences com-

mented with our subject. The one is the 'planting of wands' (*tsuki-soshi*) in rice-fields, probably with incantations—a *primum* which an ancient native interpretation explains as the erecting of magic boundaries on the field of which one claims to be proprietor, though perhaps it is an example of pointed wands secretly stuck into the mud to hurt the bare feet of a neighbour, just as, among the Malays, a person in flight retarded the pursuit of his adversaries by this means. The other offence (*magi-mono seru tsutsumi*) is the 'performing of witchcraft,' either in a general way (cf. *Koyiki*, 393 f.) or in particular against a neighbour's animals (if we connect this passage with the expression *homono-taiyushi*, 'to kill animals,' which precedes it). In any case the Chinese character employed shows that it is a question of black magic, and that is why the *norito*, although it is itself a magical text, does not hesitate to condemn it. The ritual afterwards shows that, when these faults are committed, the great *sakotomi* has to prepare some twigs in a certain way, doubtless intended to form a sort of purificatory broom, then to recite 'the powerful ritual words of the celestial ritual' (*ama teru norito no futo norito-goto*). The native commentators tried for a long time to find out to what mysterious incantation this passage could possibly allude, without seeing that it simply referred to the *norito* itself. This is the 'celestial' ritual which the gods revealed on high to the ancestor of the emperor, and whose 'powerful words' his descendant owes to be repeated—an expression intended to recall the intrinsic virtue of this formula. When the high priest recites it thus, according to the text of the ritual itself, the gods of heaven and earth will approach to listen, and all offences will disappear, being swept off, carried away to the ocean by the goddess of the torrents, swallowed by the goddess of the sea-currents, driven to the nether regions by the god whose breath chases before it all impurities, and there they will be seized at last by a subterranean deity who will banish them for ever. Clearly these duties are only the four wheels of the machine which the emperor sets in motion by the hand of the great *sakotomi*, the magician who knows the sacred words which even the gods obey. As for the rest, to make more certain, they bring a horse whose erect ears will induce these gods to listen attentively, just as the crowing cocks, the lighted fire—all these magical processes of the myth of the eclipse (*Koyiki*, 63-65)—would recall the sun, or as, in another account of the old Shinto annals (*Nihongi*, tr. W. G. Aston, London, 1896, I, 106), one had only to whistle to raise the wind. Then an order is given to the *urabe* ('diviners') to throw into the river the expiatory offerings, to which a mysterious sympathy unites the sins themselves, which will disappear along with the objects to which they have been attached. The ritual finishes, therefore, with a last example of the magic which has inspired the whole of it.

We may mention the 11th ritual along with this one. It is an invocation which the hereditary scholars of Yamato pronounced immediately before the ceremony of the Great Purification, and in which they presented the emperor with a silver-gilt *hamae* effigy, which would play the part of scapegoat by removing calamities from him, and a gilded sword on which he breathed before it was taken from him, with the same intention of driving away, after this magical transfer, both the sins committed and their material support.

Another ritual which is plainly magical is the 12th, the title of which, *Ho-shidume*, 'Appeasing of the Fire,' shows that its purpose was not to worship the god of fire, but to banish him from the palace. As in the 10th ritual, the text first recalls

the celestial revelation which has confided to the emperor the 'powerful words' by means of which he is superior to this god. Then it recounts the atrocious crime of this 'child with the wicked heart,' who caused his mother's death by burning her when she gave him birth (cf. *Koyiki*, 22-23); and tells how Imanami herself, curing this son who had caused her death, came up from the nether regions to give birth to the water-goddess, the gourd, the river-plant, and the princess of the clay mountains, four divine things whose magical use against fire she immediately taught. Then, in order that this wicked god 'may daign not to be terribly lively in the palace of the august sovereign,' he is loaded with offerings, which have the effect of captivating and subduing him. This ritual was accompanied by rites which consisted mainly in the lighting of a fire by the *urabe* in the four outside corners of the precincts of the palace, with the primitive apparatus (*As-hori-nue*) of which a specimen may be seen in the University Museum, Oxford.

The 13th ritual, *Michi-sai*, also aimed at employing certain gods to combat others. Those who were invoked on this occasion were three gods of roads and cross-roads, whose phallic character caused them to be looked upon as 'preventive gods' (*soko no kami*) against the epidemics sent by the demons. The ritual begins by reminding these protector-gods, without great reverence, that their duties were inaugurated in heaven itself, where they already served the son of the gods. It then dictates to them what they must do:

Whoever from the East-country, the Bottom-country, there may come savage and unfriendly beings, connect not and part not with them, but if they go below, keep watch below, if they go above, keep watch above, protecting us against pollution with a night guarding and a day guarding.

In return they are presented with offerings, which they are to enjoy while defending the great roads 'like a multitudinous assemblage of rocks,' and, finally, the celebrant insists once more on the 'powerful words' of his formula.

The next ritual, the 14th, was devoted to the *Oho-nike*, 'Great Offering of Food.' Before eating the new rice of the year, the ancient Japanese performed a ceremony called *Niki-name*, 'new tasting,' which had a propitiatory purpose towards the spirit of the rice (*Uga no Mi-tama*). The *Oho-nike* was a more solemn *Niki-name*, celebrated some time after the accession of the emperor, and constituting a sort of religious coronation for them. The ritual relating to this festival contains nothing very curious in itself; but it is interesting to find that the very complicated ceremony with which it was connected included a long series of preparations, in which magic occupied a large place, just as in the essential part of the festival, when the emperor in person, surrounded by ladies of honour who repeated a mysterious formula, shared in the repast which he had just offered to the gods.

The 15th ritual is another document whose magical value appears as soon as it is placed in its psychological surroundings. It is entitled *Mi-tama shidume*, which shows that its purpose was 'to appease the august spirit,' i.e. the spirit of the emperor. It was a case of keeping the imperial soul in his body, of recalling it if it seemed to wish to escape—in a word, of renewing magically the vital force of the sovereign for the coming year and thus prolonging his life. This is the meaning of the ceremony called *Chidume*, which was celebrated at the end of the year in the annuary of the prince of the court (see *Nihongi*, II, 373). Now, the gloss identifies this festival with an ancient ceremony called *Mi-tama furikishi*, 'shaking of the august jewels,' which again plunges us into deep magic. The *Koyiki* (II, 2) says, in fact,

that, when the sun-goddess gave the investiture to the ancestor of the emperors, she bestowed upon him ten precious treasures:

'one mirror of the effing, one mirror of the above, one eight-hands-breadth sword, one jewel of birth, one jewel of return from death, one perfect jewel, one jewel need-returning (evil things by the road they come), one serpent-sword, one bee-sword, and sword of various things.' She added 'In case of illness, shake these treasures and repeat to them the words *Hi, fu, mi, yo, hi, mi, me, ame, ya, hi, me, to, i*, and shake their purple (sacramental). If then death or the dead will certainly return to life.'

The objects enumerated by the sun-goddess are *takamama*, several of which occur in the most ancient Japanese mythology (see *Kejiki*, 86, 180, 224, etc.). As for the incantation, it represents simply the series of numbers from one to ten, which demonstrates its intrinsic power, independent of the meaning of the words. We know, besides, that the same incantation was recited at this festival by young sacerdotal virgins (*me-ama-no-ko*), who performed the sacred *haguro*, in imitation of the dance of *Uzume* in the eclipse myth (*Kejiki*, 64-66), while a *nakatsomi* knotted threads, which were clearly meant to retain the imperial soul, and which he shut up in a closed vessel.

We shall omit rituals 16 to 24, which refer exclusively to the offices of the temples of *Ise*; it will be sufficient to mention in this group the formula of the 23rd ritual, for the installing of a prince as vassal:

The offering of a sacred witness of the blood imperial to serve as the *daijō* staff, having first, according to custom, observed the rules of religious purity for three years, is to the end that thou mayest cause the Sovereign Grandchild to live peacefully and firmly as long as Heaven and Earth, the Sun and the Moon may last. I, the Great Nakatsomi, holding the dried spear by the middle, with deepest awe presence this dedication of her by the Mikado to the end that she may serve as an august staff.

We have here evidently a survival of the 'abstainer' of primitive Japan, whose asceticism assured on pain of death the good fortune and health of the village, in the same way as here the sacrifice of the imperial virgin is to guarantee the happiness and long life of the sovereign (cf. art. *ASCETICISM* (Japanese)).

The 25th ritual, of a more general interest, is entitled: *Tatarigami no utarashi-takamatsuru norito*, 'Ritual for the Respectful Removal of the Gods who send Plagues.' In the 13th ritual the gods of roads were made to intervene against those wicked gods; now they themselves are directly addressed. It is, therefore, a real formula of exorcism. The text begins by recalling how the supreme council of the celestial gods, wishing to 'pacify' the country before the descent of the future emperor, sent *Futsu-nushi* and *Take-mikadomochi*, who triumphed over the terrestrial gods and 'silenced the rocks, trees, and the least leaf of herbs likewise that had spoken.' After this warning, undaunted and all the more plain because, according to the ritual, the wicked gods know well, 'by virtue of their divinity, the things which were begun in the Plain of high heaven,' numerous gifts are made to them to win them over—and not only the usual offerings of cloths, fish, game, vegetables, rice, and sake, but also, in a naive form,

'as a thing to see plain in, a mirror; as things to play with, beads; as things to shoot off with, a bow and arrows; as a thing to strike and cut with, a sword; as a thing which gallops out, a horse.'

Lastly, after having thus loaded them with numerous toys and abundant dainties, which they beg them to accept 'with clear hearts, as peaceful offerings and sufficient offerings,' they earnestly ask these 'sovereign gods' to be good enough,

'without desiring to be troubled, desiring to be serene, and desiring to hurt, to remove out to the wide and deep places of the mountain-streams, and by virtue of their divinity to be tranquil.'

Passing in silence a less interesting ritual (the 26th), we come at length to the last document of the collection, the 27th ritual, which is called

Idzumo no kuni no miyabito no kuni no yamato, 'The Divine Words of Good Fortune of the Chiefs of the Country of Idzumo.' These local chiefs, after having lost their civil sway, had preserved their religious power. It is they who to this day in this old province hand down the primitive fire-kindler which their legendary ancestor, the god *Ame-no-hohi*, had received from the sun-goddess herself, and which each chief priest of Idzumo bequeaths to his successor by the ceremony called *Hi-tsuji*, 'perpetuation of fire.' In this ritual the *miyabito* first announces that he will recite the formula, after many ritual preparations, to bring happiness to the reign of the 'visible god,' i.e. the sovereign. He then relates how *Ame-no-hohi* and, later, other celestial ambassadors were sent to earth to prepare for the descent of the sun of the gods; how *Ohonemochi*, the divine king of Idzumo, who achieved the 'making of the country' with the help of a stranger magician, and who was the first to found a government in this important region of the archipelago, was persuaded by the celestial envoys to abandon his temporal rule to the son of the gods; how he then divided his souls, by a curious application of the Japanese idea which allows the possible separation of the multiple souls of man, attaching his 'gentle spirit' (*ayai-tama*) to a fetish-mirror which he caused to be placed in a temple of Yamato, while his 'rough spirit' (*ara-tama*) went to rest in the great temple of Idzumo; and how at length *Ame-no-hohi* received from above the command to bless the sovereign henceforth, that his life might be long, healthy, and happy (cf. *Kejiki*, 84, 86, 113-124). It is while carrying out this command that the descendant of *Ame-no-hohi* intervenes, as he himself declares. He brings to the emperor 'divine treasures,' whose magical rôle—fortunately for us—he clearly defines. There are, first of all, sixty jewels, white, red, and green.

'These white jewels are the great august white hairs (to which your Majesty will reach); the red jewels are the august, beautiful, rosy countenances; and the green-jewels are the harmonious sinews with which your Majesty will establish far and wide, as with a broad sword-blade, his lasting great august reign over the Great-eight-island-country which he governs.'

We have here, therefore, a typical case of the action of like upon like, which is one of the essential doctrines of primitive man, and which, in the present case, attaches to the different jewels a power corresponding to their colour. The formula continues by other applications of this principle of imitative magic:

'As this white horse plants firmly his four hoofs and his hind-hoofs, so will the pillars of the Great Palace be set firmly on the upper rocks and become firmly on the lower rocks; the pricking up of his ears is a sign that your Majesty will, with ears ever more erect, rule the Under-Heaven,' etc.

It is possible that at some time these rites may have become symbols; but it is impossible not to recognise in them, especially at the beginning, practices inspired by that primitive logic which has always and everywhere constructed magic on the same universal principles.

Ancient Shinto, therefore, as it appears to us in its most authentic liturgies, is a religion in which the magical element still prevails over the religious sentiment. The rituals are essentially magical formulae, addressed to magician gods (as is demonstrated by all their mythical exploits) by magician-priests (the *nakatsomi*, the *imabe*, and the *urabe*), and encircled in magical rites. Magic is, therefore, at the base of the national cult of the Japanese, and it appears there with all the characteristics familiar to the student of comparative religion.

To finish with a vivid illustration, which, after the necessarily short descriptions given above, will show this magic in application in a typical and exact case, we shall choose as an example every-

as it was practiced in the most ancient times. The following is the curious account of the subject given in the *Kojiki* (235 f.):

"The Duty of Idzumi (the country of the 'sacred stones') had a daughter, whose name was the Duty Maiden-of-Idzumi. So eighty Deities wished to obtain this Maiden-of-Idzumi in marriage, but none of them could do so. Hereupon there were two Deities, brothers, of whom the elder was called the Youth-of-the-Hill-on-the-Autumn-Mountain, and the younger was named the Youth-of-the-Hill-on-the-Spring-Mountain. As the elder brother said to the younger brother: 'Though I beg for the Maiden-of-Idzumi, I cannot obtain her in marriage. Will thou be able to obtain her?' He answered, saying: 'I will easily obtain her.' Then the elder brother said: 'If thou shalt obtain this maiden, I will take off my upper and lower garments, and distill liquor in a jar of my own height, and prepare all the things of the mountain and of the river, in payment of the wager.' Then the younger brother told his mother everything that the elder brother had said. Forthwith the mother having taken wistaria fibre, wove and sewed in the space of a single night an upper garment and trousers, and also socks and boots, and likewise made a bow and arrows, and clothed him in this upper garment, trousers, etc., made him take the bow and arrows, and sent him to the maiden's house, where both his apparel and the bow and arrows all turned into wistaria-blossoms. Thereupon the Youth-of-the-Hill-on-the-Spring-Mountain hung up the bow and arrows in the maiden's privy. Then, when the Maiden-of-Idzumi, thinking the blossoms strange, brought them, he followed behind the maiden into the house, and forthwith wedded her. So she gave birth to one child. Then he spoke to his elder brother, saying: 'I have obtained the Maiden-of-Idzumi.' Thereupon the elder brother, vexed that the younger brother should have wedded her, did not pay the things he had wagered. Then when the younger brother complained to his mother, his august parent replied, saying: 'During my august life the Deities indeed are to be well imitated; it must be because he imitates mortal men that he does not pay those things.' Forthwith, in her anger with her elder child, she took a one-jointed bamboo from an island in the River Izumi, and made a coarse basket with eight holes, and took stones from the river, and made them with brine (shio, in the sense of 'hard salt'), wrapped them in the leaves of the bamboo and named this curse 'I Am to be spoken (by her younger son): 'Like unto the becoming green of these bamboo-leaves, do thou become green and wither! Again, like unto the flowing and ebbing of this brine (again the word shio, but here with the meaning of 'sea-water'), do thou flow and ebb! Again, like unto the sinking of these stones, do thou sink and be prostrate!' Having named this curse to be spoken, she placed the basket over the smoke (apparently on the hearth of the elder son). Therefore the elder brother dried up, withered, sickened, and lay prostrate for the space of eight years. So on the elder brother entreating his august parent with lamentations and tears, she forthwith named the curse to be reversed. Thereupon his body was pacified. This is the origin of the term 'a divine wager-payment.'"

In this text we have a case of original sorcery, founded on sympathetic magic (a conception so well expressed by the Japanese word for 'magic,' *magikari*, which conveys the idea of 'to mix'), but before the time when the progress of the arts and foreign influences could have given the idea of exercising sorceries on the effigy of an enemy. (For this later development see, e.g., the popular ballad of Shantoku Maru, in *TASS*, vol. xxii. pt. iii. [1894] pp. 294-308.) We are, therefore, in the presence of a thoroughly Japanese rite, whose ancient character is shown by its very obscurity, and which cannot be understood unless it is replaced in the midst of the primitive beliefs from which it came. First of all, the mother provides herself with the mysterious bamboo on which the life of her elder son is to depend. Purposely she does not gather it in any chance place; she takes it from an island—which already connects that object with the aquatic element. With this bamboo she weaves a basket, in which she takes care to leave eight holes, which will be the eight openings by which eight years of misfortune are to enter for the victim. In this basket she places river-pebbles, which, even more than the bamboo, come from the water. But it is from fresh water that they have come; and the nature of the rite demands that they should assume a maritime character. They are, therefore, put among brine; by this union the assimilation is made, and the sorcery can be accomplished. The only thing that remains to be done is to pronounce the formula whose powerful words will act on all these things.

The victim will wither like the leaves of bamboo, in the same way as, in another legend (*Kojiki*, 238), the magical imprecation (*utsuki*) of a chieftain had made a great oak-tree suddenly decay; or, better still, in the same way as, by the effect of a general malediction, man, formerly immortal, was condemned to die as the flowers of the cherry-tree fade (*Kojiki*, 140-142). Then, as the high water falls back, the guilty one will be abased. Lastly, he will be seen foundering as a stone sinks when disappearing under the waves. This curse pronounced, the basket of perdition is placed in the smoke of the hearth; the green leaves become black; the throat is executed. Yet in the end the mother's heart hears the repentance of her son. She reverses the curse, i.e., the terrible magical formula is this time pronounced backwards (cf. *Kojiki*, 238), and immediately the body of the young man is 'pacified'; he returns to health, to life.

In this sorcery the most curious point is that which is connected with the sea element. The fate of the young man is, in fact, connected with the ebbing of the tide. We have here an interesting illustration, among the insular Japanese, of the belief so wide-spread among primitive races, according to which a mysterious harmony exists between the life of man and the flowing and ebbing of the sea. In this belief, it is when the sea is flowing in that one is born, becomes strong, prospers; it is when it is ebbing that one loses his energy, falls ill, and dies. The Japanese sorceress, the depositary of primitive traditions, is well aware of this secret agreement. She knows that, even far from the seashore, an artificial connexion can be formed between these two manifestations of a single force. Consequently she brings into connexion with the salt element these river-pebbles, into which the consecrated words will bring the very existence of her son; and the cursed one is immediately delivered up to the enchantment of the waters; he becomes like a pebble on the beach, the tide carries him away, drags him towards the brightness of life, then lets him fall back and roll in darkness and death. This story of witchcraft has, therefore, given us at one and the same time a typical case of Japanese magic and a new proof of the strange unity observable even in the most curious beliefs of humanity in general.

Continued.—This has been cited in the article.

M. REYON.

MAGIC (Jewish).—The attitude assumed by Judaism towards everything not sanctioned by its own monotheistic teaching has also affected the practices which may be called 'magic,' and it thus becomes necessary, first of all, to obtain as clear a definition as documents of the OT and Jewish tradition allow as to what is to be understood by the term.

It must at once be pointed out that divination and charms (see *DIVINATION* [Jewish] and *CHARMS AND AMULETS* [Jewish]) are not part of Jewish magic, which, properly speaking, corresponds most closely to 'witchcraft.' The difference between witchcraft and other forms of magic is that the magician has nothing whatsoever to do with forecasting the future or with preventing any occurrence that is sure to happen in the ordinary course of nature. He has nothing to do primarily with spells or incantations, nor is the writing of any formula an indispensable condition for magic. Magic can only be 'performed'; no magic is effective unless it is the result of some 'operation'; the magician must 'act' in one way or another in order to accomplish his purpose; and herein lies the profound difference between magic and any other form of superstition—preventing and altering the regular operations of nature. The magician is not helping things to fruition; on the contrary, he

seeks to subvert the regular course of events. He is expected, if possible, to obscure the sun and moon, to bring the dead to life, to change human beings into animal shapes or vice versa; he is to produce fruit in winter, and, in fact, to do everything that is contrary to the regular laws of nature. The magician will kill, he will create strife—his activity will always be an evil one. He is not expected to do good; he will be the agent for vengeance, hatred, and everything that makes for strife, death, and destruction. But he cannot carry out his intention without an 'operation'; he must 'do' something in order to bring about the desired result. Unlike the diviner, who is guided by certain signs and omens, which he is able to understand and combine, so that he can read the future in the events of the present, and unlike the charmer, who can only undo the magician's evil work by certain spells, songs, formulas, and written amulets, the magician must perform a whole set of ceremonies quite independent of signs, omens, and spells. It is a new dedication that is here offered, which, by describing much more narrowly the field of superstition, is an endeavour to give to magic its real meaning. The magician's work, again, is not expected to be of a permanent character; it is temporary, and it can be undone by other means, or by other magicians who know the secret of the action and the means by which it has been achieved. In order, then, to disturb the laws of nature, to transform existing things, to shape and mould new creatures, the magician requires the help of superhuman powers. This is the very root and basis of magical art; the magician must be able to command the services of spiritual powers—demons, gods, or ghosts—malignant in their disposition and willing to do mischief.

Jewish magic presupposes the existence of such spirits, and occupies the borderline between orthodoxy and heresy, between Judaism and paganism. It is an art that lives in the twilight between truth and falsehood; and the line of demarcation shifts according to the change of theological views in the course of development and transition. It depends also upon the nature of those spirits and upon the theological attitude towards them—whether they are considered as forces opposed to God or as mere negative forces that are also creatures of God and yet unwillful, by their own innate wickedness, to do good. The conception of a rebellious angel who has been cast down from the heavenly heights because of his arrogance and insubordination does not enter into the sphere of Jewish magic, nor, with rare exceptions, have the gods of other nations become evil spirits subservient to the wish of the magician and willing to do his bidding.

The Hebrew term for 'magic' is *kešef*, which, like all technical expressions connected with superstition, is of obscure origin; though many attempts have been made to elucidate its primitive meaning, not one has yet proved satisfactory. The primitive meaning of *kešef*, in the view of the present writer, is apparently 'hidden,' 'obscure,' 'a thing done in a secret manner,' which is the very essence of magic. The performance is a secret one, and even those who are allowed to witness it are slow to understand its meaning. The word *kešef*, with its various derivatives, occurs twelve times in the Bible. It is to be noted that all the references in the Pentateuch are to Egypt, while of the references in the Prophetic writings some are to Assyria as well as to Palestine itself. In 2 Ch 28 Manasseh is described as having practised witchcraft as well as other forbidden things (cf. also Mal 3); the wizards of Egypt are mentioned in Ex 7²³ 22¹⁸; in Babylon there is only one allusion to them, in Dn 2.

The LXX translates *kešef* by *pharmakon*, which does not mean 'poison,' but, as in later Greek, a 'spell' cast by a magician. *Kešef* has remained the technical term in Hebrew literature. Witchcraft is called *kešef* in the Mishna and Talmud, and no words have been more widely used, and yet with a very definite meaning attached to them, than *kešef* and *wehakešef*, nor is there any doubt that the real meaning of this 'magic' is exactly witchcraft. It is clearly stated (Sana. vii. 4, 11) that only he is to be called a magician who produces a real act, but not the man who produces an optical illusion, a kind of jugglery.

The fact that witchcraft is mentioned in connection with Egypt (exclusively, in the Pentateuch, and occasionally, in other passages in the Bible) shows the probable source of the magical art known and practised in Bible times. The Egyptian *wehakešefim* in Ex 7²³ 22¹⁸ perform precisely the acts defined above as the work of the magicians; they endeavour to change the order of nature. No details are given regarding the operation of the magician in the Bible; but from Is 47¹³, Mic 5¹², Mal 3, Nah 3, Jer 27, and 2 K 17 it is clear that, in the eyes of the prophets, the work of sorcery was tantamount to idolatry and to lewdness, possibly through the performance of some action by the magician. That some of the witches performed such acts in a state of absolute nakedness is an attested fact throughout the history of magic, and it is possible that the prophets had this in view when in speaking of witches they placed them on the same plane as harlots. It is noteworthy that the witch, and not the wizard, is mentioned in Ex 22¹⁸, Dt 18¹⁰. The sin of the *wehakešefim* must have been so heinous that the law punished it with death. Witchcraft must, therefore, have been connected with idolatry (Mic 5¹²); it was characterized as an 'abomination' (Dt 18¹⁰), and was also described as *evratim*, 'lewdness' (Nah 3, 2 K 17).

The scanty references in the OT, which show that the practice could not have been wide-spread in Bible times, become clear in the light of the tradition of Rabbinical literature. We learn to know through what powers the magicians were able to carry on their operations; the spirits become, as it were, more materialized.

The existence of demons is not denied; on the contrary, they are universally acknowledged, possibly through the influence of Babylon, and the Jewish belief of the period endeavours to account for them in a world created by God (see DEMONS AND SPIRITS [Hebrew] and DEMONS AND SPIRITS [Jewish]).

According to the *Pirke Aboth*, v. 9 (cf. C. Taylor, *Sayings of the Jewish Fathers*, Cambridge, 1907, ad loc.) and Gen. Rab. 7, manna'im were created by God Himself at the close of the sixth day; but, as the Sabbath supervened before their creation had been completed, they remained half human, half spirit. They are not fallen angels, nor are they ancient heathen gods, but intermediate between angel and man, and mostly of an evil inclination.

How they are to be used—i.e. the art of witchcraft—has been taught to man by two angels who have forfeited all rights to the bliss of heaven. According to a legend found in the *Book of Enoch*, the *Chronicles of Jerahmeel* (tr. M. Gaster, London, 1899), and other Jewish Haggadic collections, the two angels Uzza and Azazel, who showed their discontent at the creation of Adam, and afterwards were sent by God, at their own request, to see whether they could withstand temptation, both fell in love with a woman and were punished by God. One of them hangs head downwards from heaven, and the other is chained behind the dark mountains; it was the latter who taught women the arts of witchcraft and cosmetics (*Jerahmeel*, ch.

25, and notes, p. lxxiii).¹ The Konites, the descendants of Cain, were the pupils of these angels, and, according to the *Book of Jubilees*, corrupted the descendants of Seth and brought about the Flood. According to another tradition, the *massekithim* and *sheddem* were the children of Adam and Lilith, the *sheddem* who leads the procession of *sheddem*, and who, during the one hundred years that Adam was separated from Eve, consorted with him (*Zohar*, I, 176; cf. *KKE* iv, 618). Lilith plays a great rôle in magical literature; she later becomes the demon who kills infants at birth and, together with her companions, is constantly mentioned in Aramaic inscriptions on magical bowls from Assyria and Babylon (see below). The demons are both male and female, and they also endeavour to consort with human beings—a conception from which arises the belief in *incubi* and *succubi*—and it is through these demons that the magician is believed to be able to carry on his work.

In apocryphal and legendary literature we get a clearer glimpse of the beliefs prevalent among the Jews concerning magic and magical operations. Faith in demons and demoniacal powers seems to have been established by that time; at any rate, these beliefs are far more in evidence, and do not seem to be seriously contested. The character of these spiritual potencies is somewhat indefinite, except in the *Book of Enoch*, where, as we have seen, angels who had fallen in love with human women use such powers as instruments for deception and sorcery. In the book of Tobit another side of this belief is shown in which we may begin to see a differentiation between a white magic, or a magic tolerated by Judaism, and that kind of magic which ranked as pure paganism, and which probably would fall under the category of the witchcraft for which the death penalty was prescribed by law. Here we find the angel Raphael himself helping, by means of fumigation, to counteract the work of a demon who, falling in love with Sarah, had become an *incubus*, and would, therefore, kill any one who intended to approach her. The spirit thus exorcised was *Azazel*, who is recognized in the later demoniacal hierarchy as the king of the evil powers.² The position of Belial, or Belial (the name given also in Samaritan tradition to the evil spirit who deceived Eve), is, in the *Assumption of Moses* and other apocryphal writings, not so clearly defined, but in any case he is an evil spirit approximating to the character of Satan in the book of Job (cf. *BEALIAH, BELIAR*).

To obtain the assistance and help of these powers, certain means had to be devised: gifts or sacrifices were made in order to win them over and gain control over them. Maimonides,³ in interpreting Dt 32, 'they sacrificed to *sheddem*,' says that the gift most acceptable to the evil spirits was blood, and that their willing help was obtained by giving them the blood of the sacrifice as food; the magician must partake of the blood, thus sharing the food of the evil spirits, so as to become their associate. To this sacrifice, which was not limited to the shedding and partaking of blood, other ceremonies had to be added, all best understood as sacrifices; just as the fumigation or burning of incense in the temple is an offering to God, so fumigation and the burning of incense must be understood primarily as gifts very acceptable to the spirits, who are not sufficiently materialized to enjoy material food (cf. the Biblical parallelism of

magic with idolatry, noted above). In addition there was the lighting of candles and the use of a knife with a black handle which is mentioned by Rashi to *Sanh.* 101a, and which can be understood only as a symbolical sacrificial knife. Philtres must be served in glass bowls (*Shabbat* 157a, 2a). Fasting and other ceremonies are all intended to propitiate the evil spirit, and this is what made magic and magical operations objectionable to Jews and an 'abomination' to Judaism. Yet Rabbis made allowance for weakness of human nature and, except on rare occasions, avoided rigorous measures against witchcraft. But when necessary they did not shrink from them. During the first centuries of the Christian era the whole of what might be termed the civilized world—Egypt, Babylon, Greece, and Rome—stood under the absolute sway of belief in evil spirits. It was partly Babylonian tradition that ascribed every form of evil and harm to the action of the *sheddem* and *massekithim* and produced a large literature of invocations and magical formulae for harm and for protection, and partly the Egyptian tradition of magical operations and ceremonies of a mystical and magical character. During Talmudic times it seems to have been believed that some *sheddem* were harmless, and, though they were looked upon as evilly inclined and malignant, a friendly intercourse with them does not appear to have been considered contrary to Jewish law. Thus a Rabbi once assisted in a dispute between two *sheddem*, in which one who had taken unlawful possession of a place belonging to the other was vanquished and a few drops of blood were found floating on the wall where they dwelt (*Levi. Rab.* 24); but, on the other hand, Abaya saw a seven-headed monster coming out of a well and killed it.⁴ The attitude of the Rabbis was justifiable so long as it did not lead to real idolatry.

The belief in the power of the Ineffable Name (see CHARMES AND AMULETS (Jewish), NAMES (Jewish)) was as old as any belief in witchcraft. As soon as the existence of evil spirits could not be denied, they also were given mysterious names, and it was held that, the moment the magician possessed the secret of their names, he could win their assistance, provided it was not contrary to the will of God. Legend says (*Pal. Targ.* to *Gen* 28¹²) that among the first who obtained mastery over these demons and the knowledge how to deal with them for their own purposes were the children of Abraham by his wife Keturah, to whom he had imparted the knowledge of the mystical names of the demons (the names of the *unclean*). It was through the names of these evil spirits that 'the prophet of the heathen,' as Balaam is called, was able to perform his witchcraft and was expected to harm the Israelites. He was considered to be the greatest magician of old, and, according to *Pal. Targ.* to *Nu* 23¹, he taught the daughters of Moab to practice sorcery and witchcraft and thus entice the young men to idolatry and immorality, which brought the plague upon Israel. It is also said that Balaam tried to escape by flying in the air, but Phinehas, through the Holy Name, was able to fly higher and smite him. The magicians in Egypt who unsuccessfully withstood Moses were Jannes and Jambres (see already in *Pal. Targ.* to *Ex* 1), well known in apocryphal literature as the great magicians at the court of Pharaoh (cf. also *1 Ti* 3⁸). According to the Samaritan *Apocrypha of Moses*, the sorcerer who predicted the birth of Moses was a certain Palti. The Samaritans trace the origin of sorcery and witchcraft to the 'Book of Signs' given to Adam before he left Paradise; but in Jewish and Christian

¹ For an Egyptian parallel to this legend ascribing the origin of magical art to the teaching of an angel who had fallen in love with a woman see M. Horowitz, *Collection des contes égyptiens* (Paris, 1907-08), I, 51.

² Later the best of *sheddem* had other names and names besides *Azazel* (cf. *Jerem.* 31:17; cf. *Gen. Rab.* 20, *Levi. Rab.* 5, and later Midrashic compilations).

³ *Guide*, III, 55.

⁴ This is one of the earliest mentions of a seven-headed demon, which plays such an important rôle in fairy-tales.

apocryphal literature it is the 'Book of Adam,' or the 'Book of Rastai,' a title afterwards given to a handbook of practical *kabbalah* full of such mystical names of angels, rulers, princes, stars, planets, and sublimar worlds. Still less could the Rabbis object to belief in power over these demons when they remembered that even the Temple in Jerusalem was said to have been built by Solomon with the assistance of the *shaddim*—a legend which rests on a peculiar interpretation of the word *shaddai*, occurring in Ex 9¹. So firm was the later belief in Solomon's power over the *shaddim*—and whatever was allowed to Solomon could not be refused to any other Jew—that Josephus has preserved to us (*Ant.* VIII. ii. 5) the tradition of Eleazar, who came before the Roman emperor Vespasian, and was able to drive away an evil spirit by using the ring of Solomon and certain herbs.

In the Solomonian cycle Asmodeus is mentioned as their king, and Lilith, Mahalat, and Agarion are also described later as leaders of evil spirits, while even a demon Meridianus has been evolved out of Ps 91². Once the grouping of spirits was conceded, numbers came from various quarters to swell the host. Among these we find references, in the Talmud, to the princes or rulers over oil and eggs,³ rulers over the thumb or, rather, thumb-nail, and over crystal—all shining objects used, no doubt, for crystal gazing (*q. v.*). It was a time of syncretism, in which everything that helped either to do or to avert evil was eagerly sought by the credulous. The work of the magician was wrapped in obscurity; his books were kept secret, and his operations were accessible only to the adept, whence much of the practical operation is almost lost to us. What has survived is, with few exceptions, the accompanying formulae by which these various spirits and invisible powers were invoked or subdued either for evil, as in most cases, or for good. In the Greek magical papyri some fragments of the formulae are extant, but very little of the operations. Much more seems to have been preserved in the Hebrew *Sword of Moses* (ed. and tr. Gaster, *JRAS*, 1906, pp. 149-190), of extreme antiquity, and in some MSS of practical *kabbalah*, or practical occultism, mostly in the possession of the present writer (one of the prescriptions in these is given below). A large number of bowls, many of them dating from the first centuries of the Christian era, have been found in Babylonia with Hebrew and Syriac inscriptions, these vessels being used by the ancient magicians for the purpose of making the incantation or conjuration written on them effective. The inscriptions in question contain whole lists of demons and spirits who are in the service of the magician or whose power he is expected to check. A large number of them have been published by J. A. Montgomery (*Aramaic Incantation Texts from Nippur*, Philadelphia, 1913), and one (no. 32) may here be reproduced as showing the state of mind and the beliefs of the people. The translation is independent and differs somewhat from that given by Montgomery.

¹ This bowl is prepared for the sealing of the house and the wick and the *shaddim* Dinn, son of Isphandurad, that the Terrible (right) and evil Demons may depart from him. The bowl I filled up and I have warded (trained) it, an operation like that which was established by Rab Joshua bar Parahyah, who wrote against them—a line against all Demons and Devils and Satans and Liliths and *shaddim* which are in the house of Dinn, son of Isphandurad. Again: he wrote against them a line which is for all time, in the name of Amen, Alahai Ahi, within 7, Ahi Ahi, the name a scroll within a scroll. Through which are subjugated heaven and earth and the mountains, and through which the heights are raised (lifted) up, and through which are fettered the magicians, Demons and Devils and Satans and Liliths and *shaddim*, and through which he passed over from this

world and climbed above you to the heights (of heaven) and learned all counter-charms for heart and for healing to bring you forth from the house of Dinn, son of Isphandurad, and from everything that belongs to him. I have dominated you by the law, and it is bound and sealed and constrained, even an ancient line (of writing) which do not fail and none of old who were not surrounded (used). . . . Again: bound and sealed and constrained in this law is the name of Tuvuvuvuvu, Tuvu, Tuvu, A. (Amen), Amen, Amen, Amen.

Sealed and protected are the house and dwelling of Dinn, son of Isphandurad, from the Terrible (right) and evil Demons and the Ores. And sealed and protected to [his wife and son] from the Terrible and evil Demons and Ores and Vows and . . . Hahai. Amen.

This inscription has been selected because it contains the name of the famous Joshua (Jesus) b. Parahyah who was so important a figure in the time of John Hyrcanus at the end of the 2nd cent. B.C. He was the teacher and friend of R. Simeon b. Shetah, whose dealings with the witches of Ashkelon are mentioned below. In the apocryphal stories about Jesus a noteworthy part is assigned to this Joshua b. Parahyah, who had fled to Egypt, where he was believed to have learned the art both of working and of combating magic.

The Jerus. Talm. (*Sanh.* vii. 10, fol. 26a) tells a curious legend concerning this same R. Joshua, who is made the contemporary of R. Simeon and R. Gamaliel. These three came to a place where they found a young man whose mother had been taken away by a witch. R. Joshua moved her bones to the table, and they appeared in an instant and grew up. Out of the midst a woman with dishevelled hair suddenly appeared—the witch. R. Joshua asked her and ordered her to loosen the spell, but she refused, whereupon he threatened to divulge her name. She then confessed that she could not undo the spell, because the things had been thrown into the sea. R. Joshua then ordered the angel of the sea to throw them up, and thus the young man was restored to health, and later became the father of R. Judah b. Barabai.

In the light of the Babylonian bowl, it is not improbable that this is a story of Joshua b. Parahyah, but, as nothing was known of his magical powers, it was transferred later to another Rabbi also named Joshua.

The Rabbis had no doubt as to the origin of witchcraft: it came from Egypt. According to *Kiddushin*, 49b, ten measures of witchcraft have come down into the world, nine of which have gone to Egypt, while one has spread throughout the rest of the world. The Talmud names one or two witches who are said to have practiced in Jerusalem, among them being Yohai, the daughter of R. Yosi (Sofar, 22a), famous as a witch affecting childbirth.

One day, whilst she was assisting a woman in travail, a neighbour came into her house. Hearing a noise in a vessel like that of a child in the womb, she lifted the cover, the cord coiled, and the woman was easily delivered. Hence it was recognized that Yohai was a witch.

Evidence of the Egyptian origin of witchcraft and of its purely temporary character—as is shown by the fact that, if put to the proper test, it vanishes—in seen in the Talmudic story of Z'eri.

He bought an ass in Alexandria, but, when he attempted to cross the river on it, it turned into a plank the instant it touched the stream, for no witchcraft can withstand running water. All who saw him laughed at his circumstance, but he recovered the money which he had paid for the ass. Another Rabbi, Jannai, being offered a drink of water, poured some of the liquid on the ground, whereupon the run turned into a scorpion. He then compelled the witch to drink and she was transformed into an ass, on which he rode into the market. There another witch, recognizing her, broke the spell, and the Rabbi was then seen to have the witch for his ass (*Sanh.* 69b).

As soon as magical operations came to be regarded as idolatry, sterner measures were taken, one of the foremost opponents of magic being R. Simeon b. Shetah (*Sanh.* 44b, and *Rashi*, ad loc.), who lived in the time of King Jannus and Queen Alexandra (1st cent. B.C.). He went to Ashkelon, where, with the assistance of eighty pupils, he caught eighty witches actually practicing their magic arts, and he hanged them all in one day.

² This idea of a witch who holds the soul, or the eyes, or the heart in close imprisonment in certain vessels which, when broken (the contents being restored to the owner), restore life, health, and sight occurs frequently in fairy-tales and is derived from Egyptian tradition.

³ The rulers of the egg must mean those who obtained an insight into the work of the spirits or mastery over them through looking intently into the yolk of an opened egg (*Sanh.* 67b).

The details are of much interest, for they show a complete continuity of practice from that day onward. The women procured food and drink in a mysterious manner, and in the midst of this feasting did not disdain to invite the Rabbi's pupils to share in their banquet. Each of the young men then took one of the virgins in his arms and lifted her from the ground, whereby she lost her magical power, the reason given for this procedure being that no harm could befall a witch as long as she touched the earth.

It was, however, found necessary to bring some order into the chaos of magic, for the Rabbis could not transgress a clear prescription of the Bible, and a sin which was punished with death could not be passed over lightly. On the other hand, what was a deadly sin for the followers of one creed might be tolerated by those following another; a heathen might be allowed to be a magician and not fall under the ban of the Law, while a Jew was strictly forbidden to follow such practices, and, vice versa, a Jew might be considered a magician by the followers of another creed. To a Jew all heathen practices and even religious ceremonies might be magic, and the Rabbis, therefore, divided magic into three categories. First, the death penalty by stoning (Lv 24¹⁰) was inflicted only on those who practised magic and performed magical operations. The second class consisted of those who merely acted as jugglers or produced optical illusions, and who were warned not to indulge in such practices, but were not punished. A third type of magic was that by which operations and identical results obtained by the Holy Name were not only tolerated, but actually sanctioned. A difference was thus made between the use of the names of the unclean spirits (magic) and the names of the clean ones (*shaddai*). By the former are meant demons and spirits, by the latter angelic powers. At the same time mastery over demoniacal beings might be obtained through the mediation of heavenly powers.

Thus, when R. Simon b. Yohai and other sages went to Rome, they caused a demon, ben Pashon, to enter the emperor's daughter; and, when they arrived at the city, they were able to cure her by expelling the spirit (briefly told in *Sh'itah*, fol. 17, a-b, enlarged form in A. Jellinek, *Sefer ha-Midrash*, Vienna, 1886-78, v. 1, 128-129, also Rashi, ad loc. Gaster, *Heavenly and the Earthly*, London, 1898, no. 19; H. Seligson, in *JR* xl, 200 f.).

Thus was established a compromise which was facilitated by the manifold meanings attached to the word *ruah*, 'spirit,' used even in the Bible for both a good and an evil spirit coming forth from the Lord, possessing man and departing from him. So strong was the belief in the harm which such evil spirits could produce that, as far back as the time of the Mishna, a light might be extinguished on the Sabbath if an evil spirit was feared (*Mishna Shab. ii. 8*); and in the Bible *ruah* is already occasionally applied to evil spirits, demons, and devils (*Jg 9¹¹, 1 S 10¹⁰⁻¹², 1 S 28¹², Zec 13²*).

Despite the stern attitude taken by the Rabbis, magic flourished among the Jews, for the adepts of this science often deluded themselves as to the true character of their art. Not only did they continue their forbidden practices and their operations for evoking spirits and subduing demons, but in their formulae they introduced names of spirits and demons gathered from every form of warring creed and ancient tradition, and gods and spirits long dead and forgotten were retained in magical practices and invocations. Gnostic, Babylonian, and Egyptian names, and even such appellations as Sotir, Alpha, Omega, and Evangelion are found side by side with *Shaddai* and *Shaddai*. Actual specimens of these conjurations are very rare, for the magician would never disclose his mode of operation, but the following example (taken from the present writer's Cod. no. 443, fol. 136) is characteristic of the peculiar mixture of names and powers used by the magician.

'And they are called "the potencies of hellum." Take *shaddai* and write upon it with olive oil: 'Amen. (or) *Amen-ma*; and take a boy seven years old and anoint his hand from the top of the thumb to the end of the finger, and put the *shaddai* into his hand in the anointed place and seize his hand; and you shall sit upon a three-legged stool and put the boy between your knees so that his ear shall be against your mouth and you shall turn your face towards the sun and say in his ear: "Amen, I adjure thee in the name of the Lord God, God of Truth, God, Ruler of the Heavens, Alpha, Omega, that thou shalt send from thee three angels." Then the boy will say (in *Sh'itah*) (that of) a man; and say (the charm) twice more, and he will see two (*Sh'itah*); and the boy shall say unto them: "Your coming be in peace!" And then tell him boy to ask of them that which you wish. And if they will not answer him, the boy shall injure them, and say: "Kamach, Kamach, *Shaddai* (or) *Shaddai*, the master and I adjure (you) with a second adjuration that you tell me that thing or who has committed that theft." And know that he who wishes to do this must do it on a clear, cloudless day, and in winter time at mid-day.'

The most remarkable product of this type of syncretism is the *Sifre Maftan Shaddai* ('Key of Solomon'), a complete facsimile of which has been edited by H. Gollancz (Oxford, 1914).

No legal command could eradicate so deep-seated a belief as that in magic and magician, and, though it is true that it was forbidden, almost on pain of death, to become a pupil of a magician (*Sanhedrin*) (*Shab. 75b*), yet his help might be invoked to break a spell in the case of a man who had become seriously ill through witchcraft. This was done almost to modern times (*Tor, Yoreh de'ah*, § 179, and the commentary of R. Joseph Caro (see *QARO, JOSEPH*, ad loc.)).

Belief in magic received an additional impetus through the mysterious teachings of the *Zohar*, which, from the 14th cent., held almost unbroken sway over the mind of the majority of the Jews. In it the Talmudic legends concerning the existence and activity of the *shaddai* are repeated and amplified, and a hierarchy of demons was established corresponding to the heavenly hierarchy. Halls of the nether world and their demon rulers are fully described in the *Zohar* (Ex. 246b-268a) and exorcism of the *shaddai* or any evil spirit was recognized as within the power of every man fully versed in mystical lore and in the mystical names of God. Many a tale is told of such expulsion of demons by holy and pious men, such as Heliodorus in Catania in the 6th cent. (L. Zung, *Zur Geesch. und Lit.*, Berlin, 1846, p. 406); and others are mentioned by Manasseh in his *Nichmat Hayyim* (Amsterdam, 1682), bk. iii, which is full of information concerning belief in demons and the power of the pious to master them and use them for their own purpose. Even the scholarly and learned Rabbis of the 17th cent. along to the belief, while in the legendary lore of the Middle Ages such men as Maimonides (q.v.), Ibn Ezra (q.v.), R. Judah the Pious, Rashi, and Nahmanides (q.v.) were all credited with magical powers, and many a legend is told of their operations. Rabbi Jehiel of Paris has even found a place in Victor Hugo's *Notre Dame de Paris* as a wonder-working Rabbi, and no less famous was R. Loeb of Prague (17th cent.), who was regarded as a great magician and was credited with having a clay lamulus that was able to perform wonderful deeds, since it had under its tongue a plate on which a mysterious name had been engraved. The Ba'al Shem († 1780), who founded the sect of the Hasidim, had many encounters with the *shaddai*, as described in his biography (*Shaddai Ba'al Shem Tob*, Bardichev, 1815 ff.), and a collection of miraculous deeds performed by him and after him by wonder-working Rabbis of the Hasidim as detailed in the *K'had Hasidim* (Lemberg, 1864); nor should we forget the legendary content, de-

4 The three kings from the East, Kasper, Melchior, and Balthasar—a curious invention in the mouth of a Jewish magician. It is evident, from the corrupted form of the names, that the scribe did not understand what he was writing.

scribed in an anonymous chapbook, between a bishop magician and a red Jew, who had come from beyond the waters of the mysterious river Sambatyon, for upon the issue of the struggle depended the life of the Jewish communities in Germany. To this very day the Jews in Syria perform such magical operations as fumigation, libations, and offerings of oil, bread, and lighted candles, which are put in the four corners of an empty house to propitiate the *shaddim* before the people venture to enter the dwelling and make the proper dedication. Gradually, however, the belief in the *shaddim* is waning, and the literature of practical *shaddim* is slowly but steadily being discarded. Indeed, much of Jewish magic to-day is, in reality, little more than a concession to ignorance. When a Rabbi was asked why the aid of a magician may be invoked in case of serious illness, he replied, according to Joseph Caro (commentary on *Tôr, Yôrêk De'ah*, ch. 179), that, although there was no basis of fact for the procedure, such an appeal might soothe and comfort the patient, and therefore he saw no objection to it. This is practically the answer which is given in modern times when the people are asked why they continue to believe in the harm done by demons, and in magical operations intended to propitiate them and to obtain relief and safety. It is merely a temporary comfort to those who are loath to give up old beliefs which are now recognised as vain imaginations.

LITERATURE.—In addition to the books mentioned in the text see the *Literature at art. CHARMING AND ANTI-CHARM (Jewish), DIVINATION (Jewish), and RITES (Jewish).* M. GASTER.

MAGIC (Slavio).—The Slavio countries are a peculiarly rich field for the study of folk-lore, as they were not Christianised until the 10th cent., remained isolated from Western influences, and have conserved their written traditions.

On the vast uplands of the northern steppes man's relations to nature were characteristic. The Greeks, in their narrow, diversified, hilly country, developed a corresponding mythology, varied and beautiful; the modern Western European, a city-dweller, turns to nature in a romantic manner, semi-religiously idolizing what is to him unworked and fresh. But to the Slav peasant nature was business, his everyday surrounding, beside which nothing else existed. He was rather unimaginative and quite ignorant. Whilst the Norsemen and the Greeks created mythologies out of natural phenomena, the Slav, in the drear monotony of his plains, fell into neither the deep religious fatalism of the Scandinavians nor the bright imagery of the Greeks; he simply saw that the sun ripened and the sun scorched; that the earth was moist and fertile or parched and frozen; that he was environed by unknown powers to be obeyed or to be subdued; he addressed prayers and incantations to them in a prosaic, almost rationalist, attitude of mind, without adoration, with merely a recognition of inevitable dependence. His spells and invocations (the bastard descendants of heathen rites) were unsound science, but good rationalism. A. N. Rambaud¹ says that the primitive Slavs adored matter and never felt the incentive to personify, idealise, or philosophise it; perhaps it was a mere acceptance of necessity.

The Pomeranian Slavs, the only Slavs who had access to the sea, had a very elaborate ritual, and worshipped many-headed images in temples, not in groves, like the other Slavs. Their greatest oracles and pilgrimages were in the Isle of Rügen; these pagan shrines were destroyed by Valdemar I. of Denmark in 1168.

The recollection of this sacred island has strongly

¹ *Les Slaves duques*, Paris, 1894, p. 211.
VOL. VIII.—20

influenced Slav myth and magic. The word Rügen is derived from the same root as the English 'rough,' and is called in Early Russian Rayán. Now the word Bayán comes from a synonymous root, and looks like a translation of the Teutonic name Rügen; and it is thus a safe and probable theory to identify the fabulous island of Bayán with the historical shrine of Rügen—all the more so as the mysterious stone Alátyr is thought perhaps to mean amber, which was an article of Baltic commerce.

When Christianity had effaced the old Slavio nature-gods, the need for which they stood still remained—that of dealing with nature, coaxing and dominating her, and mastering her secrets. Fragments of the old ritual, degenerating into incomprehensible patter, continued to be used at the old sacred haunts, but these incantations were clandestine; though the beings invoked were believed in, they were considered illicit or heathen; heathendom had changed into magic.

Every village had its magician or witch-doctor. These practitioners certainly possessed great knowledge of healing, as herbalists and masseurs; but, where all nature consists of discontinuous miracles, such cures had to be accompanied with the ritual that was calculated to conciliate the powers and convince the patient.

The Russian sorcerer lived alone; he had learnt the magic formulae, and had been instructed by the woodsprites (*leski*), the goblin of the hearth (*domovoy*), the fairies of the fields and the water (*polovoy, vedyonoy*). Such practitioners are known by many names—e.g., *sudkhar, holdun, budernik, vedún, vovodny, etc.*; the women-witches are called *vedúma*; and to them more extraordinary powers are attributed. These magicians hand down their wisdom to their youngest children—a custom signifying that this magical knowledge was derived from non-Aryan peoples, and taken over by the Aryan conquerors.

It is said that the *sudkhar* has physical marks—a troubled eye, a grey complexion—that he mutters, has a hoarse voice, and so on. Unless he communicates once a year, earth will not receive his body, and then he wanders after death as a vampire, sucking others' blood. Witches are credited with the power of flying, and are supposed to have marvellous muscular strength and a spotted skin. They are said to forgather in the gusts and whirls of snow at cross-roads; a pious man should cross himself when he comes upon such whirling columns, for in them the witches dance. If a knife be thrust into such a column, it will drop to the ground blood-stained; and it then becomes an implement for sorcery—e.g., a man crossed in love may use its broad blade to wipe out the track of his maiden in the snow.

The wizard is believed to have terrible powers; among the Galician Rusins, e.g., if the *sudkhar* inserts a knife under the threshold of his intended victim's dwelling, the victim is snatched away by a whirlwind, and detained until the knife is removed.

The magical formulae are very curious. They are framed for every occasion of need; and, to be efficacious, they must be spoken in one breath without any departure from the text—only thus can the powers of nature be quelled, and the wizard be the lord of creation. The following is the text of a charm against lead, copper, and iron bullets:

¹ In the lofty chamber, at the river mouth, beyond the river Vólga, a fair maiden stands, stands and dwells herself, commands herself in valourous folk, glories in deeds of war. In her right hand she holds bullets of lead, in her left bullets of copper, on her feet bullets of iron. Do thou, fair maiden, ward off the guns of the Turk, the Tatare, the Goryane, the Circassians, the Russians, the Moldavians, of all tribes and seas;

smile with thy invisible might the hostile weapons. If they shall smite from their guns, may their bullets not hit, but strike like most earth, the open field. May I be whole and unharmed in this war, and my shield whole and unharmed, and my drum stronger than armour. I close my shield with a lock, and I hurl the key into the Ocean-sea, on the burning stone Alätyr. And, as it is not to the sea to dry, as the stone may not be seen, the keys not be reached, so may I not be hit by bullets for all my life.

A charm against fever runs as follows:

'On the Mountains of Athon there is an oak, and under the oak thirteen eagles with the Sage Padéti. To them there go twelve maidens, fair, with clasped breasts, and simple belts. And the Sage Padéti with the thirteen eagles says: "Who are these who have come to us?"—And the twelve maidens say: "We are the daughters of King Herod, we journey across the earth to freeze up bones and torture the body." And the Sage Padéti speaks to his eagles: "Break off three rods, and we will beat these on her three breasts and three gleamings." The twelve maidens brought the thirteen eagles with the Sage Padéti; but in vain. And the eagles began healing them, saying: "Bail, ye twelve maidens! Be ye turned into water-sprites, and weakened, and live in the chilled water; nor enter the world, nor afflict bones, nor torture bodies." The maidens fled into the cold water as water-sprites,' etc.

These charms contain weird mixtures of legend: beyond the sea of Khvalynsk (probably the Baltic), on the lake of Bayán, on the mystic stone Alätyr, or on a sacred oak magical maidens sit; or there is a mighty sword, or a man with a huge bow, a gigantic raven, or a castle with seven locked gates. In fact, the epic portion of the incantations is a medley of all the ancient myths, the one common feature being the locality of the island, and, occasionally, distinct recollections of the ritual practised at Rügen by the Pomeranian Slavs in the 18th century. These incantations also contain, as necessary parts, an invocation in which the 'servant of God,' the suppliant, states his request, and a conclusion, such as 'my word is strong,' 'a seal on my words,' to ratify, as it were, and assert the mastery over nature ensured by the spell.

Incantations must be pronounced in the traditional manner and at the right time and spot—e.g., on midsummer's day, facing east, on the threshold, etc., during the offices at church (to contrive murder, a candle should be held upside down during the hearing of Mass). The professional enchanter expresses his desires forcibly and effectually to the natural powers whom he has under his sway, by means of formulae which are a ferrage of ancient Finnish magic, Aryan folklore, and Christian apocrypha. The incantations contain words of action, such as 'I stand up,' 'I wash myself,' 'I shroud myself in the clouds,' 'I surround myself with the crowded stars'; and the expression creates an illusion of the reality of the action.

Among the incantations against toothache, one invokes the dawn-goddess to cover the aching teeth with her veil against the attacks of the fiend Limar; the epic part goes on:

'In the field there is a hare, in the sea there is a stone, in the depths there is Limar.'

Another invokes the horned moon to cure the affliction. A third invokes, literally in the same breath, the Christian saints Martha, Mary, and Pegales, and the water-demon. A fourth runs as follows:

'I go neither on the road nor on the street, but on empty hands by copse and canyon. I meet a hare. Hare, where are your teeth? Give me yours, take mine. I go neither on a road nor a path, but in the dark forest, a grey wood. I meet a dusky wolf. Wolf, dusky wolf, where are your teeth? I will give you mine, give me yours. I go neither on earth nor on water, but on the open plain, the flowery mead. I meet an old woman. Old woman, where are your teeth? Take out your well-like teeth, take out my filling teeth.'

In an incantation to stay the flow of blood the *sudkhar* squeezes the wound and recites three times in a breath:

'In the Ocean-sea, on the Isle of Bayán a fair maiden was weaving silk; she did not have off weaving silk; the blood ceased flowing.'

Again, in another formula, the Holy Virgin is depicted, like Svantovit, one of the principal gods worshipped at Rügen by the Pomeranian Slavs, or St. George, as riding across the golden bridge on her horse—an unmistakable reminiscence of the chariot of the sun on the rainbow.

There are charms to lull a child to sleep, and these sometimes invoke mysterious beings—Krika, Plaka, and Ššokotana—as well as the dawn, coupled with the names of Christian saints.

To save a man from drunkenness a worm is taken out of an empty wine-cask, dried, and then steeped anew in wine, whilst this formula is recited:

'Lord of the sea-depths! Carry the methumous heart of thy servant out of the shifting mists, the burning oceans; breed in him a winged brood.'

The following examples illustrate the lyrical quality occasionally found in these strange compositions, especially in some of the spring invocations:

'Then, Heaven, hearst thou, Heaven, hear what I wish to accomplish on the body of thy servant X. [There follow four words unintelligible. An unintelligible patter is sometimes found, which looks very like a tradition of a lost language.] Then Moon, turn away the servant of God from wine; then little Sun, bring peace to the servant of God from wine. Ye bright stars, do ye assemble in the wedding-dup! But in my cup be there water from the mountain-well! Ye stars, do ye wear X, the servant of God, from wine. My word is potent.'

'Then bright Moon, come into my net! But in my net there is neither bottom nor cover! Then generous Sun, approach my door, my courtyard, but in my courtyard there are neither man nor beast.'

The field of Slav magic is too vast and intricate for adequate treatment in these few words. The varied superstitions have been voluminously compiled by Sakharov and his generation; but it should be particularly noted that there are extant songs of witches in a meaningless gibberish, which some philologist might very possibly interpret and so assign definitively some origin to part of the magic ritual, at any rate, of Russia.

In the 18th cent. Russian magic became specifically demonological. An infernal hierarchy was fostered upon it with anti-eclesiastical ritual. These late charms impress the reader as being identically artificial, like the imitative ballads of the same period; in form they copy the mediæval spells.

Summary.—The history and decline of Russian magic, it would appear, traced the following course. The primitive vague and inchoate nature-worship of the Slav Aryans was profoundly influenced and deflected by the subject races of the Finns, Cods, and other Turanian races, who became typical magicians and had mystic powers ascribed to them. The elaborate ritual of the Pomeranian Slavs originated in a greater intermixture of race, and, when suppressed, was soon forgotten; but it lingered on in tradition and folk-lore, in the incomprehensible patter of the spells, and especially in the legend of the Isle of Bayán and the stone Alätyr.

As Christianity spread, the ancient gods of thunder, spring, and progeny, the sun and moon, etc., were duly canonised, whilst the pagan soul and the pagan adoration of nature remained the same, and the festivals were held, often on the same day in the same place, and with similar ceremonies.

In the second mediæval stage, merged in and with the incantation are village science and medicine, village nature-poetry, and primitive religious lore. The specialisation of the medicine-man, the healer, the priest, and the minstrel came with advancing civilization, the herbalist degenerating into the magician and enchanter. Post-mediævally, a formal demonology arose, a positive anti-Christianity, artificial, sporadic, and short-lived.

[illegible]

L. A. MAGNER

MAGIC (Teutonic).—In all ages and in all localities the belief in magic is found to have sprung from the same roots: panvitalism, i.e. the conception of nature as alive in every part; the incapacity of primitive man to distinguish persons or things from their names or representations; the belief in the transformability of the powers of nature and of human souls; and the dread of soul-spirits and demons, as also of such hostile persons as were believed to be in league with these supernatural existences. We need not wonder, therefore, if the means by which the various peoples of the earth have sought to defend themselves from all sinister influences of the kind should likewise show a large degree of uniformity. Naturally the most effective mode of securing immunity from the machinations of magic was to counteract them, if possible, by a magic still more potent. From the earliest times the amulet and the spell have been specially resorted to as protective expedients. While the former, however, was employed exclusively as a prophylactic, the magic formula was used in the practice of other kinds of the occult art, whether its design was beneficent or the reverse.

With references to the ideas and customs associated with the belief in magic, the Teutons formed no exception to the general rule. Among them, as among other races, are found the belief in the soul and the various forms of superstition developed from and dependent upon it. The souls of the departed were believed to pervade and animate all nature; they could assume at will human or animal forms, and bring good or evil fortune to men. From the soul of the sorcerer came the powers of the witch whose devices could work injury upon other human beings. Many of the nature-demons, whose place of origin was the physical environment, were regarded as being endowed with magical powers. Among the Germans, likewise, the practices of soothsaying and magic were intimately connected with the belief in soul-spirits. The prophetic faculty was attributed to women as well as men. In the north of Europe the *Völven* had a great reputation as prophethesses and sorceresses. The practice of magic was on the whole more fully developed among the Northern Teutons than in Germany, being fostered in the former case by the shamanism of the neighbouring Finns, a people famous over the entire North for their magic. The most powerful and formidable sorceresses mentioned by the Norse sagas belong, for the most part, to the Finnish race, which, again, in its religion, its demonology, and its magic, is very closely allied to the ancient Sumerian peoples. It is possible that many elements in the magic and demonology of the Northern Teutons were borrowed from the Finns. At all events, the practice of resorting to the latter people in order to acquire their magic arts became so prevalent that at a later time the Christian Church found it necessary to enact laws prohibiting it. But this was not the only channel by which the Teutons became acquainted with the magical ideas and usages of foreign, and especially of the Roman, Greek, and Oriental, peoples. The Northern Teutons visited the Mediterranean Sea

both as Vikings and as peaceful merchants, while the Southern Teutons were the near neighbours of the Romans, and were sometimes in their pay as mercenaries. In point of fact, however, the occult art and its adepts are found among the Teutons from the outset. Here, just as on Greek and Roman soil, the idea prevailed that it was possible to work changes in the nature of objects simply by the magical virtues of the spoken and written word or of the symbol. The magic utterance and the magic rune—the engraved talismanic symbol—were used for the most varied purposes. According to the *Ynglinga Saga*, runes and spells owed their origin to Odin, while the rune-master of the *Hæmatal* knows the right method of engraving the characters, as well as the songs which effect cures, restrain enemies, render weapons harmless, quench fires, subdue winds and waves, call up the dead, and awaken a maiden's love, though the words of the songs are not given. Other magic songs are referred to in the *Sigrdrífumál*. That a similar profusion of magic songs was to be found among the Southern Teutons is shown by the *Homilia de aerlægis*, which came into existence in the Southern Frankish kingdom under the Merovingians. Alike in the North and in the South these songs were in great part employed as expedients for the cure of disease in man and beast; nor is this to be wondered at when we remember that disease itself was regarded as due to demons and malefic magic. Magic alone, in fact, could undo the work of marie.

Now, the articles exclusively employed for the purpose of influencing the magical properties of things were amulets and ligatures. There was not the slightest misgiving as to the efficacy of the appropriate amulet. Discoveries in tombs furnish ample information regarding the objects specially in request as amulets among the Teutons. Thus, for the protection of the dead, belemnites, amber rings, stone arrow-heads, and hook crosses were laid in the grave along with the body. Amulets were also fashioned out of all kinds of objects bearing figures and drawings, while a special vogue was enjoyed by the so-called *bracteates*, which were imitated from Roman coins, and brought to the North in the early centuries of our era. These were mostly of gold. The images of the gods which served as amulets likewise date from the period of Roman influence.

When the missionaries of the Roman Church introduced the Christian religion among the Teutonic tribes, they found ideas and practices quite similar to what had prevailed in pagan Rome and its provinces. Accordingly, they sought to apply the same procedure as had been previously resorted to, i. e., they incorporated the deities of the pagan Teutons into the system of demons whose existence the Church recognized, while they forbade all worship of them, as also the practice of magic in general, and inflicted severe penalties upon the disobedient. From the early centuries of the Church's history, synods and councils had found it necessary to forbid even the priests to pander to the people's craving for amulets, written spells, adjurations, and magic potions; and, as late as the 8th cent., clergy in Thuringia, the missionary district of St. Boniface, were making amulets of small cards inscribed with Biblical verses of supposed protective or remedial powers, and hung from the neck by a cord, just as if they had been pieces of amber or agate. The use of incantations was also vigorously assailed from the pulpit, while other ecclesiastical enactments against amulets and spells are found among the rules for penance and in the ecclesiastical or Christian codes. Among the various collections of penitential regulations—which, it is true, prohibit many non-Teutonic

superstitions—a peculiar place is occupied by those of the Anglo-Saxons, as the Frankish regulations are in great measure verbally dependent upon them. They warn against 'divinationes,' 'auguria,' 'scandala,' 'mathematica,' 'enimores tempestatem,' and especially against 'incantationes diabolicas,' 'fascicula,' and 'ligatura.' As yet excommunication was the extreme penalty for transgression. The Venerable Bede (*HE* iv. 37) relates that, during a time of pestilence and high mortality, recovery was had to adjurations and spells. The abbot Regino of Prüm has incorporated an entire series of the decrees of councils dealing with the subject in his work *de Synodaliibus Concilio* (A.D. 908; *PL* cxxxii. 187 ff.), and from that work much has been borrowed by Bernhard of Worms, who wrote about the beginning of the 11th century (*PL* cxi. 537 ff.).

That similar ideas and usages were still flourishing in England at this period is shown by *Alfred's Poenie S. Bartholomei Apostoli*, with its injunction that no one shall seek to regain health by using a ligature of medicinal herbs or praising a herb in a 'magic song.' The ecclesiastical ordinances of Eadgar and the Northumbrian priests' laws contain regulations to the same effect. Among the Northern Teutons likewise canon law directed its mandates against superstition and magic.

Till well on in the 16th cent. synods and councils of the Church were constantly under the necessity of dealing with the use of spells and amulets and the evils arising from them. Thus can. 9 of a papal bull enacts for the Lateran Council of 1514 that *sortilegia* made by invoking demons, by incantations, or by other superstitious practices are unlawful. Clerics who offend are to be punished at the discretion of their superiors, and laymen are to be excommunicated or visited with civil penalties.

In dealing with such offences, the national codes of the various Teutonic peoples do not show the same unanimity as the Church. The Teutonic nations that came into existence on Roman territory found it necessary to base their legislation against magic directly upon the ordinances of Roman law. The earliest Teutonic code, the *law Pactus*, enacted (bk. vi. tit. 2, 4) that those who 'quibusdam incantationibus' bring hailstorms upon the fields and the vineyards 'ducentenis flagellis publice verberentur et decalvati deformiter decem convivas possessiones circuire cogantur inivit.' Rotharis, king of the Longobardi, sternly prohibited the belief in cannibal witches. Among the Germans, as among all other races, the feeling prevailed that one who practised malefic magic must at all costs be got rid of, whether by expulsion from the tribe or by death. But, on the other hand, we have a variety of testimony from Northern Europe which seems to show that the practice of magic was not in all circumstances deemed criminal.

In the civil law of the Anglo-Saxons, from the 7th cent. onwards, we find penal enactments against superstition and magic, and in particular against the employment of spells and amulets. The laws of Alfred the Great dealing with magic are founded mainly on the Biblical denunciations of the practice. Of similar character are the legal ordinances directed against the occult art among the Northern Teutons. The elder Icelandic canon law of the 12th cent. ordains that those who tamper with incantations or witchcraft shall be punished by banishment.

The evil against which the enactments of the Teutonic codes were mainly directed was malefic magic (*maleficium*). Until the 8th cent. we find no similar enactments against other superstitions which eventually gathered round the belief in witchcraft. But the belief in the existence of cannibal witches and in witches' flights was ex-

placitly forbidden by ecclesiastical and civil legislation, though Ivo of Chartres (c. A.D. 1100) thought it possible that witches exerted some influence upon the sexual functions. The Church, however, notwithstanding all its exertions, was by no means successful in ridding the people of their magic beliefs and practices. Both continued to flourish abundantly in the department of medicine, thanks to the renaissance of the old neo-Platonic—in reality, the Babylonian-Egyptian—doctrines of demons. At an early period medicine had become the monopoly of the priest; the demons of disease were exorcised by the priest; and to relics, to the rosary, and to the 'Agnes Dei' were ascribed the greatest virtues. Those who in sickness and trouble applied to the priests were treated by means of the amulet and the incantation, so that as late as the 16th cent.—at a time, that is, when a medical profession in the proper sense existed—adjurations were still resorted to by doctors.

The attitude of the Church towards the belief in magic was twofold. On the one hand, it accepted magic as an indisputable reality. On the other hand, it ranged itself with the civil legislation in an uncompromising opposition to certain dangerous popular superstitions. But in the 13th cent. came a momentous change in the Church's standpoint. The doctrine of Satan was now made the basis of the doctrine of magic and witchcraft. The nightly journeys of witches, the transformation of human beings into animals, the sexual intercourse of men with female demons, and the operation of sorcery in the sexual functions—all these things were now accepted as facts not to be gainsaid. Then in the 14th cent. the two currents of heresy and sorcery, which had hitherto run side by side, became amalgamated with each other, and merged in the belief in witchcraft. While among the Teutonic tribes the practice of magic had hitherto been penalized—to speak strictly—only because of the mischief which it might work, in the 13th cent. the civil legislatures in Germany likewise resolved upon a new policy. The Old Saxon code (*Sachsenspiegel*) sent those who practised magic of any kind to the stake, and its example was followed by other municipal and territorial codes. In spite of the rigour of the Inquisition, it is true, the earlier penal law (which threatened with excommunication the users of incantations, amulets, or other magic devices) was still pleaded for by the councils and by certain outstanding men among the clergy. But the Inquisition at length alienated every stricture against its competence to deal with magic. By the civil legislation of the 16th cent. those who dealt in magic and soothsaying were punished mainly by fines; the death penalty was scarcely ever mooted. On the other hand, the Hamburg criminal code of 1808 enacts that the punishment of malefic magic shall be death by fire, and this clause was taken over by the Imperial legislation—the 'preliminäre Gerichtsordnung Kaiser Karls v.'—while we find that the criminal code of the Electorate of Saxony (1572) sentenced witches to death by fire, and its example was followed by the legislation of the several States. The persecution of witches was gradually introduced into the various territories of Germany during the second half of the 16th century. In England the earliest processes of this kind seem to have been trials for real or alleged attacks upon the person of the sovereign, as from the reign of Henry VI. But in England the laws against witchcraft were in general much more lenient than was commonly the case on the Continent. Witch-persecution in England dates from about the middle of the 16th cent.; in Scotland cases are found as early as the beginning of that century. With regard to Sweden, we are not in a position to say whether witches were burned

before or during the Thirty Years' War. These measures, however, were incapable of extirpating the belief in magic—just as the Reformation itself failed to destroy it, though the delusion certainly received a telling blow from the Reformers. As to the question whether sorcery has a foundation in fact, the Reformers themselves shared the ideas of their age, and the final deathblow to the belief in witchcraft and sorcery was administered by the reconstituted sciences of modern times.

Even in the earliest ages a clear line of demarcation was drawn between lawful and unlawful magic. The latter was treated by all races with the utmost rigour, and not seldom punished with death. Among the Teutons, as elsewhere, incantations and amulets were utilized as a means of securing protection and profit to the individual and his belongings, and also to work injury upon others, and their possessions. The magic spells of the Teutons may therefore be arranged in two main divisions, according to the purposes that they were intended to serve: (1) magic formulae supposed to secure protection and advantage; (2) magic formulae intended to injure others. But, as the subject itself suggests, the former class may be further divided according to the effects which the spells were intended to produce. Their object might be either (a) to drive away an existent evil, to 'exorcise' it, or (b) to avert a possible evil by means of a 'blessing'. This dichotomy of the first main group, however, will not be found exhaustive, and it is necessary to mark off another subdivision. Magic formulae were used not only for the purpose of dislodging present and averting future evils, but also as a means of inducing spirits to throw light upon the future, and upon hidden things generally. In so far as this (c) prophetic magic (as it may be called) had often to do with things which lay in the future, it comes into close touch with the class of magic formulae designed to prevent possible evil. But, while the received spells can for the most part be assigned to one or other of these four groups, many particular species may be differentiated within the larger groups. The number of different varieties will in general correspond to that of the various purposes which the formulae were meant to serve.

Magic can be overcome only by counter magic; such was at one time the universal postulate of the occult art. In primitive times, however, all sorcery consisted in words and symbols, generally conjoined with actions. Thus, with reference to the Germans, Tacitus (*Germania*, x.) states that, when the deity was consulted by means of the lot, the priests held aloft the magic wand engraved with symbols, muttering incantations the while. Sundry Anglo-Saxon spells specify the appropriate action to be performed. Thus the incantation for bewitched soil gives precise directions regarding the requisite symbolic actions and sacrificial usages. For the formula against the machinations of witches the instruction runs: 'wilt swetice seferfaege and seo reade netales, 6e purh mæn inwyrð, and wegbrado: wyll in buteran'; then at the end, 'mim þonne þæt me, æd on wmtan.' But word and action had already been frequently employed independently of each other, and it is not surprising that the word came to be used apart from all accessories or symbolic actions. The Teutonic conviction that magical effects could be directly produced by the spoken word must doubtless have found expression in the particular form of the spell. But the simplest—and hence, no doubt, the oldest—vehicle of direct influence is the express command, and, accordingly, such command must have formed the nucleus of the Teutonic incantation. Two examples of Teutonic spells may be given here. The first is a formula from the 9th–10th cent., which has come down to us bearing the title 'contra vermes'

(C. von Müllenhoff and W. Scharer, *Deutscher deutscher Poesie und Prosa*, I. [1892] 17):

'Gang 6t, come, mid elgum scemilum
6t þan þessu mæge æt þæt bæn,
fæ þessu bæn æt þæt fæg,
6t þan þessu fæg æt þæt bæn,
6t þan þessu bæn æt þæt fæg,
dræhtin, eowes 6t!'

With this may be associated the Anglo-Saxon 'blaming of bees,' the 'wyð ymba,' from a Cambridge MS of the 11th century. After a direction regarding a magical action, and a verse explanatory thereof, it continues (C. W. M. Grein and R. F. Walke, *Bibliothek der angelsächsischen Poesie*, I. [1893] 219 L.):

'Sittes ge, elgweit, elgwi in corpan!
nefre ge wide to wædr fægan!
Beo ge swagenedige minnes godes,
eow 6t meana ge wile meow and opian.'

It is quite conceivable that spells of this kind should exist independently, and unattached to any preliminary narrative. This has been observed also by Schröder in his article 'Über das Spell' (*ZDA* xxvii. 269):

'Probable as it is that at a certain stage of civilization the action of the spell, i.e. the spell in the proper sense, or of certain species of it, was produced in connection with the narrative of a particular mythical incident, yet there is not the slightest doubt that in other periods the epic narrative and the magic formulae are distinct, and may each maintain a separate existence.'

Besides these adjurations strictly so called, which were complete in themselves, and which may be regarded as the earliest Teutonic spells, there comes down to us from the same age another species—that in which an epic narrative is prefixed to the formula proper.

The classical examples of this type are the two Merseburg incantations, and the Anglo-Saxon spell against the practices of the witch is constructed on similar lines. The introduction of the narrative—the narrative is generally borrowed from mythology. The procedure was to relate some incident traditionally associated with an object identical with or similar to that which the formula was meant to produce. It was not necessary to say in so many words that the spell should now operate with like efficacy; the bare recitation of the story invested the formula with all the potency required. But this dependence of the formula upon the narrative certainly indicates a change of view regarding the power of the formula. The performer has lost his earlier reliance on his own capacity, and this want, accordingly, is reinforced from without.

While this epic type of spell is often referred to as the primitive Teutonic form, the facts would seem to imply its secondary character, though its root may indeed lie in paganism, but in any case the recitation of a short narrative before the actual formula is not peculiar to the Teutons—let alone the Western Teutons—this form of spell being traceable among other races and in much more remote times. It was certainly known to the Romans and the Hindus. But, as a matter of fact, there is evidence to show that it was not even a distinctively Indogermanic usage, since it is found also among the Babylonians and the Egyptians. An Egyptian papyrus of the XXth dynasty (now in Turin), for instance, contains a spell which in its whole design shows a striking resemblance to the Merseburg incantation for fracture of the leg. In the Babylonian and Egyptian spells, too, precisely as in the Teutonic, the scene of the narrative part is always laid in the mythological sphere. In view of the vast influence exercised by the Oriental, and especially the Babylonian and Egyptian, magical ideas upon the nations of the West, it is a tempting conjecture that Oriental models may have been largely instrumental in propagating the narrative spell among the Indogermanic peoples of Europe—first of all in the Greek and Roman area, and then derivatively in the Teutonic. At all events, the theory that the Teutons had a primitive type of spell consisting of a prose narrative followed by a rhythmical formula, as adopted by Schröder (*loc. cit.*), is beside the purpose. The primordial element was certainly the formula, the narrative being added later; and, as we have seen, each could

be used by itself alone. We find, moreover, that in Christian times quite different introductions were combined with the real nucleus of the spell. We must therefore think of each part as distinct in itself, and in no degree the less so because in the recitation 'saying and singing' came alternately. In all probability the spells were simply muttered in an undertone; there is a large mass of evidence—and not from Teutonic sources only—pointing to this mode of recital.

Thus the missionaries who came to evangelize the Teutonic tribes found two types of indigenous incantations, viz. the purely imperative and the narrative. As the Church was unable to put an end to heathen customs and practices, or the use of magic formulae, it adopted the policy of assimilating everything that could in any way be reconciled with its own views, hoping that by the device of clothing the objectionable thing in a Christian garb, it might succeed in eradicating the superstitions of the heathen. It likewise endeavoured to transform the ancient formulae, and here probably its first, as also its most urgent, task was to eliminate the heathen characters from the narrative spells and put Christian ones in their place. These new formulae were generally composed in verse, and were embellished with rhyme. Their narrative portions exhibited Biblical characters, such as Jesus, Mary, the apostles, and others, in perfectly appropriate situations—a fact which in itself conclusively shows that the spells in question originated in ecclesiastical circles. Such limitations of heathen formulae composed by the clergy are relatively numerous, and date for the most part from the 11th and 12th centuries.

From this narrative species of Christian spell, again, was in part evolved a new type. This took the form of a comparison or allegory, and its rubric ran thus: 'As such and such a result was brought about then, so let it be produced now.' Very few of the surviving spells of this type are in metrical form; the great majority are in prose.

A further form of blessing, for the use and diffusion of which the clergy must again be regarded as mainly responsible, derives its origin from the special Roman Catholic ceremonies known as the sacramentals. New formulae were formed on the pattern of the 'exorcisms,' 'benedictions,' and 'consecrations,' or these were simply translated into the vernacular. This species is probably not older than the 13th century.

Mention must also be made of a type of magic formula in regard to which the monks played merely an intermediate rôle. This group consists mainly of formulae handed down in ancient medical writings. The design of most of these is the cure of disease, but adjurations for use in digging up medicinal plants were also transmitted in this way. These formulae were, of course, mostly in the Latin language. Their potency lay mainly in phrases and letters—magic words and characters largely of Eastern origin, being derived from Babylonian, Egyptian, and Jewish magic. This group, accordingly, comprises the most ancient type of spell, which, it is to be observed, always exhibits an unintelligible jumble of words. From the earliest times, indeed, this very unintelligibility was the indispensable condition of the efficacy of the spell. From the 13th cent., however, we must take account also of another contributory source of the superstition which is concerned with words and letters—and, it may be added, numbers also. This was the religious philosophy of the Jews, as set forth in the works of the Kabbala (p. v.).

These leading types will suffice to classify the great majority of magic formulae, and even the hybrid, composite, and other derivative varieties which inevitably made their appearance in the

course of centuries. But the prime factor in such secondary formations was doubtless oral tradition, to the action of which a large proportion of the spells would certainly be subject at some stage of their development. The learned formulae of the Church are usually of considerable length, and in their full form would have relatively little vogue among the common people. From these larger spells, accordingly, certain typical portions were excerpted, and then used independently. The popular mind laid the main emphasis upon the nucleus of the spell—the formula proper; and examples of this type become numerous from the 10th century. In these the strict parallelism of the earlier ecclesiastical blessings is to some extent abandoned. It was now considered sufficient to say: 'As surely as this act has taken place, so surely may this effect ensue.' Sometimes, in fact, the place of the parallel is taken by the antithesis. It became the practice, further, to draw upon still more remote quarters for the conclusion of the blessing, and to introduce formulae which in themselves had formerly done duty as blessings, so that the formulae of blessing, being supplemented by invocations of God and multiplied petitions, often actually approximated to the character of prayer itself.

When we consider the mass of Teutonic formulae—even with the 10th cent. as the ulterior limit—in relation to the purposes which they were meant to serve, we see that the multiplicity of forms mentioned in the *Hærened*, the *Sigdrifumál*, and the *Homalia de sacerdotibus* is by no means an exaggeration. Adjurations against disease certainly constitute the largest class. Many maladies were believed to be due to malignant demons and unfriendly magicians, and were therefore combated by the magic formula. But the same means was employed in dealing with diseases about the origin of which there was no uncertainty. The remedies employed in such cases were supposed to acquire peculiar efficacy by having a spell uttered over them.

Nor was it human beings only who in their distresses were benefited by spells. As had been believed from the earliest times, protection was equally indispensable for the lower creatures most closely associated with human life, viz. the domestic animals. In their case also, therefore, magic formulae were used to ward off disease and other evils. The dog, and especially the shepherd's dog, was protected in this way from the dangers to which it was exposed from wild beasts. People were very specially concerned, however, to guard against the bite of mad dogs. A certain blessing, 'ad pullos de nido,' was supposed to help the growth of chickens. The purpose of the somewhat numerous 'bee-blessings' was to keep the insects from swarming.

There was, besides, a multitude of adjurations for animals other than the domestic. People tried to rid their houses of flies, mice, and rats by appeal to the power of the formula; wolves were adjured not to hurt the cattle in the fields; serpents, to be easily caught. The bite of the serpent was averted by spells, and by means of adjurations the reptiles were induced to yield up the potent ophite stone, and to be obedient to all commands. The tooth and the right forepaw of the badger acted as charms against all kinds of injury, and with the shoulder of a toad a man could win the love of whomever he chose.

In the therapeutics of ancient and mediæval times an important place was assigned to medicinal herbs. It was of vital moment, however, that these herbs should still retain their supposed virtues after being plucked, and certain magical formulae were believed to ensure this. The practice was to adjure either the whole world of herbs,

or a definite number of them (cf. the Anglo-Saxon 'nine-herb spell'), or, again, some particular herb. But still further manifestations of the potency of herbs could be elicited. They could be made to secure the traveller against fatigue, to act as a defence against weapons, and to protect the cattle from sorcery and the crops from hailstorms. They could also help one to win love, to open locks, to ascertain truth, and to read both the future and the past.

Then the magic formulae served to protect man not only against disease, but also against the malice of their fellows and the threat of misfortune. By their aid a person sought to safeguard himself—especially when on a journey—against the artifice of his enemies, to blunt their weapons, and to free himself from prison. By the same means he could defend himself against malefic magic, and against the bewitching of his food and drink. Other formulae possessed the power of procuring friendship, love, and favour, and of gaining justice before a legal tribunal. Wives sought, through the medium of magic, to turn the hardness of their husbands into love. An astute merchant of the 10th cent. would even try by a spell to induce people to buy up his stock of stale wares.

Human life was thus surrounded by a rampart of spells, and property likewise was in similar fashion made proof against evil influences. Houses were secured by spells against burglary and fire, and corn in the granaries was kept from decay. If anything was lost or stolen, the magic formula could restore it, and even lead to the discovery of the thief. The same means were also used to protect, and to increase, the fruits of gardens and fields.

The number of extant magic formulae designed to work harm is quite insignificant—a circumstance which is, no doubt, due to the rigorous treatment meted out from the earliest times to the practice of malefic magic. Such harmful spells might be used by the malicious to sow dissension between old friends, to change the love of a married couple into hatred, to bring every conceivable disaster upon another, and even to overwhelm with destruction all that he possessed.

MAGIC (Vedic).—1. Definition.—The sphere of cult and ritual has two aspects in Vedic literature—religion and magic. The former (see art. VEDIC RELIGION) represents the relation of man to the gods and lesser divine beings. Its object is to cultivate their goodwill by means of hymns as well as sacrifice, and thus to induce them to bestow in return the benefits which man desires. The essential character of Vedic religion, therefore, is propitiatory and persuasive. Magic, on the other hand, endeavours to gain its ends by influencing the course of events, without the intervention of divine beings, by means of spells and ritual. Its essential character is, therefore, coercive. Both aim at the same result, but in different ways. Religion achieves its purpose indirectly by inclining the will of a powerful ally through prayer and gifts, for instance, to destroy an enemy; magic does so directly by operating with the impersonal (and imaginary) causal connexion between the means which it employs and the effect to be attained, as burning the effigy of an enemy in order to burn the enemy himself. Its practice was in part auspicious and beneficent, as the ritual for the obtaining of offspring or luck, of rain or victory, but it was largely maleficent in the interest of individuals and not of the community, and, therefore, as being dangerous, was condemned by the priesthood, except in so far as it was applied by themselves.

2. Literary sources.—The sphere of religion, as considered apart from magic, is chiefly represented by the earliest product of Indian literature, the Rigveda, which consists almost entirely of hymns addressed to various gods, in which their greatness and their deeds are praised and all kinds of welfare are prayed for, and which are intended to accompany the ritual of the soma sacrifices (cf. art. HYMNS [Vedic], § 7f.). Only a dozen of its 1028 hymns are concerned with magic, about one half of them being auspicious, the rest maleficent in character. As to any magical rites connected with the sacrifice, the Rigveda gives us no information. On the other hand, magic is the main and essential subject-matter of the Atharvaveda (art. HYMNS [Vedic], § 11); it is a collection of metrical spells, largely to be accompanied by ceremonies aiming at the welfare of the magician or the injury of his enemies. The Yajurveda (art. HYMNS [Vedic], § 13) occupies an intermediate position between these two Vedas as regards magic. In its original part, which consists of prose formulae, the gods are only secondary, bearing a kind of mechanical relation to the sacrificial ceremonial with which these formulae are associated, and which they follow in its minutest details. Its character is thus of a magical rather than a religious type. The great development, in this period, of an intricate ritual and the concentration of sacerdotal thought on its perfect performance had led to the new conception that sacrifice was not meant to propitiate the gods, but directly to control the natural course of things.

The prose theological works called Brahmanas,

which represent the next stage of Vedic literature, being concerned with explaining and interpreting the details of the ritual, supply much information regarding the magical notions and observances with which the sacrificial ceremonial was permeated. The *Upaniṣads*, though a continuation of the *Brāhmaṇas*, are philosophical rather than religious, but their speculations on the nature of *brāhmaṇas* and on the supernatural powers acquired by knowledge and asceticism are charged with magical notions.

The final phase of Vedic literature, which comes down to c. 300 B.C., is represented by the *Sūtras*. These concise manuals, especially those dealing with domestic life (*gṛhya*), and to a less extent those concerned with customary law (*dharma*), show how the observances of everyday life were saturated with magical beliefs and practices (cf. also art. LITERATURE [Vedic and Classical Sanskrit], §§ 2-12).

3. Importance of the subject.—A knowledge of Vedic magic is obviously important to the investigator of magic in general, for here we have magical material, bearing on every aspect of human life, which began to be recorded well over 3000 years ago, and which can, from that time onwards, be historically studied in continuous successive literary stages, extending over more than 1000 years. Such facilities are afforded by no other ancient literature as regards either the antiquity or the quantity and quality of the evidence afforded. The material in Vedic literature does not require to be laboriously gathered together from scanty and scattered references, as is necessary elsewhere. It is here supplied not only in great abundance, but, for the most part, in an easily accessible collected form. Its aid is, moreover, essential to the student of Indian religion: without it he would arrive at erroneous or exaggerated conclusions as to the purity and advanced character of the beliefs and practices of that religion in its earliest form.

4. Sacrifice and magic.—Considering that in the *Rigveda* we have a collection of prayers, and in the *Atharvaveda* one of spells, are we justified in supposing that the spheres of religion and of magic were already separated in the Vedic period? By no means. It is, indeed, certain that the sacrificial invocation had by that time assumed a literary type, and that the hymns of a magical character found in the *Rigveda* are very few and late. It must, however, be borne in mind that the prayers of the *Rigveda*, being addressed to the great gods, offered few opportunities for references to magical practices, while the ritual which the hymns of the *Rigveda* were intended to accompany, and which is fully described in other Vedic texts, is, though carried out by the sacrificial priests, from beginning to end saturated with magical observances. Again, where there is a group of ceremonies directed to the accomplishment of a particular purpose and, therefore, favourable to a greater prominence of the magical element, such as the wedding and funeral rites, we meet with quite a network of magical usages bearing the stamp of extreme antiquity. It is thus impossible to suppose that the sacrificial priests of the *Rigveda*, the composers of the old hymns, should have occupied an isolated position, untouched by magical practices derived from a much earlier age and afterwards continued throughout the priestly literature of later times. In fact, a close examination of the hymns of the *Rigveda* actually affords evidence that even in them the belief in magical power independent of the gods is to be found. Thus in one hymn (x. xvi.) the sacrificing priest *Devāpi* begins with the intention of appealing to the gods for rain, but then himself brings down the waters by the magical powers of his sacrificial art: 'the sage *Devāpi* set down to the

duty of Hotṛ priest, familiar with the goodwill of the gods; he then poured down from the sea above to the sea below the heavenly waters of rain' (v. v.). Every page of the *Brāhmaṇas* and of the ritual *Sūtras* shows that the whole sacrificial ceremonial was overgrown with the notion that the sacrifices exercised power over gods and, going beyond them, could directly influence things and events without their intervention. An incipient form of this notion already appears in the *Rigveda*, where exaggerated sacrificial powers are in several passages mythically attributed to ancient priests; e.g., 'with mighty spells the Fathers found the hidden light and produced the dawn' (vii. lxxvi. 4); 'the Fathers adorned the sky with stars, like a black steed with pearls; they placed darkness in night and light in day' (x. lxxviii. 11); 'with their kindled fire the *Aśvins* (ancient priests) found the cows and steeds hidden by (the demon) *Paśi*' (x. lxxxiii. 4); they 'by their rite caused the sun to mount the sky' (x. lxii. 3); '(the ancient fire priest) *Atharvan* by sacrifices first prepared the paths; then the sun, the guardian of ordinances, was born' (i. lxxxiii. 6). The ancient priest *Vīśvāmitra*, by directly invoking the rivers, made them fordable for the tribe of the *Bharatas* (iii. xxiii. 1-12). The composers of all such passages must have attributed to the sacrifice in their own day the powers which they thus projected into the past.

An examination of the ritual literature shows that the dividing line between a sacrificial act, which is meant to propitiate the gods, and a magical act, which is intended to control the course of things, is by no means always definite, but that the two are often intermingled. Thus the morning sacrifice at sunrise, of which we read in the *Rigveda* (e.g., iv. ii. 7), when the fire is kindled and an offering is made to the fire-god, in the *Satapatha Brāhmaṇa* (ii. iii. 1. 5) assumes a magical character, the fire being kindled to produce sunrise: 'By offering before sunrise he (the sacrificer) makes him (the sun) to be born: he would not rise, if he were not to sacrifice in it (the fire)'. A similar view seems already to be expressed in a verse of the *Rigveda*: 'Let us kindle thee, O *Agni*, that thy wondrous brand may shine in heaven' (v. vi. 4). Again, there are several passages in the *Rigveda* (e.g., ix. xlix. 1, xvi. 17, xvi. 9, xviii. 9f.) in which the *Soma* ritual is spoken of in the magical character of producing rain direct, without influencing the goodwill of the gods that shed rain.

The blending of a sacrificial and a magic rite may be of two kinds. A ceremony which is primarily sacrificial may assume a magical character by the nature of the object which is offered for the attainment of a special purpose.

There can be little doubt that only food eaten by man originally constituted the offerings offered to the gods in fire. On the Vedic sacrificial ground there was, by the side of the fire, the litter of grass (*barhi*) on which the gods were conceived as sitting to receive the offering. On the conclusion of the ceremony the *barhi* was thrown into the fire, originally, no doubt, in order to remove the offering, but by the divine presence, it had become dangerous to produce smoke. To the *barhi* corresponds, in the ancient Persian ritual, the *harwan* (a bundle of reeds, see art. *Iranian*) on which the sacrificial offerings were placed, and which was the seat of the gods. This indicates that the oblation to fire was an Indo-Aryan innovation, and that the burning of the *barhi* was immediately formed the transition to the fire-sacrifice.

The ritual literature furnishes innumerable examples of sacrifices receiving a magical turn by the employment or addition of a non-eatable substance; as when a man wishing for cattle offers the dung of a couple of calves (*Gāhvaṇi Gṛhyasūtra*, iv. lx. 13f.); or when poison is added to an offering in order to destroy ants (*Āśvaka Sūtra*, xvi.). On the other hand, objects eatable for direct magical manipulation could easily be turned into an offering by those habituated to the sacrificial idea in order to invest magical acts with the garb of sacrifice. Thus the

burning of injurious substances would become a sacrifice; for instance, arrow tips might be offered in order to destroy an enemy (ib. xlvii. 44). In this way the sacrifice came to assume the rôle of driving away demons; of helping a woman to overcome her rivals; of enabling a prince to conquer his enemies or to return from exile; and of producing many other magical results. The gradual mixture of the religious and the magical in the direction of the latter led the whole system of sacrifices to assume this character in the later Vedic period.

Various causes contributed to this result. The belief in the divine presence at the sacrifice, and in the mysterious power produced by the sacrifice, encouraged an increasing application of magical practices as the ceremonial system became more elaborate. Secondary characteristics of the sacrificial ritual might already have belonged to the sphere of magic from the beginning. Efforts to explain accidental features of the ceremonial would lead to the discovery of effects called to magic. Priests would also foster belief in the magical power of sacrifices in order to secure their own indispensableness. The magical tendency would be increased by the mixture of prayer and spell. If in the prayer accompanying the sacrifice the magical effects of a spell were assumed, each offering would naturally be attributed to the sacrifice also.

5. **Predominantly magical ritual.**—There are several groups of rites which, though belonging to the sphere of sacrifices, are predominantly magical in character. They are partly connected with family and partly with public life. The most important of these are:

(1) *The wedding ceremony.*—What little worship of the gods is found in this group of rites is almost restricted to the cult of Agni, the domestic god, who was constituted a witness of the marriage, and who, in the form of the domestic fire, was to accompany the young pair through life. On the other hand, the ceremony was surrounded by magical acts, of which the following were the principal. The bride's hand was grasped so she might be delivered into the power of her husband. She stepped on a stone to acquire strength. She took seven steps with him in order to establish friendship. She ate the sacrificial food with him to create community of life. When she reached her husband's house, she sat down on a red bull's hide to ensure fertility. The son of a woman who had borne only living male children was placed on her lap in order to fulfil the hope of healthy male progeny. Later, during pregnancy, a magical powder was placed in her nose to ensure the birth of a son.

(2) *Initiation.*—Of the various religious ceremonies which were performed during boyhood, and which display the same predominantly magical character, the chief was that of initiation (*upanayana*). This, though not mentioned in the Rigveda, goes back to pre-historic times, as is shown by the parallel Avestic ceremony, and is the Vedic transformation of a rite by which, on the attainment of puberty, a boy was received into the community of men. In India it was regarded as a second birth, as being the entry into a new life, when the boy was introduced to a religious teacher with a view to Vedic study. The sacred signs of the initiation are the girdle, which is wound three times round the pupil's waist, and the sacred cord, worn over the left shoulder and under the right arm, with which he is invested. The ceremony included a number of observances and involved various taboos in regard to food, some of which will be mentioned below (see also *Vedic Sanskrit*, § 64, and cf. *Upanayana* [Hindus]).

(3) *Public rites.* The public ceremonies of Vedic times were performed on behalf not of the clan or tribe as such, but of an individual, who in these cases was the king. The most prominent of them, aiming at the attainment of certain definite purposes, are magical in their main elements. At the royal consecration (*akshaya* [q.v.]) the king sits on a throne made of wood from the *ashvamedha* tree, which to the Indians was the embodiment of all nourishment. The seat was covered with a tiger-skin, the emblem of invincible strength. The sounds of a map made of *ashvamedha* wood, filled with butter, honey, and rain-water, were poured over the king in order to communicate to him their strength and abundance. The royal inauguration (*akshaya*) is a further series of rites, chiefly of a symbolic character (cf. on (3)) intended to ensure a successful reign. A still more imposing ceremony was the *Vijaya*, the two main features of which, a conventional rite and another symbolic character, have a magic purpose (see (3), cf. further, art. *Upanayana*). Finally, the horse sacrifice (*ashvamedha* [q.v.]) was the highest sacrificial expression of royal power, which was undertaken for the fulfilment of all the most ambitious wishes of the king, and in which the victim indicated the desire to transfer the *akshaya* of the horse to the mortifying ceremony.

6. **Priest and magician.**—The magician of pre-historic ages, who manipulated only the lower ritual concerned with demons and natural forces, had long before the time of the Rigveda (at least as early as the Indo-European period) developed into the priest, who dealt with a higher cult in which

he invoked and sacrificed to gods. In the later Vedic period of the Yajurveda, however, we find the priest to a considerable extent reverting to the rôle of a magician; for he now constantly appears, independently of the gods, driving away evil spirits or influencing the powers of nature by the use of spells and other expedients of sorcery. In various lesser rites the priest acts quite in the style of pre-historic times. Thus he makes the bride step on a stone to ensure steadfastness; he causes fish to be eaten for the attainment of speed; he produces an imitation of rain that it may actually rain—here he is not a servant of the gods, but a magician. Yet even in the earliest period, that of the Rigveda, the sacrificial priest was a magician as well (though by no means necessarily the only magician, for both here and later references are made to sorcerers whose magic is directed against the sacrificial priest). It cannot be supposed that even the most advanced minds among the priests regarded prayer and sacrifice as the only means of securing welfare, while rejecting magic as an ineffective and reprehensible superstition. Magic was still to some extent used by those who had occasion to apply it, as is apparent from the character of some hymns of the Rigveda which, although late, form part of its canonical text. But not the employment of every form of magic was approved nor the practice of magic as a profession, doubtless because alliances with evil spirits and the use of malevolent magic were liable to injure the community. This is sufficiently clear from the words of the author of a passage of the Rigveda: 'May I die to-day if I am a sorcerer (*yajurveda*), or if I have harmed any man's life; then may he lose his ten sons who falsely calls me "sorcerer"; he who calls me, that am no sorcerer, a practitioner of sorcery, or who, being a demon, says that he is pure, may Indra strike him with his mighty weapon, may he sink down below every creature' (VII. civ. 15 f.). It was because the Atharvaveda contained a body of malevolent spells that it did not attain to canonical recognition till after it had become associated with the sacrificial cult by the addition to its text of numerous hymns borrowed from the Rigveda. On the other hand, in the Atharvaveda itself (e.g., V. viii, VII. lxx.) magic is expressly approved when directed against the sacrifice offered by an enemy; and the ritual texts are full of directions for the sacrificer who wishes to destroy his enemy, in particular, when he desires to give his sacrifice a magical turn for the purpose of inflicting injury. The post-Vedic *Code of Manu* even contains the express statement (xi. 23) that the magic spells of the Atharvaveda are the Brahman's weapon, which he may use without hesitation against his foes. In the Upanishads the magician-priest has become a philosopher who has passed from the path of ritual (*dharma*) to that of knowledge (*vidya*), but his mode of thought is still full of traits derived not only from sacrificial, but from magic lore. Of such a nature are his conceptions of the world-soul (*brahman* [q.v.]) and of the identity with it of the individual soul (*atman* [q.v.]), as well as his speculations on the sacred syllable *om* (analogous in sense to 'amen'). Such, too, is his doctrine of *dharma* (q.v.) as an impersonal power which, free from any divine influence, raises future existences with inexorable force. The same mental attitude is indicated by his approval of the grotesque and forcible exercises of Yoga, which is an inextricable blend of philosophy and magic. By the aid of Yoga he believed himself capable of acquiring the ability to make himself minute and invisible, to increase his size infinitely, to multiply his body, to remember his former existences, and so forth.

7. **Asceticism and magic.**—There is evidence that from the earliest Vedic period ascetic prac-

tions (*tapas*, lit. 'heat'), primarily exposure to heat, but including other forms of self-mortification, such as fasting, abstinence, and silence, were regarded as a means of attaining various supernatural powers resulting from the ecstatic condition induced by them. Thus the *Rigveda* says (X. cxxxvi. 2) of those who are in such a frenzied condition that 'the gods have entered into them.' A poet of the same Veda tells (VIII. lxx. 6) how, in a vision produced by austerity (*tapas*), he saw the old creations of ancient sages, the first sacrificers, in the remotest past of the human race. There are many other Vedic passages ascribing similar powers: dream is born from the soul filled with austerity (*Atharvaveda*, XIX. lvi. 8); speech born of austerity penetrates to the gods (*Taittiriya Aranyaka*, V. vi. 7); he who has practiced great austerity reaches the sun (*Rigveda*, X. xlv. 2); after practicing austerity Indra won heaven (X. xlvii. 1); the magical power of austerity peculiar to the *Brāhman* will bring calamity on the man who injures him (X. cix. 4). Austerity confers the power to produce the mightiest creations: the goddess *Aptakā*, performing austerity, produced the greatness of Indra (*Atharvaveda*, III. 2. 13); the asura were born of austerity (XI. l. 26, XVIII. ii. 15, 16). In many passages of the *Brāhmanas* the greater *Prājapati* is described as gaining by the practice of austerity the power to evolve out of himself the worlds and all living creatures; and in one place (*Śatapatha Brāhmana*, X. iv. 4. 2) he appears as practicing such asceticism that from all his pores came forth lights, which are the stars. The *Brāhmanas* also tell how various mythical beings attained by austerity to a high degree of enlightenment that revealed to them some secret of sacrificial lore. It is for such magical effects that austerity is required as an essential element in the preparation for various particularly holy sacrificial rites. Thus the *Soma* sacrifice is preceded by a consecration (*dīkṣā*) of the sacrificer in which he practices austerity lasting, according to some authorities (cf. XIII. l. 7. 3), till complete physical exhaustion ensues.

8. *Magical conditions and agencies.*—Magical effect is largely, if not altogether, based on contact (vary often impalpable), which has to be brought about if the agency is beneficial to oneself, or to be prevented if the agency is injurious to oneself. The result desired is attained by the use of spells and rites of various kinds. The place selected for the practice of magic, except when it is an element of the sacrificial ceremonial, is generally a lonely one. A cemetery, the seat of flesh-eating demons, is a specially suitable place for its operations. A cross-road in a favourite locality to divert oneself of evil influences. A secluded part of a house, a shed, and solitary spots in field or forest are also used. The time at which many operations of hostile magic take place is night; but that of others depends on their circumstances or their purpose. Direction is an important element. Thus the south is the home of demons and *manes*; hence performers of rites connected with them must face that point of the compass. In auspicious rites walking and other kinds of movement are directed from left to right, following the course of the sun, while in funeral and other unpropitious ceremonies the direction is invariably reversed, the performers moving from north to south.

(a) *Spirits and demons.*—Some of the lower spirits are concerned only with one activity, such as presiding over the fields and helping at harvest; others, with *Arbudi* at their head, are invoked to spread terror and death among enemies on the field of battle (*Atharvaveda*, XI. ix. 1 ff.). The characteristic of most of the rest is to cause damage and destruction in the sphere of human life. These demons are usually called by the

generic name of *rakṣas*, *yāsu*, or *pāśaka*, though many of them also have individual designations. Their appearance is for the most part human, though often with some kind of deformity; but they not infrequently have an animal or bird shape, such as that of a dog, wolf, owl, or vulture. They also appear in assumed figures, human or animal; thus at funeral rites they intrude in the form of the souls of the ancestors to whom the offering is made; and they approach women in various disguises. The sorcerer himself (as well as the spirits serving him) might assume animal form and thus injure his enemies. Belief in such transformation is already expressed in the *Rigveda*, where hostile magicians are spoken of as becoming birds and flying about at night (VII. civ. 18). Setting demons in motion is regarded as letting them loose against an enemy. Thus in the *Rigveda* (X. ciii. 13) the demon of disease *Apvā* is let loose against a hostile army with the spell: 'Go forth, *Apvā*, to confuse their minds, to cause their limbs; attack them; burn them with thy heat in their hearts; let the foe fall into deep darkness.' Such spells might be accompanied by magical acts, such as letting loose a white-footed ewe, in which the power of disease was supposed to be embodied, against the hostile army.

Evil spirits are thought to be everywhere—in the air, but most of all in human dwellings; otherwise they especially inhabit the place where four roads meet. The time of their activity is chiefly evening and night; at night they seek to kill the sacrificer who has undergone consecration (*dīkṣā*). But they are particularly active during the night of new moon. Their usual mode of attack (mentioned in both the *Rigveda* (VIII. xlix. 30) and the *Atharvaveda* (V. xlix. 6-8, VI. lxxvi. 4)) is to enter into a man, especially through the mouth; they then eat his flesh, suck his marrow, drink his blood, and create disease of every kind; they also cause madness and take away the power of speech. They are chiefly dangerous on the most important occasions of domestic life—birth, weddings, and funerals. One of the main objects of their attack is the sacrificer: the *Rigveda* speaks (VII. div. 21) of the *Yāsu* that enter the sacrificial food, and the *Atharvaveda* contains (VII. lxx. 11) the spell of a magician desiring to destroy the sacrificer of an enemy through the wife of a demon. Hence the sacrificial ceremonial is, from beginning to end, accompanied by formulae directed to defend against demons. These evil spirits, moreover, do harm to man's property, drinking the milk of his cows, eating the flesh of his harvest, and damaging his dwellings. In short, every moment of life, every act, every possession is assailed by hosts of invisible foes, the enemies of human well-being and continuity.

(b) *Inferious substances.*—Closely allied to these demoniac enemies are the numerous substances—the most general expression for which in the Vedic language is *śatru*, or 'body'—which, conceived chiefly as impersonal, though sometimes still tinged with personality, perhaps represent an advance of thought. Hence the boundary-line between personal demons and impersonal agencies is not fixed; thus the term *pāśman*, 'evil power,' as a masculine is used in the former, as a neuter in the latter sense. Nor are even injurious creatures like snakes, ants, and worms clearly distinguished from evil spirits, being often spoken of as demons to be driven away. Examples of impalpable agencies are the 'substances' of disease, of hunger and thirst, of guilt, even of such abstractions as conscience; or the intangible influences proceeding from auspicious or baneful stars and from the waning or waxing of the moon. These are supposed to fly about in the air and to affect men by various forms of contact. The sphere of magical operations is greatly extended by the belief that, if a 'substance' or power is embodied in any creature or object—e.g., irresistible strength in a tiger—that power is inherent in all its parts and in all that is connected with it. Such a power, therefore, resides not only in the flesh of an animal, but in its skin, horn, hair, and so on. Again, the essence of water dwells in aquatic plants like the *śaṅkhā* (*Bryonia octandrea*), and in aquatic animals like the frog; the nature of the bear is present in the nail

that is torn up by its tusks; the force of lightning is latent in a splint of wood from a tree that has been struck; the virtue of one's native land exists in a clod taken from it; a man is connected with the earth by his footprints; even an image or a name is conceived as containing a part of the essence of the beings or things which they represent or name. As all such powers are communicable by contact, the whole sacrificial ritual is full of rules as to the persons or things which the performers are to touch, for thus the beneficial power of the sacrifice is transferred to them. For instance, the skins of various animals communicate the characteristic quality attributed to them: one who seats himself on the hide of a bull acquires fertility; on that of a black antelope, sanctity; on that of a hog-goat, plenty; on that of a tiger, invincible power.

9. *Magical procedure.*—The operations of magic are mainly directed against hostile agencies, either by preventing their contact with the operator or by bringing about their contact with an enemy. Auspicious rites, besides being much less numerous, are often only another aspect of offensive magic, and will, therefore, be treated under the various types of action, partly auspicious and partly hostile, employed in magical ceremonies (§ 12).

10. *Defensive magic.*—This type of magic, though consisting in warding off injurious powers, is not always expressed in the form of hostility when demons are concerned; it may then be attended by a certain amount of propitiation. Thus in the *Atharvaveda* (I. xii. 2) deterring homage is paid to a demon of disease: 'Thee, lurking in each limb with burning, we, paying homage, would worship with oblation'; lightning is similarly addressed (I. xiii. 2): 'Homage to thee, child of the height, whences thou gatherest heat; be merciful to ourselves; do kindness to our offspring'; also instruments and ministers of death: 'To those weapons of thine, O Death, be homage; homage to thy benediction, homage to thy malediction; homage to thy favour, O Death; this homage to thy disfavour' (VI. xiii. 1-3). Again, sacrifices to demons are often mentioned (*Baudhāyana Dharmasūtra*, II. i. 32); and in the general sacrificial cult they receive their share, which, however, consists only of inferior offerings, such as blood and offal. Hostile words or actions are often accompanied by spells expressive of homage. *Harappahadina Gṛhyasūtra* contains a direction (I. xvi. 30f.) that a brand burning at both ends should be thrown at a jackal (regarded as possessed by the evil powers of death), and that the animal should at the same time be worshipped with the Vedic verse, 'Thou art mighty, thou carriest away.' In a rite concerned with serpents the reptiles are addressed with homage, while the intention to destroy them is also expressed (*Sarpasūtra*, xi.). A ceremonial intended to ward off ants (*Kaushika Sūtra*, cxvi.) begins with propitiatory offerings and spells; but, if these fail, they are followed with a poisoned oblation surrounded by symbols of hostility and accompanied by an invocation of the gods to destroy their eggs and progeny. Propitiation, however, plays but a very subordinate part in this type of magic.

1. *PREVENTIVE MAGIC.*—On the principle that prevention is better than cure the procedure of defensive magic is largely prophylactic, everything being avoided that might attract injurious powers. The precautions taken are of the following kinds.

(1) *Avoidance of contact.*—The touch of beings in which malevolent spirits or substances were supposed to dwell was eschewed. Thus to touch the mother during the ten days of impurity after childbirth was regarded as dangerous; and the stones used in erecting an altar for Nirṛti, the

goddess of dissolution, were put in their place without being directly handled. The access of injurious powers through other senses was similarly avoided. Thus listening to impure sounds involved risk. Precautions were taken not to see impure or dangerous persons or things; the sight of offerings to the dead or to the uncanny god Rudra was to be avoided; and those who were departing from a place where inauspicious ceremonies had been performed, such as those concerned with the dead, with demons, with the goddess Nirṛti or the god Rudra, abstained from looking back. On occasions when evil spirits were likely to be in the neighbourhood care was taken to prevent their coming too near. Thus a bundle of twigs was tied to the corpse on the way to the burning ground in order to efface the footprints and so hide the path from the demons; and the sacrificial fire of the departed, having by his decease become a seat of death-bringing powers, was removed by some aperture other than the door.

(2) *Fasting.*—One of the chief precautionary measures against the attacks of hostile powers was abstinence from food, in order to prevent them from entering the body. It is, therefore, a leading element in the preliminary consecration (*dikṣā*) for the Soma sacrifice. With reference to this, one of the *Saṁhita* remarks (*Āpastamba Śrautasūtra*, I. xiv. 9): 'When an initiated man (*dikṣita*) grows thin, he becomes purified for the sacrifice.' A special form of fasting was the avoidance of particular kinds of food. Thus the performer of the new and full moon sacrifice had, on the eve of the ceremony, to refrain from eating either flesh or the kind of food which he was going to offer on the following day. The teacher who has invested a pupil with the sacred cord may not eat flesh for a night and a day; while the student himself has to refrain from eating salted food and drinking milk for three days after the ceremony; he must also abstain from food altogether for three days, or a day and a night, before he enters upon a particularly holy part of his Vedic course. A newly married couple must, during the first three nights following the wedding ceremony, avoid all salted or pungent food. The efficacy of fasting is illustrated by the precept (*Gobhila Gṛhyasūtra*, IV. vi. 13) that one who desires to gain a hundred cartloads of gold should observe the vow of fasting during one fortnight.

(3) *Abstinence.*—Another safeguard is the practice of chastity. This is enjoined for three nights after the wedding ceremony in order to ward off the attacks of demons that destroy offspring. It is observed by the performer of the new and full moon sacrifice on the night before the rite takes place; for a day and a night by the teacher who initiates a pupil; for twelve nights by the offerer of the Sabhi sacrifice; during the course of the *Dikṣā* by him who undergoes that consecration; and by the Vedic student during the whole period of his apprenticeship.

(4) *Abstention.*—This expedient appears in various forms. One of them is exposure to heat; it is an element in the *Dikṣā* ceremony, a special formula being quoted for use when the initiated man breaks into perspiration. Sleeping on the ground is prescribed, during the same length of time as abstinence for the newly married couple, the Vedic student, and the performer of the *Dikṣā* consecration, of the new and full moon ceremony, and of the Sabhi sacrifice. As a safeguard against demons dangerous to the sleeper, watching through the night is enjoined during the *Dikṣā* ceremony, and on the eve of setting up the sacrificial fire and of the new and full moon sacrifice. Silence is to be observed by the sacrificer undergoing the *Dikṣā* consecration, by the man about to set up the three

sacificial fire, and by the Vedic student on various occasions. Holding the breath, which was regarded as an important form of asceticism, appears, for instance, in a rite during the funeral ceremony. It may here be added that austerities of various kinds had to be undergone by one preparing to cure epilepsy, before he was qualified to perform the magical ceremonies intended to effect the recovery of the patient.

(5) *Concealment*.—Another means of guarding against the attacks of hostile powers was concealment of one's person or of its parts, as seclusion in a shed and covering the head during the observances of the Dikṣa ceremony; or putting on garments to make oneself unrecognisable; or hiding the hair of the head and beard or nails out of at moramental rites, such as the initiation of the Vedic student (cf. § 8 (5)).

(6) *Amulets*.—Charms worn on the body were frequently employed both for the negative purpose of warding off evil influences from one's person (amulets) and for the positive purpose of attracting prosperity (talisman). Sometimes the same charm serves both purposes; thus the pearl destroys demons, disease, and poverty, and at the same time bestows welfare and long life. Amulets were for the most part made of wood, but also of various other substances. Their efficacy is regarded as dependent on the particular power of repulsion inherent in them, and is not infrequently spoken of as imparted by the gods. They are called god-born, are said to have been given by gods to men, to have been strengthened by the gods, or to have had their power communicated to them by the gods, who co-operate with them; the gods themselves are described as having once been unsuccessful by the power residing in them; by amulets Indra overcame the demons (Atharvaveda, X. iii. 11). Their potency sometimes emanates from their names. An amulet derived from the *corvus* tree (*Crataegus Roxburghii*) destroys enemies because, according to the meaning attributed to the name (cf. X. iii. 5), it drives off (*adroyati*). An amulet made of this wood is thus addressed in the Atharvaveda (X. iii. 14, 11): 'As the wind and the fire consume the trees, the lords of the forest, so do thou consume my rivals; this *corvus* upon my breast, the kingly, divine tree, shall smite asunder my foes, as Indra the demon.' One of the amulets most frequently mentioned in the Atharvaveda is that made from the *jaigirda* tree, which protects from diseases and demons. Again, a long hymn of the same Veda (VIII. v.) dwells on the aggressive powers of an amulet fashioned from the wood of the *crabtree*, which destroys foes, demons, and sorceries. Cf., further, art. CHARMS AND AMULETS (Vedio).

II. REMEDIAL MAGIC.—Magical operations are performed not only to ward off malevolent powers that are threatening, but also to expel them after they have taken possession of their victim in the form of diseases or ailments. The Atharvaveda is full of spells directed against these. Many such incantations make no mention of any concrete remedies with which their use was accompanied; but the evidence of the Śāstras shows that these incantations, at least very often, formed part of a magical rite in which concrete remedies were an element. Examples of simple spells for the cure of diseases are the following: 'As the rays of the sun swiftly fly to a distance, thus do thou, O cough, fly forth along the flood of the sea' (VI. cv. 3); and 'The disease that racks and wastes thy limbs, and the sickness in thy heart, has flown as an eagle to the far distance, overcome by my charm' (V. xxx. 9). Curative spells are, however, more usually accompanied by the express employment of material objects, chiefly plants. The hymns of the Atharva-

veda abound in references to such remedies. These represent the earliest beginnings of medical lore in India. The border-line between magic and primitive science here is not always definite, for in some cases the plant used with the spell may have been an actual cure for a particular disease, while in other cases its application was purely magical, as that of the herbs used to promote the growth of hair on bald heads (these were doubtless as ineffective as the hair-restorers of modern times). The following are two charms from the Atharvaveda intended for this particular cure: 'That hair of thine which drops off, and that which is broken root and all, upon it do I sprinkle the all-healing herb' (VI. cxixvi. 3); 'Make firm their roots, draw out their ends, expand their middle, O herb! may thy hairs grow as reeds, may they cluster black about thy head!' (VI. cxixvii. 3). The Atharvaveda contains many spells in which the *bugha* plant (probably *Cotus speciosa* or *arabica*) is invoked to drive out fever; two of its hymns (I. xxi. f.) are meant to cure leprosy by the use of a dark plant; one (VII. lvi.) operates with a herb that destroys snake poison, and another (VI. xvi.) with a plant against ophthalmia. Fractures are cured by the plant *aradāni* (IV. xii.), and wounds by the use of the pepper-corn (VI. cix.). The use of ointment is associated with one hymn of the Atharvaveda (IV. ix.), of which this is one of the spells: 'From him over whose every limb and every joint thou passeth, O salve, thou dost, as a mighty interceptor, drive away disease.' Water not infrequently appears as a magical remedy, and its general curative powers are thus expressed by the following spell of the Atharvaveda (VI. lxx. 3): 'The waters verily are healing, the waters chase away disease, the waters cure all ailments; may they prepare a remedy for thee.' It also cures individual diseases, as excessive bodily discharges: 'The spring water yonder which runs down from the mountains, that do I render healing for thee, in order that thou mayest contain a potent remedy' (II. iii. 1); or heart-disease: 'From the Himavat mountains they flow forth, in the Indus is their gathering place: may the waters, indeed, grant me that cure for heart-ache' (VI. xxiv. 1). *Parashara Grhyasūtra* (III. vi. 2) describes how water is used in a magic operation for the cure of headache: the performer moistened his hands and passed them over the eyebrows of the sufferer with the spell: 'From the eyes, from the ears, from the whiskers, from the chin, from the forehead I drive away this disease of the head.' Another remedy is the horn of an antelope, used against a hereditary disease named *kṣṛya*: 'Upon the head of the nimble antelope a remedy grows! He has driven the *kṣṛya* in all directions by means of the horn' (Atharvaveda, III. vii. 1).

III. Offensive magic.—Aggressive operations against malevolent powers cannot always be distinguished, especially in regard to demons, from that form of defensive magic which is directed to warding off their attacks. Hence the expedients adopted are to some extent the same for both purposes.

1. MEANS EMPLOYED.—(1) *Fire*.—Fire was one of the chief direct means of driving away demons and all hostile sorcery. Thus in the Rigveda Agni, the god of fire, is frequently invoked (I. xii. 5, xxxvi. 20) with such verses as: 'Burn, O Agni, against the sorcerers; always burn down the sorcerers and the allies of the demons.' This use of fire, probably the earliest in cult, though overlaid with its later and much more extensive sacrificial application, still survives in the Vedic ritual. Thus a special fire called the 'lying-in fire' (*śāntidhāni*) is introduced into the lying-in chamber (*śāntidhāni*). Of this fire the author of one of the domestic Śāstras remarks (*Śrīrājanīya Grhyasūtra*, II. iii. 61.):

* Sacred rites, except fumigation, are not performed with it; he fumigates the child with small grains mixed with mustard seeds; he then adds a number of spells to drive away various demons that prowl through the village at night, that drink out of skulls; Agni is invoked to burn their lungs, hearts, livers, and eyes. At the sacramental ceremony of cutting the child's hair a fire is kindled while a number of auspicious verses are recited; as nothing is said of its application to sacrificial purposes, it was presumably meant to ward off demons. Of similar significance were the fire employed at the investiture of the Brāhman student, behind which both he and his teacher stood, and that kindled when the pupil entered upon his course of Vedic study. That this was the significance of the fire brands which the Soma sacrificer watched during the night in the Dikṣā ceremony is certain, because it is expressly said (*Taittirīya Saṃhitā*, vi. 1. 4. 6) that Agni is here appointed 'for the destruction of the demons.' It can hardly be doubted that in the great sacrificial ritual of the three fires the southern fire was understood to have the magical power of dispelling demons, for the south is the direction from which the souls of the dead and the injurious spirits allied to them approach. In the funeral ritual a brand was taken from the southern fire and laid down pointing to the south, while a formula was pronounced in which Agni was invoked to drive away all demons that, assuming manifold forms, might venture near. At the conclusion of the funeral ceremony a fire was used by the survivors for the purpose of warding off the powers that cause death. Fire was also on various occasions carried round what was to be protected against the attacks of evil spirits. Thus a brand lighted at both ends was moved round the funeral offering; and a firebrand was also borne by the priest round the victim, the post, and other accessories of the animal sacrifice.

(3) *Water*.—Water is another efficacious means of repelling hostile agencies, as is indicated by the statement (*Mānḍūkya Sūtra*, iv. vii. 5) that 'the demons do not cross the waters.' We have already noted some examples of the use of water in curing diseases and ailments. Water is further regarded as a chief means of removing possession by evil spirits. At the birth ceremony water is supposed to wash away all injurious powers from the new-born child. A purifying bath is prescribed before entering on various ceremonies, as the Dikṣā, to remove supernatural substances that might be inimical to their success. Thus the bride and bridegroom take a bath or perform ablutions before the wedding ceremony. In rites of expiation especially, bathing and washing play an important part. Various ceremonies also conclude with a bath in order to diminish the risk of taking back into ordinary life the magical influence inherent in the rite. Such is the case at the end of the Dikṣā, when clothes and implements used during the ceremony are also laid aside. The significance of the bath taken by the Brāhman student at the end of his apprenticeship is similar. There is, further, a rule that after the utterance of spells addressed to unmanly beings, such as the dead, demons, or Rudra, one should purify oneself with water from the contact with those beings which has thus been incurred. The urine of cows was specially esteemed as a means of purification, being perhaps at the same time regarded as communicating the abundant nutritive power inherent in the animal. As long as a magical condition is meant to continue, bathing or washing is avoided; hence dirt is the characteristic of one who, by means of asceticism (*tapas*), aims at acquiring special magical power.

(3) *Plants*.—We have already seen that plants were frequently used along with spells as a magical

cure of disease. Cognate to this medicinal employment is the application of herbs to the purpose of securing the love of a man or a woman, and of promoting or destroying virility; of both these classes of charms the Atharvaveda contains many examples. But they are also resorted to for other objects. Thus some are employed against demons and sorcerers, others to counteract curses, and several are associated with battle-charms. Aquatic plants, together with frogs, as representing water, are combined with spells to quench fire. Bdellium (*guggulu*), the fragrant exudation of a tree, frequently occurs in the ritual as, by its odour, driving away demons of disease or frustrating a curse.

(4) *Stones, etc.*—In the wedding ceremony, as we have seen, the bride stepped on a stone to ensure steadfastness. A stone, as representing a dividing mountain, was regarded as a means of keeping off evil spirits, and with this intention it was employed in the funeral ritual to separate the living from the dead, where also a clod of earth taken from a boundary was similarly used. In the same ceremony a mat was laid down while the formula, 'This is put between against enmity,' was pronounced (*Kaṭhika Sūtra*, lxvii. 14). A wooden fence was placed round the sacrificial fire, the purpose being 'to strike away the demons' (*Taittirīya Saṃhitā*, ii. vi. 6. 2).

(5) *Lead*.—This metal was frequently employed in magical operations, as, e.g., in wiping off dangerous substances. The Atharvaveda contains a hymn (i. xvi.) in which lead was used against demons and sorcerers, this being one of its spells: 'If thou slayest our cow, if our horse or our domestic, we pierce thee with lead, so that thou shalt not slay our heroes.'

(6) *Weapons and staves*.—These appear on various occasions as a protection against demons. Thus a man who weds a bride is accompanied by one armed with a bow and arrow. At the wedding ceremony little staves are shot into the air, with the formula: 'I pierce the eye of the demons that prowl around the bride who approaches the fire' (*Mānava Gṛhyasūtra*, i. x.). At the royal inauguration the priest beats the king with a staff, saying, 'We beat evil away from thee' (*Kātyāyana Śrautasūtra*, xv. vii. 6). The staff is a part of the ritual equipment in the Dikṣā ceremony, its significance here being explained by the *Satapatha Brāhmaṇa* (iii. ii. 1. 28) thus: 'The staff is a thunder-bolt to drive away the demons.' The Vedic student, as peculiarly liable to the attacks of evil spirits, is provided with a staff at the rite of investiture. This he must always carry, never allowing any one to pass between it and himself; he parts with it only at the end of his apprenticeship, when he casts it away into water, along with his girdle and other sacred objects. On entering the next stage of religious life the Brāhman receives a new staff made of a different wood, the purpose of which is sufficiently expressed by the spells employed at the accompanying rite: 'Protect me from all powers of destruction on all sides,' and 'Destroy all hosts of enemies on every side' (*Śiṣyavākya Gṛhyasūtra*, i. xi. 3). A wooden implement shaped like a sword, technically called *śphya*, and very variously applied in sacrificial rites, has evidently the significance of a demon-repelling weapon. At the sacrifice to the dead the *śphya* is passed over the altar with the words, 'Smitten away are the devils and demons that sit on the altar' (*Sāṅkhya Śrautasūtra*, iv. iv. 2).

II. *MAGICAL ACTION*.—Certain types of action are regarded as producing a magical effect in various rites. They may be grouped as follows.

(a) *Hostile*.—(1) To make a noise is believed to be an efficacious means of driving away demons. At the solstitial festival drums were beaten in order to scare evil spirits, which were deemed to

be especially powerful at the time of the shortest day. A gong was sounded at the ritual for exorcising the demon of epilepsy. At the funeral ceremony a din was produced by shattering pots.

(2) A frequent method of removing injurious influences is to wipe them off. Thus lead or a black thread of wool was used as an aid in the process. In particular, the *apandrya* (*Achryanthus asperus*) plant (popularly interpreted to mean 'wiping out') was most variously employed in this sense. The *Atharvaveda* contains several hymns with which the plant is applied, the following being one of the spells in which this action is expressed (IV. xviii. 8): 'Having wiped out all sorcerers, and all grudging demons, with thee, O *Apandrya*, we wipe all that evil out.' The *Satapatha Brahmana* remarks (V. ii. 4. 14) that by the aid of this plant the gods wiped away bonds and demons. Among other magical applications of this action may be noted the requirement that one who has seen an evil dream should wipe his face.

(3) Another means of getting rid of demons or injurious powers is to shake, cast, or strip them off. The black antelope skin used as a sacrifice is shaken out with the words, 'Shaken away is the demon; shaken away are the goblins' (*Vajrasamhita*, I. 14). After feeding the souls of the dead, the officiant shakes the hem of his garment in order to remove the souls that may be clinging to it. At the conclusion of the funeral ceremony, the bundle of twigs, used to efface the footprints of death, is thrown away for fear of the dangerous substances which it may have derived from those footprints. For similar reasons clothes worn at uncanny rites, such as funerals, are cast aside. Injurious substances are deemed to be stripped off by passing through some aperture the person to whom they adhere. This notion is found even in the *Rigveda* (VIII. lxxx. 7), where Indra is said to have cured the girl *Apāla*, who suffered from skin disease, by drawing her through an opening in a ear. It is doubtless a survival of this form of purification when, in the wedding ceremony, the aperture of the yoke of a car is placed on the head of the bride.

The removal of injurious substances is not always a mere riddance, but is often also a transference to remote places or to other objects animate or inanimate. The *Rigveda* and the *Atharvaveda* contain several formulae or spells to relocate evil agencies to particular places or persons in the far distance. Thus hostile magic is expelled beyond the ninety steves (*Atharvaveda*, VII. v. 8. 1. 16); the disease *Tibhava* (a sort of fever) is cast away to far-off people, such as the *Chandartanas* and the *Mandakas* (S. v. xii. 14); evil dead and evil dream are banished to the divine being *Tris Apāra* in the remotest distance (*Rigveda*, VII. xlvii. 15-17). Injurious agencies are also transferred to others at particularly uncanny spots, especially crossroads. A garment containing certain impurities is removed to a forest, suspended from a tree, or hung over a post, to which the dangerous influence is conveyed, and then rendered innocuous (*Atharvaveda*, IV. 3. 40). Snake-poison is removed to a firebrand, which, being then thrown at a snake, returns the danger to its source (*Aśvinsūtra*, xii. 6). Fever is transferred to a frog as an antidote representing water (*Atharvaveda*, VII. cxvi. 12); while jaundice is conducted to a homoeopathic snapper to a yellow bird (S. I. xxi. 4).

(4) *Auspicious*.—(1) A very prominent part is played by eating in the communication of beneficial influences; contact with injurious substances, which would, of course, be equally well effected by eating, is avoided by fasting (cf. § 10. 1. (2)). The Vedic ritual contains innumerable examples of the magical power conveyed by the eating of sacrificial food. The eating of the food is regarded as communicating the blessing embodied in it; and in the most various forms the view appears that the sacrificial substances convey the special kind of power implied in a particular sacrifice. Thus, when the religious teacher initiates his pupil, he gives him the remnant of the offering with the formula, 'May Agni place his wisdom in thee.' On the occasion of the ploughing festival a mixture of the milk of a cow that has a calf of the

same colour and dung, hidellum, and salt is eaten. At the ceremony for the obtaining of male offspring the wife has to eat a barleycorn and two grains of mustard seed (or two beans), one of which has been laid on each side of it (as symbolising a male being). The act of two or more persons eating together establishes a community between them; at the wedding ceremonial the bride and the bridegroom eat together, and at the royal inauguration the king and the priest.

Based on the idea that an animal, when eaten, communicates its special characteristics to the eater is the correspondence in colour, nature, and other qualities between the victim and the god to whom it is offered. To induce a bull or (less often) a buffalo, to which he is often compared, to minister to the *Aśvins*, twin gods of the morning, a reddish hog-gest, for 'of reddish colour, as it were, are the *Aśvins*' (*Satapatha Brahmana*, V. v. 4. 1), to the goddess *Haravati* a cow of certain qualities, to Agni, with his columns of dark smoke, a hog-gest with a black throat, to the Sun and to Yama (god of death), two hog-gests, one white, the other black. A curious magical correspondence appears in the offering of a black victim in a rite for the obtaining of rain: 'It is black, for this is the colour of rain, with that which is its nature he wins rain' (*Taittiriya Samhitā*, II. 1. 8. 5). When the destruction of enemies is intended, a black red victim is offered by priests dressed in red and wearing red turbans.

(2) There are several anointments in which anointing is applied for the attainment of auspicious ends. In the *Dikṣa* rite the sacrificer is anointed with fresh butter to give him unimpaired vigour and sound sight. In the animal sacrifice the stake is anointed with clarified butter for the purpose of bringing blessings to the sacrificer. At the royal inauguration the king is anointed with a mixture of butter, honey, rain-water, and other ingredients, which communicates to him the powers and abundance inherent in them. At the same ceremony the king anoints himself with the fluid contained in the horn of a black antelope and refrains for a year from cutting his hair, which has been moistened by it. At the *Sastrapāṇi* rite, an expiatory part of the *Soma* sacrifice, the priest consecrates the king by sprinkling him with the fat gravy of the sacrificial animals: 'With the essences of cattle, with the highest kind of food, he thus sprinkles him' (*Satapatha Brahmana*, XII. viii. 3. 12).

(3) *Charms*, made for the most part of wood, but also of other materials, were frequently attached to parts of the body for various auspicious purposes. A talisman made of wood from the *parva-tree* (*Butea frondosa*) was worn in order to strengthen royal power (*Atharvaveda*, III. v.); a bridegroom, while reciting a hymn of the *Atharvaveda*, fastened to his little finger, by means of a thread coloured with lac, a talisman made of liquorice wood to secure the love of his bride (*Kausika Sūtra*, LXVI. 8 f.); at the full moon ceremony the sacrificer tied on his person talismans made of lac, together with all sorts of herbs, for the attainment of prosperity; while sowing seed, the husbandman put on a talisman of barley. The Vedic student who, at the conclusion of his apprenticeship, has taken the purifying bath ties a pellet of *budara* (*Euphorbia jayada*) wood to his left hand and fastens a pellet of gold to his neck; he then attaches two earrings to the skirt of his garment, and finally inserts them in his ears. A talisman of gold secures long life: 'He who wears it dies of old age,' in the words of the *Atharvaveda* (XIX. xvi. 1). To ensure conception a woman puts on a bracelet with the spell, 'An acquirer of offspring and wealth this bracelet has become' (VI. lxxxi. 1).

(4) *Indifferent*.—(1) Durying was a frequent secret method of conducting magical substances to others, generally with hostile intent. The *Atharvaveda* is full of spells expressing fear of magic buried in sacrificial straw, or fields, or walls, or cemeteries. Objects belonging to a woman who is to be injured—a garland, hair, a twig for cleaning the teeth—together with other things productive of misfortune are placed between three stones

in a mortar (a symbol of crushing) and buried. The luck of a person thus attacked might be restored by digging up the objects, while an auspicious spell was uttered. The *Satapatha Brāhmaṇa* relates (III. v. 4. 2 f.) a myth how the demons buried charms in order to overcome the gods; but the latter, by digging them up, made them inoperative. The Boma sacrifice even contains a ceremony the express purpose of which is to dig up the magical objects buried by rivals or enemies. This idea of burying things sometimes has an auspicious intention, as when a mixture of milk, dung, bdellium, and salt is buried in order to promote the welfare of cattle (*Kaushika Sūtra*, xix. 19).

(2) The action of *looking* at an object may be either beneficial or injurious. It has the former effect, e.g., when the sacrificer says (*Yajurveda Śaṅkhāya*, v. 34) to the priest, 'Look at me with the eye of Mitra' (the sun-god); or when a guest addresses the sweet food that is offered to him, saying, 'With Mitra's eye I regard thee' (*Āśvalāyana Grhyaśūtra*, I. xxiv. 14). But the evil eye (q.v.), e.g. of the serpent, brings disaster on him towards whom it is directed. At the wedding ceremony the bridegroom secures himself against the evil eye of the bride by anointing her eyes and saying, 'Look not with an evil eye, bring not death to thy husband' (*Pāraśara Grhyaśūtra*, I. 4; *Śākhāyana Grhyaśūtra*, I. 10). In the *Atharvaveda* (iv. ix. 6) incantation is conjured against the evil eye with the spell, 'From the evil eye of the enemy protect us, O salve'; the *jungla-tree* is invoked against the evil eye of the hostile-minded (XII. xxv. 3); and a certain plant is employed with the spell, 'Of the enemy who bewitches with his eye we hew off the ribs' (II. vii. 5; cf. XII. xlv. 1). On the other hand, the evil effect produced by an inauspicious object on him who sees it is shown by innumerable directions enjoining avoidance of such sights. Thus the Vedic student who, at the conclusion of his apprenticeship, has taken his purifying bath must not look at an enemy, a malefactor, a corpse-bearer, or ordure. For similar reasons, one returning to the sacrificial ground should not look round after performing an inauspicious ceremony, such as an offering to the goddess Nirrti or a rite for the slaughter of demons.

(3) The action of *circumambulation*, which occurs very frequently in the Vedic ceremonial, is regarded as having a magically auspicious effect when the performer walks round an object in sunwise fashion by keeping his right hand towards it (*pradakṣaṇa*). Both living and inanimate things are three times circumambulated in this manner; e.g., priests thus walk round other priests or the victim, and the wives of the king walk round the dead sacrificial horse. Sacrificial altars and temples, the ground where a house is built, as well as houses (as a protection against serpents), are circumambulated. This rite is especially often performed with the sacrificial fire, as at the wedding ceremony and at the initiation of the Vedic student. Water is circumambulated at a wedding, as also a new house, while water is at the same time sprinkled round it. When the ceremony is inauspicious, the direction is reversed, the left hand being kept towards the object. This is done especially in funeral rites at the burying ground and at cross-roads. Thus the mourners walk three times round the unlucky fire deposited where four roads meet, with their left sides towards it, beating their left thighs with their left hands. When a patient is to be cured of snake-bite, the priest walks round him to the left. When a servant who is disposed to run away is asleep, his master, making water into the horn of a living animal, walks three times round him to the left, sprinkling the water round him with the spell, 'From the mountain on which thou wast

born, from thy mother, from thy sister, from thy parents, and thy brother, from thy friends I sever thee' (*Pāraśara Grhyaśūtra*, III. vii. 2). Movement both in the auspicious and in the reverse direction is not restricted to walking. Thus in the sacrifice to the dead the officiant grasps a water jar with his left hand and pours out its contents from right to left; he also holds the ladle in his left and deposits the offering on the grass in the same direction (cf. further, art. CIRCUMAMBULATION).

IX. Sympathetic magic.—A special type of magic is that which has been called 'sympathetic,' being the influence exercised on a remote being or phenomenon by means of a telepathic connexion between it and what is manipulated by the magician. It may be either beneficent or injurious.

(a) *Effigies*.—An image is frequently made and operated on for the purpose of producing a similar effect on the victim. Thus an enemy is destroyed by piercing the heart of his clay effigy with an arrow, or by transfixing his shadow. His death is also produced by melting a wax figure of him over the fire, or by killing or burning a chameleon as representing him. The elephants, horses, soldiers, and chariots of a hostile army are imitated in dough, and sacrificed piece by piece so as to bring about its destruction. The magician annihilates worms by stamping on or burning twenty-one roots of the *agru* plant, while he pronounces the spell, 'I split with the stone the head of all worms male and female; I burn their faces with fire' (*Atharvaveda*, v. xxiii. 13). In order to exterminate the field vermin called *turda*, a single *turda*, as representing the whole class, is buried head downwards, its mouth being tied with a hair so as to prevent its eating grain (*Kaushika Sūtra*, I. 19). With a view to smothering the limbs of evil spirits pigs are driven into the ground. One who pounds the Boma shoots for sacrifice directs the blows against his enemy by fixing his thoughts on him during the operation.

The sympathetic *mantra* is sometimes very remote, as when implements or materials are used in which a particular power is regarded as inherent. Thus an evil priest's rumour soon rendered magical by being couched with wood that has grown from the stump of a tree, symbolising the restoration of fallen fortunes. At a ceremony for the removal of troublesome ants a mortified ball of *śālikha* wood is employed chiefly because the name of the tree means 'remover.' At a rite to destroy demons the dipping spoon is made of wood from the *palāśa* (*Butea frondosa*) tree as representing the magical spell (*brāhmaṇa*), which is a slayer of demons. When the sacrifice for the restoration of an exiled prince is performed, earth and other material from his native country are employed. At a sacrifice for victory in battle, soil torn up by a bear is taken for the altar (*vedi*), with a view to communicating the fierceness of that animal to the combatants on behalf of whom the offering is made.

(b) *Imitative processes*.—The higher caste concerned with the three sacrificial fires abounds with rites in which the desired effect is produced by an imitation of the event or phenomenon. Thus the kindling of the sacrificial fire in the morning develops into a magical rite to make the sun rise; and the dripping of the Boma-juice through the purifying sieve becomes a rain charm. At the ceremony of the royal inauguration, the conventional chariot race in which the king wins is meant to gain for him speed and victorious might. On various occasions in the ritual a game of dice is played; this has clearly the magical purpose of securing luck and gain for the sacrificer. At the celestial ceremony as *Arya* and a *śūdra* (representing a white and a black man) engage in a struggle for the possession of a circular white skin, the former ultimately wresting it from the latter; the magical aim of this performance is the liberation of the sun from the powers of darkness. In the same ceremony, as well as at the Boma and the horse sacrifice, there are certain sexual observances the obvious purpose of which is to produce fertility in women. A good example of the imitative method is the procedure

meant to deflect a river into another channel. The new course is first watered; it is then planted with reeds; and, finally, representatives of water, such as a frog and the aquatic plant *acanda*, are deposited on it; the imitation is believed to produce the reality.

(1) This type of magic is very frequently found in the particular form of *rain-making*. Such is the purpose when, at the seasonal festival, a cowhide is pierced with arrows—probably an imitation of the myth of Indra's release of the waters by piercing the rain clouds (which frequently appear as cows in the *Rigveda*). On the same occasion girls dance round a fire with jars full of water which they pour out, while they sing a song calling upon the cows to bathe. At the ceremony of piling the fire-altar jars of water are emptied on the ground, on which rain is thus said to be shed, and grain is sown on the spot. When an otter is thrown into the water, rain falls in abundance; or, if any one desires rain, he casts herbs into the water, submerges them, and then lets them float away.

(2) A modified form of sympathetic magic is *divination*, the aim of which is to find out what is hidden or future, largely from the occult correspondence between the representation and the reality. Dreams and sacrificial and funeral rites are the most significant representations; these can be interpreted by spiritual persons who possess inner illumination, strengthened by the power of asceticism and other magical means. From the direction taken by a cow at a particular point in the ritual it may be inferred that the sacrificer will attain his purpose. If at a certain sacrifice the fire flames up brightly, the sacrificer will obtain twelve villages; if the smoke rises, he will obtain at least three. The fire kindled in a special way between two armies about to fight prognosticates the result of the battle by the direction of the smoke. The observer who, at a funeral, notes which of the three sacred fires catches the corpse first can tell whether the soul of the deceased is in heaven, in air, or on earth.

The following examples of divination are of a more general type. If one wishes to know whether an unborn child will be a male, the son of a Brahman must touch a member of the mother; supposing the member has a masculine name, the child will be a boy. When it is desired to ascertain whether a girl will make a good wife, she is bidden to choose between various cloths taken partly from auspicious soil (as that of a furrow or a cowshed), partly from an unlucky spot (as a cemetery or cross-roads); her choice betokens her character and her future. A special form of prognostication is the foretelling of weather by old Brahmins from the smoke of dung.

Mixed with the knowledge of the future obtainable from a symbolic process is that derived from gods or spirits, by interpreting the movement, the light, or the cry of animals or birds specially connected with gods or spirits, such as the wolf and hyena, the owl, crow, pigeon, and vulture. Thus, in one of the two hymns of the *Rigveda* concerned with augury, the bird crying in the region of the Fathers (the south) is invoked to bring auspicious tidings (II. xlii. 2). Again, in one of the *Sûtras*, the owl 'that flies to the abode of the gods' is addressed with the words, 'Flying round the village from left to right, portend to us luck by thy cry, O owl' (*Hiranyasaka Gṛhyasûtra*, I. xvii. 1. 3). The direction from which the wood will come is indicated by the flight of crows after the performance of the rite for obtaining a husband for a girl. Such omens seem to be a later development, resulting from the simplification of the symbolic method of divination by isolating a single feature of a complex process.

13. Oral magic.—Magical formulae are usually

accompanied by some ritual act; but the spoken word in the form of a spell, a curse, or an oath also has a magical effect by itself.

(a) *The spell*.—The spell has generally a metrical form, being sometimes an old religious verse degraded to magical use. Though the formula is magical in application, it is in form often a mixture of prayer and spell, the gods being mentioned or invoked in it; e.g., 'Between the two rows of Agni Vaisvânara's teeth do I place him that plans to injure us when we are not planning to injure him' (*Atharvaveda*, IV. xxxvi. 2; cf. XVI. vii. 3); 'Thy ninety-nine spirits, O Night, shall help and protect us' (XIX. xlvii. 3-5). It is, indeed, characteristic of the hymns of the *Atharvaveda* to contain the names of numerous deities, while the panegyrics of the *Rigveda* are addressed to one only; e.g., 'Heaven and Earth have anointed me; Mitra has anointed me here; may Bṛhaspati anoint me; may Savitṛ anoint me' (VII. xxx. 1). The magician very usually threatens or commands in his own person; e.g., 'I plague the demons as the tiger the cattle-owners; as dogs that have seen a lion, they find not a refuge' (IV. xxxvi. 6); 'As the lightning ever irresistibly smites the tree, so would I to-day beat the gamblers with my dice' (VII. I. 1); 'Swift as the wind be thou, O steed, when yoked to the car; at Indra's urging go, swift as the mind; the Maruts shall harness thee; Tvastṛ shall place fleetness in thy feet' (VI. xxi. 1). But he also often mentions in his spell a parallel case, in order to effect his purpose, like the symbolical process in sympathetic magic; e.g., 'With the light with which the gods, having cooked porridge for the Brāhmanas, ascended to heaven, to the world of the pious, with that would we go to the world of the pious, ascending to the light, to the highest firmament' (XI. I. 37); 'As one pays off a sixteenth, an eighth, or an entire debt, thus we transfer every evil dream to our enemy' (VI. xlv. 3); 'As the rising sun robs the stars of their brilliancy, so I rob of their strength all the men and women hostile to me' (VII. xlii. 1); 'The cows have lain down in their resting-places; the bird has flown to its nest; the mountains have stood in their site; I have made the two kidneys stand in their station' (VII. xvi. 1). A frequent feature of spells, in order to make sure of striking the injurious spirit, the seat of evil, or whatever else is aimed at, is the enumeration of a whole series of possibilities; e.g., 'Out of eyes, nose, ears, brain, neck, back, arms I drive the disease' (II. xxxiii. 1 f.). If, however the demon is known, this knowledge is emphasized as bestowing magical power over him; e.g., 'This is thy name; we know thy birth; this thy father, this thy mother.'

On the most varied occasions spells are uttered without any accompanying rite. The application of one that may be pronounced by a man on entering a court of justice is thus described (*Pāraśara Gṛhyasûtra*, III. xlii. 6): 'If he should think, "This person will do evil to me," he addresses him with the words, "I take away the speech in thy mouth, I take away the speech in thy heart; wherever thy speech is, I take it away; what I say is true: fall down inferior to me." Spells are also uttered, e.g., when a man mounts an elephant, a camel, a horse, a chariot, when he comes to cross-roads, when he swims across a river, and in many other situations.

A formula sometimes consists of two or three words, or even of one word. If a man has spoken what is unworthy of the sacrifice, he has only to murmur 'Adoration to Vîṣṇu' as an expiation. The daily repetition of the single sacred syllable *hriṣ* averts death from him who utters it: 'he has nothing to fear from various diseases or from anxiety' (*Gobhila Gṛhyasûtra*, IV. vi. 1). Again, the more mechanical repetition of a prayer meant for a totally different purpose may have a magical effect. Thus, the celebrated *Gayatri* verse of the *Rigveda* (III. I. 10): 'We would attain that excellent glory of Savitṛ the god, that he may stimulate our prayers'—it

uttered 8000 times, from a man from the din of competing universal presences. Even the formulaic use of a stereotyped dialogue secures the desired result. Thus, when the rite of parting the hair of a woman is performed, the husband asks her, 'What dost thou see?' 'O offspring,' she replies.

(3) *The curse.*—A special form of the magically effective spoken word is the curse. The earliest examples of it in Vedic literature are mythological. In the *Yajurveda* (*Taittiriya Samhitā*, II. vi. 6. 1) Agni curses the fish for betraying his hiding-place in the waters, predicting that men shall kill it by means of various artifices: 'Hence men kill fish with various artifices, for they are cursed.' In *Tāpdye Brāhmaṇa* (VI. v. 11) the gods curse the trees with the threat that they shall be cut down with an axe the handle of which is made from themselves. That the employment of actual curses was also common in early Vedic times is obvious, and is confirmed by the occurrence of many spells intended to counteract them or to make them recoil on him who utters them. The *Atharvaveda* contains several such; e.g., 'Avoid us, O curse, as a burning fire a lake; strike him that curses us, as the lightning of heaven the tree' (VI. xixvii. 2); 'Let the curse go to the enchanter, we crush the ribs of the hostile eye-conjuror' (II. vii. 5; cf. V. xiv. 5, x. i. 8). Plants, such as the *apamārga*, are invoked to free from the calamity consequent on a curse. The *Satapatha Brāhmaṇa* contains several passages showing the potency attributed to curses. Thus it is there said (II. i. 4. 10, III. ii. 1. 9) that, 'if any one were to curse him, saying, "May the moricose turn away from him," then he would indeed be liable to fare thus'; 'Were any one to curse him, saying, "He shall either become demented or fall down headlong," then that would indeed come to pass.' It is there also said that he who curses a Brāhman possesses of certain knowledge leaves this world bereft of his strength and the result of his good deeds. In other *Sātras* those who raise their hand to pronounce a curse are said to be one of the seven kinds of *amāsin* (*Yajur-smṛiti*, v. 191).

(4) *The oath.*—This is really a curse directed against oneself, as is indicated by the verb *śp*, which in the active means 'to curse,' but in the middle 'to curse oneself,' 'to swear.' It calls down on oneself and one's belongings loss of life or possessions in this world and the next as a penalty for telling an untruth or breaking one's word. Thus, in the ceremony of royal inauguration the priest causes the king to swear the following oath (*Atarvya Brāhmaṇa*, vii. 18): 'All the merit of my meritorious and gifts from the day of my birth to the day of my death, my position, my good deeds, my life, my offspring shall belong to thee, if I deceive thee.' If the oath is broken, the punishment ensues; e.g., the *Yajurveda* (*Taittiriya Samhitā*, II. iii. 5. 1) relates how, when the moon-god did not keep the oath which he had sworn to the Creator Prajapati, he was attacked by the disease of consumption.

MAGICAL CIRCLE.—For the 'operation' of 'conjuring' spirits the medieval sorcerer sat in the centre of a circle described on the ground. This formed a spiritual barrier, protecting him from ghostly attacks, while enabling him to question his 'familiar' or other spirits from a coign of supernatural vantage.

'Orculi sunt monstrum quoniam quae operantur a malis spiritibus resident tunc.'

The concepts of circle, circular, and encircling lend themselves naturally to dramatic ceremonialism, and ideas of continuity, finality, and eternity have been appropriately expressed by circular symbolism.

In Scandinavian mythology a serpent encircled the earth, *Pythia* Lerna, fastening an ultimatum from the Senate of Rome to King Antiochus, drew with his staff a circle round himself in which he awaited the reply.

The circular form of certain shrines and religious structures may involve some symbolism, possibly astrological. According to the Talmud, a round house and a three-cornered house do not become unclean—e.g., from the contagion of leprosy—whereas a square house does. Possibly the sacred number 3 renders the three-cornered house immune; possibly, again, the three corners represent the points of supernatural weapons. In the case of the round house the idea may be that nothing can cling to its smooth outline.

The circle as a supernatural protective barrier has several analogies in primitive custom, and variations of form involve corresponding variations of meaning. Throughout, from the earliest examples to the latest, importance is usually attached to the material or the instrument with which the circle is traced.

Among the Shavup Indians the bed of a mourner is surrounded by thorn-bushes, the object being to ward off the ghost of the dead person. The *Sollomoh* Indians, also of British Columbia, have a similar practice. Besides surrounding the bed with thorns, mourners cleanse their bodies while standing in a square formed by thorn-bushes, as a protection against the ghost. Here the mystic circle depends not on its shape but on its completeness in the geometrical sense.

Water and fire, excellent bulwarks both in human warfare and in spiritual conflict, and, possibly for this reason, among others, regarded as supreme cleansers, are often used to avert evil influences.

The Lactians had a custom of burning a fire burning in a circle around the bed of a mother for some weeks after child-birth. In Abyssinia the bed was surrounded by blazing herbs, while the mother herself was held in the circle by 'most young fellows.' In a moving or dynamic form the fiery circle was used for the same purpose in Scotland. Morning and night fire was carried

4 This seems to be one notion in the use of the pentagram or pentacle (see Thompson, loc. cit.).

5 G. B. pt. ii. *Taboo and the Perils of the Soul*, London, 1911, p. 142, quoting P. Boas.

6 J. B. pt. vii. *Under the Sun* (Vol. I), London, 1912, II. 375.

7 J. G. Fraser, in *JAGS* xv. (1893) 361.

round the mother till she was churched, and round the child till it was christened. In some parts of Scotland a fire-circle was whirled three times round the bed where mother and child lay.¹

It has been suggested that in some such cases the idea was to prevent the soul in its critical state from leaving the body, but the greater proportion of cases certainly depend on the idea of protecting the patient from external evil, though the fire-treatment of childhood may have originated simply in a primitive clinical intention of producing comfort or obviating complications.

In China candles are kept alight round the coffin to 'give light to the spirit,' or to light him on his way.² The Chinese buried a fire round the grave.³ A Chinese charm consists in laying a circle of ashes round the dead man. It is supposed to surround him.⁴ The Romans carried water or fire round incense on their return from the funeral.⁵

The curious custom of circumambulation as a mark of honour was practiced by Hindus, Greeks, and Celts.

In ancient India, walking round a person three times to the right (sunwise) was a ceremony of honour,⁶ as it was among the Gauls and Celts.⁷ The ancient Indians walked round the funeral pyre, as Achilles does round the pyre of Patroclus⁸ (see art. CHIRONOMIA). The ancient Indians also practiced the rite as a cure for a sick person.⁹ Possibly the idea of protecting a person with a circle, or ring, is behind the domestic variety.

In Wales a candidate for the priesthood converses with spirits in the mountains, when he returns home, he splits a young tree and crows through the fissure, 'in the belief that any spirit which may still be clinging to him will then be left clinging to the tree.'¹⁰ Highlanders of Scotland used to send their sheep through hoops of reeds to 'ward off the witches.'¹¹ Similar customs are found in E. Europe and England as well for sickness.¹²

The Lapps wore a brass ring on the right arm by way of protection against the ghost of the dead person.¹³

Fraser instances superstitious about rings—arm or finger rings—suggesting that the idea is to keep the soul in the body. For this purpose magic cords are tied round wrist, ankle, or body among various peoples.¹⁴

'To keep the soul in or the demons out' is a question where convergences of practice is natural. In ancient India the medical magician encircled the bed of a woman at child-birth with black pebbles to ward off demons.¹⁵ This is in line with primitive practices mentioned above, but a suggestion of V. Henry possibly connects it with Babylonian magic: he finds in old Indian magic traces of the double pentacle, or Solomon's Seal, the famous constituent of the mediæval magical circle, consisting of two equal and equilateral triangles, cutting each other so that the resulting segments are equal. The underlying idea may be that the points of the star pierce the inviolable enemies.¹⁶ The Indian Hita alone show a connexion, by means of this astrological element, with the Semitic, and it is from the Semitic practice that the magical circle of mediæval Europe, along with a considerable body of astrological magic, was developed. This is a remarkable case of permeation from one source. Semitic magic and its conquest of Europe may be described, not altogether fancifully, as a left-handed compliment to Semitic religion and the conquest of Europe by the Bible.

The Babylonian texts continually refer to the *uwrutu*, which Thompson justly identifies as 'the prototype' of the magical circle, possessing the properties of a 'ban.'

The circle-potential existed over the sick as *uwrutu*: '(The man) of the sick... the messenger of Hama on 1... the circle of Hama is in my hand.'¹

In more detail, the sick person was surrounded by an enchanted circle (of the nature of a talisman) made with flour or other material, 'as a kind of haven through which no spirit could break.' The priest first performed a ceremony of abatement, in which a kid was sacrificed. He then laid the kid away, and then described the circle. 'Hama the man with kumra (flour), flour of lime, surrounded the sick man right and left. The kid is bound.' A mixture of meal and lime seems to be intended: both substances possessed virtues. The 'Sour of Hama (the cure-god)' was the 'line of the great god.' In another ceremony, before the god Hama, the priest described with lime a circle round seven winged figures, and in yet another flour and water were used for drawing the circle.² Hama Thompson compares the mediæval use of the flour as a protection against vampires and witches. The Babylonians described the mixture as the 'net of the cure-god.' Similarly the Jews of Jerusalem employed the virtues of food against evil influences, enclosing a sick person of food round the bed of a sick person.³ A Semite parallel to the idea of stripping off evil by passing through a ring, or arch, or other circumscripted opening is found in a cure for headache, which consisted in making a circle round a desert-plant with meal, plucking it up before sunrise, and tying it on the head. When the plant was removed, the headache disappeared simultaneously. On the same principle an ailing limb was cured by tying round it a charmed thread, and then cutting this away, along with the sickness.⁴

The development of magic, white and black, in Europe, and its remarkable exploitation, lasting till well after the scientific period had begun,⁵ were bound up with Semitic animism, or rather demonism, if the distinction may be observed. The causes producing a state of culture in which every man of science was a necromancer and conjurer of spirits do not concern us here, but the invariable employment of the magical circle for the conjuration of spirits is typical of the culture of those ages. The primitive Babylonian practice was now divorced from medical magic. As applied to the evocation of elemental demons, whose aid was invoked for alchemical research or prophecy or evil magic against individuals, its main purpose was to protect the sorcerer from the dangerous servants whom he called up.⁶ At the same time the geometrical possibilities of the circle appealed to the mathematical instincts of the scholar, and geometry perhaps owes something to magical experiments upon the circle. Kabbalistic lore was also called upon for the exploitation of names and numbers of power, to be inscribed in the circle. Here begins the positive virtue of the circle, which, in connexion with the universal concepts of the figure, made it something more than a protective barrier. It became rather a mystic focus of power, and had at least the merit of concentrating the alchemist's or astrologer's thoughts. Lastly, the astrological elements of the sodical system were applied to it, and it thus became an intermediary between chemistry and astronomy, as the focus to which were attracted the infernal and supernal powers alike.

The Arabic and Hebrew developments of magic in the early centuries of the Middle Ages are obscure. The account given by Psellus of a *Hebraïcus circulus*, 'Hebraïcus circulus', calls for notice, though its meaning is confused. He writes:

'Hebraïcus circulus is a golden sphere, enclosing a sapphire in the centre, turned by a string of bull's hide, and having characters through the whole of it. They make conjurations by turning this, and they are wont to call such things *lyyres*, whether they have a spherical or triangular or any other shape whatsoever. Shaking them, they uttered unintelligible or barbarous sounds, laughing, and striking the breast. It accordingly teaches the operation of the rite, or the motion of such a circle, as possessing secret power. And it is called "Hebraïcus" as being dedicated to Heme; and Heme is a divinity among the Chaldeans.'⁷

⁷ That magic was practiced at the end of the 10th century.

⁸ *JAT*, p. 102, the circles 'are certain talismans.'

⁹ *Supplementum Chaldaicum* (PG xxi. 1118).

fixed in the ground or floor by nails. Five concentric circles, close together, formed a strong protective circumference. A triangle took the place of the pentagram, and three small circles were described for the stations of the operator and assistants.¹

The elaboration of geometrical design and astrological figures within the circle was connected with its positive efficacy for conjuration and control of the spirit. Thus Giordano Bruno writes:

'O! quanta virtus est intercirculationibus circuli et quoniam unum huiusmodi occultis! Cum caput Draconis in Significatio existerit, discipulo lapide posito in aqua, naturaliter spiritus ad dandum responsum veniunt.'²

Consultation of the stars and seasons was essential.

'Operari in constituendo circulo considerare quo tempore anni, quo hora circulus facies, quo spiritus advenire velit, cui saluta et regem present, et quae functiones habent.'³

For summoning chance spirits or seeing visions generally, a circle was made (probably at cross-roads) and perfumed, and the operator had to walk round its circumference, east to west, till he was giddy.⁴ For necromancy the churchyard was an appropriate site.⁵ The operator wore elaborate vestments, and was anointed with holy oil.

The circle was invariably obliterated on the conclusion of the operation.⁶ A similar practice of destroying the traces of magical rites is regular throughout the history of magic, even in primitive culture.

The talismans, pentacles, or seals, used freely by the magicians, depended largely upon the magical circle which was described round them. Here, as in the large operating circle, the more concentric circles, the more potent the efficacy. Against the attacks of spirits they were very powerful, 'proceeding with wonderful influence.'⁷ They were exhibited to the spirit on its appearance; by their means the operator bound the spirit, and was able to prevent it from departing 'without a licence.' The issue of the licence was an important detail; if it was omitted, the death of the operator might result.⁸ The first virtue of a seal was from the star under whose influence it was, and, accordingly, it would be made of gold, if the planet were the sun, of iron, if the planet were Mars.⁹ Seals 'of the names of God' were most powerful. Others had the names of angels, such as Raphael, Michael, Gabriel, inscribed between two concentric circles. Those which may be distinguished as pentacles proper had a Solomon's Seal surrounded by a circle.¹⁰ The most usual form had enclosed within the circle the 'table' of a planet. These tables, it is interesting to note, were 'magical squares' in the mathematical sense (see below). Each planet, and each of the other forces, had its own magical square.¹¹ The Seal had an obverse and a reverse, and was the size of a large medallion.¹² In connexion with the pentagram, this figure was a synonym for health. It was also developed into a continuous figure, by combining two, resulting in five, not six, points.¹³

The 'characters' of spirits were taken by the operator within his circle. These were in a book, which, when completed, was consecrated in a triangle described just outside the circle.¹⁴ When a spirit appeared, it was asked to place its hands on its 'character' and swear.¹⁵

Medieval amulets for general use were frequently stamped with the magical circle in its numerous

varieties, as also were talismans of various make. The latter were effective, as a rule, only in co-operation with a ring engraved with 'charactum.' This was worn on the finger, and the talisman on the arm or body.¹⁶ The magician's wand was sometimes phant and could be made into a circle, the ends being joined by a gold chain.¹⁷ Described on parchment, the magical circle served as a basis for astrological calculations. This use was prevalent wherever Arabic culture penetrated. Thus, in Malaysia at the present time the circle is employed for all kinds of divination. To select a lucky day for a journey or business, a circle enclosing a heptacle is used, but every alternate day is skipped, the lines of the continuous heptacle running from, e.g., Sunday to Tuesday, Thursday, Saturday, Monday, Wednesday, Friday, Sunday, and so on.¹⁸ This heptacle is an ingenious development of the double pentacle. Magic squares of three or five numbers enclosed in a circle are less frequently used. Another form of divinatory circle has only radii from the centre. Colours emphasize the various parts of these circles.¹⁹

As a mathematical curiosity, the so-called magical circle is a development from the magical square, known since the earliest Arabic sciences. The latter is a square divided into smaller squares in each of which a number is written, and so arranged that the sum of the numbers in any row, horizontal, vertical, or diagonal, is always the same. The magical circle, or circle of circles, has numbers in concentric circles with radial divisions, possessing the same property as the rows in the magical square.²⁰

LITERATURE.—In William Brewster, R. C. Thompson, *Scientific Magic*, London, 1902, and G. C. Horst, *Sealer-Book*, Mainz, 1873, are the best of a very few. Francis Barrett, himself an adept, remains the most useful of the occultist expositors, in his *Magus*, London, 1801.

A. E. CRAWLEY.

MAGYARS.—See HUNGARIANS.

MAHABAN (Skt. mahā, 'great,' vana, Hindi bām, 'forest').—A sacred town in the Mathurā District of the United Provinces and Oudh, on the left bank of the river Jumna; lat. 27° 37' N., long. 70° 45' E.; famous as the scene of the adventures of Krishna as a child.

Here and at Gokul (q.v.), as might have been anticipated, the places where the young god was attacked by the witch Pātāṅgī, where he played his pranks in the dairy and was saved from the falling wooden mortar, and where he overcame the demons Tṛpāvarta and Bakasā are now shown. Mahāban was, in reality, only the water-side suburb of Gokul, which has now appropriated much of its sanctity, possibly because Mahāban never recovered from its sack by Mahmūd of Ghazal in A.D. 1017 (H. M. Elliot, *Hist. of India*, London, 1867-77, ii. 458, 460). In the fort are found fragments of Buddhist sculptures, and it is believed that Mahāban was the site of some of the Buddhist monasteries which, in the time of the Chinese pilgrim Fa-Hien, stood on both banks of the river. The existing temples are modern and mean. Only one is of any importance, that dedicated to Matherānāth, Krishna as lord of Mathurā. The most interesting building, however, is that known as Aṣṭi Khambhā, 'the eighty pillars,' which also has the name Chhathī Pāṇā, so called because women come here to be purified on the sixth day (ṣaṣṭhī) after child-birth, and here the cradle (pāṇā) of the infant god is exhibited. In its original form it seems to have been a Buddhist building, afterwards used for Hindu ceremonial, and finally converted into a Muhammadan mosque.

The style of the colonnades closely resembles that of the more famous building of the same class near the Qutb Minar at Delhi (q.v.), and both buildings have been ascribed to the same age, the close of the 13th cent. A.D. The most remarkable feature in this building is that one half of the southern end consists of the shrine of a Hindu temple almost undisturbed, with the original roof still in position.

Literature.—The history, legends, and architecture of the place have been fully described by P. S. Grover, *Nathuram, Allahabad*, 1908, p. 373 E., and A. Führer, *Konkarnal Antiquities and Inscriptions in the North-West Frontier and Oudh*, ed. 1904, p. 105 E.; *JOL* vol. [1902] 457 E.

W. CROOKER.

MAHABHARATA.—The *Mahābhārata* is an epic poem of India in eighteen books, containing altogether about 400,000 verses of eight and eleven syllables each, although these verses are united into stanzas (called *śloka* and *triśṭubh*) of four verses each, so that the Hindus call it a poem of a lakh (100,000) of stanzas. The books are of very unequal length, varying from a few hundred to several thousand stanzas, and there is also a supplementary book—the *Harivamśa*—of 18,000 stanzas. The matter of the poem is partly narrative and partly didactic. The epic proper contains about 30,000 stanzas embedded in and embellished by moral, political, religious, and metaphysical dissertations, the whole forming a heterogeneous mass of tale and teaching, which gradually accumulated around the epic kernel. As a tale the *Mahābhārata* ('Great Bharata' story) represents in its oldest form the *purāṇa*, or ancient tale, in distinction from the *skanda*, or studied, elegant poem, of which the other epic, called the *Rāmāyaṇa* (q.v.), is the representative. It is probably older in its oldest parts than the *Rāmāyaṇa*, and yet in its entirety much later. It belongs rather to western ('Midland') India, while the *Rāmāyaṇa* belongs to the east. It celebrates Kṛṣṇa as representative of Viṣṇu on earth, while the *Rāmāyaṇa* celebrates Rāma. Finally, it has not the unity of the *Rāmāyaṇa*, nor was it written by one poet, as was the *Rāmāyaṇa*. According to a tradition still extant in the work itself, the *Mahābhārata* at first contained only 8000 stanzas and was subsequently increased to 24,000, after which it was again enlarged by the addition of numerous episodes till it reached its present size. The chief individual characters in the poem are known in part in ancient literature, but not the popular characters, the heroes of the winning side in the story as now extant. The war waged was between the old and the new; the date of the poem as it stands cannot, therefore, be that of the antique characters of the Brāhmanic age. As a whole, the poem dates from about the 2nd cent. B.C., extending to the 2nd cent. A.D. or, with the margin allowed by some scholars, its period extends from 400 B.C. to A.D. 400, this representing the centuries during which the whole poem was developed into its present shape. The additions since A.D. 400 must have been slight, though it is possible that one of the most probable references to Christianity in the poem, contained in the story of the 'White Island' (xii. 336-339), was among such 'latest additions.' The material wrought into the poem is in part older than the poem itself, probably by centuries, especially the narrative and didactic episodes, some of which seem to be of Buddhist origin. But the mass of the poem is greater than the epic narrative itself, and this mass, being largely didactic, led to the theory that the epic was originally didactic only, the narrative of human conquest being utilised as a frame on which to hang interminable sermons. This theory, put forth by Dahlmann, was further burdened with the thesis that the encyclopaedic epic dated from pre-Buddhist times and was the work of one author;

but neither this most improbable hypothesis nor the basic theory—to wit, that the epic proper was merely ancillary to the didactic mass—has obtained general recognition. It is merely the exaggeration of a truth not denied by any one, viz. that moral and narrative poetry have always been more or less commingled in India. If the hypothesis of Dahlmann could be established, it would, of course, tend to show that Buddhism had been very much over-rated as an originator of ethical teaching. Very simple critical tests show, however, that no such great antiquity can be assigned to the *Mahābhārata*; the metre alone proves that it belongs to a period much later than that of Buddhist beginnings. The epic is first mentioned in the *Gṛhyasūtra*, withal not the earliest (*Āśvalayana Gṛhyasūtra*, iii. 4), to which there is no cogent reason to ascribe an antiquity greater than the 3rd cent. B.C., and it is not impossible that even this reference may be interpolated. In the 2nd cent. A.D. the Greeks refer to an Indian Homer (Dio Chrysostom, *Orest.* liii. 6), and this perhaps implies the supposititious author or compiler Vyāsa, to whose activity the Hindus give the name of authorship of the epic, as they say that Vyāsa compiled or arranged the Vedas—a story without any historical importance. Not more successful has been the counter-theory of Holtzmann, who holds that the epic was much later than the Christian era. He would date the *Mahābhārata* from the 5th to the 9th cent. A.D., and thinks that the story as we have it is an inversion of an older epic, in which not the Pāṇḍava but the Kuru were the characters originally bearing by some earlier poet, and that it is due to the retention of older material that sins ascribed to the Pāṇḍava and their ally Kṛṣṇa have been kept in the poem of to-day. This theory also has failed to find recognition, in part because it ignores the weight of inscriptional evidence, which shows that half a millennium before the *Mahābhārata*, according to this theory, had been completed, it was already of the size it is now.

The completed *Mahābhārata* represents an age well acquainted with foreign nations, even Greeks, Scythians, Persians, and Chinese being occasionally referred to in it (e.g., v. 18); it represents also a time of empire, when, however exaggerated, the conquest of all India was regarded as quite a possible feat. It shows a superficial knowledge of the extreme north and south and a very intimate knowledge of Middle India. Castes are recognised as orders of society naturally, or, rather, divinely, established (e.g., xii. 72, 207). Heterodox beliefs are freely disowned; outlandish morals are gravely reprobated (e.g., viii. 46). *Śaśi* is approved, but is not regarded as imperative; the ethical standard is high. Buddhist remains and Hindu temples are mentioned (e.g., iii. 190). Different epochs have amalgamated their beliefs in regard to the gods. In one episode the Vedic gods are paramount; in another the authority of Brahmā is supreme; elsewhere Viṣṇu is the one great god, or Śiva alone is God and Viṣṇu is his representative. Only one late passage recognises the Trimūrti, or triad of Brahmā, Viṣṇu, and Śiva, as three forms of one god (iii. 272).

The *Mahābhārata* begins with an Introduction, or Book of Beginnings, which tells how the childhood of the heroes was passed and gives their origin, and also, incidentally, the origin of gods and men in general. For the story, it may be compressed into the following statements. Two brothers, Dhṛtarāṣṭra and Pāṇḍava, are educated by their uncle Bhishma. The former brother grows up and marries a western woman, Gāndhārī, who has a hundred sons, called Kuru. Pāṇḍava has two wives, one of whom, Mādrī, commits suicide at his

death; the other, Pritha or Kunti, survives Pāṇḍu and brings up his five children, called the Pāṇḍus, who are really sons of the gods, whom Kunti and Mādrī had invoked. These sons are Yudhiṣṭhira (son of the god Dharma, or Right), Bhīma (son of the wind-god), Arjuna (the chief hero of the epic, son of Indra), and the twins Nakula and Sahadeva (sons of the Aśvins, or Dioskouroi). After this introduction, which, like most childhood-recitals, is in general late, comes the 'Babha', the title of the second parvan (book), taken from the assembly in the gaming-hall (*asbha*), where the epic drama begins. At Hastināpur (about 60 miles north of Delhi) the Kurus hold an assembly, to which they have invited the Pāṇḍus, who, after various adventures, had built a town at Indraprastha (near Delhi). The Kurus intended to cheat the Pāṇḍus out of their kingdom by a game of dice, since they were afraid of the waxing power of their cousins. Yudhiṣṭhira plays away all his wealth and kingdom, and finally his brothers and himself. Then he plays Kṛpā, the daughter of Drupada, polyandrous wife of the five brothers, and loses her. Once more he plays, all that he has lost against a term of exile, and on losing again he and his brothers and wife are driven ignominiously forth to live for twelve years in the forest. The third book is called 'Vana' ('Forest'), and narrates the life of the exiles. It is a storehouse of legend and tales, such as the story of Savitri, and that of Nala and Damayanti, told to relieve the tedium of exile. The fourth book receives its name 'Virāṭa' from the name of the king with whom the Pāṇḍus take refuge at the close of the twelfth year. They stay in town collecting allies and assisting Virāṭa against attacks by the Kurus. They are at first disguised, and incidents of court life form the main part of this book, which is obviously, in its details, a late part of the epic. The fifth book is called 'Udyoga' ('Preparation for War'). Kṛpā (Viṣṇu) is now enlisted upon the side of the Pāṇḍus, as, with her brother's consent, Arjuna has married his sister after eloping with her. The following four books are named from the leaders in the battle which now takes place, 'Bhīma', 'Droṇa', 'Karna', and 'Śalya'. Bhīma and Droṇa are the uncle and teacher respectively of the cousins now at war. Into the 'Bhīma Parvan', at the beginning of the battle, is inserted the long poem called *Bhagavad-Gītā* (g.v.). This book ends with the fall of Bhīma, and Droṇa then assumes the leadership of the Kurus. Numerous encounters are described with wearisome iteration, and Śrī is loaded as the great One God. Karna, the half-brother of the Pāṇḍus, son of the sun-god, had been insulted by the refusal of Kṛpā to recognise him as a worthy knight when she chose her husband, and had taken part with the Kurus against his brothers. He now leads them into battle, but is slain by Arjuna. This leads to the 'Śalya Parvan' (ninth book), in which Śalya is made leader of the Kurus; but, with the exception of a few warriors, they are all routed and slain, and the chief Kuru prince is killed (after the battle) by Bhīma. The tenth book is called 'Sauptika' ('Night-Attack'), and describes how the surviving Kurus make an attack by night on the camp of the victors, killing all the army except the Pāṇḍus themselves. It is followed by a short book called 'Strī' ('Woman'), which gives an account of the lamentation of women over their dead. The war is now over; but Bhīma has miraculously survived, and in the long didactic books called 'Śānti' and 'Anuśāsana' he is resurrected to preach religion and philosophy, and give rules of ethical behaviour. Yudhiṣṭhira is crowned emperor, and in the fourteenth book, called 'Āśvamedhika' ('Horse-Sacrifice'), he performs the horse-sacrifice,

which is the sign of undisputed lordship (see art. *ĀśVAMEDHA*). Into this book is inserted (18-51) the *Āśvamedha*, a poem imitative of the *Bhagavad-Gītā*. The fifteenth book, called 'Āśramavāṭika' ('Hermitage'), takes up the life of Dhṛtarāṣṭra and his queen, who, with Kunti, the Pāṇḍus' mother, retire into the woods, where they are barred. The sixteenth book, called 'Maumala' ('Club-Battle'), tells of the death of Kṛpā and his brother Baladeva, and the fate of their city Dvārakā, which was flooded by the sea. The family of Kṛpā, the Yadus (Yādavas), are cursed by a Brāhman, and destroy each other. The seventeenth book, 'Mahāprasthānika' ('Great Remuneration'), tells how the Pāṇḍus give up their kingdom and climb to heaven by way of the northern mountains; this is supplemented by the last book of the epic proper, called 'Svargārohaṇa' ('Ascent to Heaven'), describing the journey. To this is later added the *Bhaviṣya* ('Genealogy of Viṣṇu'), a long account in three sections of the life and family of Kṛpā as a form of Viṣṇu. It has, in part, the characteristics of a Purāṇa (g.v.), and is, without doubt, a subsequent addition, dating perhaps from the 2nd cent. of our era, though generally regarded as still later.

The *Mahābhārata* may be viewed as a rich store of philosophical and religious lore as well as a tale, and as embodying important geographical and historical data. It undoubtedly reflects some real content, which may have taken place about a millennium before our era. It extols the lunar race (the other epic, the *Rāmāyaṇa*, extols the solar race), and derives the heroes from kings who descended from Boma, the moon-god, himself the son of the seer Atri. Budha, son of Boma, had as wife Ilā, a daughter of Ikṣvāku of the solar line. Their son was Puruṣava, whose son, Āyus, was the father of Nahuṣa, the father of Yayāti, from whom came Pūru and Yadu, the ancestors of all the lunar race, Yadu being the ancestor of Kṛpā, and Pūru being the ancestor of Bharata and Kuru, whose descendant, Śāntanu, was the father of Bhīma (above) by the goddess Gaṅgā (the river Gaṅga). Śāntanu's wife, Satyawati, was also the mother of Vyāsa and of Vichitravīrya, who died without children; but Vyāsa raised up children for him, and these were Dhṛtarāṣṭra and Pāṇḍu. If these legends be reconstructed historically with the aid of the Purāṇic lists of kings, they show that a real historical background is reflected in the mass of myth. The polyandry of the Pāṇḍus is a trait of certain hill-tribes, and is not unknown on the plains; it is undoubtedly a genuine bit of tradition which serves to mark the Pāṇḍus as a ruder race than the old and long-respected Kurus.

An attempt to group the participants in the great war according to their place of origin has been made by F. H. Pargiter (*JRAS*, 1908, pp. 300-330, and 1910, pp. 1-66), who seeks in this examination to determine whether the theory of successive invasions leaving inner and outer rings of Aryans in India can be substantiated thereby; but the result seems to leave considerable doubt as to such invasions having left traces in the poem, though the theory of successive invasions may be substantiated on other grounds. The didactic teaching of the epic is not confined to any one part of the work, and from a general view of this teaching it is evident that a later pantheistic system has become amalgamated with the dualistic doctrines of the Sākhya philosophy in its later theistic tendency as represented by the Yoga. This mixed system is represented not only in the *Bhagavad-Gītā*, but in the *Āśvamedha* and in the philosophical chapters of the twelfth and thirteenth books. The outcome of the systematic speculation is in accord with the teaching of the Vedānta, but the terminology and basic ideas are those of the

Shakya system throughout. The chief interest of the religious doctrine lies in the insistence upon the loving devotion of the worshipper and the saving grace of the supreme spirit (see BHAKTI-MĀRGA). Kṛṣṇa as a form of Viṣṇu is not revered (as later) in his child-form, nor is anything made of his being the lover of milk-maids, though both traits are recognised. They come out strongly in the *Hārivaṃśa* and later Purāṇas, and it is perhaps not unjustifiable to conclude that they did not form part of the worship as originally adopted into Brāhmaṇism.

Directly opposed to Kṛṣṇa-Viṣṇuism is the śiva-cult also found in the epic, as already indicated. This cult appears to have been set against that of the Kṛṣṇa-worshippers by the more orthodox upholders of Brāhmaṇism, although neither Śiva nor Kṛṣṇa was a Vedic god. But Śiva had long been recognised as a form of the Vedic Rudra, and, though probably at first a popular god, like Kṛṣṇa, he was already accepted by the Brāhmaṇ priests. The parts of the poem exalting Śiva as All-god or as the One God are not early; on the contrary, they bear the marks of later composition and the trait now so familiar, that of phallic-worship, appears only in a few late passages. As this aspect cannot be in itself a late feature, it must have acquired the seal of respectability only by degrees, being probably repugnant to the orthodox priests of Brāhmaṇ. The special sectarian cults or forms of cults as advocated in the Purāṇas are unknown in the epic. The cult of Viṣṇu is that of the pantheistic All-god; the cult of Śiva is that of the only One God. But, with the opposing claims of each sect, each god gradually assumes the distinctive attributes of the other. Viṣṇu is the one theistic god and Śiva is the pantheistic All-god. Each in turn claims to be maker, preserver, and destroyer; and Brāhmaṇ also, though originally creator god, becomes destroyer as well, till all three, the sectarian Kṛṣṇa-Viṣṇu and Śiva and the older Brāhmaṇ of Brāhmaṇism, coalesce into the 'one god with three forms' or, as the Hindu says, 'three gods and one form.' Besides these great gods it is noteworthy that a revival of sun-worship leads to strange exaltation of the sun as supreme god (but only in late passages), probably because of the identification of Viṣṇu with the sun on the one hand and the later Persian sun-worship on the other; for, though the epic was probably rounded out to its present size by the 2nd cent. of our era and was virtually complete in all probability as an epic two or three centuries before (by 100 B.C.), yet numerous epical and laudatory hymns have been added at all times, as may be seen by the manifold additions in the recently published southern text of the epic, which contains thousands of verses in great part of this character (in part, narrative). Of such sort also are the hymns to Durgā and probably also the exaltation of Śkanda as the great army-leader of the gods, raised far above his earlier conception. All these later additions are of priestly sectarian origin. The original lay of the Śharata war may also have been of priestly rather than of popular origin, though 'hero-lords' sung by hired minstrels are not unknown in early literature. But it was part of the business of the king's chaplain to recite laudations in his honour, and it is not impossible that some chaplain of the epic kings may have expanded the theme, for not only the king living but 'dead kings and their glory formed the topic of lays and eulogies. The completed *Mahābhārata* was intended for recital, but this was in dramatic form, so that even to this day it is acted as well as recited by the purveyors of amusement at country fairs.

MAHABODHI.—See GAYL.

MAHAR, MHAR, MEHRA.—One of the manual or depressed castes of W. India and the Deccan, numbering 2,342,650 at the Census of 1911. Their name is very doubtfully connected by G. Oppert (*Orig. Inhabitants of Bharatavarsha or India*, London, 1893, p. 25 ff.) with that of the ancient Indian Malla; and, according to J. Wilson (*Indian Caste*, Bombay, 1877, ii. 46), they gave their name to the country of Maharashtra, from which the Marāṭhas take their title. They are practically all Hindus by religion. Another caste, the Dhed or Dhar, is sometimes included with them, and, if not identical, they are allied, with the Holeyā manuals of the Madras Presidency (E. Thurston, *Castes and Tribes of S. India*, Madras, 1909, ii. 229 ff.).

In the Central Provinces 'the Mahars say they are descended from Mahimuni, who was a forefelling plucked up by the goddess Parvati on the banks of the Ganges. At that time beef had not become a forbidden food, and when the divine cow, Tripitā, died, the gods determined to cook and eat her body, and Mahimuni was set to watch the pot boiling. He was as industrious as King Alfred, and a piece of flesh fell out of the pot. Not wishing to return the dirty piece to the pot, Mahimuni ate it; but the gods discovered the delinquency and doomed him and his descendants to live on the bank of dead cows' (R. V. Russell, *Central Provinces Ethnographic Survey*, pt. II., Allahabad, 1911, p. 26; cf. E. J. Hume, *Census Report*, Suvar, 1881, p. 114 n.).

Their religion is of the primitive animistic type, with a veneer of Hinduism. In the Khāndesh District they keep the regular Hindu fasts and feasts, and worship the popular gods of that country—Viṣṇu, or Viṭhoba; Śiva as Khandoba; Mahāoba, an evil spirit who abodes in an unhewn stone smeared with red lead; Bhairava, or Śiva in his terrible Bhairava form; and the Mother-goddess in the form of Āi Bhavāni, whose image they keep in their houses. Besides these they worship snakes and the spirits of their dead ancestors (*BG* xii. [1890] 118 f., xvii. [1894] 172 ff.). At a temple in Kāthiawār the Dhed worship what is really an image of Viṣṇu reposing on his serpent Śaṅga as Hāṇi, who is said to have been a deified woman of the caste. Women who are unable to nurse their babies and owners of cows which give a scanty supply of milk vow to wash this image in milk if their milk be increased (*BG* xii. [1894] 418).

In the Central Provinces 'the great body of the caste worship the ordinary deities Devī, Hanumān, Dānta Dās, and others, though, of course, they are not allowed to enter Hindu temples. They principally observe the Holi and Dhamat festivals and the days of the new and full moon. On the festival of Nāgpanchmi they make an image of a snake with flour and sugar and eat it. At the sacred Ambhi tank at Bhatkal the Mahars have a special bathing-ghat set apart for them, and they may enter the official and go as far as the lowest step leading up to the temples here they worship the god and think that he accepts their offerings. They are thus permitted to

involves the outer enclosure of the stūpa, which are also sacred. In Wārāṇasī the Mahāsīs may not touch the shrines of Mahāsīs, but must stand before them with their hands joined. They may sometimes deposit offerings with their own hands on those of Mahāsīs, originally a Gṛha-god, and Mahā Devī, the goddess of smallpox.

In Barār they worship a curious collection of deities, among whom are included the archangels Gabriel, Anael, Michael, and Anāthā, all of whom, they say, come from Pāṇḍharpar. In Barār the worship of these archangels was probably borrowed from the Muhammadans; but in Gujārāt it was apparently taken from Christianity.

It seems that the attraction which extends farther and farther in the Mahāsīs in the hope held out of ameliorating the social degradation under which they labour, itself an outcome of the Hindu theory of karma. Hence they turn to Islam or to what is probably a degraded version of the Christian story because these religions do not recognize caste, and hold out a promise to the Mahāsīs of equality with his co-religionists, and in the case of Christianity of a recompense in the world to come for the sufferings which he has to endure in this one. Similarly the Mahāsīs are the warmest adherents of the Muhammadan saint Sheikh Farīd, and flock to the fair held in his honour at Gīr in Wārāṇasī. In Pāṇḍharpar in Bhandār, where he is supposed to have slain a couple of giants (Russell, p. 102).

MAHATMA.—See THEOSOPHY.

MAHĀVASTU.—The *Mahāvastu*, one of the most noteworthy books of Buddhist antiquity, is a huge confused compilation of legends 'on the origins of Buddhism, on the persons of its founder (up to the gift of the *jāṭaka*) and his first disciples—in a word, on that ensemble which, with infinite varieties of detail, crossed and ramified in every way, is the common property of all Buddhists.' Besides all this, it includes a gnomic treasure, which is also traditional, an enormous mass of *jāṭakas* ('birth-stories') and tales, certain dogmatic speculations (see below, § 3), interminable lists of Buddhas—'needless digressions, more padding—two, three, four accounts and more of the same episode, from different sources, sometimes contradictory, sometimes following one another, sometimes scattered through the book, dovetailed into one another, dismembered, intercalated.'

The interest attaching to the *Mahāvastu* is of many kinds: (1) it is a book of *vinaya* ('discipline') of one of the ancient sects, and its history, so far as it can be traced, is instructive; (2) it is a vast repository of legend and folklore, which, when compared with Pāli literature, supplies innumerable documents on the nature and primitive state of Buddhist tradition; (3) the *Mahāvastu*, from the point of view of dogmatic ideas, marks a period or a transition stage between the Hinayana and the Mahāyana; and (4) its language, too, deserves attention.

1. History and contents.—The *Mahāvastu*, or, according to the colophon (which is open to suspicion), *Mahāvastu-sūtra*, claims to be a part of the *Vinayapitaka*, of the 'recitation' (i.e. the canon) of the Lokottaravādin Mahāsaṅghika of the Madyadeta.

(1) The Mahāsaṅghikas are one of the old sects or branches of the Order, the other branch being that of the Śhāvīras or Theras (see SECTS (Buddhist)); from the beginning it probably had special rules of *vinaya*, or 'discipline.' (2) The expression Lokottaravādin, 'believer in the supernatural character of the *bodhi*' (see below, § 3, and art. BODHISATVA), indicates a dogmatic school. It is possible that there were Mahāsaṅghikas who were not Lokottaravādins. It would not be difficult to eliminate from the *Mahāvastu* the passages which have a Lokottaravādin tendency. (3) The Madyadeta, or 'middle country,' of the Buddhists

comprises N. India, Magadha, Kōśala, and Videha; but there were Mahāsaṅghikas outside of the Madyadeta, notably the Pūrvaśāiles and the Aparāśāiles, who were also Lokottaravādins.

In order to understand the word *mahāvastu* and to see how the *Mahāvastu*, in which discipline takes only a very small place, can belong to the section on 'discipline,' it is necessary to go far back.

The disciplinary literature (*Vinaya*) was from the beginning composed of two parts: (1) the formula of confession (*prātimokṣa*, *pāṭimokkha*), a list and classification of grave and venial faults, to which an explanatory and historical commentary was soon added: on what occasion such and such a prohibition was made by the Master; in the Sarvāstivādin school this commentary is called *Pūṣṭaka*, in the school of the Pāli language *Pūṣṭaka*; and (2) the statutes of the Order, a collection of the texts (*śāstra*, *śāstra*) relating to ecclesiastical acts (ordination, fortnightly confession, etc.) and of rules referring to ordination, confession, the ascetic life during the rainy season, to parishes, medicines, beds, and alms. These texts and rules were also embedded in a historical commentary. In the Pāli canon they are divided into two sections (*āṅgikā*), in two chapters or books (*saṅga*)—the 'Great Vagga' and the 'Little Vagga' (*Mahāvagga* and *Chullavagga*), the latter being devoted to subsidiary questions. There is the same division in the canon of the Sarvāstivādins, under different titles: the *Āśāśāstra* (*saṅga*, 'thing,' 'topic,' 'point of discipline or doctrine,' 'story'), corresponding to the *Chullavagga*, and the *Vinayavastu*, which, although it does not bear the title 'Great,' corresponds to the *Mahāvagga*.

One of the characteristics of the *Mahāvagga* (and the *Vinayavastu*) is that, especially in its first part, it assumes the form of history. It contains a short epitome of the origin of the Order, which is perfectly justified as an introduction to the *saṅga* of ordination: it was in a book of discipline that the most ancient writers, for want of a better planned library, deemed it expedient to place some pages from the life of the Buddha—his illumination, his first sermon, etc. The editors of the *Vinayavastu* (which is, as we have said, the *Mahāvagga* of the Sarvāstivādins), who came long afterwards, took far more liberties: in the first ten chapters their work preserves the character of a historical treatment of monastic discipline; but the last chapter (devoted in principle and in title, like the corresponding chapter of the *Mahāvagga*, to the internal strife of the Order) contains not only a fresh statement of the biographical elements of the first chapter, but also the history of Śākyamuni from the beginning of time, related in a continuous account down to the schismatic intrigues of Devadatta; a list of the *chakravartin* kings, the creation of the universe and life of primitive men, and the history of the Śākyas (ancestors of Śākyamuni); legends of the birth of Śākyamuni, his education, his departure, his mortifications, etc.—a *summa* of ancient traditions among which are to be found documents which have an independent existence in the Pāli canon (e.g., the *Āśāśāstra*). Of the five hundred pages in the eleventh chapter of the *Vinayavastu*, little more than forty are devoted to the schism which gives its name to the chapter, and which, in all probability, was at first its only *saṅga*, its one subject. In a word, the *Vinayavastu*, as a whole, is a faithful replica of the *Mahāvagga*; but it shows a very wide use of interpolation.

It is different with the *Mahāvastu*, and the manifest contradiction between the title and the contents raises a delicate question. Such a title

¹ Barth, *Journal des Savants*, 1890, pp. 401, 402.

implies that the book was, like the *Mahāvastu* and the *Vinayaśāstra*, meant to be a history of disciplinary rules. As a matter of fact, of thirteen hundred pages about twenty treat of discipline (especially at the beginning, two lines on ordination), and certain parallels with the *Mahāvastu* cannot be mistaken; e.g., there is 'a series of stories in the *Mahāvastu*, in the Pali *Mahāvastu*, and in the Tibetan *Vinaya* which hold together, and really seem faintly to reproduce a common prototype' (Barth, *loc. cit.* p. 464). But, on the whole, the *Mahāvastu* is a collection of legends without any connexion with discipline.

One can easily understand how a primitive *Mahāvastu*, a historical treatment of discipline, would be lost (Barth says *nowhere*) by a mass of heterogeneous materials, differing in date and character, which, by their inorganic or chaotic accumulation, would explain all that non-disciplinary literature which forms ninety-nine hundredths of the present *Mahāvastu*. This task of enlarging and of 'feeding' was carried on in all the Buddhist sects, for a longer or shorter time, with more or less moderation; and what is true of the literary units is still more true of the canonical collections. Although we at present know nothing about the library of the Mahāśāghika, we may suppose that it had no shelves in which the *jātakas*, *suttas*, and *stāvas* would be arranged. The only course was to gather together in the *Mahāvastu* all that seemed precious.¹ The development of the *Mahāvastu*, therefore, if it had remained to any extent a history of discipline, and if some pieces of the framework of the *Mahāvastu* were perceptible, would seem quite simple. Must it be admitted that the last compilers of the *Mahāvastu* systematically cut away the elements of *vinaya* already sunk in the legendary mass? Or that, in the fearful disorder in which the literature of the *Mahāśāghika* was warring, these elements fell into oblivion? Or that the *Mahāvastu* was never in any respect, except the title, a replica of the *Mahāvastu*? The three hypotheses seem equally inadmissible.

Some light is perhaps afforded by the history of the *Śāstra*. R. H. H. (and after him S. Lévi) has proved that this book is, above all, a collection of anecdotes and legends taken from the *Vinaya* of the Sarvāstivādins. The extracts have not always been made very consistently, and some fragments of *vinaya* proper—disciplinary rules—are to be found in the *Śāstra*. The history of the *Mahāvastu* is probably similar. The collection gives the name of *Mahāvastu-saṃskāra*; is this to be translated 'the narrative part of the *Mahāvastu*'? In the Pali *Vinaya* the various episodes are linked to the history of the *Vinaya* by explicit references or allusions, thus, without exception, are wanting in the *Mahāvastu*: 'So then some episodes which in the *Mahāvastu* and the *Śāstra* are more or less profuse and discursive chapters of a treatise on discipline are here more narrative, which end by making the *Mahāvastu* a book of stories.'²

However this may be, 'the materials which have entered into the composition of the *Mahāvastu* are of widely different ages; . . . the course of the compilation is certainly ancient, since it forms part of the canon of one of the ancient schools. It must be admitted, therefore, that it took a long time to be formed, for it is certain that it was not completed until very late.' The mention of astrologers under a Western name (*Aviprasāda*) and that of the writings of the Chinese and of the Huns, Paliyaka (Ptolemy?), Ujjhubbaka (Uzbek?), indicate the 4th or 5th century. At that date, however, 'the perambulations, in the press, of the ecclesiastical jargon, which will be discussed below (34), is an astonishing fact.'³ We must, therefore, admit late interpolations and carry the date of the compilation a little further back. In order to realize the character of this compilation, it must be

noticed that 'the editors do not allow themselves to invent anything, and do not dare even to correct the most flagrant contradictions.'⁴

2. Comparison with Pali canon.—There are numerous parallel passages in the *Mahāvastu* and Pali literature. Minayeff, Oldenberg, above all Senart and Barth, and, lastly, Windisch, have called attention to many, but not to all. Differences which seem to be marks of sect are rare. We are able to study the unsettled state of Buddhist tradition and the infinite diversity of arrangement and treatment of the same materials.

'In these examples, the amount of similarity is of all degrees, from simple community of subject and vague resemblance to complete identity. The latter, however, is rarely attained, and never for long. . . . The similarity, especially in the *vinaya*, is to a large extent an exterior one. It is shown in mode of expression, in general sentences, in words more than in matter, in words more than in words. The same is the case, when the meaning is sometimes quite different, like an egg of which nothing remains but the shell. . . . They all go back to one original. . . . The probabilities are not always in favour of the Pali edition. But for the example of the fragments as well as for the detail of their rendering, it is the Pali that is the best on the whole and that gives the best representation of the original version.'⁵

It is well known that all the comparisons set up between the Pali canon and the other canons arrive at the same conclusion. The Pali writings were fixed and codified first.

3. Relation to Mahāyāna and Hinayāna.—The *Mahāvastu* may be said to form the bridge between the Old Vehicle and the New. As is seen in art. MAHĀYĀNA, the two Vehicles are not incompatible, and the book may present certain characteristics peculiar to the Great Vehicle while remaining acquainted with the others.

(1) The 'Buddhology' of the *Mahāvastu* marks a stage between the conception of Buddha as a simple mortal (Little Vehicle) and that of Buddha as a quasi-eternal god sending illusory images down to this world (Great Vehicle). The Buddha of the *Mahāvastu* is a superman. He feels neither hunger nor thirst; he lives in ignorance of carnal desires; his wife remains a virgin. It is from consideration for humanity, in order to conform to the customs of the world (*lokanusarand*), that he behaves as a man, or that he gives to men the false impression that he is behaving as a man. In technical terms, he is *loketava*, 'superior to the world.'⁶

(2) The infinite multiplication of Buddhas in the past and in the present is also a characteristic of Mahāyānist tendency. It must be noticed, however, that the Sarvāstivādins, who are reputed to be free from Mahāyānism, allow that several Buddhas may co-exist, though in different universes, or 'fields of Buddha.'

(3) Much more marked is the tendency of one of the chapters of the *Mahāvastu*, entitled *Dadaśādhimā*, 'the book of the ten dharmas'—successive steps by which the future Buddhas have to mount up to the state of Buddha.

'It is to the beings who aspire resolutely to the condition of Buddha that the *Dadaśādhimā* ought to be set forth . . . for they will believe; the others will only scoff' (I. 168).

The *Mahāvastu*, therefore, has incorporated a book which is addressed, in so many words, to the man who wish to become, not *arhats*, but Buddhas, i.e. to the man who enter the Vehicle of the future Buddhas, the Mahāyāna.⁷

¹ Barth, *loc. cit.* p. 464.

² *Id.* p. 467.

³ The text says that his body is *manomaya*, 'mind-made.' This expression has been discussed by R. Senart and A. Barth (*loc. cit.* p. 467). According to the *Abhidharmaśāstra*, it means, not 'mental body,' but 'body formed of mind,' but 'body created by the mind,' without intervention of soul and blood. Such is the body of the creature called *asapādhaka*, 'apertional,' one of whom characteristic is that, on dying, they leave no trace.

⁴ Several other instances of Mahāyānist tendency are discussed by Senart and Barth (*loc. cit.* p. 468). Different interpretations may be suggested from time to time for solutions for

⁵ See the Introduction and notes of R. Senart, and of Barth, *Journal des Savants*, 1899, p. 303 L.

⁸ *Id.* p. 468.

this sentiment implies a living god—though the *Abhidharmaśāstra* employs the term. Veneration of relics, *śāsthas*, etc., is useful and recommended; it is good, it is helpful, as penance (*śauca*) is, but it is not essential.

(5) Ancient Buddhism is not merely a vehicle of nirvana, it also teaches how to be re-born in heaven in the world of Brahma.

[illegible]

2. **Great Vehicle.**—The new Buddhism adopts the name of *mahāyāna* ('great vehicle'). The word *yāna* ('vehicle') is used to express the same idea as that conveyed by the 'supramundane path' (*bhūttarūpamārga*), the 'path leading to nirvāṇa'. But, as we shall see, there are various kinds of *Mahāyāna*, and this fact explains the diversity of definitions and the evident difficulty in which early writers—e.g., the Chinese pilgrims—found themselves when they tried to explain the differences between the Little and the Great Vehicle.

The Great Vehicle consists of (1) the practice of the virtues (*pāramitās*) of a bodhisattva or future Buddha (i.e. *pāramitāyāna* [*paṃ*] or *bodhisattvayāna*); by it one becomes a Buddha (*buddhayaṇa*); (2) the wisdom or knowledge of vanity (*prajñāyāna* or *jñānamāyāna*); (3) devotion; it is the path of devotion (*bhaktiyāna*).

(1) *Carer of the bodhisattva*.—The books which profess to belong to the Great Vehicle (*Mahāyāna-sūtras*) tend to assert that nirvāṇa cannot be attained by the ancient method. To obtain deliverance from desire, ignorance, and existence it is necessary to practise all the virtues and acquire all the knowledge of the Buddhas, to enter on the career of a future Buddha (*bodhisattva-saṃgha*) and pursue it for centuries. Instead of 'Great Vehicle,' it may therefore be called 'Vehicle of the future Buddhas' (*bodhisattvasaṃgha*), or 'Method of the perfect virtues, charity, patience, etc.' (*sāmaśānta*).

Now the Buddha Śākyamuni, during his former existences, has always lived in the world. It is possible, therefore, to enter the 'Vehicle of the future Buddhas' although married. Nothing, however, prevents monks from making the 'vow to become Buddhas'; by this vow they mount the 'Vehicle of the future Buddhas' but by their monastic observances they belong to the 'old Buddhism,' and form part of one of the disciplinary schools of the Śrāvakas. Young laymen often take the vows of monks, and, after acquiring merit in this way for a time, renounce them in order to take the vows of a future Buddha.

(2) *Vacuity*.—The books that treat of philosophy explain that the ancient dogma, 'The soul is nothing but a complex of transitory elements (*skandhas*),' is perfectly accurate, but unsatisfying; they would

add that these elements themselves do not exist in themselves, but are 'void' (*śūnya*). (For the two ways of understanding *śūnya*, and the two schools of the Great Vehicle, see artt. *MAHĀYĀMAKA* and *VIJĪĀNAVĀDIN*.) The doctrine of *śūnya* (*śūnyatā*) is the second characteristic of the Great Vehicle. But a layman or a monk can perform the 'vow to become a Buddha' without thinking out the doctrine of *śūnya*. The 'theologians' themselves declare that, as the beginning of the *śālisty* career is entirely devoted to charity, it is not good to give too much thought to philosophy, i.e. to universal nothingness. On the other hand, an adept of the Little Vehicle who does not believe in the necessity of becoming a Buddha may adhere to the doctrine of *śūnya* and become imbued with it, in order to attain *nirvāṇa* as an *arhat*, i.e. in this present life. Some texts even explain that, if the doctrine of *śūnya* is really indispensable to the attainment of *nirvāṇa*, it is sufficient, without the career of the future Buddha.

(3) *Devotion*.—A third characteristic of the Great Vehicle is the worship of the Buddhas and 'future Buddhas' of high rank (see art. *BODHISATVA*). The Buddhas are great gods, almost eternal, who sit upon thrones in heavens surrounded by saints, and send 'magic bodies' down to earth to save men. The worship of the Buddhas may exist independently of any desire to become oneself a Buddha and independently of philosophic speculation.¹ There is therefore a Great Vehicle that is merely devotional: (a) the Buddha (*Amitābha*, a.g.) is a god in the full meaning of the word, eternal or almost so (*Amitābha*, 'infinite splendour,' is sometimes called *Amitāyus*, 'infinite life'); (b) the only concern of the faithful is to be re-born in the paradise of this god, 'the blissful world' (*Buddhāvāsi*), the western paradise, by the grace of the god and with the help of the holy saints *Avalokita*, etc.²

This life deep on tree body shaman Avastika, etc.

This Mahayana, partly doctrinal and with quantitative transcendence, is not a 'Vehicle of future Buddhas'. In the books discussing it (*Saddhistatras*, etc.) there is practically no reference to nirvana. This vehicle is a Buddhist turn of the wheel which has been turned by the Buddha himself. It is highly orthodox sect of monks, which are recommended by the Hinayan. worship of arhats, mandalas in honor of the Buddha, abstemious from food before worshipping Buddha, etc. But the Mahayaniist bhakti is laden with liturgies and turmoils; it declares that ritm effices sin, and ascribes military virtue to the reading of the sutras and the repetition of the name of the Buddha—which is not quite orthodox.

It is to be noticed that the worship of Śaṅkha, Tārā, etc., is compatible with the strict orthodoxy of the Māyāṅka, as has been remarked in regard to Jāva, which is very idolatrous and yet attached to the Māyāṅka.¹

3. **Vedāntic and Tāntic Vehicle.**—The Mahāyāna, as analyzed above, is, from the philosophical point of view, a phenomenalist system, and, from the religious and mythological point of view, polytheism with monarchical and devotional tendencies. From early times phenomenism and polytheism led to conceptions of immanence and monism.⁶ In the days of Aśoka (A.D. 4th cent.) men believed in an Ādibuddha (g.v.) who would play the part of Brahmā in his various aspects as Brahmā, or Kṛpā divine, or Kṛpā incarnate. These speculations upon immanence and emanation, which often mingle with the doctrines of the Mahāyāna proper,

are the basis of the 'Vehicle of formula' (*samhaya*), the 'diamond method' (*vajrayana*), also called the 'Tantric Vehicle' (*tantrayana*). This Vehicle is Vedānta in Buddhist disguise as regards its doctrine, and Śaivite and pagan as regards its mythological representations and its rites. Its goal is the condition of a Buddha, its doctrine that (1) every being is, in his innermost nature, a Buddha, and (2) every being can, by meditation, spells, (additions), and therapeutic practices of all kinds (often erotic), 'realize' this Buddha nature at little expense (see *TANTRISM*).

4. Is the Mahāyāna the only Vehicle?—This is an interesting question and worthy of our attention. Do the Mahāyāna teachers regard the Mahāyāna as the only Vehicle of salvation? I-tsing's remarks may be accepted as giving the general opinion:

"These two systems [Mahāyāna and Hinayāna] are perfectly in accordance with the noble doctrine [of the Buddha]... Both equally conform to truth and lead us to Nirvāṇa."

But the scholastic literature and the Mahāyāna-sūtras of course give different and often narrower views. Maitreya-Aśvāgōśa says that 'the meditation (*dhyāna*) of the Hinayāna, though impure, leads to salvation';¹ but for Śāntideva the Hinayāna is of only relative truth, and its followers are upon a path that has no issue;² Chandrakīrti sees no virtue in the Hinayāna except its teaching of 'vacuity' (see *MAHAYANA*): there are old sūtras which proclaim vacuity (*śūnyatā*); in an extreme case *arhatship* and *nirvāṇa* may be attained by meditation on these sūtras³—in an extreme case, we say, because the follower of the Hinayāna has no part in the spiritual aids that are reserved for the future Buddha; he does not have the great 'means' (*upāya*) of salvation, compassion, great compassion (*mahākaruṇā*), i.e. the desire and the vow to save all creatures; the possession of wisdom (*prajñā*) is unavailing, since he lacks the great 'means' of remission of sins and elimination of passion. In fact, there is only one Vehicle, as the *Lotus of the True Law* (g.v.) and several sūtras teach very clearly. The only way to salvation is to become a Buddha. But this demands a long career; so the Buddha has shown men a nearer goal, the *nirvāṇa* of the arhat, that they may not lose heart—like a caravan-leader who creates a magic town in the midst of the forest, far from the end of the journey, that the travellers may think they are near their destination, and take heart to advance.⁴ 'The men who mount the Vehicle of the Śrāvakas cannot obtain deliverance by the Vehicle of the Śrāvakas'; embracing a false *nirvāṇa*, they are like a lover who embraces his mistress's corpse; they have, however, advanced nearer to the true *nirvāṇa*. At death, they falsely think that they have attained deliverance and exemption from re-birth; they are re-born, for they are not yet delivered, but they are re-born beyond the world (*śrīdhātu*), in the 'pure realm' (*anurūpadhātu*), in lotuses which open their petals to the rays of Amitābha and other Buddhas. There they learn the true Vehicle, make the bodhi-vow, and enter, through numerous lives, upon the career of a future Buddha.⁵

The Chinese texts studied by J. J. M. de Groot (*Ōdo du Mahāyāna en China*, Amsterdam, 1895, p. 94) reduce the Hinayāna to the observation of monastic rules, taking no notice, either purposely

or through ignorance, of all the Fohist Path and meditation on the truths. They say that the Little Vehicle, thus understood, leads to re-birth in the very inferior paradises of the world of Sāma (see *COMMENTARY ON COMMENTARY* (Buddhist)). It is therefore a Vehicle that leads to the gate (*devatā*, according to de Groot's translation), and not a Vehicle of salvation.

5. Speculative doctrines of the Mahāyāna.—These are examined in the art. *MAHAYANA* and *VIJÑĀNĀVĀDINĀ*, which discuss the two chief philosophic schools of the Great Vehicle. The doctrines connected with the 'career of the future Buddha' (*bodhisattva*) are treated in art. *BODHISATTVA*. Many details might be added on the technique of meditations; but the works on this subject (*Abhisamayālaṅkāraśāstra*, *Bodhisattva-sādhana*) have not been published, and present very serious difficulties.

6. Discipline (*Vinaya*) of the Mahāyāna.—The Indian schools of devotion (*bhakti*) are often not strict as regards morality and discipline. There existed, accordingly, lax Mahāyāna, inclining to Tantrism, which preached salvation and the remission of sins by the recitation of formulae, etc., independently of rules of conduct.

But there is also a rigid Mahāyānist 'monachism,' sometimes adhering to the ancient *Vinaya*s, sometimes introducing new ones.

(1) The *Śālistambasūtra* says:

"If a Bodhisattva (i.e. an adept of the Great Vehicle) begins to think: 'The Bodhisattva does not require to study the law which forms part of the Hinayāna', he need not make it a rule for himself. What is the use of accepting this rule? What is the use of this rule?—If he thinks in this way, he is guilty of error, and renders himself very culpable."

Śāntideva speaks in the same strain:

"The adept of the Great Vehicle will never give his heart to the vain hope of acquiring purity by simply reading the books of the Great Vehicle, and reciting formulae, while abandoning the rules of conduct."¹

One fully realizes I-tsing's statement:

"Which of the eighteen schools [of the Hinayāna] should be grouped with the Mahāyāna or with the Hinayāna is not determined. . . . Both [Mahāyāna and Hinayāna] adopt one and the same discipline (*Vinaya*)."

Monks and convents practicing the strict monastic observance of the ancient *Vinaya*s adopted the dogmas and worship of the Mahāyāna; Yuan Chwang therefore mentions monks who were 'Mahāyānists of the Śthavira-school and all perfect in *Vinaya* observance.'² It has been supposed that the *Vinaya* of the ancient Mahāśāghika sect was the most popular in Mahāyānist convents, because it was in a Mahāyānist convent that Fa Hian found the Mahāśāghika *Vinaya*,³ because the Mahāśāghikas seem to have been the forerunners of the Mahāyāna.⁴

(2) The Mahāyāna apparently introduced into the discipline some new rules concerning the use of milk and meat. The Sarvāstivādins (Hinayāna) allowed the use of meat under certain conditions; the Mahāyānists condemned it. I-tsing tells a touching story of a young Mahāyānist, Chittavarman, who was refused ordination in a Hinayāna convent until he renounced, in tears, his principles of diet.⁵

Sooner or later, however, the Mahāyāna created a new *Vinaya* for itself—a *Vinaya* that was independent of the ancient *Vinaya*s, that had a different purpose in view and that could be, and was often

expected to be, used together with the ancient *Vinayas*. The ancient *Vinayas* were for the use of monks; the Mahāyāna *Vinaya* is the 'Vinaya of the future Buddha', or, more exactly, 'of inapparent future Buddha' (*adhimukha bodhisattva*). (a) It was while making the vow to become a Buddha that Śākyamuni, prostrating himself at the feet of a Buddha, became a 'future Buddha'; this vow is valid, not only for present existence, but also for numerous future existences; like the vows of a *bhikkhu* (see KARMA), it creates 'discipline' (*śikṣa*), the obligation and, to a certain extent, the 'grace' (the moral power) to perform certain duties. We have no longer a Buddha in our midst to receive such a vow from us; we must be content to take the 'discipline of a son of Buddha' (*śūgataśikṣasamūhā*) before a qualified person (*adhimukha*), or, in the absence of such, before all the Buddhas of the quarters.¹ (b) The future Buddha must practice the perfect virtues (*pāramitā*); theologians have therefore to explain how he is to fulfil the virtues of giving, energy, and meditation. (c) He commits errors; he must know how to confess them, before whom (i.e. Buddhas of confession), and how to obtain pardon. (d) The ancient devotional practices, worship of *arhats*, etc., are not sufficient for devotees of Avalokita, Amitābha, and Tārā; fixed rules of worship must therefore be made.²

We have no exact information regarding the oldest forms of the *Vinaya* for *bodhisattvas*. But documents which give an accurate idea of the rules of life of the Mahāyānist monk will be found in the *Brahmajālaśāstra* (tr. de Groot, *Code du Mahāyāna en Chine*), and in the 'Daily Manual of the Shaman' (S. Beal, *A Catalogue of Buddhist Scriptures*, London, 1871, p. 239). The ritual of the office in honour of Avalokita (Beal, *Catalogue*, p. 288) indicates the nature of the cult.

(3) The Mahāyānist monks belonged to one of the Hinayāna schools, and fulfilled the obligations of future Buddha³ in addition to those of their own school. Later, there were monks who adhered solely to the monastic code of the Mahāyāna (the type given in de Groot, *Code du Mahāyāna en Chine*), which became a complete code in itself, a conglomerate of different *Vinayas*. Finally, it is always possible for a monk to renounce his vows and return to the world; the Great Vehicle favoured this tendency inasmuch as it had a special 'code of the future Buddha' for the use of married people.⁴ It is understood, however, that ordination to future Buddhahood can be granted only to persons who are at least *Upāsakas*, 'devotees', who have taken the three refuges and are ritually bound by the five vows (not to kill, etc.).⁵

(4) The relative importance of duties for monks who are at the same time 'future Buddha' is not always clear. I-tsing declares that he is not writing 'concerning those who claim to follow the practice of a Bodhisattva rather than the *Vinaya* rules.'⁶ Śāntideva cites an extreme case—the story of the monk who had practised continence for a long

time (84,000 years) consenting to satisfy the desire of a woman so that he might fulfil the requirement of benevolence and kindness that is the essential law of future Buddha.⁷ For them the sins of hatred are very serious, while the sins of desire are venial. The very spirit of the Mahāyāna, therefore, may perhaps be responsible for the singular development of Kashmir monasticism, viz. married monks.⁸

II. HISTORY AND ORIGIN OF MAHAYANA DOCTRINE.—As we have seen, the Mahāyāna differed from the ancient Vehicle in three points: (1) the substitution of the 'career of a future Buddha' for the 'conquest of the quality of *arhat*'; in other words, the substitution of the *bodhisattva*, who might be a layman, for the *bhikkhu*, 'monk'; (2) the creation of a new ontological theory, 'the doctrine of the void' (*śūnyatā*) or of 'the non-existence in themselves of the constituent elements of things and of the human ego' (*dharmaśūnyatā*), superimposed upon the doctrine of 'the non-existence in itself of the human ego' (*pudgalaśūnyatā*); and (3) the transformation of the Buddhas into great mythological gods, almost eternal; the deification of 'future Buddha' as helping providences; and, by a parallel development, the practice of devotion (*bhakti*) towards these 'great beings' (*mahātattva*) instead of the respect and meditation practised by the ancients towards the Buddha; what was formerly venerated in the Buddha, what men 'took refuge in' (*śaraṇagamaṇa*) when taking refuge in the Buddha, was the complex of the moral and intellectual qualities in virtue of which a certain person is Buddha. To admire and meditate on these qualities is an excellent means of gaining morality, tranquillity, *nirvāṇa*. The Mahāyānist addresses himself to living, gracious, paternal gods.

There are, therefore, three formative elements in the Mahāyāna; and its history means the history of the development and inter relation of these three elements. This comprises three distinct histories; for, though the three elements are sometimes united, they are often separate; and, though their development has been parallel, or almost so, they have no connexion from the logical point of view. We may safely attempt to give the scheme the evolutionary curve of these three elements, but it is very difficult to give chronological dates or precise details in the evolution.

1. Career of the *bodhisattva*.—Ancient Buddhism holds that Buddhas are very rare, but the Mahāyāna invites all who desire salvation to enter on the career of a future Buddha. This is a fundamental change from the dogmatic point of view, and involves a corresponding change in morale: in short, the monk believed that the quickest way to reach *nirvāṇa* was by meditation; he worked entirely 'for himself' (*śraddhā*); the activity of the future Buddha, on the contrary, is, above all, altruistic (*pārāṇā*).

Our literary evidence on the stages of this transformation is unsatisfactory. On the other hand, it is easy to guess the motives behind it. The following factors are of great importance.

(1) The ideal of ancient Buddhism, the *arhat* useless to others and an utter egoist, to the extent of incensibility, appeared mean when compared to the Buddha, the being of compassion and pity. Hence the 'saint for himself,' the 'delivered while

¹ See *Buddhistabhidharma*, I, 10, fol. 82, and the fragments of the *Buddhistaprajñāpāramitā* (S. Beal, *Catalogue of the Chinese Translation of the Buddhist Scriptures*, Oxford, 1884, nos. 1026-1028), quoted in *Schubert's* *Abhidharma*, p. 11. On the vow of the future Buddha see *Śāntideva*, *Bodhicaryāvatāra* (JPTS I, [1888] 89), and art. *Bodhisattva*, vol. II, pp. 744, 745. The *Buddhistaprajñāpāramitā* has been published by Watanabe, Strasbourg, 1912. The *Vinaya* of the Mahāyāna were first placed under the patronage of Upan (Upanishad), later they were more completely cut off from the tradition of the Hinayāna.

⁸ See H. A. Stein, *Kāśmīr's Rajatarangīni, a Chronicle of the Kings of Kashmir*, London, 1892, p. 74: 'In one half of the monastery the placed those Bhikkhus whose conduct conformed to the precepts; and in the other half those who, being in possession of wives, children, cattle and property, deserved blame for their life as householders' (on the date see introd., p. 81). Cf. Hodgson, *Essays*, p. 82, and various predictions of the *Buddhistabhidharma* as to the decadence of Buddhist law.

still alive,' so long the dream of India, was no longer held in honour. The creation of the type of the Buddha, the hero of charity, saving the world at the cost of so many lives consecrated to the world, reveals tendencies in ancient Buddhism towards the doctrine of the 'career of the bodhisattvas' open to all.¹

(2) The question arose, further, whether the *arhat* actually obtains *nirvāṇa*. Formerly the *arhat* was required to show, not only 'morality,' 'harmlessness,' but also 'feelings of benevolence' for the mass of human creatures, as it is only just to mention, but his 'equipment of merit' appeared somewhat slight, and we may suppose that men were even then tempted to ask whether his 'equipment of knowledge' was sufficient. Metaphysics and psychology had made progress. Many existences are necessary, they may have said, to obtain 'knowledge' sufficient for deliverance; just as, in order to achieve deliverance from desire, love of self, and love of existence, the first necessity is devotion to others.

(3) It is possible, also, that faith in *nirvāṇa* was shaken, or that, not knowing exactly what *nirvāṇa* was, men were somewhat afraid of it, and devoted their attention rather to the acquisition of celestial powers and the bliss of the Buddhas (now transformed into very happy and long-lived personages) (see below, §3).

The *Dadabdhama*, a very technical work on the 'career of the future Buddha,' was translated into Chinese between A.D. 305 and 316; the *Mahāvastu* (p. 5), of much earlier origin, gives a lengthy account of the stages or degrees (*bhūmī*) of this career. According to Chandrakīrti (*Mādhyamakavārttika*), the Hinayāna knows nothing of the 'Vehicle of the future Buddha,' which is the characteristic trait of the Mahāyāna.

3. Vacuity.—We have more extensive information on the philosophic doctrine. Here we are dealing with a development rather than with a transformation: (1) the principles of analysis and speculative annihilation applied by ancient Buddhism to the ego and the great entities (the body, the chariot) were now applied to the *dharma* ('elements of things'), the minute elementary realities constituting the ego and the great entities; this is the Mādhyamika system (see art. MĀDHYAMAKA); and (2) the ancient idealist tendencies were developed which saw in thought the cause of all: 'All that we are is the result of what we have thought; it is founded on our thoughts, it is made up of our thoughts' (*Dharmapada*, i. [SBF x. (1898) 32]. Hence the conclusion that matter does not exist; thought alone exists.²

The two philosophical schools of the Mahāyāna (*Mādhyamika* and *Vijñānavādins*) are both in line with the most ancient tradition. Nāgārjuna, the great master of the former, is placed in the 2nd cent. A.D.; but there is a great deal of Mādhyamika philosophy in the Pāli canon,³ and the *sūtras* of the *Pratyāparāmitā*, where this philosophy is predominant, are ancient.⁴ Chandrakīrti establishes

¹ The *Charapadāra*, not one of the most ancient books, is the first in Pāli literature to mention the doctrine of the *parāmitā*, 'perfect virtues' necessary for making a Buddha, 'a doctrine that plays no part in the older books' (Ryue David, *Buddhist India*, London, 1902, p. 177). The doctrine of the bodhisattva, the theory of his charity, merit, etc., is rudimentary highly developed in the *Abhidharmaśāstra* and its sources (Chandrakīrti *Buddhism of the Hinayāna*).

² But the existence is not *paravandhita*, 'contingent'; it is *vyavasthāna*, 'contingent,' as will be seen in art. *Vijñānavādins*.

³ E. Oldenberg (*Buddhist*, Stuttgart, 1914, p. 308) disagrees with the present writer on this point.

⁴ The *Pratyāparāmitā* was translated into Chinese between A.D. 147 and 164. We are told that the *Pāraśarada* and the *Apārāśarada* possessed a *Pratyā* in Pāli (Waddell, *Buddhism*, p. 391), which is quite possible. They were Lokottaravādins (see art. *Devanāgarī*, vol. II, p. 162). But what is the date of this *Pratyā*?

the fact that the true doctrine of the void was known to the Hinayāna, or, to be more exact, that the Buddha had already taught this doctrine in his first revelation, in the *sūtras* of the Hinayāna. But, it will be asked, if this Vehicle, the Vehicle of the *Śrāvakas*, teaches the non-existence in themselves of the elements of the ego (*dharma-nirvāṇa*), where is the need of the Mahāyāna? The Mahāyāna, replies Chandrakīrti, teaches not only the *dharma-nirvāṇa*, but also the stages of the career of the future Buddha, the perfect virtues (*parāmitā*), the resolutions or vows to save all creatures, the application of merit to the acquisition of the quality of Buddha, the great compassion (*Mādhyamika-sūtra*, tr. in *Nyāsa*, new ser., viii. 373), whence the Mahāyāna was necessary.

3. Devotion.—As regards the deification of Buddhas and worship of Buddhas and bodhisattvas, we have a sure date in the Chinese translation (between A.D. 148 and 170) of the *Saichōsūtra*, the book in which the monotheistic religion of Amida (see above, I. 2. (3)) is formulated.¹ The Gandhāra monuments, the exact date of which is not known, but which can hardly be later than the 1st cent. A.D., take us back even further than the earliest date of the Chinese translation. They show, or at least may be held to show, the worship of the *bodhisattvas* associated with that of the Buddhas.²

On the other hand, we know from the documents of the Hinayāna that the worship of the Buddha is of great antiquity. In the art. *ADIBUDDHA* the present writer has mentioned some of these documents, and (although he no longer sees in certain passages the quasi-deification of the Buddha which he saw in 1908) they show that the Buddhists, or at least certain Buddhists, came to the conclusion that Śākyamuni did not descend in person to the earth, but was content to send his image (cf. *DOCTRINE* [Buddhist]). This is, in substance, the teaching of the Great Vehicle on Buddha—the Buddha almost eternal and saving beings by means of magical creations. Scholars who admit the authenticity of the *Kāśyapāsūtra* as a whole are compelled to locate this belief before the time of Aśoka. Without believing in the authenticity of this very composite book, the present writer would willingly admit that the deification of the Buddha and his 'almost' eternity belong to a period long before the formal documents.

It is almost certain, too, that this transformation of the Buddha may be explained by the natural evolution of the Buddhist dogma on Hindu soil. The resemblance between the Buddha reigning peacefully in a paradise and sending beings of himself down to this world, on the one hand, and Krishna, gladdening beings in his own world (Gokula) and appearing in a human form, on the other, is striking, and contains a valuable lesson.

Nevertheless, it must be noted that, although *dharmapada* plays an important rôle in the *Lotus of the True Law* and in the Mahāyāna literature of which he is the revealer, he does not seem to have such a leading part in the religions of the Great Vehicle. In the first rank are Mañjuśrī, the future Buddha, more living than *dharmapada*, and especially personages of obscure origin, Avalokiteśvara (see art. *AVALOKITEŚVARA*), Amida, Vairocana, Vajrapāṇi, and many others, whose Buddhist character is not very marked.

Several scholars, moreover (and no mean ones), regard the origin of the devotion to the Buddha as a real 'puzzle' (Max Müller), and believe that it is to be found in the influence of the 'barbarians,' notably the Iranians—an influence which was exercised especially in Northern India, the Punjab, and Kashmir, where religious ecstasy reached such high development. The pre-historic mythology of the Great Vehicle is riddled in obscurity, and future researches may perhaps confirm this hypothesis, but the comparisons to which attention has been called up to the present have little value and do not prove that Amida is an Achaemenid or an Apollo disguised. In any case it is useless to explain the worship of the Buddha by the influence of Greek empires when, it is believed, were the first to make images of Buddha. The whole 'theology' of the

¹ See the tr. of Max Müller and Tachibana in *BSF* xlii. (1904).

⁴ See Foucher, *Bouddhisme*, *Opinions sur le développement*, p. 108.

religion of Amida in India; the belief in the providence of Amida and of Avalokita, the belief in their saving grace, has very little in common with avowed Buddhism, but is an ancient Kṛishṇaism. The practice of the west (Mahāyāna), and the name of Amida, infinite light, which probably are in reality 'color,' have not up to the present been consistently studied and explained. The idea of multiple universes, however, each ruled by a Buddha, is very authentic Buddhism (see, e.g., the Mahāvastu).

III. HISTORY OF THE SCRIPTURES OF THE MAHAYANA.—1. Controversy on the authenticity of the books and legends concerning them.—We know that the books of the Hinayana appeared surrounded with a very definite ecclesiastical history. Whatever may be the value to modern scholars of the tradition referring to the Councils (e.g., R. O. Franke, *Dighanikaya*, Göttingen, 1912, p. xlii), the Buddhists of the Mahayana and of the Hinayana admitted the authenticity, in the strict sense, of the ancient canon. But the adherents of the Hinayana did not recognise the books of the Mahayana for the simple reason that these books were unknown in ecclesiastical history:

²This is the word of the Buddha which is found in the Sūtra, which appears in the Vinaya, which is in harmony with religion, with Truth (dharma).³

This old text of the *Dighe* is, according to them, the condemnation of the Mahayana, which not only is not authentic, but is even full of heretical novelties.

The most weighty argument of the Mahāyānists is the speculative argument. The Mahāyāna, they say, is in harmony with the *dharmaśāstra*; it is the only vehicle of *siddhi*. The Hīnayāna is indeed authentic, but the Buddha taught it only as provisional truth, taking into consideration the weakness of mind of his hearers. Besides, if the doctrine of the Mahāyāna is not found in your *sūtras*, it is found in ours; if you do not admit our *sūtras*, we admit them. But, the Hīnayānists reply, our *sūtras* are authentic since you admit them; yours are not authentic, and that is why we reject them. To this the Mahāyānists answer that there are far more reasons for admitting the *sūtras* of the Mahāyāna, since they are the true path to salvation.²

The Mahāyānists further maintain that the Mahāyāna is not new, and that the Hīnayānist tradition shows that the Mahāyāna is authentic. (1) The *Saṃyuktanikāya* (II. 17 and III. 149) prove that even in the Hīnayāna the Buddha taught the non-existence in themselves of the elements of the ego (see above, II. 2; *Mādhyamakāśāstra*, p. 25). (2) The doctrine of the multiple teaching of the Master, of his 'accommodation to the ideas of the world' (*lokanuvarṭana*), is taught in the Canon of the Pūrvaśālas, a sect of the Hīnayāna (*Mādhyamakāśāstra*, Fr. tr., *Museon*, new ser., XI [1010] 134); which is also (3) said to have possessed the *śāstra* of the *Prajñāpāramitā* edited in Prakrit. This sect, however, is strict in the matter of doctrine, since it orders the expulsion of those who do not understand the 'reserved questions' (see art. AGNOSTICISM [Buddhist], vol. I, p. 221; *Mādhyamakāśāstra*, p. 25). (4) The *Mahāvairocana* (a book of the Hīnayāna) teaches the stages in the career of a bodhisattva and the perfect virtues.

If the whole of the Mahāyāna was not known to the ancients, it was because the doctrines were too sublime to be understood by the compilers of the Hinayāna. But it was the Buddha who taught them, and they were heard by the bodhisattvas Samantabhadra, Mañjuśrī, Gaṇeśvara, Vajrapāṇi, and Mañjuśrī. In fact, immediately after having obtained illumination, the Buddha preached to the gods (in the heaven of the Thirty-three) and to the bodhisattvas (J. *Edkins, Chinese Buddhism*, London, 1893, p. 18; A. Foucher, *Ismographie bouddhique*, p. 80).

The *Buddhistica*, throughout the course of the ages, have revealed the Mahāyāna to men; Mañjuśrī took the form of a *śākyas* and, it is said, made known the *Pratyāśādharmas* in 60,000 articles (*Tārānātha*, tr. A. Schöfner, Petrograd, 1898, p. 58). It was Maitreya, the future Buddha, who explained the *Pratyāśādharmas* to Aśaṅga, and who is the author of the treatises of the Vijñānavādin school (*Abuṣton*, vi, [1908] 146, xv. [1914] 43). According to a Japanese tradition, interesting as an example although without historical value, Mañjuśrī and Maitreya had published the Mahāyāna in the year 110 of Nirvāṇa: 'If these books had not existed before, whence would they have been obtained?'—a very childish argument. This Mahāyāna is said to have been completed in 900 of Nirvāṇa, notably by the publication of the *Avastashāstra* (= *Garuḍapāṇḍita*). All these revelations took place before Nāgārjuna (B. Pujahima, *Le Bouddhisme japonais*, Paris, 1899, p. 64).

Nevertheless, it is to Nāgārjuna that our most trustworthy documents give the honour of the revelation of the Mahāyāna. The *Laṅkāvatīra* and a *Mahāmayāhārī*³ put into the mouth of the Buddha words like the following:

'Four centuries after my death this Imaoka will be the
 Mahayana called Maza; he will teach the Great Vehicle.'

It is said that Nāgārjuna obtained the *Pratyakṣasūtra* or the *Avatamsaka* from the Nāgas (Woodhall, *Buddhism*, p. 118 f.). We cannot give an account of all the legends referring to the revelation of the books of the Mahāyāna (see Taranātha, p. 81 f.); what has already been said will give a sufficient idea of the beliefs that arose in the Buddhist world concerning the origin of these books. Apart from a few ardent partisans of the Hīnayāna, all Buddhists readily believed all that appeared as the 'word of Buddha.'

c. A Criticism of the legends and conjectures.—The library of the Mahāyāna consists of two parts, which the Tibetans have carefully distinguished: first, the *śāstras*, divine works, uttered by Śāgavat himself, which are arranged in the *Konṣar* (= *śāṣṭar* Agyar, 'word of the Master'); and, secondly, the commentaries on the *śāstras* and the treatises (*śāstras*) properly so called, human works, the greater number of which were written by the scholars to whom tradition ascribes them; all this literature forms part of the *Tenṣar* (= *tan* Agyar, 'instruction, scholasticism'). This distinction has not always a historical value. Many *śāstras* are frankly scholastic works, and it is probable that some of them are later than the signed treatises whose doctrine they contain and authorize.⁴

We know that Amagha wrote five treatises which he gave as a revelation of Maitreya. Although revealed, these treatises are included as part of the Tanjur, because in form they are not *sūtras*, but more treatises (*śāhite*, mnemonic verses, with a

¹ For a description and analysis of the literature of the Great Vehicle see Waddell, *Siddhanta*, pp. 127-207, and Winternitz, *Geach der ind. Literatur*, p. 127-226, see also Winternitz on the *Lalitavastava* and the *Mahāvastava*—works which belong to both Vehicles. Among translations see 'The Lotus of the Pure Law,' SSS vol., 'The Sukhāvatī,' etc., SSS etc.

² See Roddichrydson, *loc. cit.*, Pt. II, Introduction & Les
généralités des Fèces Scandinaves, p. 130; Nordmann, *l.*
Fœtus, Scandinavie, Opinions sur la dégénération, p. 157.

* Arguments 1 and 2 are given in the Tibetan work, the *Middleways* of Mahāyānaśālistavajra, p. 129², in the Urgan ed., tr. by Wasth in *Buddhism*, p. 261 (201). The connection of the Mahāyāna with the Mahāyānist school, of which the *Śālistavajra* is a branch, is beyond doubt, but the authenticity of the doctrine of this school is rather doubtful.

3 Matrone-Amadio believes (Memorandum, 1. 7) that the two Vehicles are contemporaneous.

³ See *Madhyamahāvīra*, p. 76; *Prajñāna*, pp. 22, 24, for the perception of *leśa*, which are wanting in the *Śrī Chikīrṣa* version, see *Ms. Minor, Indis, What are 3 leśa as?*, London, 1922, p. 221.

• We must remain sensitive to a few remarks here. The subject will demand for a long time not just answers.

of Ali received the title—e.g., Zaid (after whom the Zaidis are called); he was defeated and killed in the year 122 A.H., and his body was afterwards crucified. An Umayyad satirist said that he had never before seen a Mahdi hanging on a tree (Maa'adī, ed. and tr. C. Barbier de Meynard and Pavet de Courteille, *Les Prairies d'or*, Paris, 1861-77, v. 471). When the pretender Muhammad b. 'Abdallah first made his appearance, the people of Medina cried out: 'The Mahdi has come forth' (Tabari, iii. 186 [A.H. 144]). It was to be expected that prophecies of the appearance of such a personage should be attributed to the Prophet Muhammad, and such were current, though of questioned authenticity, the best, according to Mutahhar b. Tahir, who wrote about 325 A.H. (*Le Livre de la création et de l'histoire*, ed. C. Huart, Paris, 1898-1903, ii. 161), being:

'The world shall not pass away until my nation be governed by one of my house whom I have sworn with mine.'

This tradition is also found in the collection of Thumidhi († 279; ed. Cairo, 1292, ii. 36), where it is followed by another in which the Mahdi is mentioned:

'We were afraid of some trouble occurring after the Prophet's death, so we asked him, and he said: In my nation there is the Mahdi who shall come forth, he shall live five (or seven or nine) years; a man shall come unto him and say, "O Mahdi, give me!" and the Mahdi shall pile into his lap as much as he can carry.'

The author of this fiction appears to have interpreted the word as 'the giver,' which should rather be Mahdi. Somewhat more information is to be found in the contemporary collection by Ibn Mājah († 273; Cairo, 1313, ii. 399): the tradition just given is repeated with some variations, indicating that under the Mahdi men would enjoy greater blessings than they had ever experienced; to it is prefixed one to the effect that certain persons with black standards (i.e. the 'Abbāsids) would come from the East,

'who shall ask for good and not be given it, and shall fight and be victorious and be offered what they asked and not accept it until they hand it [the sovereignty] to one of my house who shall fill it with justice as they filled it with injustice.'

Another tradition states that the Mahdi is to be a descendant of Fatima; another gives as the list of lords of paradise the following members of the family: the Prophet, his uncle Hamzah, his cousins 'Ali and Ja'far, and his grandsons Hasan and Husain and the Mahdi. The last is:

'Men shall come forth from the East, and shall prepare the way for the Mahdi.'

It seems clear that the authors of these fictions had somehow heard of an expected Mahdi, and made up traditions calculated either to encourage the magnificence of princes or to win adherents for some political party. Mutahhar adds another, that the only Mahdi to be awaited was 'Isa b. Maryam, i.e. the Christian Saviour; and, since orthodox Islam looks forward to His returning to judge the world—according to the law of Muhammad—it is not quite easy to find room for another Deliverer. One of the etymologies suggested for the name, viz. the man of the madd, 'cradle,' favours this view, the reference being to Qur'an, xix. 20 ff., where Christ speaks 'in the cradle.'

There is little reason for supposing that the Prophet Muhammad contemplated the appearance of a Mahdi, however interpreted; but the outbreak of the civil war within a generation after his death, and the perturbed condition of Islam which followed, led to the adoption of the idea from Jews or Christians, who look forward respectively to the appearance and reappearance of the Messiah; why the title Mahdi should have been adopted for the expected Deliverer is, as has been seen, an unsolved puzzle. To the etymologies suggested we should be inclined to add one more, viz. from *Amā* in the sense 'to give,' making the

word mean 'He to whom has been given,' as in Mt 28¹⁸ the Risen Saviour says, *ἵδωτε ἐν ἐμοὶ καὶ ἐν τῷ πατρὶ*, and a similar interpretation was current for the name Shiloh in Gn 49¹⁰, 'until Shiloh come,' viz. *shel lo*, 'whom is.' Thus the Shī'ite author of the *Fakhrī* (ed. W. Ahlwardt, Gotha, 1880, p. 58), speaking of the Mahdi Zaid (executed in 122 A.H.), curses those who deprived him of his 'right.' However this may be, the function of the expected Mahdi was, in the first place, to fill the world with justice in lieu of injustice, which often meant the abolition of unauthorized practices and the enforcement of orthodox doctrine and conduct; in the second, to achieve the conversion of the world to Islam, and often this was identified with the taking of Constantinople. Some, however, were satisfied with a partial execution of this programme; and among persons who had been accepted as the Mahdi by various writers up to his time Mutahhar (loc. cit.) mentions 'Ali himself, the pious Umayyad 'Omar II., and the 'Abbasid al-Mahdi, who reigned A.D. 775-785.

About the signs whereby the Mahdi was to be recognised when he appeared there were differences of opinion; a common theory was that he should have the name Muhammad and the patronymic Abu'l-Qāsim, and that he should belong to the Prophet's house; yet not all demanded the fulfilment of these (not very difficult) conditions. To all—save the few who suppose that the Mahdi has come already—he is *ḥajjāj*, 'he that shall come'; and, on the whole, the Sunni view is that his appearance will be that of an ordinary man whose career is that of a reformer and conqueror, while the Shī'ite view is that he is in hiding somewhere, and has been concealing himself for an unlimited period. In our times there were in the Sūdān two Mahdis simultaneously, representing these different opinions. The line between the two is not quite easy to draw, except where some definitely historical personage is expected to reappear; for it has been found possible to adopt the theory that the Mahdi is some one in hiding, without any suggestion of supernatural concealment. In more than one case of a successful revolution the victory has been won by a commander in the name of an obscure individual, who has been brought forward only when success has been assured. Thus the author of the *Fakhrī* (p. 171), describing the rise of the 'Abbāsids, remarks that, while the Kharijites under the brilliant leadership of Abū Muslim were fighting for the *imām* Ibrāhīm (representative of the 'Abbāsids), he was himself in retirement somewhere in Syria or Arabia, attending to his devotions and the affairs of his family, the greater number of his adherents being unable 'to distinguish between his name and his person,' i.e. knowing nothing at all about him.

The rise of Mahdis from time to time, then, was due to the disordered state of Islam in normal circumstances, but also to the wide-spread sentiment that the sovereign should be a descendant of either the Prophet or 'Ali, for with some communities the latter was regarded as the more important personage, and indeed the master whom the former betrayed (see Yāqūt, *Dictionary of Learned Men*, ed. D. S. Margoliouth, London, 1913 ff., i. 202). The pretenders of the house of 'Ali were repeatedly supposed by their adherents to have escaped death, notwithstanding their ostensible execution, and the Shī'a sects were to a certain extent divided by their loyalty to different pretenders whose return they expected. Such pretenders were Muhammad b. 'Abdallah, executed 145 A.H., whose return was awaited by some of the Jārādīyah sect; Yahyā b. 'Umar, executed

280 A.H., expected to return by others of the same sect; Muhammad b. al-Qasim, who revolted in the year 212, was captured, but escaped and disappeared; and Mūsā b. Ja'far, who died of poison in Baghdad in 188 A.H. Several others are mentioned with these by Ibn Hāsim (*Kutub al-Fitān*, Cairo, 1221, iv. 179 f.). The sect called Qat'iyyah got their name from making sure of the death of this Mūsā b. Ja'far, without having ascertained it (Mas'ūdi, *Tunisi*, ed. M. J. de Goeje, Leyden, 1894, p. 232). Believers in the continued existence of Muhammad b. al-Qasim were to be found in the time of Mas'ūdi (332 A.H.; *Pantheon d'or*, vii. 117) in the district of Kafah, in the mountains of Tabaristan and the Dailam, and the districts of Khurasan. The person ordinarily acknowledged to be the 'expected Mahdi' is Muhammad b. Hasan al-Ash'ari, whose father died 280 A.H. There was, however, great doubt as to the age of this Muhammad at the time of his father's death, some denying that he ever came into existence, and all agreeing that he could have been only a few years old at the time. Shahrastāni locates him in Samarra (ed. W. Cureton, London, 1843-46, p. 128); but at some time in the 7th or 8th cent. A.H. he appears to have taken up his abode at Hillah. The traveller Ibn Batūta († 750 A.H.; ed. and tr. C. Deffrémery and H. B. Sanguinetti, Paris, 1853-56, ii. 96) gives a word account of the ceremonies which he found there, and which seem to be relics of some pagan cult.

There is a mosque with its door covered by a silver curtain, called the maṣṣarif of 'the Lord of the Age.' Each afternoon a hundred of the inhabitants come out of their houses armed with drawn swords, going to the governor, they obtain from him a horse with saddle and bridle, or else a robe, leading drums and playing musical instruments, they then proceed, fifty of them in front of the charger and fifty behind. Others arrange themselves on either side. Coming to the mosque that has been named, they halt before its door, and say: 'Bismillah, O Lord of the Age, come forth. Mahdi is rampant, and wrong abundant, this is the time for thee to come forth, that God may distinguish by thee between the true and the false.' They continue till the prayer of sunset, playing their musical instruments the whole time.

Ibn Khaldūn, a contemporary of Ibn Batūta, who has no high opinion of his veracity, tells the same story, with some variation. According to him, the people of Hillah hold that their Mahdi entered a cellar in their habitation, and every night they appear with a mount before the entrance to this cellar, and keep calling him to come out, from the prayer of sunset until the stars are all shining (*Prolegomena*, Beirut, 1900, p. 198). It is surprising that in the *Farḥān-Quṣṣidāh* (compiled 730 A.H., ed. E. G. Browne, London, 1910, p. 308) the connexion of this Mahdi with Hillah appears to be unknown.

In his ninth year he disappeared in Samarra, and was never seen again. The people of the Shi'ah, however, believe that he is the Mahdi of the end of the world, is still alive, and will come forth when the time arrives. Probably even the revised version of Ibn Batūta's story requires further reduction.

The majority of the Mahdis have thus played a larger rôle in the imagination than in reality; there have, however, been cases wherein the character has been assumed with very considerable and even permanent success. The first capital of the Fatimids in Africa was called Mahdiyyah after the Mahdi who founded the dynasty (397 A.H.=A.D. 1006). The conquests which prepared the way for his sovereignty were all achieved by an agent, who had ultimately to produce the person to whom he had preached allegiance; and, according to the statements of his enemies, the person produced was an impostor, suddenly called to play the part, the real Mahdi having perished on his way to Africa. According to an author of weight (Nizam al-Mulk, † 495; see C. Schafer, *Chrestomathie persane*, Paris, 1883-86, i. 166), the propaganda of this sect began at least a century

before, and proselytes to whom the mysteries had been communicated were forbidden to divulge them until the Mahdi appeared. Probably with this community (in theory at least) the Mahdi, called also, as has been seen, 'the Lord of the Age,' was the legitimate occupant of the Fatimid throne; when the sovereign al-Hakim disappeared, doubtless through assassination, his continued existence and future reappearance became the dogmas of a sect.

Another Mahdi whose efforts resulted in the foundation of a dynasty was Ibn Tūmart (g.a.; † 594=A.D. 1130), who started the empire of the Almohads. Of this personage there is an unusually full and interesting biography by Ibn Khallikān (tr. W. M. de Slane, Paris, 1843-71, iii. 205 ff.), which is doubtless somewhat coloured by prejudice. He appears to have started genuinely as a religious and moral reformer, and to have taken the title Mahdi when opposition and danger induced him to draw the sword; he is likely then to have been influenced by the prophecy of the appearance of such a reformer, which, as we have seen, had already found its way into an authoritative collection of traditions. The pedigree which brought him into connexion with 'Alī may well be an invention later than his time, and as such his biographer appears to regard it. Some stories told by Ibn Khallikān are characteristic of such adventures, though not perhaps true in this case; he got access to the *Book of Ja'far*, in which 'Alī had prophesied all that was to occur till the end of time (see art. DIVINATION (Muslim)), whence he obtained the letters which formed the name of the person destined to be his chief helper and successor, with a description of his appearance. In order to be armed with a miracle, he persuaded a learned associate to feign illiteracy and ignorance of correct Arabic; one day this person claimed to have learned the Qur'ān by heart in a dream, and this miracle convinced the most stubborn; the confederate then proclaimed Ibn Tūmart the Mahdi, whereas he had previously been called imām. According to Ibn Khaldūn (*History*, Cairo, 1284, vi. 220), the only heresy of which he could be convicted was his agreeing with the Imāmiyyah sect that the sovereign was infallible. In his treatment of opponents he appears to have been as ruthless and intolerant as any religious leader; but a singular feature of his career as a Muhammadan saint was that, besides asceticism in diet, he observed strict chastity. His creed, which has been published (*Maṣṣarif al-ra'is* ii, Cairo, 1288, p. 44 ff.), does not appear to differ from the orthodox *halak*.

The prophecy of a Mahdi assumed special importance at the commencement of the century proceeding the first millennium of Islam, especially in India. According to the details collected by H. Blochmann (*Indo-Arabia*, i. [Calcutta, 1878] p. 14 ff.), the Mahdist movement started in Badakhshān, where one Sayyid Muhammad Nurbakhsh gained numerous adherents, defied the Afghan government, was defeated, and fled to Irān, where he maintained himself till the end of his life. In India it assumed a definite form through the action of Mir Sayyid Muhammad of Jaunpur, who found an adherent in Gujarat in Sultan Mahmūd I. Apparently this personage was, like Ibn Tūmart in his early days, a preacher and reformer, whose doctrines gave offence, and who was forced to leave one place after another. Ultimately he decided that the burden of Mahdism was too heavy for him to bear, and that, if he returned home, he would recant; he died in 911 (=1505) at Farah in Baluchistan, where his tomb became a place of pilgrimage. An interesting account of another Indian Mahdi of this century is given by the historian Haddādī in his *Musabikhat al-Tumart*

(Mr. G. Ranking, Calcutta, 1898, p. 607 ff.). This person was named Shaikh 'Alī, and was born in Basina in Hindustan. To the same place there came one Miyan 'Abdallāh, who had come under the influence of Muhammad of Jaunpur.

He adopted the manners of a Mahdi (which would seem to have been noted by Ibn Tūmar, for they consisted in extreme asceticism), making his dwelling in the corner of a grove far from the haunts of men, on the borders of a tank, he used to cast water on his head, and when the time of prayer came round, he used to gather together certain of the labourers who had to pass that way, and compel them to form an assembly for prayer, with such a degree of asceticism that, if he met any man who did not do so, he would give him a few blows and encourage him.

Shaikh 'Alī was much impressed by this example.

He too, 'trampling under foot his self-esteem and conceit, devoted himself to the poor of his neighbourhood, and, entering the valley of self-renunciation and abnegation, he bestowed all his worldly possessions, even to his boots, upon the poor.'

He became a disciple of Miyan 'Abdallāh; the two formed a community of ascetic socialists or communists, consisting of three hundred householders, who, abandoning all other source of gain and traffic, agriculture, and skilled labour, spent their time with them. In spite of their asceticism, they were in the habit of keeping arms and implements of war always with them as a protection against their enemies, but also in order to interfere with any proceeding in the city or the market of which they disapproved.

'They would go and call the offenders to account by main force, admitting no investigation by the governor, and on most occasions they got the best of it.'

After a time the place came to be too hot for Shaikh 'Alī, who, along with his followers, whose numbers had now reached six or seven hundred heads of families, migrated to Khawāspur, near Jodhpur; but here, too, he interfered seriously with the government of the place, and he was compelled to go back to Basina, accompanied by his disciples. Islam-Shāh had by this time obtained possession of Agra, and he summoned Shaikh 'Alī to his court, whither the Mahdi proceeded with a party of select companions fully armed; according to the chronicler, the Shaikh nearly effected Islam-Shāh's conversion to his views, but he was presently expelled and sent to the Deccan. Meanwhile, his former teacher and associate had started a sect of his own, which with some difficulty was suppressed by the authorities; and the Shaikh 'Alī was himself ere long summoned again to Agra, and requested to abandon his claims to the Mahdi-ship; refusing to do this, he was tortured to death. His followers, however, were numerous, and increased, and were known as the Mahdawis; they were persecuted, but not exterminated, in the reign of Akbar.

Blochmann observes that these Indian Mahdis were men of considerable eloquence, who by their preaching obtained great influence over the populace, and that they regularly came into conflict with the authorized exponents of the law at the Muhammadan courts. Badā'uni takes evident pleasure in narrating how Shaikh 'Alī triumphed over the official theologians who were employed to argue with him. They endeavoured to bring the practice of their co-religionists into harmony with the strict principles enjoined by the Sunnat codes, and especially to banish practices which had been borrowed from their pagan neighbours.

The Mahdi who acquired the greatest fame in Europe was the personage whose enterprises led to the Anglo-Egyptian conquest of the Sūdān. The best account of the early stages of the movement is given by F. R. Wingate in *Mahdism and the Egyptian Sudan* (London, 1901). After the strong hands of Zubair Pasha, Samuel Baker, and General Gordon had been withdrawn from the Sūdān, that country was subject to violent oppression, and the 'broad basis of the Mahdi's appeal was the injustice

and cruelty of every sort which sprang up the moment Gordon's wholesome discipline was withdrawn' (p. 12). Muhammad Ahmad, who took this title, was born at Dongola in 1844 of a family of boat-builders; at the age of 22 he was already a shaikh with a great reputation for sanctity, and became a powerful preacher; he denounced the iniquities of the Egyptians, and laid stress on the promised appearance of a Mahdi, with whom he presently identified himself, and, indeed, in the Shi'ite sense; he claimed to be the twelfth imam, the son of Hasan 'Askari. His claims were first recognized in 1861 at Abba Island, 150 miles south of Khartum, when a band of men declared him their appointed leader, and he communicated to them the secret that he was the Mahdi. News of his 'issuing forth' having come to Khartum, the governor sent to have him arrested; but he declined to obey, and, when troops were sent to enforce the order, he succeeded in annihilating them. He evidently possessed some skill both as an organizer and as a military leader, for he soon enrolled among his followers tribes after tribes of Sūdān, and proceeded from victory to victory until, at his death on June 22, 1885, shortly after the historic fall of Khartum, his empire extended from lat. 8 to 21 S., and from long. 23 to 38 E. of Greenwich. Wingate suggests as an epitome of Mahdism the sentence 'Your money or your life'; in practice it was an enforced communism, maintained by plunder, divided arbitrarily by the Mahdi. Success also appears to have made of the Mahdi a coarse voluptuary. Like some of his predecessors, he seems to have aimed at reproducing what were supposed to be the conditions of early Islam, and to have insisted on a sort of asceticism; his followers were advised to go on foot, or at any rate to ride asses and not horses, except in war. Further, they were told to reduce expenditure on weddings. These ascetic tendencies were indicated by the name which his followers assumed, Darwish ('poor'), for which at a later period the Mahdi substituted the appellation Ansār ('helpers'), which had been given by the Prophet Muhammad to his entertainers in Medina. The Mahdi himself clearly aimed at reproducing the career of the Prophet, since he had a *hijrah*, or 'migration,' via from Abba, where he first came forward, to Massat in the Nuba mountains; and he assigned four chairs to persons representing the eminent associates of the Prophet who became the first successors. The chair of Abū Bakr, the first khalīf, was filled by 'Abdallāh al-Ta'ālshī, who afterwards became famous as the Mahdi's successor, or *Khalīf*, and is said to have suggested the rôle of Mahdi first to Zubair Pasha and then to Muhammad Ahmad (*Mogtāfī*, xxiv. [1900] 5).

The asceticism of the Mahdi, like that of the Wahhābīs, included the tabu of tobacco, the smoking of which it regarded as a greater offence than the drinking of wine; in his early days he showed leniency towards Sūfism, and would gladly have obtained recognition from the head of the Sanāfī; this being refused, he abolished all 'orders' except his own.

After the fall of Khartum the Sūdān was gradually evacuated by the Anglo-Egyptian government, and the *Khalīf* extended the Mahdi's empire by fire and sword till it reached the bounds of Egypt; in 1896 the reconquest of the country began, and this was achieved at the battle of Omdurman (Sept. 22, 1898). The new State had achieved nothing but devastation and destruction.

The success of the Sūdānese Mahdi encouraged many others to play the part. It seems that the title 'al-Mahdi' in the case of the head of the Sanāfī community was originally a proper name; its holder, however, gave it the familiar applica-

tion, and even claimed to have on his body the 'seal of prophecy,' i.e. the nervous between the shoulders which had indicated the office to which Muhammad was born (the Suddānese Mahdī also bore a mark, but it was a mole on his right cheek). In the oracle which foretold his appearance the beginning of the 13th Islamic cent. (1301 = 1883) was specified as the date. His theories will be found in the art. *SANŪSĪ*. He was rarely seen by strangers himself, having a 'double,' *Shi Ahmad b. Biskri*, who resembled him very closely, to play the part before them. In 1384 he enjoined the Muslims to pay no attention to the Suddānese pretender, who was merely 'an impostor and a liar.' In 1388, when an appeal was made to the Sultan of Borge to assist in the suppression of Mahdism by revolutionaries in the Suddān, the Suddān Mahdī, to whom the matter was referred, advised the Sultan to abstain from interference with Suddānese affairs and fight with the *Shāfiʿ* only if himself attacked.

The measures taken by the Protectorate of Nigeria in recent years to regulate taxation, emancipate slaves, and introduce other reforms led to the rise of numerous Mahdīs; between the years 1900 and 1908 there were a dozen in Sokoto, and as many in the other provinces. In 1906 Mahdīs arose simultaneously in Satsara, Besshi, and Kontagora. Most of these were caught, tried, and executed, the government regarding such severity as necessary for the preservation of order. In 1907 there was one Mahdī at Bima in Raschi, 'but the situation was in general satisfactory' (*Revue du monde musulman*, iv. [1908] 144).

While the tradition, which, as we have seen, has been admitted into some authoritative works, is likely to produce aspirants to the Mahdī-ship from time to time, it is probable that the general introduction of good and stable government will render their appearance constantly rarer and their adherents fewer. To the question whether there were any relics of Mahdism in the Suddān, the *Cairo Journal of Egyptology* as early as 1902 (xxvii. 1190) replied that the introduction of security and justice in place of the long reign of terror which that system had produced had effectually destroyed its traces.

LITERATURE.—The authorities have been cited throughout the article.
D. B. MARGOLIOU.

MAIMONIDES.—i. **Life.**—Maimonides (Moses ben Maimon), Talmudist, philosopher, and physician, born at Cordova, 30th March 1136, died at Cairo, 13th Dec. 1204, is known in Jewish literature as 'Rambam' (the letters r, m, b, m being the initials of Rabbi Moses ben Maimon) and in Arabic literature as Abū Imrān Mūsā ben Maimūn ibn 'Abd Allāh. His native city falling into the hands of the Almohads, Maimonides, when yet a lad of thirteen, was compelled either to leave or to embrace Islam. He, together with his father, chose the former course, and settled at Fes. Here they led for a time the dual life of Muslim and Jew. But, the Muslim authorities growing suspicious of their *bona fides*, father and son determined to leave Fes. Accordingly, in April 1166, they boarded a vessel bound for Palestine. Acre was reached after a month's stormy voyage, and after a short stay there they went on to Jerusalem; but, as Palestine had just been the scene of the Second Crusade, and the Jews there were few in number and poor in goods as well as in culture, Maimonides fixed upon Egypt as a more congenial centre. A home was made in Fostat, a suburb of Cairo. Soon after their arrival here, both the father and the brother of Maimonides died, and, becoming financially reduced in consequence, Maimonides took up the practice of medicine as a means of livelihood.

After several years of obscure practice he became court physician to Saladin, pursuing his Rabbinical and philosophical studies undisturbed while following out the exacting duties of his profession. The eminent position which he has ever held in Jewish estimation is expressed in the popular Jewish saying, 'From Moses to Moses there was none like Moses.'

2. **Works.**—Maimonides' works can be classified under the following heads.

i. **Philosophy and Jurisprudence.**—(a) *Da'ialet al-Hukm* ('Guide of the Perplexed'), known in Heb. as *Hidvat Mada'at*. The Heb. tr. was effected in 1204 by Samuel ibn Tibbon, and another and less popular Heb. tr. was made by the celebrated Hebrew poet Al-Harizi in the 13th century. The Lat. tr. by the younger Barstori (Basel, 1697) is based on the Heb. of Ibn Tibbon. Salomon Mendel published a Fr. tr. of the Arabic original entitled *Guide des égarés* (3 vols., Paris, 1881-82), and there are two Ital. tr. of the whole work and several Germ. tr. of parts. An Eng. rendering of pt. III. was brought out by J. Towson (London, 1887) under the title of *The Reasons of the Laws of Moses*. The standard Eng. ed. with commentary and introduction is that of M. Friedländer.

(b) A work on the laws used in logic entitled *Ma'alah al-Hikmah*, popularly known in its Heb. tr. (by Moses ibn Tibbon) as *Ma'alah al-Hikmah*. Sometimes Münster published a Lat. tr. (Basel, 1697). There are two Germ. renderings, and the most noteworthy Heb. commentary is that of Shalom Hamelekh.

(c) *Ma'alah al-Hikmah*, on the unity of God, known in Heb. as *Ma'alah al-Hikmah*.

ii. **Commentaries on Talmud and Mishnah.**—(a) *Commentary on the Mishnah* known in Arabic as *Sifra* ('Light'). The comment parts of the work were translated into Heb. by various medieval scholars. W. Surinberg rendered the Heb. into Lat. and E. Posner published parts with a Lat. tr. (Oxford, 1884). The section known as 'The Right Chapter' (*Shema'ah Pivshah*) was edited with an excellent Germ. tr. and valuable annotations by H. Wolf (Leipzig, 1889). A new ed. with a very good Eng. tr. and notes is that of G. S. (Columbia University Press, 1912). Various ed. of small sections have been brought out by other scholars; and there is much that still awaits the light.

(b) *Sefer al-Furqan*, rendered into Heb. under the title of *Sefer Ha-Emunah* by Ibn Tibbon. Moses Bloch brought out a complete ed. with a Fr. tr. (Paris, 1899), entitled *Le Livre des principes*. [This book might also appropriately be classified under III.]

iii. **Halakot on conversion or baptism laws.**—*Sefer al-Furqan* ('Separation of the Law'), known also as 'The Strong Hand' (*Yad al-Jadida*). It is divided into fourteen component books, and was written by the author in Hebrew. Extracts were translated into English by E. Burrows and E. Shteynshel in 1890. The work is of gigantic proportions, and was meant to be an easily intelligible compendium of Jewish law.

iv. **Letters and occasional tracts.**—(a) *Sefer al-Tamim* ('Letter on Conversion'), written in Arab. and translated anonymously into Hebrew. It deals with the subject of formal conversion. Maimonides maintains that a Jew who outwardly through compulsion pretends to embrace Islam does not thereby forfeit his claim to be considered a righteous Jew. But the authenticity of the 'Letter' has been doubted by scholars.

(b) *Sefer al-Tamim* ('Letter to Tamim, i.e. Yemen'), written in Arab. and translated into Heb. by Ibn Tibbon and others. The Jews of Yemen are given advice as to how to conduct themselves in times of religious persecution.

(c) *Ma'amar al-Hayyut* ('On the Resurrection of the Dead'), written in Arab. translated into Heb. by Ibn Tibbon and also by Al-Harizi (see *Sefer al-Harizi*, *Hebrew Literature*, p. 65). He maintains a spiritual view of resurrection as opposed to the largely prevalent material view of the resurrection of a united body and soul.

(d) 'Letter to the men of Marcellin, written in Arab. and translated into Heb. by Ibn Tibbon, a discussion on astronomy and astrology, in which Maimonides upholds the truth of the former, but rejects belief in the potency of the stars.

(e) 'Letter to Rabbi Jonathan of Lunel,' in which Maimonides, while replying to certain queries on ritual topics, discusses much of his private and personal life. A similar note is struck in a letter to Ibn Tibbon (translated into Eng. from the Heb. by H. Adler, in the *Translations of Hebrew Literature*, I, 1870).

v. **Miscellaneous and apocryphal.**—(a) An essay on the Jewish calendar, called *Sefer al-Hikmah* (written at the age of twenty-three), composed in Arab. and translated into Heb. by an anonymous writer, to be found in the collection *Sefer al-Hikmah* (Leipzig, 1889).

(b) Various minor works on detailed points in medicine. These were all written in Arab. and were translated into Heb. by Jews of the Middle Ages. There are also Lat., Fr., Germ., and Span. tr. of several.

vi. **Basores.**—Maimonides' correspondence embraced nearly all the Jewish communities of the Middle Ages. They were translated at an early date into Heb., and comprise the collection known as *Sefer al-Hikmah* (Leipzig, 1889).

3. **Place in philosophy.**—Maimonides holds a
i.e. Shalom Hamelekh (p. 2).

significant place both in Jewish and in general philosophy, his importance in these respects resting mainly on his three larger works—the 'Guide of the Perplexed,' the *Sirj*, or Commentary on the Mishnah, and the *Mishneh Tordā*. The most essentially 'Jewish' of the three is the *Mishneh Tordā*. It is an elaborate text-book of 'law' as understood by Jewish orthodox tradition, its sources being the Bible, the Talmud, and the whole Rabbinical literature previous to Maimonides. What prompted the author to write it was the fact that the Talmud and the Rabbinical literature generally are a large, unwieldy, unsystematized mass of opinions and rules, laws, counsels, prescriptions, permissions, and prohibitions, with no vestige of any attempts at logical classification and arrangement; so that, unless a Jew possesses a complete mastery of those intricacies, he is puzzled to know what is, and what is not, Judaism as laid down by the Rabbis and sanctioned by orthodox tradition. Maimonides felt the necessity of adding Jews in this cardinal respect. Judaism appeared to him to be in danger of losing itself in masses of its own invention; he therefore planned a work in which both the letter and the spirit of the Talmud should reappear in a simple, orderly, and systematic guise. All the controversies, disputations, and doubtful points in the original are omitted. The faithful Jew who wishes to know the settled Rabbinical view on any subject of ritual or belief need no longer waste for the information through oceans of unnecessary details. It is given him in definite, clear-cut, and brief language. As can be understood, this good service rendered to Judaism was not without an admixture of evil. Talmudic law, once flexible, became rigid. Maimonides, by aiming at laying down opinions which were to be the norm of all future religious practice and belief, was fated to have exercised a too arbitrary dogmatism. He made development impossible and chained Judaism to the letter, instead of leaving it free to the eternally unfolding life of the spirit. The numerous attacks—very often virulent and abusive—which were hurled against him both in life and after death on account of this dogmatism, and on kindred grounds, constitute a substantial chapter in Jewish medieval history. On the other hand, the book was well received in many Jewish communities, though the hope of the author that it would one day become the authoritative code for all Israel was never realized.

In the making of 'codes' or 'compendia' of Jewish law, Maimonides had both predecessors and successors. But his work stands out from all these in two commanding respects: (a) a greater variety of subject, a broader interpretation of the scope of Judaism as a system both of 'law' and of 'theology'; (b) the metaphysical (Aristotelian) colouring pervading his treatment of religion and ethics, as well as the addition of dissertations on such subjects as the calendar, idolatry, and free will. He was no mere codifier in the sense that others were. His was the genius of the literary artist working out his own original conception of divine truth as understood by the Jew. Hence, whereas to-day resort is had to other codes only when enlightenment is sought on points of strict 'legalism' or strictly orthodox ritual—what is forbidden and what is not forbidden by the 613 precepts of the *Tordā*—the code of Maimonides is a source of edification to the theological student generally, quite irrespective of its relation to the Jewish life. The first of the fourteen books comprising the *Mishneh Tordā* is entitled 'Maddā' ('Knowledge'). Maimonides feels that, before a man can be ordered to worship God, he should first be informed of what God really is; so he sets out

with proofs of the existence of God, of the impossibility of a plurality of gods, of the impossibility of a world without God, of the various grades of animate and inanimate existence—angels, 'spheres,' men, plants, minerals (introducing, of course, the 'four elements,' viz. earth, air, fire, water). He shows how all these have their places in the cosmos, and how all reveal God in their several ways and degrees. In the framework of such a treatment he discusses the Rabbinic views of prayer, divine worship, Sabbath, feasts and fasts, repentance, and the whole host of ethical and civil prescriptions which the Talmudic Rabbis had deduced from Scripture and had laid down for observance by the Jewish commonwealth. It is all done in a way which shows that, while Maimonides defended what he considered the eternal sanctity of 'ceremonial,' he was too spiritual, too mystical a thinker to omit giving due prominence to the ethical and spiritual aspects of Judaism—the aspects which justify and transfigure the rest.

The *Sirj*, or Commentary on the Mishnah, has not as yet had full justice done to it by scholars and students. It has been in many senses overshadowed by the more popular commentary of Obadiah Bertinoro, an Italian Rabbi of the 15th century. But there can be no doubt that, with the growing modern recognition of the necessity of studying the Rabbinical literature on strictly scientific lines, the *Sirj* will yet come into its own.

The object of Maimonides was to enable the layman to understand the Mishnah—its technical phraseology as well as its general drift—without the necessity of working through the involved disquisitions of the Talmud. The Talmud is *per se* excellent the commentary on the Mishnah, but its elaborations and criticisms of the Mishnah, instead of throwing light on the latter, often render the darkness all the greater. Further, Maimonides was of opinion—and critical study shows that he was right—that the Talmudic masters did not always understand the Mishnah, because their extraneous knowledge was faulty. He therefore planned a work in which the student would be able to see the Mishnah as it essentially is and irrespective of the Talmudic glosses. Not that Maimonides ignores these glosses. He incorporates them—and largely too—in the commentary. But he sometimes adopts an independent view; and this is just one of the facts that make his work serve as a really valuable introduction to the study of the Talmud. It is also very valuable for the many long dissertations which it contains on points in theology, philosophy, history, and exegesis. Thus, commenting on Mishnah xi in the Treatise *Sanhedrin* on the words 'All Israelites have a portion in the world to come,' he is led to write a treatise on the Jewish creed, in which he draws up the famous 'Thirteen Principles of Faith' (for which see *REF* iv. 346), being the first 'Rabbanite' (i.e. as opposed to 'Karaites') Jew to ask the Synagogue to accept a set, formulated creed of Judaism. For this he was severely criticized by a famous 15th cent. Jewish philosopher, Hisdai Crescas, in his *Or Adonai* ('Light of the Lord'). But, as subsequent history proves, there was no necessity for attaching any really serious importance to these 'Thirteen Principles of Faith,' seeing that the Synagogue at no time did, and even at the present time does not, attach any canonical validity to them. In all probability Maimonides promulgated them with no dogmatic intent. They are useful as a literary monument of the often-forgotten fact that Judaism emphasises inward belief as well as outward conduct.

Another remarkable excursus is that known as

'The Eight Chapters.' Just as Philo attempted to expound the OT on the basis of Plato, so Maimonides here attempts to present Judaism in the dress of Aristotle. Rabbinical ethics are viewed through Greek spectacles, and Aristotle's doctrine of 'the mean' (*mesotês*) is shown to underlie the sacred moral truths of Judaism.

'This perfect Law does not teach us to subject the body to useless and unneeded-for-torture. On the contrary, its aim and intention is that man according to the dictates of nature should pursue the path of moderation, eat and drink moderately and according to his means' (opening words of ch. iv.).

Adopting this standpoint and with the aid of the Aristotelian psychology, Maimonides shows how the Jew's path to ethical perfection lies only through the adoption of the mean. With all its Greek colouring, the spirit and teaching of the book are thoroughly Hebrew. OT and Talmud contain the highest wisdom and are man's surest guide to God.

Maimonides' greatest contribution to metaphysics, however, is his 'Guide of the Perplexed.' It is designed, as he himself says, 'for thinkers whose studies have brought them into collision with religion,' for men who 'have studied philosophy and have acquired sound knowledge, and who, while firm in religious matters, are perplexed and bewildered on account of the ambiguous and figurative expressions employed in the holy writings.' Thus the book is not meant to convince the unbeliever, but, rather, to correct the believer. His introductory motto is, 'Ye who have gone astray in the field of the holy Law, come hither and follow the path which I have prepared. The unclean and the fool shall not pass over it.'

The object of the book is to provide a working harmony between reason and faith. But whose conception of reason does Maimonides take as the standard? No one but Aristotle's. What is faith to Maimonides? Belief in the Torah, which is for all time the one true embodiment of the divine word. There is no contradiction between divine revelation as entrusted to the Jews and the metaphysical truths given to the world by the brains of the philosophers. For not only is it a fact that both in the last resort emanate from God, but it has also to be borne in mind (so argued Maimonides) that the prophets of the OT received a twofold divine message. Besides the message which is manifest to us in their written prophecies, they received oral revelations of a philosophical kind. The written prophecies are really instinct with these oral philosophies; and Scripture enshrines, in ways and degrees which can be detected only by the student of philosophy, a body of metaphysical truth. As the average Jew, through the dulling effect of the repeated recitation of his rite, fails to grasp this metaphysical truth, Maimonides conceived it his duty to devote the major portion of the first book of the 'Guide' to an exhaustive examination of the anthropomorphic expressions occurring in the Scriptures in order that the reader should thereby learn the first and fundamental tenet of all metaphysics, viz. that God is incorporeal, and that all the Scriptural passages which talk of 'the eye' or 'the hand' or 'the foot' of God, or which describe divine movements such as 'passing,' 'dwelling,' 'coming,' 'standing,' etc., must be understood allegorically, seeing that they express transcendental metaphysical truths about the deity. But there is another leading consideration. What about the Scriptural 'attributes' of God? Is not the misunderstanding of these liable to lead to an infringement of both the incorporeality and the unity of God? Maimonides saw real danger here, and, therefore, after a severe examination of the meanings and inter-relationships of the different attributes of God, he proves the inapplicability of them all to God. All that can be predicated of God is

that He exists. God is indefinable. Even to assert, as Scripture repeatedly does, His unity, power, wisdom, eternity, will, is inadmissible. But how, then, can we justify Scripture? By assuming, he says, that, owing to the poverty of language, these terms must be understood as describing not a positive quality but a negative of its opposite. Hence to say that 'God is one' is merely tantamount to saying that God is not a plurality. Hence the deity can be described only by negative attributes; and, since the number of these is infinite, the positive essence of the deity must for ever lie outside human comprehension. But, despite all this, the deity is unquestionably active in the universe; He is the creator of the cosmos, and the traces of divine design are everywhere obvious. How are these divine relations with the universe to be understood? Before grappling seriously with this subject, Maimonides enters into an acute criticism of the views of the Mutakallimîn, or philosophers of the *Andalus* (q.v.). As against Aristotle, who maintained the eternity of the universe, these Arabian philosophers defended the *creatio ex nihilo*. Maimonides, while as a Jew differing on this fundamental point from his teacher Aristotle, agreed with the Mutakallimîn, but differed from the latter again on several other fundamental propositions of theirs. Maimonides' originality of mind as well as his fearless liberality of spirit in the investigation of religious truth can be clearly gauged in this connexion. He rejects, as has just been said, the propositions of the Mutakallimîn—but only as propositions, i.e. theories or methods of proof. For he accepts their results. He believed, just as much as they believed, not only in the *creatio ex nihilo*, but also in the existence, incorporeality, and unity of God. On the other hand, while opposing Aristotle on the question of the *creatio ex nihilo*, he practically employs the whole paraphernalia of the Aristotelian cosmology in order to prove the *creatio ex nihilo*. The latter came about through the work of a Primal Cause, who is identical with the Creator alluded to in the Scriptures. From this Primal Cause there emanate the intellects of the spheres (these 'intellects' are identified with the angels of Holy Writ). All changes on earth are due to the revolutions of the spheres, which have souls and are endowed with intellect. God created the universe by producing first the intellects of the spheres, which give to the spheres the faculties of existence and motion and are thus the *fons et origo* of the entire universe. It is of deepest interest to both the theologian and the mystic to note in this connexion the quaint Maimonidean exegesis of Gn 1 (*M'asah Erevah*) and Est 1 (*M'asah Nothahah*). His whole theory of emanation (*hashfah*) is a wonderful combination of what are usually regarded as two diametrically opposite frames of mind, viz. rationalism and mysticism.

Aristotle believed in the eternity of matter. Maimonides argues against this at great length in pt. ii. of the 'Guide,' in favour of the *creatio ex nihilo*—not that he believed that the latter thesis was really provable from Scripture, but because he felt it a necessary peg on which to hang the essentially Jewish doctrines of miracles, revelation, and prophecy. On the latter subject his views are strikingly original but highly debatable. There is a strong element of passive ecstasy in prophecy. The prophet is wholly the passive instrument in the divine hand. Imagination is an essential element in all prophecy. Prophecy is an impulse descending from the Active Intellect to man's intellect and imagination. Can any man become a prophet? No, because, while it is in the power of many a man to bring himself to the high pitch

of moral and intellectual perfection which prophecy necessitates, another factor is still required. This factor consists in a special vouchsafing of the divine will, i.e. divine inspiration. A man may be intellectually and morally perfect, but may be unable to prophesy, because prophecy arises, in the last resort, only at the call of a divine *fantasy*; and the *fantasy* is arbitrary.

Maimonides' subsequent discussions on the nature and origin of evil, on belief in divine providence and man's free will (in which he strikingly discusses the central problem in the book of Job), on the purpose of the Biblical precepts, on the meanings of the Biblical narratives, on the stages by which man comes to hold real communion with the divine—all these are treated with a fullness of knowledge which makes them a contribution to general as well as to Jewish theology. A vein of unvarying optimism permeates his teachings on sin and evil. Evil has no positive existence, but is merely the absence of good, just in the same sense as sickness denotes the absence of the possession of health, or poverty the absence of sufficiency, or folly the absence of normal wisdom. In support of the argument he quotes Gn 1st, 'And God saw every thing that he had made, and, behold, it was very good,' the Midrashic comment upon which is, 'No evil thing descends from above' (*Brishit* Rabbis, x.iii. 9). Divine providence extends to individual human beings, but not to animals, plants, or minerals. Here Maimonides differs from Aristotle, who held that Providence took no account of particulars, because His knowledge was limited to universals. Scriptural passages are quoted in refutation of Aristotle's views. Can free will be reconciled with the fact of divine omniscience, seeing that the latter must imply predestination? Numerous passages from Scripture are quoted in illustration of the difficulty of the problem. Maimonides bases his answer on the words of Is 55th, 'My thoughts are not your thoughts, neither are your ways my ways.' God's knowledge is unique; and the great mistake that men always make is that they persist in thinking and speaking of God's knowledge in the same sense as they think and speak of man's. It is identical with His essence, and is independent of existence or of time—past, present, and future are all the same to God.

The object of the divine precepts is 'to give man true knowledge or to remove wrong knowledge, or to give a correct ordering of life or to remove oppression, or to give a training in good morals or to exhort against bad morals.' Man's final consummation of 'knowing' God can come about only after man has perfected himself, not only inwardly, but in all his external relations to society, to the State, to the world. Maimonides discusses every precept of the Torah with the object of showing how their rightful understanding and practice lead to this goal. By an ingenious adaptation of Scripture he shows that the reason why God 'led the people about, by the way of the wilderness by the Red sea' (Ex 13th), instead of leading them straight to the Promised Land, was in order to give them the necessary preliminary training in the endurance of hardship, in the cultivation of courage in face of danger, and in all the social and martial qualities which a self governing nation needs. Even so, says he, it is with man. Before he can live on the high level of knowing God, he must live on the lower level of an obedience to all the divine precepts which are the training-ground for his more exalted role. 'Knowing' God and 'loving' God are identical.

Maimonides influenced all succeeding generations of Jewish thought by his introduction of what we nowadays call 'the scientific spirit' into

the study of Judaism. Henceforward an anthropomorphic conception of God became impossible. God is spirit, and the worship of Him—based as this is on the carrying out of the 'laws' of the OT as interpreted by the Rabbis—is not a series of mechanical performances, but a movement of the human spirit towards its divine source. Man's intellect is his greatest asset. Hence Judaism, rightly understood, can never really become fossilized, seeing that the application of the intellect to it cannot but result in a continuous chain of development in consonance with the changing phases of human thought as time goes on. Although much of the substance of the 'Guide' is now obsolete, its encouragement to a freedom of spirit in the handling of religious problems will always, unlike the dogmatism of the *Mishnah Tordah*, make its appeal to the thinker and the moralist. Maimonides the liberal philosopher will live on long after Maimonides the dogmatic ritualist is forgotten.

The influence of Maimonides on general European thought has not yet been adequately appreciated. The Latin translations of the 'Guide' in the 13th cent. afforded the great Franciscan, Alexander of Hales, as well as his contemporary, William of Auvergne. The great Christian scholastic, Albertus Magnus and Duns Scotus, drew inspiration from its pages. Thomas Aquinas's whole theological system is permeated with the theological view-points of Maimonides. What doubt, if any, Spinoza's philosophy owes to him is a moot point, but that the reading of the 'Guide' influenced Spinoza's mode of life is certain.

LITERATURE.—The *editio princeps* of the *Mishnah Tordah* is unknown, and the place of publication is unknown. Former editions were ed. by those of Salsburg, 1650. Constantinople, 1650. Amsterdam, 1703. Heb. and Eng. H. H. Bernard, Cambridge, 1852. Heb. and Germ. Vienna, 1855. Eng. J. W. Pappas, London, 1855, 1856. The *editio princeps* of the 'Guide of the Perplexed' appeared first without place or date; then in Heb. Venice, 1561. Berlin, 1791. In Lat. Paris, 1690; Basel, 1695. In Germ. Leipsic, 1699. In Arab. and Fr. S. Munk, 8 vols. Paris, 1856-60. Imb. Leipsic, 1870-81. Eng. 5 vols. M. Friedländer, London, 1863. 2nd ed. in 1 vol. do. 1866. The commentary on the *Mishnah* was first published at Naphan, 1695, and is ascribed to the Lab. in of W. Saragostin, to his *Mishnah*, Amsterdam, 1695-1705.

MAJHWAR, MANJHI.—A non-Aryan tribe numbering, Majhwar 14,310, Manjhi 4083, according to the Census of 1911, and found in the United Provinces of Agra and Oudh, Bengal, Central Provinces, Bihar, and Assam. The name is usually derived from *Skr. madhya*, in the sense of 'headman,' and ethnologically they are closely connected with the Gonds and Kharwars (q.v.).

In the United Provinces the Majhwar possess a well-marked system of totemistic exogamous divisions, some being named from trees, animals, or birds, each of which is held sacred and not injured or eaten by the members of the division who take their name from it. The tribal legend describes the rescue of their forefathers by a tortoise; they therefore worship the tortoise, and will not injure or kill it. Their death rites recognize the survival of the soul after death, and they take measures to prevent the return of the malignant spirits of the dead, particularly those who have died by accident or in some tragic way. But some of the ancestral spirits are supposed to be re-incarnated in their descendants, or in a calf which is taken care of and not used in ploughing. At marriages a fowl and spirituous liquor are offered to ancestors, and in their honour the *padari*, or tribal priest, offers a fire sacrifice (*homa*). Among the special tribal deities of the Majhwar may be mentioned Dulha Deo, the spirit of a bridegroom who in the olden days perished in a specially tragic way. As in the case with the cognate tribes, there is, in their beliefs, a clear distinction between those who live more or less within the range of Hindu influence and those who are less exposed to it. The former worship, under the title of Mahadeva, 'the great god'—a name of *Siva*—a deity who seems to be identical with *Bars Deo*, 'the great god' of the Gonds, both of whom are believed to use the ox as a 'vehicle' (*utthana*). This cult has a basis of phallicism, which is more clearly seen in the worship of *Lingo* or *Lingal* (*Skr. linga*, the phallic symbol). The *padari*, at his periodical visits to his parishioners, worships Mahadeva by rattling a number of iron rings fixed on a staff. The collective village-gods are impersonated by a male deity *Dih* (*Pers. diha*, 'the village'), whose name at least is of modern origin, while his female counterpart is known as the *Deoharin* (Hindi *dehara*, *Skr. deharika*, 'house of the gods'), so named because she occupies the village-shrine, a mass of rude stones piled under a sacred tree, usually the *adi* (*Shorea robusta*). More advanced members of the tribe identify her with the Hindu *Devī*. The shrine contains a water vessel, over which a red flag is hung, and the seat of the deity is a little mud platform on which offerings are laid and a fire sacrifice is performed. The officiant at these rites is the *deiga* (q.v.), the village medicine-man, who holds a goat or fowl facing the east and sacrifices it by cutting off the head and allowing a little blood to drop on the platform. The worshipper, his friends, and the priest then and there cook and eat the flesh. No blood sacrifice is offered to ancestors, but flesh cooked by the wife of the eldest son (perhaps a survival of mother-right) is offered in the family kitchen, where the honoured dead are supposed to live. When they eat they throw a little food on the ground for the earth-goddess. Women may be present at the worship of the higher gods, but not at that of the village-deities. They also propitiate a number of demons or evil spirits, such as *Turkin*, the ghost of a Turk or

Muhammadan woman, and her consort *Barwat*, who rule all the mountain-spirits of the neighbourhood. Other spirits inhabit streams and water-pools, and with these are joined the snake-gods—the *Nag* and his consort, the *Nagin*. A special tribal rite is the worship of the sacred barman tree (*Nandea parvifolia*), which is ceremonially cut down and brought into the village, where the people dance round it to the beating of drums. The rite is probably, like similar rites in other parts of the world described by J. G. Frazer (*GP*, pt. i, *The Magic Art*, London, 1911, i, 247 ff.), a form of symbolical or imitative magic to promote the fall of rain and the fertility of the people, their crops, and cattle (*W. Crooke, PRP* ii, 84 ff.). Only the more Hinduized members of the tribe employ *Brāhmanas*, the real priests being the *padari* and *deiga*, who are usually drawn from the more primitive allied tribes, which are believed to preserve unimpaired the knowledge of the local cults. *Potichism*, so called, appears in the reverence for the sacred chala (*gurdā*) hung in the village shrine, with which hysterical girls are beaten in order to drive out the evil spirit supposed to cause such attacks. The belief in witchcraft, the evil eye, and omens is wide-spread.

LITERATURE.—*W. Crooke, Tribes and Castes of the North-Western Provinces and Oudh*, Calcutta, 1898, III, 413 ff.

W. CROCKE.

MAL, MÅLE, MAL PAHARIA.—A non-Aryan tribe, containing various groups, numbering, Mal 2,135,329, Mal Paharia 54,060, at the Census of 1911, and found in the greatest numbers in Madras, Hyderabad, and Bengal.

The inter-relations of the North and South groups have not been clearly ascertained, but they seem to be, to a large extent, pure Dravidians, and those in the Rajmahal Hills in Bengal are closely allied to the Orissans (q.v.). The Mal, a cultivating caste in W. and Central Bengal, are mainly Hindus, and few vestiges of primitive beliefs can be traced among them. The snake-goddess, *Manasa*, is their special guardian, and they also worship the local village-deities. The earliest account of their religion in the Rajmahal Hills is that by Shaw, which has been supplemented by Risley and Dalton.

'At the head of their system stands the Sun called *Dharum Ganda*, and represented by a roughly hewn post set up in front of each house. He is worshipped with offerings of betel, ghee, and oil at the commencement of the harvest season, and at other times when any misfortune befalls the family. When people are gathered together for this purpose, the village headman, who acts as priest, goes round the congregation with an egg in his hand, and rubs the names of certain spirits. He then throws away the egg, apparently as a propitiatory offering, and enjoins the spirits to both abstain and abstain from troubling the mortals' (Risley, *FC*, 2, 57).

Shaw describes various gods inferior in rank to the sun-god. Whenever a tiger, amalipek, or any other plague attacks the village, *Baksey* or *Rakal* is supposed to desire that a shrine should be raised for him. Accordingly the *deuduo*, or tribal priest, is directed to search for the god. He cuts a branch of the *dihi* tree, and gum benjamin is burned, which he smokes. He is thus enabled to point out a place where he directs the people to dig, and the god, in the shape of a sacred black stone, is discovered. The *mdayak*, or headman, then sets out in search of a large tree, under the shade of which he places the stone, and encloses it with a stone fence and hedge. A fowl and a goat are sacrificed, and the headman or some other worthy person does worship to the god and then retires (*Asiatic Res.* iv, 46 ff.). This god at the present day is the tutelary deity of strong drink, who is worshipped by the headman before he begins to distil liquor from the fresh crop of *māna* (*Bassia latifolia*) (Risley, ii, 57). *Chal*, or *Chalad*, presides over a group of villages, but he is not worshipped until some

plague attacks the people, when the *dewdne* dreams that a shrine should be raised, and the god, when found in the shape of a stone, is placed under a *maknaw* tree near the village, the stone undergoing no change in form from the chisel (*Anaite* *Rev.* iv. 48 f.). Goats and pigs are usually offered to him, but the triangular sacrifice of a cow, mentioned by Shaw, seems now to have fallen into disuse (Risley, ii. 58).

The first worship performed by young men is offered to *Pis Gossin*, god of the road, but it is not undertaken till some accident has induced the worshipper to consult an exorcist, who decides whether a sacrifice will be acceptable.

On the day of thanksgiving at harvest he presents to a high road, and above a space under the shade of a young *bel* tree (*Alph. maritima*), in the centre of which he plants a branch of the *maknaw* tree. Round it he makes marks with red paint and, laying some rice and an egg decorated with three streaks of vermilion near the sacred branch, he invokes the god of the highway to protect him on his journey. A cock is sacrificed, some of the blood being dropped on the branch, and the offering is cooked and eaten by the worshipper and his friends. The rite concludes with the breaking of the egg, and is never repeated unless the person concerned should meet with an accident in travelling (*Adon* *Rev.* iv. 51 f.).

At present the offering prescribed for the god is a white goat, and the sacrifice is very expensive, owing to the large amount of rice-bear which must be offered to the god and then drunk by the assembled worshippers (Risley, i. 58).

The tutelary deity of the village, spoken of by Lieutenant Shaw under the name of *Dwara Gossin* (god of the doorway), is now called *Biru-Dwari*, because he is supposed to live in a temple with twelve doors. The whole village worships him in the month of *Magh* (Jan.-Feb.). Colonel Dalton suggests that this god may perhaps be the same as the *Ornan Gossin*. *Kali Gossin*, 'the Gossin of the mountain-top,' and *Autpa*, the god of hunting, appear not to be known at the present day. *Gumo Gossin*, or the god of the pillar, is represented in every household by the wooden post (*gumo*) which supports the main rafters of the roof. On this the blood of a slain goat is sprinkled to propitiate the spirits of ancestors. The fact that this god is common to the *Malis* and *Mal Paharia*, and is worshipped by both in the same way, seems to tell strongly in favour of his common origin of the two tribes. As in Lieutenant Shaw's time *Ornan Gossin* still ranked high among the tribe, and demands offerings on a larger scale than any other god' (Risley, ii. 59).

At the present day the priests of the tribe are said to be the *dewdnes*, who were originally diviners; but it is declared that generally the *dewdne* does not officiate as priest, but merely directs the village headman, head of the household, or other influential person chosen for the occasion (ib.).

The religion of the *Mal Paharia* is of much the same type. Their chief god is the sun, who is addressed as *Gimain*, 'Lord,' and to whom an offering of rice is presented and then given to a goat, which is decapitated by a blow from behind. The meat is cooked, and served up at a feast, of which the neighbours partake. The head alone, which is regarded as sacred food (*prasad*), is carefully reserved for the members of the family. Next in honour to the sun are *Dharti Mata*, Mother Earth; her servant or, as some say, her sister, *Garami*; and *Singhabhini*, 'she who rides on a tiger,' who rules tigers, snakes, scorpions, and all manner of noxious beasts. The tribe also performs the *Arumna* rite, dancing round the sacred tree (see *MAJHWAR*). Chordani, 'the thief demon,' is a malevolent spirit, who must be propitiated by sacrifice and the offering of the firstfruits of the crop, which, as usual, are under tabu (J. G. Fraser, *GP*, pt. v., *Spirits of the Corn and of the Wild*, London, 1912, ii. 48 f.). To Mahadani eggs are the appropriate offering. *Gumo Gossin*, the house pillar, represents the larva of the household, and every village has its own tutelary deity, which lives in a *ad* tree (*Shorea robusta*). This is periodically doused with red lead, and may on no account be cut down.

From *rev.*—T. Shaw, 'On the Hinduism of the Hills near Balmahal,' in *Annals of the Asiatic Society*, iv (London, 1794) 31 f.; E. M. Risley, *Princes and Castes of Bengal*, Calcutta, 1891, ii.

45 f., 41 f., 42 f.; E. T. Dalton, *Descriptions Ethnology of Bengal*, do. 1877, pp. 130 f., 139 f.; a popular account of the *Paharia*, mainly based on the above authorities, will be found in F. B. Bradley-Bart, *The Story of an Indian Upland*, London, 1904, pp. 12, 137 f. W. CHOCHE.

MALABAR JEWS.—See JEWS IN COCHIN (MALABAR).

MALAY ARCHIPELAGO.—The religious beliefs and customs of the natives of the numerous isles of the Malay Archipelago, all of them belonging to the great Malayo-Polynesian family, were certainly in the main identical, but, owing to historical facts and foreign influences, by far the greater part of the population have forsaken their ancestral creed. The native population, with insignificant exceptions, of Java and Sumatra, except most Battak, profess Muhammadanism, as do the Macassars, Buginese, Mandarans, Bimanes, and some other tribes of the West and North coast of Celebes, and of Borneo; the small islands of Ternate and Tidore are also peopled by Muhammadans. The Balinese in Bali and Lombok are Saivites, with a sprinkling of Buddhists, whereas the *Sasaks* of Lombok are followers of Islam. Christianity is the prevailing religion in Amboina, the Minahama, the Bangir, and Talaud Islands, and has an increasing number of adherents among the Battak, Torajas, Sawunese, and Rotinense; Roman Catholics natives are chiefly found in the Eastern part of Flores. Some small communities of converts to Christianity are also found in Java.

1. Animism.—The religion of the pagan tribes of the Archipelago is what is generally denoted as animism. In speaking of the beliefs prevailing in the Malay Peninsula Sneath rightly says:

'The root-idea seems to be an all-pervading Animism, involving a certain common vital principle (*aswang*) in Man and Nature, which, for want of a more suitable word, has been here called the *Soul*. The application of this general theory of the universe to the requirements of the individual man constitutes the Magic Art, which, as conceived by the Malays, may be said to consist of the methods by which this *Soul*, whether in gods, men, animals, vegetables, minerals, or what not, may be influenced, captured, subdued, or in some way made subject to the will of the magician.'

All this applies to the pagan Indonesians, and, in many respects, also to the natives who have adopted another religion and, in their own opinion, are sincerely attached to it.

Sumangal, with dialectic variations, is the general word with the Malays also in Indonesia for 'soul,' 'vital force,' penetrating the whole body, but distinct from the latter, so that it can leave the body temporarily, e.g., in dreams, and finally at death. The Macassars and Buginese use the same word, *sumanga*, *sumangal* with the same meaning. The Battak use the term *tsudi*, *tandi* for exactly the same idea; and the Dayaks have *Ambaruan*, *amirus*, *amirai*, *Amu*, and other dialectic variations of the same word. With the Torajas in Central Celebes the usual term is *tonoune*, properly 'homunculus'; another expression is *enyo*, or *limbago*, i.e. 'shadow' (Jav. *uwuyang*, Mal. *bayang*). When the soul temporarily leaves the body, it assumes the form of a homunculus or an animal. A man whose soul thus goes forth in order to feed upon the souls of others appears in the shape of a deer, pig, crocodile, monkey, buffalo, or cat. Like many other Indonesians, the Torajas believe that there are witches who can separate their head and entrails from their body in order to suck the blood of sleeping persons. Such beings may be compared with the Mal. *penanggalan*, 'vampires.'

1 With the doubtful exception of the people of Ternate Tidore, Malakka (Giles).

2 Malay Magic, London, 1900, p. 479 f.

The word for 'soul' in Nias is *aso*, which, like Skr. *prāṇa* and Gr. *psūchē*, is properly the 'breath of life,' and then 'life,' 'vitality.' The same may be said of *āśmā* (Jav., Mal. etc.). There are several other Indonesian words for 'soul'—e.g., Tontembuan *imutur*, *amutur*, Sangir *aimutur*, Bontenan *aimutur*, Ponosakan *dimutur*.

The common belief is that not only men, but also animals, vegetables, and minerals have a soul. The Ngaju Dayaks make a distinction between *hamburwen* and *gasa*, the former belonging to men, animals, rice, and money, the latter to slaves, some trees, and things. The *gasa*, like the *hamburwen*, can leave its abode and appear in the shape of a human being to men in dreams.

The soul leaves the body at death, and returns to its origin, the creator, or passes, directly or indirectly, into another human body, an animal, or a plant. The residuum of the individual, however, continues a shadowy existence as spirit. Such a spirit of the dead is called *lisa* among the Ngaju Dayaks, and *dios*, *andios*, among the Olo Dusun. It is commonly believed that the *lisa* goes forthwith to Lewa lian, the spirit land, which it often leaves to roam in the woods or haunt its burial-place. During that time it is often harmful to the survivors, particularly by causing disease.

The common word for 'spirit' in Battak is *begu*, Nias *beghu*, which not only denotes the spirit of the departed, in which case we may translate it by 'ghost,' 'spectre,' but is applied also to superhuman beings, demons, and gods. The Torajes use the term *angas* for the spirit of the dead, and, in particular, *angas* for the spirits of chieftains and heroes. This word *angas*, or *angis*, so wide-spread throughout the whole area of the Malayo-Polynesian, in Formosa, the Philippines, and the lakes of the Pacific, is the common term for the ghosts of ancestors in the Moluccas, Timor, and Roti. The Rotinenses use it also for demons, whereas the Hill Torajes apply it to their gods, who, in fact, are deified ancestors. In general it is difficult to distinguish the ghosts of the departed from the spirits of higher beings or gods, but among some Torajes, who use the term *lamos*, we find that a distinction is made between higher and lower *lamos*.

According to E. H. Cushing (*The Moluccans*, Oxford, 1891, p. 124 f.), 'It must not be supposed that every ghost becomes an object of worship. A man in danger may call upon his father, his grandfather, or his uncle; his awareness of his is sufficient ground for it. The ghost who is to be worshipped is the spirit of a man who in his lifetime had means to him.'

The same may be said with reference to the people in the Malay Archipelago, and not the heathen exclusively. The ghosts of different kinds are not equal in power. The Karo Battak hold the ghosts of stillborn children in particular awe, making little houses for them, and honouring them with offerings. The inhabitants of the Luang Sermata Isles believe that the ghosts of those who have died a violent death are most powerful and zealous to help their kinsfolk. In Halmahera the ghosts of persons killed in war or by accident are called *diñdi* in Galelases, *diñdi* in Tobalores. They are more powerful than other ghosts, protecting the living, especially in battle,¹ and are worshipped in the village temple. The Torajes also honour the ghosts of those who have fallen in battle.

To another category of ghosts belongs the protecting genius of places, regarded as the founder of a village or the common ancestor of the population. In Java every village honours the ghost of its founder, the *tyahat dion*, with

frequent offerings. The tutelary deity of a place is called *ganyang*, i.e. 'the god'; as the name implies, he is not a ghost, but a supernatural being. The worship of the reputed founder of a settlement is very common in the Moluccas. The Galelases call the genius of a village and the forefather of its people *wong*.

The Indonesians in general live in constant dread of innumerable ghosts, who are mostly malignant, and therefore must be propitiated by offerings or warded off by other means. Most feared is the *ponosak*, a word which with slight variations recurs in the whole archipelago, the Malay Peninsula, and the Philippines. The *ponosak* is the reputed ghost of a woman who has died in childbirth and, out of jealousy, penetrates the bodies of pregnant women to kill the unborn children. Usually she is thought to have the shape of a bird,² but to be invisible when she approaches her victim. In the archipelago the customary prophylactic against her insidious attempt is to suspend the thorny branches of a certain lemon-tree, the fruits of which are also employed as a means of repelling ghosts (for other means see Kruijt, *Het Animisme*, pp. 265-261).

All sorts of diseases are ascribed to the baleful influence both of ghosts and of other spirits. Especially in Nias we find several names of *beghu* who are held responsible for the appearance of different diseases and evils. It is no wonder that the people employ every means in their power to cure sickness or to prevent threatening attacks. In apprehension of the danger which may accrue from the dead, the Malays take care that the dead body is so treated that the ghost may not return. With many tribes one of the symbolical means of doing this is to scatter ashes, as if to blind the ghost.³ The relatives of a deceased person have to undergo a longer or shorter period of mourning, during which they must wear the conventional mourning dress, observe certain restrictions in the use of food and drink, and refrain from amusements. At the end of this period it is customary for some tribes to offer human sacrifices, the ruling idea responsible for this custom apparently being that the ghost ought to be given a companion by way of propitiation.

It is commonly believed that the ghosts of the dead remain for some time in the neighbourhood of their former dwelling, whence the custom of erecting a hut in which to place the necessary offerings. With some Indonesians it is usual to prepare a bed of state for the ghost during the first days after the death. Even the Christians of Amboina and the Sangir Isles believe that the dead man pays a visit to his former home on the third day.

The ghosts continue to wander and meet with all sorts of difficulties before finally reaching the realm of the dead, which is situated somewhere in the West. When they are supposed to have arrived there, a great commemorative feast is arranged, such as the *tiwakk*⁴ of the Ngaju Dayaks and the *longs* and the *mompom* of the Western Bare's Torajes.⁵ For the ceremonies of the feast among the Dayaks of Sarawak see Ling Roth, *The Natives of Sarawak*, i. 208-210.

In the primitive belief of the less civilized Indonesians there is a bond of connexion between a dead man and his body, chiefly his bones. It is usually the skull that is used as a medium for

communication. It is preserved with great piety, honoured with offerings, and worshipped. Not seldom a magic power is ascribed to parts of the body, which thus come to be in reality miracle-working relics. Another medium of communication is found in idols representing the deified ancestors; these are held to be inspired after due initiation. Such images are very numerous in Nias, where they are called *adu*, and occur also in Ceram and in some parts of Borneo. The Battak have no idols of particular ancestors, but keep two puppets in their houses, one male, the other female, called *Bilaon* ('the primeval ones'), or *Debatu idup* ('deities of life'). They seem to represent the primordial couple from whom mankind is sprung. Among the Ngaju Dayaks puppets called *Ampatong* represent the ghost (*gana*) of the slaves of the deceased at the *tiwah*, but the term has also the more general meaning of 'puppet.' The Toraja tribes, on the other hand, except the To Laga and To Onda's, have no images, but wooden masks (*pasaka*). Stones are also objects of worship, as well as certain earthen pots or urns, which are regarded as sacred and inspired.

2. Shamanism.—The belief that persons, during madness, epilepsy, and sometimes abnormal states of mind, are possessed by spirits has led to attempts to reproduce the same phenomenal conditions in order to get into contact with spirits to learn from them what medicines to apply or how to act in matters of importance. The medium through whom the spirits manifest themselves is the shaman, who is brought into a state of mental abnormality by artificial means, the rites employed for this purpose being multifarious among the peoples of Indonesia, but, in general, similar to what we find elsewhere—e.g., among the Burjats (q.v.).

The Battak distinguish the shaman (*sibaso*) from the priest (*datu*). Though their functions are not seldom analogous, there is this difference between them: the former acts unconsciously, under inspiration, whereas the latter gives his decision, based upon his knowledge of the books of his craft, in full consciousness. With the Dayak tribes it is a priest or priestess who acts as medium. The *dayang* of the Kayans is a priestess who sends her own soul to bring back the soul (*blua*) of a sick person, or to conjure up the ghost of the dead. The *manang*, a word properly meaning 'one who exercises power,' is with the Sea Dayaks the man who is able to meet and converse with spirits. The same character belongs to the *wasian*, *belian*, *basir*, or *dayang* of other Dayaks. Such persons are more properly medicine-men than priests or shamans. Yet it is true that in doing their work they occasionally show signs of ecstasy caused by their being inspired. A peculiar kind of shamanism, which, however, is of foreign origin, is found in Halmahera.¹

3. Fetishism.—Various substances are supposed to conceal a powerful soul within themselves. They are therefore held sacred and worshipped in one way or another in the hope that by their power some desired object may be attained. All over the archipelago we find the use of so-called thunder-stones, chiefly as a means of gaining invulnerability in battle or as a preservative against lightning. Not less common is the belief in the wonderful effects attending the possession of the banner.² A high sacredness is attached to stones of a certain uncommon shape, especially in the eastern isles of the archipelago. In Timor the finder of such a stone, considered to be the abode of a spirit, puts it on a sacred place (*waso*) and

brings sacrifices to it. It looks as if such a sacred stone is a rude form of idol, for idols also are inhabited by the deity. Various other fetiches are used as amulets, and a prophylactic fetich called *motabur* is in common use. It consists of a collection of leaves and sticks, which are hung in fruit trees to repel thieves. With the Torajans and Dayaks the suspended materials are mostly of a sympathetic character.

4. Mythology.—In general it may be said that the pagan Indonesians recognise the existence of real gods, and that the supreme god is the creator, more or less directly, of the world and the preserver of it, and punishes the transgressors of his laws. In the Moluccas and the South-Eastern Isles the supreme deity is generally known under the name of Upu Laro (with dialectic variations). The word means 'Lord Sun'—a sufficient proof of his origin. Upu Laro may be identified with Upu Langi, i.e. 'Lord Heaven.' The earth is a female deity, and represents the female principle, who, in the West monsoon, is impregnated and fructified by the male principle, Lord Sun-Heaven. Similarly, the Torajans recognise two supreme powers: *Ilai*, 'the Man,' and *Indara*, 'the Maiden'; these formed men, but not animals or plants. In the Minahama Muntumunts is the sun and lawgiver. In the confused mythological lore of Nias we find Lora Langi represented as the creator of men, though he himself is not primordial, but came forth from the bud of a tree. His counterpart is Latara, the chief of the evil spirits, who, curiously enough, is said to have his seat in the sun; he is the master of all that is perishable. The highest god of the Toba Battak is *Ompa mnia jadi na bolan*, 'the Great Lord Origin of the Creation'; and his subordinates are the three gods *Debatu na tolu*: *Batara guru*, *Soripada*, and *Mangala bolan*. The use of the somewhat corrupt Sanskrit words is sufficient proof of foreign influence, but the name of the highest god is original. *Batara Guru* is a title of *Iiva* among the Saivites in ancient Java. Among the Karo Battak he is the highest god; and likewise among the Macassar and Buginese in former times. The Sanskrit word *Maṭṭara*, in some more or less changed form, is found in many Indonesian languages in the sense of 'god' or 'divine being.' So the Ngaju Dayaks call the creator *Mahatara*, but also *Hatalla* or *Mahatalla*, borrowed from Arabic *Allah ta'ala*; and the same name is used by the Manyan Dayaks. With the Sea Dayaks *patara* or *batara* is a name for higher beings. Thoroughly original is the word for the supreme being in Halmahera, viz. *Galelaren Gili-moi*, *Tobeloren Gili-moi*, the 'First Being.' The moon plays a considerable part in the myths, but not in the cult; but there are traces that formerly it was otherwise. In the belief of the people of Babar Barawolai, the war-god, has his seat in the moon, with nine female ministers.

The host of minor deities or demi-gods is so great that only a few classes can be mentioned here. The *angpangs* of the Ngaju Dayaks are benevolent demi-gods related to men. The most powerful of them is *Tempon talon*; his principal function is to conduct the ghosts to the land of spirits. The *djatas* (from Skr. *devatā*) are water-gods, whose ministers are the crocodiles. The water-spirits are called *taghasangorys* in Nias. The *Aantus* and *Aantusens* of the Ngaju Dayaks are malignant spirits, or demons, whereas the *ansu* is considered by the Sarawak Dayaks to be a helpful spirit. The belief that demons make their appearance in the shape of snakes, dogs, pigs, crocodiles, tortoises, and men is very general. The Kayans have a great number of gods—e.g., a god of war, three gods of life, a god of storms and thunder, of fire,

² For the Miao of the Malay in the Peninsula see Huxley, pp. 125-126, 273; see also following article.

Tranggana on the east coast, all of which have recently been taken under British protection, and also the State of Patani, which is under Siamese suzerainty. To the south of the Federated Malay States lies the State of Johor, also now under British protection. It is common to speak of the units of the British sphere as British Malaya, a term which formerly included our far greater possessions in Sumatra and the densely populous island of Java. Occasionally the term is more accurately extended to include the island of Labuan, British N. Borneo, a British possession, and the protectorates of Brunei and Sarawak also represent British interests in Malaya, though the conditions there differ materially from those in the peninsula and ought to be considered with the archipelago.

2. *Ethnological affinities and history.*—The ethnological affinities of the area of which the Malay Peninsula forms a part, as well as of the adjacent areas, are still obscure in many respects. In so far as they have yet been elucidated by ethnological investigations and an examination of historical records, they bear out conclusions deducible from the geographical data. The Malay Peninsula itself would appear from very early times to have served as a causeway for migrations from the Asiatic continent, while the protected character of the waterway on the west side, and the richness of this part of the peninsula in minerals and other products, have favoured its economic development, and made it not only attractive to higher civilisations, as the study of its entire history shows, but also a rendezvous of merchants and workers from many far-separated countries. At the present day not the least important element in the population consists of a congeries of alien races, Chinese from the southern provinces of China, Canton, Fu-kien, and the island of Hainan, Tamils from S. India and Ceylon, and, in a lesser degree, Sikhs, Panjabis, and Pathans from N. India, and Javanese and Malays from all parts of the Eastern archipelago. In the north of the peninsula isolated outposts of Siamese have pushed for a considerable distance over the Kra Isthmus, overstepping the ancient ethnological boundary of the peninsula. Old forts can be traced in the Patani valley and for some way down the Perak valley, the defences of which were strengthened with a hedge of thorny bamboo, which is not indigenous in this region. On the Upper Perak valley and in a few places further south there are distinct traces of Siamese influence in comparatively recent times.

(a) *Malays.*—The peculiar importance of the native religions of the region here discussed is due to the fact that they exhibit a clearly-defined series of superimposed ceremonial strata, native (i.e. aboriginal of at least two different types, and Malayan) Indian and Islamic. The most recent ethnological investigations confirm the view that the native population consists of the descendants of immigrants of a comparatively recent date, superimposed upon a more ancient stratum consisting, to a great extent, if not entirely, of aboriginal races. The Malays proper belong to the modified Southern Mongoloid group of peoples found in Formosa, Sumatra, Java, and throughout a great part of the Malay Archipelago. When the Palembang emigrants first began to arrive from Sumatra, about 900 to 1000 years ago, introducing a Hinduised civilisation into the peninsula, it is probable that they found some Indo-Chinese races of superior culture already in possession. This is suggested by certain features of the aboriginal dialects, and by other considerations.

It is of great importance to note that some of the Sumatran settlers, who followed, after some cen-

turies, the earlier Palembang colonists, are still in the matriarchal stage as distinct from other Sumatran settlers, by whom customs of a patriarchal type are followed. In the Malayan phrase, the people of the Nègri Sembilan 'follow the *adat berpatah*,' which may be described as '*Patapatah* custom,' whereas the other Malays of the peninsula 'follow the *adat Temenggong*' ('custom of the *Temenggong*'), these two contrasted bodies of custom being based on mother-right and father-right respectively.

These Sumatran settlers, who were agriculturists, amalgamated with the aborigines, at any rate in some districts—e.g., in the State called Nègri Sembilan—but the conversion of the Malays from tolerant Hinduism to Muhammadanism from the late 14th to the 16th cent. began to drive the aborigines into the jungles and hill fastnesses of the interior. Since that time Sunni Muhammadanism of the Shāfi'ite school has remained (as in Java) the official religion of the peninsula, although among the less educated of the Malays it is the merest veneer covering a vast body of practices and beliefs which can be traced either to the influences of Hinduism or to primitive aboriginal beliefs, such as are still held by the aborigines. Malay Islamism is nevertheless still fervent.

It may be remarked that the Malay Peninsula belongs geographically and ethnographically, to Indo-China, a name which well expresses the fact that, with hardly any exception, the congeries of races inhabiting the peninsula from time immemorial represent strata of races belonging to one or other of the two chief families of nations in various parts of Asia, viz. a Mongoloid and a non-Mongoloid, both terms being used broadly. Belonging to the latter family we have (1) Indonesians (defined by A. H. Keane¹ as the pre-Malay 'Caucasic' element, of which the Veddas and Korumbas, and one at least of the Australian aboriginal races, are typical), often called 'Dravidian' (though, like 'Malayo-Polynesian,' this term should strictly be confined to linguistic affinities); on the other hand, we find, as representatives of the same great family, (2) a more highly developed or specialised type, possibly the tall brown-skinned Polynesian. These two main Indonesian types are said to be represented in the peninsula, the pre-Malay 'Caucasic' element of the Korumbas-Veddias type, by the aboriginal Sakai, centred in S.E. Perak and N.W. Pahang (cf. one of the basic elements in the Malay language),² while to the pre-Malay Oceanic 'Caucasians' (of the Polynesian or Maori type) belong the taller east coast 'Malays' of Kelantan and part of Patani. The latter may be described as very tall, somewhat fleshy, large-limbed men, with light brown or cinnamon-coloured skins, straight or wavy black, sometimes nearly curly, hair, and regular, sometimes almost European, features.

Again, the great Mongolian family of nations is represented both by the Siamese (or Thai) in the northern portion of the peninsula and by the Malays themselves in the southern part, the Malays proper being perhaps best regarded as a highly specialised offshoot of the southern or 'Oceanic' Mongoloid race, immediately immigrant from central and southern Sumatra. They have long, lean, bluish-black, straight hair, of circular section, and are almost beardless, with skin of a dark yellow-brown or olive hue (or the 'colour of newly-fallen leaves'); they are round-headed (brachycephalic), and often have more or less wide

¹ *Man Past and Present*, Cambridge, 1899, p. 221.

² R. O. Winstedt, *Malay Grammar*, Oxford, 1912, p. 12.

This connexion was first definitely asserted by Prof. H. H. Schlegel of Mötting, Austria, and is now generally accepted; it establishes an ultimate prehistoric relationship between Malay and the languages of the aborigines in the Peninsula' (ib.).

and flattened nose, and somewhat thick ears, and on the average are about 1.41 m. in height. The women are usually much shorter than the men. Both sexes have rather short, often almost stumpy, feet, with toes that are to some extent prehensile; they will walk up a thin sloping pole leading to a raised platform or house-floor by gripping it with the hands and at the same time holding it between the great toe and remaining toes of each foot. Their joints are remarkably fine and small; the dagger-ring of a well-developed old style rebel chief, which was worn on his forefinger, was too small for an average-sized little finger of a European. A jungle Malay can commonly perform certain feats with his limbs that are impossible to a European unless he has been specially trained as an acrobat.

In Sumatra the race was moulded by Indian influences into a comparatively civilized condition before they crossed the peninsula. When they arrived, they found the country occupied by the three pagan races (see below, (b)), whom they drove before them into the fastnesses of the mountains and jungle-clad interior. It is thought that they also found some branch of the Môn-Khmer or Môn¹ races holding the coast-line and other points of vantage, and thus occupying almost the same relation towards the aboriginal races as the Malays do at the present day, and that they then partly absorbed the Môn, by thinning them of their women, and partly drove them into the jungle. This episode is, however, a lost chapter in the history of the peninsula, although some such theory seems evidently necessary in order to account for all the actually extant conditions.

The Malays proper are but partially civilized, a graft upon a savage stock, allied not only to the Central and Southern Sumatrans and Indonesians, but also perhaps ultimately to the Chams of Champa.² See CAMBODIA, CHAM.

The hereditary savagery of the Malay nature, for many years after the introduction of the British Residential system (introduced to curb the turbulent Malay Rajas, who were fostering piracy), continually broke out, the commonest form in which it showed itself being perhaps the *amel*, the national Malay method of committing suicide, until the gradual strengthening of the right arm of British law made it too risky to indulge in, when by degrees it became unfashionable. Other striking evidence of the high-strung excitability of the Malay temperament is still to be seen in the form of the mysterious disease called *latah* (corresponding to what has been called 'erotic hysteria'), which also has not yet been thoroughly investigated.

(b) *Aborigines*.—Various theories have been put forward as to the ethnological character of the several wild races which form the substratum of the population. It was held by the older ethnologists that they belonged to a homogeneous group—a Negrito race modified by admixture with the Malay population. This is what has been termed the 'Pan-Negrito' theory of A. de Quatrefages, N. von Miklucho-Maclay, and others. This hypothesis, however, has proved untenable, and the result of later researches has established the

fact that at least three types are to be found among these primitive tribes. Of these tribes two, at least (the Semang and Sakai), can be found in a relatively pure state, though only in very limited areas, and the third (the Jakun) is probably nowhere really pure. Admixture between the three has taken place in varying degrees throughout the peninsula, and the only satisfactory procedure anthropologically is to compare each tribe with the pure, unmixed standard or standards to which it is most closely related. By no other method can any really useful conclusions be reached, or, indeed, the drawing of the most fallacious inferences avoided.

(1) *Semang*.—The Semang are a nomad Negrito race—comparable with the Negrito (Pygmy) peoples of Central Africa, and probably most closely connected with the Andamanese, whose group of islands lies off the Burmese coast at its southward end—belonging to a primitive group of peoples found to a greater or less extent as a relic of the aboriginal population as far as New Guinea and the Philippines, although it is remarkable that no traces of any such race have yet been quite proved in Borneo midway between these two Negrito centres. The physical characters of these people are short stature (1.401 mm. male, 1.408 female), brachycephaly, skin varying from dark copper or chocolate to shiny black, hair woolly, nose broad, lips everted, beard scanty. They extend from Patani to Kedah, and from Kedah to Mid-Pinak and N. Pahang.

In view of the fact that the Semang (or, as they are called on the east coast of the peninsula, Pagan) are so frequently described as being of Negro character—'like African negroes seen through the reverse end of a field glass'³—it cannot be too strongly stated that this is a mistake. At the utmost, it may be conjectured, with W. H. Flower, that they represent, with the true Pygmies, an original undeveloped stock from which the Papuans, like the Negroes, may have branched off. But even for this theory there are many difficulties, and it cannot be said to have been in any way established. Hence the Negrito and the Negro must be regarded as totally different races—the former having short or round heads and the latter being long headed.

(2) *Sakai*.—The Sakai were at one time regarded as Semang admired with Malay, but are now clearly differentiated as a separate and independent type, most nearly akin to the Dravidian group of peoples. They are taller than the Semang (average height 1.604 mm. male, 1.437 female), dolichocephalic, skin very variable, light to dark brown, hair wavy, nose fine and small, cheek-bones broad, mouth small, lower lip full and projecting, beard as a rule non-existent. The habitat of the purest Sakai is S.E. Perak and N.W. Pahang.

(3) *Jakun*.—The Jakun are a mixed group inhabiting especially the south of the peninsula, probably everywhere blended, to a varying extent, with Semang and Sakai. This fact is the more remarkable since a relatively important element running throughout all the aboriginal dialects in

¹ Pronounced 'Mow'. The Môn, or Taling, are remnants of an old pre-Malay ('Austric') race which once covered the whole of lower Burma. The Taling language is the oldest literary remnant of Indo-China, and is fast dying out, though it is the original tongue upon which the Burmese alphabet and religion were modelled, and in which were composed the Môn inscriptions, which go back to about the 11th cent. of our era.

² The Chams distinct has in recent years been shown to contain Malay elements (R. Aymonier and A. Chaboud, *Dictionnaire des Français*, Paris, 1905). One of the most popular customs (though in this case non-Malay) attributed to the Chams is that the woman eat the man in marriage.

³ Wilkins has recently suggested that five aboriginal race types should be recognized. When, therefore, the new elements such as would be required in order to form the two proposed new types, have been differentiated, and these elements are all shown not to be referable to either one or the other of the three types already identified, the problem will have reached a further stage of development. Certainly, as there are still some unexplained points, it is probable that some further racial element may eventually be isolated (see F. H. A. Goss, *Papers on Malay Subjects*, Aboriginal Tribes, 1910).

⁴ Hugh Clifford, *In Court and Camp*, London, 1897, p. 172. But this is a misquoting slip for an author who has done as much as any other two men to familiarize the English public with the peoples of Malaya.

⁵ This all important differentiation was first clearly established by E. Martin, see his *magnum opus*, *Indonésien des malay-Indes*, Leiden, 1905.

varying degree consists of some Malayo-Polynesian tongue, the vocabulary of which shows affinities with the Malayan languages of the Far Eastern Archipelago, unlike modern (peninsular) or standard Malay. The reason for this is not apparent, unless we may conjecture that at some remote period a race whose national speech was of this Malayo-Polynesian type prevailed in the peninsula. The Jakun may be classified as consisting of at least three related groups, blended as above. In so far as they are of Malayan type, they should be to that extent regarded as aboriginal Malays. In physical character they are a little taller than the Sakai, the head is brachycephalic, the skin dark coppery, hair long, straight, and smooth, nose thick, flat, and short; the eyes show little tendency to obliquity, and the mouth is large and broad, with well-formed lips. The Jakun proper are divided by the Malays into Hill Tribes (Orang or Jakun Bukit) and Sea Jakun (Orang Laut).

The surest test in regard to these tribes is the hair-character; hence we may distinguish the three main racial groups as ulotrichi ('woolly-haired'), cymotrichi ('wavy-haired'), and lisotrichi ('smooth-haired').

There has undoubtedly been a considerable admixture between all the wild tribes, but, owing in particular to their being still pagans, it is improbable that they have been materially affected by intermingling with the Malays, since nothing could be rarer than that a Malay woman should demean herself by marrying a heathen husband. The case is rather the other way about, since a Malay marrying a woman of the wild tribes would see that his children were brought up as Muhammadans, while in many districts, especially in Kedah, the adoption of the Muhammadan religion by a large portion of the aboriginal Samang element has caused them to be reckoned as part of the recognised Malay population.

3. Culture.—(a) *Malays*.—Apart from such tendencies as have already been mentioned, the Malay character may be regarded as a softened and more civilised form of the Mongol, since under ordinary circumstances he may be relied upon to show himself a peaceable, quiet, civil, and loyal subject, though he still retains much of his old proud sensitiveness, and in inland districts he is still reserved in his ways of life, and to some extent suspicious of strangers. In countries where he is less trammelled by civilisation, the Malay is frequently of a bold and even savage character and makes an excellent soldier; there should, therefore, be no doubt that with training he would soon develop first-rate soldierly qualities. His alleged laziness is due in part to his natural reserve, which allows more pushing races to outstrip him, and in part to the simplicity of his life, and to the absence of any spur to industry in a land where the climate supplies out of its own superabundance the greater part of his few simple wants—a land which to him is a veritable 'land of fruits,' of 'bowery hollows crowned with summer sea.' It must be remembered, too, that before the advent of the British the employment by his rulers of the *brak* or *corvee* system, as well as the wide prevalence of debt-slavery, made it difficult for the average Malay to reap the reward of his labour.

Among the institutions of the Malay race which it shares more or less with other races in the same region are the use of sea-canoes (*prahu*), once associated with piracy, the building of houses on piles (inland as well as on the border of tidal

river), the use of the blowpipe with poison-tipped darts (now practically confined to the aborigines), and the *kris*, the *sarong* (the national Malay pleated skirt-like garment, closely corresponding to the kilt of our own Highlanders, though worn somewhat longer on the western seaboard of the peninsula), the filing, gold-plating, and blackening of the teeth (now all but completely obsolete customs), the use of the *balak*, or council-hall (now confined to Rajas), and a strong belief in animism. In spite of being animists at heart, however, the Malays are not infrequently more or less bigoted Muhammadans, being in this respect at the very antipodes to the Battak of Sumatra, who have a literature of their own, and who are still to some extent inclined to be cannibals.

The Malay traditions and romances contain distinct references to human sacrifices, which would appear to have lasted until the advent of the British. The men show mechanical skill of a high order, and would probably respond readily to a more advanced training especially in engineering. Many are still adept in manual arts, notably in those belonging to the jungle and the sea.

The material culture of the Malay is of the insular Malayan (chiefly Sumatran) character. It has never been influenced by Hinduism to such an extent as, for instance, the culture of Java (as exemplified in the architecture of Borobudur and other famous temples of ancient date in that island). The Malays are skilled and artistic craftsmen in certain arts, though in others they are somewhat conspicuously backward. Their textile work reaches a high standard, and they display considerable ingenuity in their weaving processes and in combining their dyed threads to produce elaborate and often intricate patterns, among which a variety of check patterns predominate. In metal-work, especially in the working of silver, their taste is, under favourable circumstances, less florid than the Indian and less coarse than the Chinese. In ornamenting metal and damascening, in inlaying, and especially in niello-work, their work, both in design and in technique, is excellent of its kind. Distinction in such branches of metallurgy as the manufacture of blades for their kramas, and other weapons, is rare, though not non-existent; a high degree of skill in the adornment of the hilts of weapons and the sheaths in which they are kept is appreciably common. They pay special attention to the manufacture of waved kris-blades, and their damascene-work is a technical process of considerable elaboration, the more so because the proportions and even, in some cases, the ornamentation of the blade are determined by an elaborate set of rules governing the dimensions and intended properties of the various portions. These rules are not entirely technical, though compliance with them requires some degree of technical skill, but are in part magical, and designed to secure excellence in the blade and success in its employment. Similar rules are sometimes applied in a lesser degree to the *gurus* (woodman's knife). Metal casting by the *cire perdue* process is known and employed not only for copper but also for white metal or *stannic* (sometimes popularly called 'tooth and egg' metal). Coins (round cash) were formerly cast on the east coast in the form of 'cash-trees,' from which the cash were snipped off, and before the British entered the country the superfluous tin was run into ingots shaped like elephants, crocodiles, cocks, etc., which were used as currency.¹ Time was reckoned by water-clock (as in India and Ceylon and also, it may be mentioned, in ancient Britain). That for the mains at cock-fights in Kedah was kept by means of a

¹ These grooves, being many bands perforated by large numbers of small, and of extremely shallow draught, could habitually slide through by means of small beads by slipping over the innumerable finger-bands of the peninsular, and escaping into the network of sub-water canals. It was not till the second half of the 19th cent. that the grooves were vanquished by the paddle-wheel.

² R. G. Temple, *The Chinese Pao Currency and Money of the Federated Malay States*, Malacca, 1914 (reprinted from *LD*).

perforated half coco-nut shell cut afloat in a water-bucket, and timed to sink in a definite period. Pottery is made both with and without the wheel, and also by moulding in a split trunk, but in a few places only, and is often crude; on the west, in some cases, Indian influence is traceable, the types being both graceful and artistic. In some cases hematite, which turns black on firing, is used as a varnish. The wide-spread use of bamboo and the palm-leaf bucket as a receptacle is, no doubt, responsible for the lack of a more extended development of stoneware, in spite of the great abundance of clays suitable for porcelain. On the east coast generally, and less commonly on the west, mat-making is a fine art; at Malacca highly artistic baskets are made of twisted strips of pandanus. The woodwork of the Malaya, as shown in the ornamentation of household utensils, as well as on the structural side of house and boat manufacture and furniture, is excellent, though as regards mere ornament it is decidedly scanty—the heart-breaking effect of the superficial Muhammadan veneer which has been imposed on the Malaya from without. The further from such influences, the commoner such ornament becomes, and the better its quality. The Malaya are especially ingenious in adapting means to ends and in conforming to the conditions of their surroundings; their houses are well adapted to the conditions of life of a jungle-dwelling race, whilst the seaworthy qualities of the Malay *prahu*, or sailing-boat, bear witness to the reputation of the Malay as a sailor.¹

(b) *Aborigines*.—The culture of the wild tribes presents generally many features of similarity. The inland tribes are still nomads to some extent, existing largely by hunting, fishing, and the produce of their search for fruits and roots of the jungle. But most of them practise a primitive agriculture, sowing in a rude way small patches of rice or millet; their method of cultivating their half-wild orchard-trees, which grow as well in the jungle as elsewhere, is limited to throwing away in certain patches of the jungle the seeds or stones of the fruit they have eaten. The Sea Jakun are especially skilled in all devices for securing a livelihood along the foreshore, while the jungle tribes give evidence of a high degree of ingenuity in slaying and snaring their game by hunting and trapping.

The Semang are the most nomadic of the pagan tribes, though they are now taking to agriculture. Their typical clothing consists of a girdle of leaves or barkcloth, or, on festival occasions, a belt of shining black strings, made of the rhizomorph of a toadstool. Their typical habitations are of a primitive character, consisting of mere lairs, or rock-shelters, or of simple round or rectangular leaf-shelters planted on the ground or in trees. Those of a more developed type are large enough to shelter a whole tribe, each individual having a separate fire and bamboo sleeping place. Frequently the head is more or less shaved and the teeth are filed to form a concave surface, possibly in accordance with a once usual Malay custom. They do not circumcise or (as a rule) chew betel, nor do they tatu or scarify the body. They have no boats, but use bamboo rafts on the river-reaches. Their most distinctive weapon is the bow with poisoned arrows; in fact, among the pagan tribes, the bow is, in the present writer's opinion, good prima facie evidence of Semang admixture; the northern Sakai, who also possess it, have most likely borrowed it from the Semang. Almost all, however, now also employ the bamboo blowpipe, of a different type from that of the Sakai, the idea

of which has been copied, in all probability, from their Sakai neighbours.

The Semang have no organized body of chiefs, but each tribe has a single head-man. The tribes are organized in villages, each under a chief, to whom disputes are referred. Quarrels between villages were settled by meetings of these chiefs. Complete equality exists as between individuals, and all property is held in common. Crime is rare, and punishable generally by fines.

The Sakai, a mountain race, are still largely nomadic. Their habitations consist of tree huts and temporary shelters; their clothing is a loin-cloth of tree-bark, though they also decorate themselves on occasion with a girdle of leaves. They tatu the face and practise scarification and body-painting, and sometimes wear a porcupine quill or a metal ring through the nasal septum. Their distinctive weapon is the bamboo blowpipe. Agriculture is of a very primitive type, the principal implement being a digging-stick. They use neither boats nor rafts. The ornamentation of their implements, more especially the blowpipe and quiver, is considerably more artistic than that of the other aboriginal races.

Their social order, like that of the Semang, is of a primitive type; the only functionary is the *pangulu* (Mal. 'head-man'), who has every right over his tribe. Except when enforcing his position, however, he is only the equal of his fellow tribesmen. The office is hereditary, but, failing a direct heir, the *pangulu* may appoint his successor during his lifetime. In their laws the penalty of death is reserved for murder, the relatives of the victim being the executioners. Cases of this kind are rare. For theft, also rare, the punishment is exclusion from the tribe. For other crimes the delinquent makes compensation, or pays a fine. Individual property does not exist, its place being taken by family property. The family as a unit cultivates the land, and the produce is shared between the members. The limits of the family property are designated by the *pangulu*, and abandoned land may not be taken up without his consent.

A more highly developed social order exists among the Jakun, or aboriginal Malayans, as represented, e.g., by the Southern Sakai, who show strong Malayan influences.

The Jakun are still to some extent a community of hunters, although among the Land Jakun agriculture is practised, more especially rice-planting. Their clothing resembles that of the Malaya, but is scantier. They sometimes file their teeth to a point. Their typical weapon is a blowpipe of bamboo, or, as in Kuantan, uniquely made of two half cylinders of wood fitted together for the purpose—corresponding exactly to a form of blowpipe used in Para. They have no bows. They use spears and outlances; in some cases they also carry sword and kris like the Malaya. They live in huts built on piles and use 'dug-out' boats of hollowed tree-trunks, but on the river only, not on the sea. They still use face- and body-paint, but do not tatu or scarify the face. Their marriage customs include, like those of the Malaya, 'bride-purchase,' the ceremony of eating together, and, in addition, the bride-chase, which takes place round a large ball-shaped mound, constructed for the occasion, or an ant-hill or tree, if the tribe is a land one, or in a dug-out canoe—the form which it took among the sea-gypsies (Orang Laut). Their social organisation is of a distinctly higher type than that of either Semang or Sakai. The chief of their tribe, the *batin*, is the head of a group of villages, and has certain subordinate officials

¹ See H. Worthington Smyth, 'Boats and Boat-building in the Malay Peninsula,' in *Journal of the Soc. of Arts*, 1902 (reprinted in *IA* XLIV, [1902] 97 ff.).

² *Pangulu* = Mal. 'head-man' (from etc. Mal. *ulu* or etc. 'head'). On the other hand, *potime* or *panglima* = Mal. 'head-man' (from etc. Mal. *lima*, 'head'), i.e. executive officer.

who represent or act for him upon occasion. Thus, among the Batak of Langkat, the *batun* is the arbiter of all disputes referred to him by the sub-chiefs, besides being the priest at marriages, the magician in cases of illness or disaster, and the judge whose duty it is to punish wrong-doing. His substitute is the *pinang*. Their subordinate, known as the *pinpang* or *batun*, has charge of the tribal feast and council, whilst the *jabat* (probably = *Mal jurat*, or 'corvée officer') is the summoner of the tribe; the *pinpang* is the *batun*'s executive officer. Among the Batak each *batun* has authority within his own jurisdiction, but difficult or unusual cases are referred to a council composed of all the *batuns*. In this division of the Jakun, as indeed among all, crime against personal property is rare, and is expiated by payment of fines in the form of *saure* Chinese plates or *saure*. One half of the fine goes to the *batun* and one half to the injured person. The office of *batun* descends, as a rule, from father to son, except among the Johor Jakun, where the eldest son has to be accepted by the tribe, and, his brothers as well as himself are rejected, a stranger to the family is elected. If suitable, the sons of minor officials would be appointed by the *batun* to succeed their father. The inheritance of property was generally from father to children, but varied from tribe to tribe in the proportion assigned to sons and daughters or to wife and other relatives. Property held by a man before marriage among the *Maista* was assigned on his death to his parents, brothers, and *saure*.

c. Languages. (a) Malay.—The Malay language belongs to the Malayo-Polynesian family, a sub-group of which extends sporadically over an amazingly vast insular area, extending from Formosa in the North to New Zealand in the South, and from Madagascar in the West to Easter Island in the Eastern Pacific.¹ Malay itself has, moreover, very considerable importance as a *lingua franca* over a great part of the same region. In recent years a connection has been sought between the Malayo-Polynesian family of languages and a family of Austro-Asiatic languages, including E. As. Mon. (Central India), Khmer (Siam), Mon, or Tai, and Khmer, or Cambodian (Indo-China), Mon, and the aboriginal dialects of the Malay Peninsula. This extension is now generally accepted.² This fact would naturally set off the Malayo languages as prehistoric (from off) the corresponding element in the Khmer and Monian dialects of the peninsula. This theory is entirely the work of Schmidt but C. O. Morgan's work³ is indicating the various elements to these aboriginal dialects first under this classification itself.

The many persons by which the standard speech of the people of the E.C. countries is meant, is of an aggressive character, the roots being, as a rule, unknown and uncertain being formed by means of affixes, suffixes and reduplication. The roots are mostly dissyllabic, and the derived words frequently very numerous, while any harsh juxtaposition of consonants is avoided, by means of either assimilation or dissimilation, full-blown corsets resembling costume rules.

From a phenetic point of view, *Malay* shows a remarkably small, almost a minute, number of changes during the last four centuries. At an earlier period it had, however, become morphologically simplified, mainly due to the development of the feature sets of which most of an earlier and more restricted distribution of similar patterns common to *Malay* itself and to the islands of the archipelago.⁴

The student finds many words in Malay are Sanskrit, and includes words for religious, moral, and intellectual ideas, with some astronomical, mathematical, and botanical terms, a strict vocabulary, and a large number of everyday words.⁵

The phrase is theoretically formed by reinflection, though, as a rule, in the voracious sport no difference is made between plural and singular. Reinflection is, however, also employed to express a metaphorical meaning. Thus we have *ovye* "persons or men" (*ovymen oboznamen*, "name of the female or old man"), but *ovye* "upper part of the eye" (corresponding to what are called, in illiterate literature, *shchery*, or "border of the eye"), *bozheny*, and, but *bozheny-bozheny*, "shape sounds" (from the play of the tongue the *bozheny* by a certain antithetical metaphor, compared to a *bozheny* motion—*bozheny*). Similar metaphorical reinflections give us *bozheny*, *bozheny*, but *bozheny-bozheny*, wooden horse or *bozheny* in its own own *bozheny-bozheny*, and *bozheny-bozheny*.

but *supai-supai*, 'balancing (in)' (on a cross, which is compared to a person running on a beam).

With regard to the different question of the pronunciation of *Worms* (1) with *l* van der Wal and Gorth van Wilk (see recently 1957) refers to the construction that the stem falls, even to standard Malay upon the penultimate syllable, both in the case of simple words and in words that are more derivatives. In this to be probably correct, although it is far from being in accordance with the strictly reserved outline.

The *Main* parts of speech frequently fail to coincide with our own *real* word or *realism*, e. g. may fail to meet either a substantive or as an adjective, with complete indifference, and the same remark holds true of substantive and verb. Words which logically would have priority take precedence of those which should not do so. Thus the actual subject or thing indeed asked, having prior importance logically precedes any word which is merely *qualitative*, also the normal counterword in subject, verb, object. There is no inferior for gender, number, or case, and the article is as simple as that of *judice* English. Thus it has been accurately reported that the *logic*

'Little boy, boy of paints,
Lacked his toy, joined the Saints,
Would be writing to a King who would appoint him as follows:
'Little boy, boy patriotic.'

Finally an up-country European traveler who happened to inquire whether there would be time for him to reach a neighboring village before nightfall might be permitted to retrace by way of reply the mysterious journey. Can or Cark (as the case might be), the man in the first case being that he could safely reckon on doing so, and in the second that night would not before he reached his destination.

Many may therefore be thought of if only an expression may be allowed—as a kind of shorthand speech—a tool which is the more remarkable because in the written literary language it often reaches the opposite extreme of ambiguity.

The dialects of Malay are many and varied, but the three that are of most importance to the present subject are (a) the dialects of Sumatra and Penang; (b) the Chinese system in North Borneo (the especially in Sarawak and Brunei); and (c) the Malacca-Java dialect system in Siam and French Indochina. Of these the first is the most critical, especially because it has the Malay-Polyanese language, to which numerous words have been added. This contains about thirty such words as can be seen from the Malay-Thai-Malay dials (''Malay dials'' - Malay dials (''dial'') of even the latter island state - Malay dials (''dial'') - Malay dials - Malay dials (''dial'') - Prema-dialect - Malay, word (''dial'') from New Guinea dialects (usually supposed to be from Malay), contain some words of evident Malay origin. In view of other evidence, it seems permissible to believe that this particular Malay dialect of the east coast of the peninsula forms a much nearer link between standard Malay and the nearest Malay-Polyanese languages, and further that it was from this group derived the continental element of north-eastern Asia that the Malayan dialect spread throughout the Polynesian islands. The corresponding words here are (a) their very similar tin-systems and (b) the general use of tain.

(b) Language—The languages of the tribes are split up into a number of dialects, each confined to a small area. They are rapidly changing, especially in the western districts of the Province, from which the Bahr and the Nile tribes have nearly annihilated the Hamites in custom and culture under modern influences. Some native purity and unimpaired differences, the linguists gathered, exist as it is in most cases, has been identified into three main groups, which may be referred to three principal types or standards: (1) typical Bahrain dialect, best represented by the speech of the aborigines in central Kordofan and the adjoining State of Hamar; (2) typical Sahel dialect, the best specimens coming from the Senegal, Fouta and the adjoining district of Falam; and (3) in the southern part of the peninsula, the Jaha dialect, which may be deemed together as Jaha or Mangani in spite of the fact that they contain a large number of Sahel words, because the same form of their words are Sahel and not Sahel, although they do not afford material as valuable for clear type-differentiation as is found among the Sahel and Bahrain. Both in phonology and in vocabulary the Sahel and Bahrain show considerable divergence, but between the strongly contrasted type-dialects are intermediate varieties, the linguistic evidence thus supporting the ethnological data in pointing to contact and admixture.

thoughts regarding the subjects led into groups with correspondence, though not necessarily with the author's personal participation of the educational work, at least in the case of the first and second

Of the similarity of the eurythmic language and the elements which have entered into their composition something has already been said. It is clear that all the dialects at now spoken contain a considerable number of purely Hany words, more or less modified in pronunciation by the natives. In addition to these loan words, however, which are easily identifiable, there is a considerable element remaining which is not translatable in standard Hany. The better known of which we have already spoken, was not developed within the peninsula, and this and the Hanyo-Polytonian factor in the eurythmic dialects which is akin to the main Hany system in the Hany Archipelago together make up what is perhaps the largest component in the language of the continent. A third and still

more interesting attempt has been made to show a very close affinity with the Miao-Khmer or Miao dialects of western Indo-China. The identification, though certain and numerous and even striking, are rather disappointing. If considered as a vocabulary percentage, Siam may himself have remarked to the present writer: 'What is the use of our assuming (as certain scholars had done) that the Siam dialects are identifiable with Miao, when all that has been identified is about 30 per cent of the entire vocabulary? The question is, what is the remaining 70 per cent?'

To reply, we must study attentively both the Samang and Siam grain structure and a considerable percentage of the vocabulary, and especially, as regards Siam, the phonology; the modern Siam dialects are of no less importance. In each group there remains an unidentified element. Samang embodies a number of words which are confined to the Negritos and which are completely *proterva*. It is clear that the Samang dialects did not originally belong to the Miao-Annam group. These words relate to matters of everyday life, and presumably they represent the old original dialects of the Negritos. Relationship with Andamanese has been suggested, but remains completely hypothetical; for hardly a single word of Samang is recognizable in the Andaman dialects, and this fact is one of the many and great puzzles of the Samang problem. For the unidentified element in Siam no suggestion as to origin has been made, though it is possible that many of the queerest words may not be loaned not to a Malay but to a Miao-Annam origin. In the case of the Jakun it is pointed out that some of the words of unknown origin must in Samang, but not in Siam, but may be hardly of sufficient number to support the view that Jakun dialects were originally allied to Samang; on the contrary, a large number of Jakun words are certainly allied to Siam, and Whitman, breaking up Jakun certain southern Siam dialects, seeks to eliminate Diogenes' linguistic Jakun but leaves unexplained both Kintali and the common element in which Miao, Siam, and Jakun differ from every other known language.

3. Religion: greater gods.—(a) Malay.—The official Malay religion, as has already been stated, is Muhammadanism, but the popular beliefs and ritual afford abundant proof, which is supported by the historical evidence, that this religion has been superimposed upon some form of Hinduism, which itself, when introduced into the country, superseded an earlier and more primitive type of belief, of shamanistic character. Folklore, charm-books, and romances go to show that the greater gods of the Malay pantheon—so far as their names go—are borrowed Hindu divinities, while the lesser gods and spirits are native to the Malay religious system, incorporated in and modified by the higher religions, but not entirely forgotten.

Taking first the Hindu divinities, we find Vignu, the preserver, Brahmā, the creator, Batara Guru (Siva), Kala,¹ and Seri² simultaneously invoked by the magician. Of the greater divinities Batara Guru is, in the minds of the Malays, unquestionably the most important; in other words, the Malays were of the Śaivite sect of Brāhmanism. In the *Hikayat Sang Samudra*, the Malay version of the *Brahmāhmaye*, Batara Guru appears as the supreme god Siva, with Brahmā and Vignu as subordinate deities. He alone has the Water of Life which resuscitates slaughtered heroes. The Malay magician will, on occasion, boldly declare that he was the all-powerful spirit who held the place of Allah before the advent of Muhammadanism, a spirit so powerful that he 'could restore the dead to life'; and that to him all prayers were addressed at that period. It may be noted that most of the theological terms in use among the Malays are of Sanskrit origin, and that the titles *Sang yang* ('the deity') and *Batara* are used mostly of the older Hindu divinities. The Malays, however, in adopting the Sanskrit title of Guru, seem to have transferred it to a hunting god, whom they identify in certain localities with the 'Spectra' or 'Demon Huntsman,' though pure Hinduism would certainly not have recognized hunting (one of the deadly sins of that religion) as a pursuit fit for one of their deities. Further, the Malays distinguish between a good and a bad side of Batara Guru's character, which may point back to the combin-

¹ Guru—epithet of Siva. Batara is Mr. Battara, 'highly honourable'; in Jav. (*Manunggul*) and Siam, *Ma-hi-ling*.

² Seri Sakti, 'black,' an epithet of Siva.

³ Mr. Sri, goddess of good fortune and wife of Vignu.

tion into one of what were originally two distinct personalities, Batara Guru and Kala. Thus the Malay Kala holds as his only definite sphere of influence the forenoon, a strip intermediate between the land-sphere of Batara Guru and the dominion of a third deity called 'Grand-Sire Long-Claws' (Toh Panjang Kuku). This attempt to divide the spheres of land and sea must again be attributed solely to the Malays, as Hindu mythology knows nothing of the sea. It is clear, therefore, that in the greater deities of the Malay pantheon we may, after all, recognize Malay deities simply re-named after the gods of the Hindus. The Batara Guru of the sea is identified by some magicians with Si Raya, and occasionally with the god of mid-currents (Mambang Tali Harau). Sickness is sometimes ascribed to him, but it is not usually so fatal as illness induced by the malice of the Demon Huntsman, and fishermen and seafarers, on the other hand, obtain from him many benefits. The only other deities of importance are the White Divinity, who dwells in the sun, the Black Divinity, who dwells in the moon, and the Yellow Divinity, who dwells in the sunset; the last is considered most dangerous to children, and Malaysian parents always endeavour to keep their children within doors at sunset and during the twilight in order to avoid his malignant influence.

(b) Pagan races.—In view of the still inadequate evidence of the beliefs of the pagan tribes in relation to a supreme deity, it is necessary to exercise some caution in making any statement as to their ideas upon the subject. On the other hand, it is at least safe to remark that any one who, as the result of mere worrying by questions, commits himself to the statement that any of these pagan races have no such beliefs whatever proves merely that his own methods of investigation are at fault in these matters.

It appears, moreover, clear that the Samang and Jakun, and possibly also the Sakai, are at present in the stage of development, common to most primitive peoples, in which the supreme deity belongs to the realm of mythology rather than of religion proper. Since he stands more or less aloof from the affairs of this world and the next, and possesses no cult, his claims to recognition are set aside in favour of spirits more closely in touch with mundane affairs, whose powers for good and evil are constantly capable of exercise and who at every turn must be propitiated. Among the Samang there is clear evidence for a belief in the existence of such a being, combined with a crude dualism based upon natural phenomena.

According to one account, *Tu Pann* ('Grandfather Pann') is a powerful but benevolent being described as the maker of the world. He was, in fact, described to the present writer by the Samang of Kuching as being 'like a Malay Rajah, there was nobody above him.' He is the moon's husband and lives with *Lu-Lu*, the crow who is the sun's husband, in the eastern heaven. *Tu Pann* has four children, two male and two female. His mother *Yah* is the old Earth-mother, and lives underground in the middle of the earth. He has a great enemy, *Sakak*, who lives in the west. He is dangerous and very black. That is why the east is bright and the west dark. The heavens are in three tiers, the highest of which is called *Kakak*, and which are defended against unauthorized intruders by a giant coconut monkey, who drives away any one found trying to enter the heavens.

The naturalistic dualism of this account is obvious; from his place of abode, and from his having the moon as his consort, we may perhaps conclude that *Tu Pann* is a spirit of the rising sun. In addition it has been maintained that the Samang recognizes two other superior deities, *Kari*, a thunder-god, the supreme creator, ruler, and judge, and *Pia*, a related but subordinate divinity, who, under *Kari*, created earth and man. The evidence, however, is too slender for dogmatic statement, and the point still awaits the collection of further material.

The religion of the Sakai is more shamanistic in character than that of the Semang, and, if any corresponding belief exists among them, as has been maintained, it is overshadowed by the cults of demons, ghosts, and spirits. The Jakun afford more certain evidence of a belief in a supreme deity, although their conceptions at the best are vague and shadowy. The Mantri say that Tahan Di-Bawah, lord of the under world, created the earth and dwells beneath it, supporting everything above him by his power. The Benun believe in one god, Pirman,¹ who dwells above the sky and is invisible. He made the world and everything that is visible. The greater part of the Jakun of Johor know and acknowledge a supreme being whom they call by the Malayo-Arabic name of Tahan Allah; the grotesquely slight influence, however, that is really exercised by Muhammadanism on the wild races of the Malayan jungles is best evidenced by the statement of those tribes who believe that Muhammad, the prophet of God, is the wife of the supreme deity.

6. Lesser gods, spirits, and ghosts.—(a) Malay.—Subordinate to the great gods are lesser gods or spirits whose place in Malay mythology is due to Muhammadan influences; their inferiority may in part be due to the law that the gods of the autochthones are usually considered by an invader more powerful than his own deities. These lesser gods and spirits are the *jin*, or genii. The Malays, to a certain extent, show a tendency to identify them with the spirits of the older Hindu religion, but only the Black King of the Genii (Sang Gais Raja) appears to rise on occasion to the level of the great divinity, when he is regarded as a manifestation of Batara Guru in his destructive aspect as Siwa, or Kala, though later he came to be considered a separate personality. This would also explain the difficult problems of how the Black and White Genii come to be regarded as brothers, the latter being identified with Mahārāja Deva, 'great king of the gods.' The genii are also subdivided into good and faithful (*jin taidan*) and bad (*jin jahat*), this nomenclature being obviously a Muslim accretion. In addition to these subdivisions they are also regarded as attached to special objects—e.g., the powerful *jin* of the royal musical instruments. The genii are able to do infinite harm to mortals, and choose as their dwelling places hollows in the hills, solitary places in the forests, dead epiphytes on trees, etc. They are sometimes said to derive from the dissolution of various parts of the anatomy of the world-maker Sakatimuna, the first great failure at man's creation.

The Malays have also adopted into their popular religion the Muhammadan belief in angels (Azrael, Michael, and Gabriel), prophets (Solomon, David, and Joseph), and chiefs, four in number panned in the four corners of the earth.

Ghosts and spirits are known by the generic name of *hantu*. Of these there are many varieties. *Hantu labor* are grave-demons who, with the spirits of murdered men, prey upon the living whenever they see an opportunity; *hantu ribut* is the storm-spirit; *hantu angin* and *hantu laut* are water- and sea spirits; *hantu randa*, deep forest demons; *hantu berok*, the baboon-demon; *hantu bilian*, the tiger-demon; and *hantu penghis*, the 'loosening' demon, who interferes with rope-snare and traps for wild animals. In addition there are giants and 'tall' demons (*batu, gun-gun, and hantu tinggi*) as well as 'good people' (*badadari* or *piri*), who are of foreign origin; *esoh*² spirits (*esoh dangian*), spirits of whom little is known except that they are good

fairies and very easily cheated; blood-sucking demons of various kinds, mostly birth-spirits (these last being certainly among the ghastliest conceptions of humanity); and others such as the *hantu zapak*, which is the equivalent of our own nightmare.

(b) Pagan races.—Except in one or two cases, little has been recorded concerning the beliefs of the pagan tribes relating to the spirits or demons. Those which most afflict the Sakai of Ulu-Bartam are the 'tiger-spirit,' the 'jungle spirit,' and the 'river- or water-spirit.' Against these charms and simples can prevail. Against the tree-spirit, however, who slays his victims before any one can help, there is no protection. The Sakai of Belanger had a ceremony at which they sat and blew bamboo pipes and sang to the demons.

The spirits in which the Bésil believe include the wind-demon (*jin angin*), who lives on a white rock near Tanjong Tuan (Cape Rachado); the demonic legion (*jin as-ribu*), who dwell in the earth and, when possible, feed upon human beings; and the garrotting demon (*jin as rapas*), who lives in the uplands. Certain trees are the embodiment of spirits, notably the gutta, eagle wood, and camphor trees, and this idea is extended to inert objects—e.g., canoes, treasure-jars, and stone implements. Chipping a jar kills its spirit.

The Demon Hantuman (*hantu as bersu*) is ten ft. high, and his face is very hairy. From nightfall onwards during the full of the moon he hunts the wild bear and the sambar-deer. Although he is highly dangerous to mankind, many have made friends with him, and, when they have invoked him, he has cured them of their illness. Other spirits are the river-spirit, the demon of fatal birth-sickness, and the tomb-demon, which, in one of its manifestations, plunders graves in the form of wild beasts, such as deer and tigers.

7. The soul.—(a) Malay.—In Malay beliefs the *admanas* ('human soul') is a thin, unsubstantial mannikin, temporarily absent from the body in sleep, trance, or disease, and permanently departed after death. It is about the size of the thumb and invisible, but is supposed to correspond in shape, proportion, and complexion to its embodiment; it can fly quickly from place to place, and it is often, perhaps metaphorically, addressed as a bird. In mental attributes it is quasi-human and may possess, independently of its corporeal owner, personal consciousness and volition. It has been alleged that the *admanas* cannot be the 'soul' because it is believed to quit the body and wander about during sleep, and that it must therefore be a spirit of vitality. But this very same reasoning would show that it cannot be a spirit of vitality. What is actually meant here by 'soul,' however, is the native (and our own medieval) idea of the soul, which is something very different from the soul of our modern idealistic Christianity. The latter might indeed almost be described, in comparison with its medieval prototype, as a 'super-soul,' and it is only the more primitive idea of the soul in which we are here interested.

In charms it is addressed as having a house, usually, though not necessarily, identified with its embodiment (the body of its owner). As the *admanas* is separable from the body, it follows that, if called in the right way, it may be made to follow—a powerful weapon in the hands of an enemy or lover who possesses the requisite magical powers. When abducted, it may be imprisoned in a lump of earth, a cloth, or a wax mannikin. The lump of earth should have been in contact with the victim's body—e.g., with the sole of the naked foot. An escaping or swooning *admanas* may be recalled to the owner's body; hence the form of certain kinds of medical treatment. In the older charms

¹ But this name (=Pirman, 'Word of God') is clearly borrowed, like ARRA, from Muslim sources.

² Possibly *Shr. Sakti*, 'hallowed,' an epithet of Siwa.

³ Or 'Malam.'

the *shamang* is distinctly referred to as being sevenfold, and, as a similar multiple division is found elsewhere among savages (PC² i. 391 f.),¹ this may be taken as original, although seven is a somewhat favourite number in Malay magic.

The belief in the existence of *shamangs* does not confine them to human beings. Animal, vegetable, and mineral *shamangs* are clearly recognized. While in the case of animals the *shamang* is a counterpart, on a reduced scale, of its embodiment, in the vegetable and mineral kingdoms the tree *shamang* or the ore *shamang* is usually an animal, whereas the rice *shamang* is treated as resembling a human infant. The *shamang* of the eaglewood tree, e.g., takes the form of a bird, the tin-ore *shamang* that of a buffalo, the gold-ore *shamang* that of a deer, and so forth. A box or a treasure-jar may also have a *shamang* until chipped or broken, when the *shamang* escapes from it. An interesting variation has been said to occur on the east coast of the peninsula, where the *shamang* of a particular kind of boat is called by a special name, *wayor*, as opposed to the usual soul-name, *shamang*.² But there is no trace of this form on the west coast or apparently in other parts of the peninsula.

This creed is no empty belief inoperative in daily life. It forms the basis of the Malay's mental attitude and practice in all dealings with the animal, vegetable, and mineral kingdoms.

Although Malay animism is consistent and complete in extending the belief in the *shamang* to all nature, animate and inanimate, side by side with the purely animistic belief there is abundant evidence of a special Circæ-like theory attributing animals, birds, fishes, reptiles, and trees to an (accursed) human origin. The elephant, tiger, bear, deer, crocodile, solid-crested hornbill, and stick-insect are examples. Evidence of such anthropomorphic ideas is to be found not only in the folklore but in many magical ceremonies and charms of Malaya (on the *shamang* see, further, INDONESIA).

(b) *Pagan races*.—Of the conception of the *shamang* held by the pagan tribes very little is known, and, lacking definite statement, their beliefs must be inferred from their methods of burial and treatment of the dead and their views of the life after death.

According to the eastern Semang (Pangan) of Kelantan, each man has a *shamang* shaped exactly like himself, but 'red like blood' and 'no bigger than a grain of maize.' It was passed on by the mother to her child. After death the *shamangs* of the wise proceed to a paradise in the west in which grow fruit-trees. To reach it they cross a bridge consisting of the trunk of a colossal tree. At the end of the bridge sits a hideous demon, and each of the Semang as are scared by him fall into a vast boiling lake beneath, in which they swim for three years until the Lord of the Paradise of Fruit-Trees lets down his great toe for them to clutch, and in this contemptuous fashion pulls them out. The old and wise men for this reason were buried in trees, so that they could fly over the demon's head. The western Semang believed that only the medicine-men went to the Land of Fruit; the lay members of the tribe crossed the sea to a land of screw-pines and thatch-palms, wherein was the hole into which the sun fell at night. If they had committed any bad action, they started by the same road, but turned north to a land which had two months of day and one month of night. Among the Sakai it has been

said that *shamangs* proceed to a Haden (*Nā-dān*)³ where they are washed clean by one 'Granny Long-Bronata,' and made to walk across a boiling cauldron on the sharp edge of a chopper. Bad *shamangs* fall in, good ones escape to an Island of Fruit, where they wait until a friend comes to show them the way to the 'Hunks of the Clouds.'

The Mantri possess peculiarly positive faith in the continued existence of the *shamang* after death. It leaves the body and is carried by Bayang Laas either to Ngangari or to Fruit Island (*Pulau Buah*), far away in the region of the setting sun, where all *shamangs* dwell in harmony, marry, and have children. Those who die a violent death go to Red Land (*Tanah Merah*), a desert place and barren, repairing thence to Fruit Island to get their nourishment. The Benua, on the other hand, believe that after death the *shamang* dissolves into nothingness again, having been fashioned from air by Pirman. Notwithstanding this, they hold that the *shamangs* of medicine-men, while their animate bodies remain behind, are conveyed or carried to heaven in music.

2. *Animism*.—Although it would in any case be justifiable to regard the attitude of the Malays towards the *shamang*, or holy place, as a survival from an earlier stage of religious belief on the analogy of similar ideas among more primitive peoples, there is, in addition, abundant evidence to support the view that not only Muhammadanism, but also the popular ideas traceable to a modified Hinduism, are superimposed upon a form of religion in which animism was the predominant factor. A belief in spirits pervades the whole of the everyday life of the bulk of the people. The position and importance of the medicine-men or magicians (*perawang* and *temor*), the language of the innumerable charms recited on any and every conceivable occasion, and the ceremonies which accompany any and every action or undertaking—even in some cases the most trivial—would in themselves point to this particular conclusion, even if we lacked the evidence supplied by the statements of the Malays themselves with regard to their object and meaning. Important proof of this connexion is furnished by the relations of the Malays with animals, with trees, and with the crops, and especially by their remarkable beliefs with regard to mining.

(a) *Animals*.—To nearly all animals, but especially to the larger, the Malays attribute anthropomorphic traits and, in some cases, superhuman powers. The elephant and tiger, e.g., are believed to possess cities or districts in which they assume human form and live in houses. According to a legend which comes from Labu in Selangor, a man tracked an elephant to her home and married her in human form. She resumed her animal form when, on returning to his country against her express directions, he gave her food which included certain young tree-shoots. The tiger, which is an object of especial fear, is believed to be a demon in the form of a beast; in the legendary 'Tiger Village' the roofs of the houses are thatched with human hair, men's bones are the rafters, and men's skins the hut-walls. The original tiger was a boy found in the forest who changed into a tiger when beaten with many stripes by his schoolmaster. The latter placed a ban upon him to compel him to 'ask for' his prey. The tiger therefore uses divination by leaves (of certain forest trees) to ascertain whether his petition for a victim has been granted. It may be added that he is also believed to doctor his wounds with leaf-poultices. The belief in wer-tigers is one of the most deeply ingrained of Malay superstitions, but the power to become such a being is believed to belong especially

¹ See also W. W. Skeat, *Malay Magic*, London, 1900, pp. 60, 61, etc. It is surprising to find among Malays this sevenfold division of Plato himself.

² H. Amundsen, 'The Theory of Souls among the Malays of the Malay Peninsula,' *J.R.A.S.*, Straits Branch, v. 3 (1907).

³ Mr. Corbett, 'ibid.'

to one tribe of Sumatrans, the Korinchi Malays, of whom there are a number living in the peninsula. In one case a dead war-tiger was identified by his possessing a gold tooth derived from his human original (see LYCAETHOPY). Both ghost-elephants and ghost-tigers are strongly believed in. They are distinguished by having one shrunken foot, are harmless, and are the tutelary spirits of certain regions of wooded localities. The most famous ghost-tiger of the peninsula dwelt on Mount Ophir (4000 ft.), near Malacca; in Selangor they were the guardians of a shrine on the summit of the Jagra Hill. The latter were formerly reputed to be the pets of the princess of Malacca; thus the two stories were connected. The princess is said by local report to have established herself on Mount Ophir at the time of the Portuguese invasion, and still visits the hill in Selangor, accompanied by a handsome tiger, though herself invisible. When a tiger was killed, a public reception was accorded to him in the nearest village, at which he was treated as a powerful war-chief or champion, and was entertained by an exhibition of dancing and fencing. Both claws and whiskers of the tiger are greatly valued as charms; the latter are sometimes twisted up with a man's moustache, to strike terror into his enemies, and the former are imitated in the tiger's claw knives worn on their fingers by the men who pretend to be war-tigers.

Equally significant are the stories and beliefs connected with the mouse-deer or chevrolais. This animal occupies the place of Brer Rabbit in Malay folklore; it figures in numerous proverbial sayings and romances, and is honoured by the title of *Mentri Belakar*, 'the Vizier of the (secondary) Forest-growth.' In the fire-getting ceremony it is said to ask for fire wherever it 'sings its mother-in-law's feathers' (a bird).

Hunting dogs are continually addressed as if they were human beings. It is, however, believed that it is unlucky to see them in the jungle, unless the person meeting them backs after the manner of a wild dog before they have time to do so. Cats, in addition to possessing supernatural powers (e.g., in the rain-making ceremony), are lucky because they wish for the prosperity of their owners. On the other hand, cat-killers, when in purgatory, will be required to cut and carry coco-nut logs to the number of hairs on the cat's body, wherefore cats are not 'killed,' but only set adrift on rafts to perish of hunger.

The flesh of swine is now regarded as unclean by the modern (Muhammedan) Malay, but there are indications that this was not always the case; thus a wild pig's peacock is required in a Malay recipe for turning brass into gold; the wild pig, moreover, is hunted and eaten with avidity by the wild jungle tribes, as is still the case in N. Borneo and other parts of the Malayan region. It may also be noted that the flesh of the buffalo is preferred to that of the ox, and the former is used, and not the latter, for sacrificial feasts—a fact which suggests an obscure survival of Hindu belief. The earth itself is supported on the horn of a gigantic wild buffalo.

The attitude of the Malays towards wild animals and their belief in their magical powers are further indicated by the fact that in hunting and trapping no skill can avail unless it is itself supported by magic, by special charms supplied by the medicine-man, and by formulae to be repeated in setting the traps and snares or when actually engaged in hunting operations, either to ensure success or to serve as a protection. Like the Siamese elephant-wizard, the Malay deer-wizard himself must first

enter the coils before a hunt begins, in order to influence the deer magically to enter the deer-snares. If this were omitted, the ropes would fail to hold the deer, nor would the deer enter. The marks on the legs of the snare-deer (*rues*) are due to ulcers on the legs of its human original.

Fish and other inhabitants of the water, like land animals, are regarded as having human or super-human qualities, and, when catching them, the Malays have to perform ceremonies to overcome their spiritual nature and magical powers. The crocodile, e.g., is, according to one account, a boy who fell from his mother's arms into the water. The various species of fish also have their special origin; one kind is said to be originally a cat, another a monkey, another a human being drowned in the river, and so forth. The Norse myth of the rivers sprung from the tears of the cow *Audhumla* is recalled by a Parak story of a large specimen of the mudfish called *arum*. Many magical or semi-magical beliefs cling round the crocodile. In many of the rivers certain crocodiles are regarded as the sacred embodiment of dead chiefs, and are free from molestation. When hunting these reptiles, the Malays repeat charms and take precautions to secure capture by symbolic actions such as striking the water with the canoe-paddle in imitation of the crocodile's tail; or, when eating curries, by gulping down three lumps of rice successively in the way in which it is hoped the reptile will take the bait; or (by avoidance) by not taking the bones of curries, for fear that the wooden curries placed buried in the bait will fail to hold the crocodile.

An elaborate ceremony precedes and accompanies a fishing expedition. It includes notification by three boat-cries to the head-spirits that offerings, consisting of rice, betel, parts of a goat sacrificed for the purpose, cigarettes, etc., hung up on a tree in a sacrificial tray, await their acceptance, and the offering of two shallow trays, one in shallow water and one containing the goat's head, at the seaward end of the fishing station. Miscellaneous offerings from a basket are scattered while the boat is rowed out to the station, and, when they are reached, coffee-coloured and perfumed rice is scattered on the water, while the 'neutralising rice-paste' ceremony is performed on the station and the banks. A number of tabus, such as seven days' restraining from sexual indulgence, the avoidance of bathing without a bathing-cloth, or of taking an umbrella into the fishing-boat, or of climbing the fishing-station with boots on, are strictly enforced. The use of a tabu language by the fishermen is also de rigueur.

Among the wild tribes similar beliefs are entertained, but in particular they look upon animals as the embodiment of their illustrious dead. The elephant, the largest and most important of the animals, is the one into which the *adwangats* of Semang chiefs are supposed to migrate. In consequence, it has euphemistic and propitiatory names. The same applies to the tiger. Monkeys, snakes, and birds play an important part in Semang mythology, while among insects the stick-insect is the most important. The list of animals to which the *adwangats* of chiefs are supposed by the Bani to migrate is extended beyond beasts of prey, including deer and pigs as well as tigers and crocodiles. Among the Mantri the tigers are the slaves of the wizard, or *poyang*, and are supposed to be immortal, while the Jakus believe that, if a tiger meets them in their path, it is a man who has sold himself to the evil spirit in order that in such a form he may wreak vengeance on his enemy or give play to his malignity. The amount of supernatural history associated with animals is, indeed, quite remarkable for a race whose jungle knowledge is so complete as it is among real up-country Malays. The case of the large caterpillar which is believed to metamorphose into a squirrel is typical.

(b) *Birds*.—Ideas of various kinds, mostly animistic or anthropomorphic in character, are very generally associated with birds by the Malays. As a rule, nocturnal birds are ill-omened. If one species of owl alights near a house and hoots, it is said that

¹ W. W. Skeat, *Fables and Folklore from an Eastern Power*, Cambridge, 1901, introd. p. xiii.

² Clifford, p. 47.

there will soon be a 'tearing of cloth' for a shroud. If the *belahak*, a nocturnal bird which flies in flocks (a goat-sucker or night-jar), is heard, the peasant brings out a wooden platter, beats it with a knife, and calls out, 'Great-grandfather, bring us their hearts,' in the hope of deluding the spirits into the belief that he forms one of the train of the Spectre Hunter (*hantu pemburu*) which these birds accompany, and must therefore not be attacked by them.

The argus pheasant (*Argus*) is said in Perak to have been metamorphosed from a woman; the female, moreover, is believed to reproduce its kind by swallowing the male bird alive. In Selangor it is believed that a hornbill was transformed from the murderer of an old man, another variety (*rhinoceros*) to have been a man who slew his own mother-in-law. The *tek katampi* (a variety of horned owl) is believed to enter the fowl-house and there live on the intestines of fowls, which it extracts during life by means of a charm. The luck-bird—a small white bird about the size of a canary—if caught and placed in a rice-bin, ensures a good harvest to its owner; a ground-dove, kept in a house, is a prophylactic against fire. If any one is fortunate enough to secure the nest of a kind of heron, or *ruwak-ruwak*, it confers upon him the power of invisibility. But the list of birds to which it has been recorded that the Malays attach peculiar ideas and significances may be said to be limited only by the varieties indigenous to the peninsula.

In fowling, as in hunting, sympathetic magic plays a prominent part, while every operation has its appropriate charm for repetition. In catching wild pigeons, constant reference is made to their *shamangats*, and the aid of the *pasung* is required to perform the 'neutralising rice-paste' ceremony in the space in front of the conical snarer's hut, enclosed for the purpose, which is known as King Solomon's Court-yard, or to recite a charm over the long bamboo decoy-tube or pigeon-call. During the operation great care is taken that no part of the snarer's paraphernalia is called by its proper name (which might be understood by the pigeon); everything is called by some euphemism—e.g., 'the Magic Prince' (for the name of the hut) and 'Prince Distraction' (instead of the word 'pigeon-call').

(c) *Vegetation*.—The Malayan beliefs in relation to trees and other forms of vegetation follow to a great degree, if not entirely, their concepts in relation to animals. It is not clear that they hold that all trees have a *shamangat*, but it is certain that some trees, such as the durian, the coco-nut-palm, the trees producing eagle-wood, camphor, and gutta-percha, and others are supposed to possess *shamangats*. This belief extends even to dead and seasoned wood, as is shown by the invocation addressed to the timbers used in the ceremony of launching a boat—a ceremony which is frequently represented in Malay romances as taking place (as formerly in Fiji) over human rollers. In earlier days the men used to try to frighten the durian groves into bearing by threats addressed to them verbally. The medicine-man struck the trunk of an unfruitful tree seven times with a hatchet and threatened to fell it if it did not bear. The toddy collector said to the coco-nut-palm: 'Thus I bend your neck and roll up your hair; and here is my ivory toddy-knife to help the washing of your nose.' The malacca cane is regarded from the same animistic point of view, and it is believed that a cane with a long joint will protect the owner from harm by snakes and animals, as well as bring him good luck in everything. In Selangor the stick-insect is supposed to be the embodiment of the malacca cane-spirit. In felling a *tuahlong* tree

(apparently not a specific tree, but a generic term for all trees containing a bear's nest)—a matter in which great reluctance is shown—it is necessary to obtain the services of a *pasung* to drive away demons by charms and incantations. In the course of the incantation the heads of two white fowls are cut off and the blood is sprinkled upon the tree-trunk. The lime is another tree of which the spirit is the object of a special cult; it is revered and looked upon as their chief patron by the theatrical players of Penang. In searching for the diseased and perfumed wood known as *glaru*, or eagle-wood, the services of a *pasung* are required to burn incense and repeat the appropriate charms. According to one account, the *pasung* uses a shelter near the selected tree (which is indicated by a low whispering or singing in the tree), and then repeats a charm which induces the *glaru*-spirit to appear to him, generally in a dream, and to inform him of the kind of sacrifice required. When the tree has been felled, any one passing between the trunk and the stump will die immediately. The *pasung* uses and carries with him a piece of eagle-wood, the *glaru* *shamangat* (or shaped eagle-wood), which possesses a natural resemblance to some animal or bird. This is believed to contain the *shamangat* of the eagle-wood and to assist in the search for that product. Similar beliefs are entertained, and similar ritual is followed, in the collection of camphor and gutta-percha. It is interesting to note that in the collection of camphor a special language must be used, *pasung haper*, which, so far as known, is Malay in part only. A portion of any food eaten during the search for camphor must be thrown into the jungle for the *beas*, or camphor-spirit.

Many rules followed in planting the crops are based upon sympathetic magic and animism. In the first place, the propitious seasons for each operation must be indicated by the *pasung*. Sugar-cane must be planted at noon; this makes it sweeter by drying up the joints and leaving the mocharine matter. Maize should be planted with a full stomach, a thick stick, and thick dibble; this will swell the maize ear. Plantains should be planted after the evening meal, as they fill out better; sweet potatoes, to ensure their having plenty of 'eyes' when they begin to sprout, should be set when the night is starry.

Of all agricultural pursuits, however, the cultivation of rice exhibits most completely the animistic ideas which underlie the relation of the Malays to nature. At every stage of the procedure precautions are taken to ensure the well-being and prosperity of the rice-soul, upon which the success of the cultivation depends.

The time of the sowing is determined by the *pasung*; prayers are read over a portion of the seed to the *manong* (replacing an earlier ceremony at the holy place, or *Ar-Rumut*) in sowing, the mother-land is placed in a specially-prepared bed in one corner of the nursery plot before the rest of the seed is sown. When the rice is ready, it is transplanted with proper propitiatory ceremonies, and occasionally, say once in three or four years, these were accompanied by a ceremony—*a sort of mock funeral* (*mayat*)—to drive off evil spirits. When the rice is ready for reaping, in order to begin the harvest, the reapers must first obtain the *pasung*'s permission. The first operation was to take the *shamangat* out of all the plots, and before cutting the rice it was used to sprinkle it with the neutralising rice-paste. From the spot where the rice is first cut and where there are seven joints to the stalk, seven stems are clipped ceremonially to be the *shamangat* of the rice-crop. Another *shamangat* is tied by the *pasung* in the centre with a strip of a special variety of sugar-cane, to be the mother of the rice-crop of the year following. This mother-stem should be reaped last, preferably by the wife of the owner. The *shamangat* was made into the shape of an infant (*manong*) in swaddling clothes, placed in a basket with a Malay umbrella or shade to keep it from the sun, and laid on a new sleeping-mat, with pillows at its head, in the house of the owner. For three days the people in the house must observe certain taboos, e.g., rice, salt, oil, money, etc., must not leave the house, parties must not be observed, hair must not be cut, and so forth. These taboos were practically identical with those imposed in the case of the birth of children. For three days after the taking of the *shamangat* the

¹ *Sham, Malay Hagi*, p. 117.

mother-child was treated as a young mother; i.e., young shoots of trees were pounded and scattered over it every evening, and on the evening of the third day rice-put and great-brothers mixed with sugar were eaten and a little ejected from the mouth on to the shoot—an analogue of the child administered to a mother. A woman, when entering the clearing, must kiss the soil, saying, 'Omma, omma, I soul of my child,' as if embracing one of her own infants. Ultimately the rice obtained from the *chamang* (representing the child) and from the shoot (representing the mother) are mixed and placed in the receptacle in which rice is stored, together with a wreath of the straw of the first ceremonial pounding of the paddy, the core first pounded being thrown out immediately after the taking of the *chamang*. Some is mixed with next year's seed, and some is used to make the *teping* tower.²

From all that has been said it will be clear that the gist of the Malayan harvest ceremony consists in the attempt to simulate, on behalf of the vegetative rice-crop, a lucky birth as of a human infant, in the hopes that this mock-ceremony may stimulate the productive powers of the rice-plant for the following harvest.

(d) *Mining*.—In the western States of the peninsula tin-mining was, and still is, the most important industry. Although mining is now carried on chiefly by Chinese, the ceremonies in use at the opening of a mine are purely Malayan. Formerly a lucrative and highly important post was that of mining wizard; some of these magicians were believed to possess the power of bringing ore to a place where it did not exist, and of turning into grains of sand, or of sterilizing, much ore as existed. The ore itself was regarded as endowed not only with vitality, but also with the power of functional increase. Sometimes it was said to resemble a buffalo, and in this shape could travel to and fro underground. The gold-spirit in one case (at Raub in Pahang) was believed to take the form of a golden roe-deer—an idea obviously based on the imaginary shape of some large nugget. Beyond tin, gold, and possibly a little silver and galena, no metals are worked in the peninsula.

The natives, however, have a great reverence for iron. The Lamp of Iron in the royal regalia, when placed in water, is the most solemn and binding oath known to those who use it, and it is referred to in the most terrible denunciations of the Malay wizard; a long iron nail guards the newborn child and the rice-owl; betel-nut scissors (also of iron) or a dagger protect a corpse from evil contact, and a Malay in the jungle often plants his knife-blade edgewise to the source in a stream before he drinks, in order to drive away any chance demons. Bazar-stones and stone implements alike are said to be endowed with magical properties and powers; a unique smelt-boat belief regards the latter as arising out of the ground, and not, as almost everywhere else in the world, as being hurled down from the sky in the form of thunderbolts.

The objects of the charms employed by the mining wizards seem to be to clear the jungle of evil spirits, to banish evil spirits from the ground before starting excavations, to propitiate the local spirits and induce the tin-ore to show itself when the tin-bearing stratum is reached, and to persuade the spirits to partake of a banquet spread for them in a receptacle intended to represent a royal hall of audience. The spiritual 'audience chamber' is usually two or three feet square and furnished with offerings similar to those normally placed on the sacrificial tray, with certain articles, such as sugar-cane, plantains, yams, etc., supposed to be specially characteristic of the food eaten by miners. The chief tabu is the killing of any sort of living creature within the mine, except in case of sacrifices, when a white buffalo may be slain upon the brink of the mine, the head being buried

¹ Lit. 'Chook, chook,' the call commonly addressed to domestic fowls.

² 'Revolving rice-paddy' (see above).

and small portions representative of each part being deposited in the 'audience chamber.' Other tabus are the wearing of a sarong, burying the skin of any beast in the mine, wearing shoes, and even carrying an umbrella; the last is particularly offensive to the spirits, since it is the insignia of Malay royalty. A special language has to be used in so far as certain words are concerned. No animal or thing not itself allowed in the mine (such as an elephant, tiger, or cat), nor even lime-fruit, may be mentioned by any but this substituted title. Nor may any one assume the attitude or dress (a black coat) worn by the wizard in building the altar for the preliminary sacrifices, in performing the magical ceremonies, or in uttering the invocations (such as the attitude of standing with both hands on the hips or behind the back), nor may even the wizard himself assume them on any ordinary occasion.

(e) *Water*.—The Malays have been a seafaring race from time immemorial, and the rivers were also of great importance to them before the making of roads. It was by the rivers that they first penetrated the country; the old Malay settlements are all on river-banks, and the streams are still the chief source of supply for irrigating the rice-fields. To both river and sea many superstitions and legends are attached. Their animistic notions include belief in water-spirits, against whom precautions are taken for the protection of their boats. It was formerly the custom to fasten a bunch of sugar-palm twigs to the top of the mast to prevent the water-spirit from settling on the mast-head. The sea-spirits are invoked to point out shoals, etc., and sometimes in rapids or other difficult places offerings are made to the spirits of the rivers. The tidal wave (bore or ebb) on a river was formerly held to be caused by the passing of a fluvial monster, which ascends the river; one of these (on the bore ebbing) was described to the present writer as having been killed by being knocked on the head with a stick. Erodia (A.D. 1613) says that the Malays attribute such bores to souls of the dead who are passing the ocean in *gallies* from one region to another, i.e. from the Golden Chersonese to the river Ganges. Ordinary river-floods (which were distinguished as male and female) were thought to be caused by similar agency.

g. *Cosmology and natural phenomena*.—(a) *Malay*.—In Malay folklore the theory of creation is that light emanating from the supreme being became the ocean, from which ascended foam and vapour. The earth and sea were then formed, each of seven tiers, the earth resting on the surface of the water from east to west, the mountains of the Caucasus being regarded as a chain put round the earth to keep it stable on the face of the waters. Beyond them is spread a vast plain, the sand and earth of which are of gold and musk, the stones rubies and emeralds, the vegetation of odoriferous flowers. Besides the Caucasus, which are known to the Malays as Bukit Kof ('Hills of Kaf'), and are of immense importance in popular lore, there is a great central mountain called Maha Meru, which is sometimes identified by Malays with a hill in Sumatra. Another version of the Creation, in part obviously due to Mesianic influence, describes how God, the eldest magician, pre-existing by Himself, created the pillar of the Ka'ba' of which the four branches form the four corners of the earth, and the world-snake, Sakatimuna, which was killed by Gabriel and broke asunder, the head and fore part shooting up to heaven, the tail part penetrating downwards beneath the earth. The description of this serpent (whose name suggests an Indian origin)

¹ Lit. 'cubo' (the cube-shaped sanctuary of the Black Stone at Mecca). For the Ka'ba see Mecca.

is remarkably anthropomorphic; in fact, it is a serpent in little more than name.

It was usually believed that the world was of oval shape and revolves on its axis four times in the year, and that the sun was a body of fire moving round the earth and producing the alternations of day and night. Some at least imagined the firmament to consist of a perforated stone or rock, the stars being caused by the light which streams through these apertures. Further, the earth is declared to be carried by a colossal buffalo on the tip of its horn—an obvious Malay parallel to the world-elephant in the *Ramayana* and the bear-incarnation of *Vishnu*. When one horn gets tired, the buffalo tosses up the earth and catches it on the other horn, the concussion thus produced being the cause of earthquakes. This buffalo stands on an island in the northern ocean, or on a giant tortoise (according to some versions), or on the monstrous fish called *Nam* (Arab. 'fish'). The universe is girt round by a huge serpent which feeds upon its own tail. Peculiarly Malay, on the other hand, is the idea of the tides, which, it is said, are caused by the movements of a colossal crab that twice a day leaves and re-enters its cave at the foot of the world-tree *Pauh Janggi* (the sea-coconut-palm), which grows on a sunken rock or quicksand in the 'Naval' or Central Whirlpool of the Ocean (puesat tusuk). The sun's name in Malay is *Mata-hari*, which means 'eye of day,' but on the east coast it is held to be a horse which is conducted in procession through the heavens by angels during the day, and led back again at night-time to the point whence it started.

Eclipses of the sun and moon are considered to be due to the devouring of these bodies by a gigantic dragon (*Rahu*), or, according to some, a god. Malays, like the Chinese and other more primitive races, endeavour to save the sun and moon by making a vigorous noise to drive away the destroyer. The spots on the moon represent an inverted banyan tree, under which sits an old hunchback, plaiting strands of tree-bark, or, as some say, spinning cotton. As soon as his task is finished, he will wage for everything on the earth's surface. The line has not yet been completed because a rat gnaws through it despite the vigilance of the old man's cat, which is always watching. It should be added that the Malay phrase, *bulan bending pelandok* ('the moon is great with the mouse-deer'), is doubtless explainable by the fact that in Sanskrit mythology the spots on the moon are thought to be a hare or antelope, which, being hard pressed by a hunter, appealed to the moon for protection and was taken up by her into her arms; the phrase is often used when she is three-quarters full.

Landships in the hills during the rains, being often accompanied by floods, are said to be due to dragons breaking forth from the hills, where they have been doing penance, on their way to the sea. Rocks and waterfalls of unusual appearance are believed to owe their origin to demons. A rainbow, if only a small portion of the arc is visible, betokens the death of a Raja, if it appears in the west. The treasure which lies where the foot of the rainbow touches the earth has never yet been found, as 'no one can ever arrive at the place' where it touches. The rainbow itself is often taken to be a snake and is sometimes said to be seen drinking (*ular minum*). On the east coast it is sometimes said to be the head and entrails of a horse or a bullock which comes down to earth to drink. There is a house on the east coast of the peninsula in which a water-jar (*tingayan*) had been drained dry by a rainbow.

Sunset is a time of danger, since then all evil spirits have power, while the name applied to the yellow glow of the last rays of the sun (*mambang*

bening, 'the yellow deity') is a term associated with terror. In Perak children are called in at sunset to save them from this danger, and women often chew and spit out at seven points, as they walk round the house at sunset, *bungat terus*, an evil-smelling root much disliked by evil demons. Pulau Tioman, an island south-east of Pahang, is believed to be actually the body of a dragon, or *naga*. The Malay who told this to the present writer said that a long while ago an English Government vessel was passing this island, when her crew, catching sight of the then existing three points of the dragon's crest on the summit of the island, fired, breaking them off, and that the vessel itself sank afterwards. There are now said to be a number of people living on it, none of whom is allowed to make the least use of vinegar; if any vinegar is spilt, an earthquake follows, because the island is in reality the monstrous body of an enormous dragon.

(b) *Pagan races*.—The Semang endow both sun and moon with human form, both being female. Like the Japanese, who have been credited by some authors with Malayian affinities, they associate the sun with a crow (*Ag Ag*), whom they assert to be the husband of that luminary, whereas the husband of the moon is *Tu Puan* (see above, p. 364). When the sun sets, it falls into a cavern, which some Semang identify with a species of *Hades*. Eclipses are caused by a huge dragon, or serpent, which tries to swallow the luminary; in the case of the moon, the Semang assert that the serpent is the moon's mother-in-law, who has assumed this form and is trying to embrace it—an act which is clearly regarded by the Semang with loathing and abhorrence. The rainbow is a huge python, or serpent, and the spots where it touches the earth are feverish and bad to live near. During a storm of thunder and lightning the Semang draw a few drops of blood in a bamboo internode and throw it skywards. As the ghosts of wicked tribesmen fly up to the heavens, this is intended to propitiate them and persuade them to return. Sometimes, however, it is believed that the spirits go downwards and become water-spirits. In this case part of the blood is thrown towards the sky and part groundwards (*Pagan*).

Thunderbolts are supposed to be hurled as the result of undue familiarity towards a mother-in-law. An unusual explanation of thunder and lightning from Kedah is that the latter phenomenon is the flashing of the top-ends of dead medicine-men. The thunder is the hum of the tops themselves when revolving.

The Kedah Semang hold that heaven consists of three tiers or layers: the highest is filled with fruit-trees which bear luxuriantly all the year round, and is inhabited by the greater personages of Semang mythology; the second also contains fruit-trees, but is defended against unauthorized pillagers by a gigantic baboon who eats any such would-be assailants with 'false durian-fruit' (the produce of a wild fruit-tree); the third has nothing but the low breeding clouds which bring sickness to humanity.

Of Sakai beliefs little that is typical has been recorded, such information as is available witnessing to a close resemblance to Semang beliefs. *Ra-hu* (obviously the Indo-Malay *Rahu*), a being resembling a dragon, tries to swallow the sun and moon, but is driven away by the beating of drums and bamboo clappers. *Kulang Belok*, a world-eagle, at one time destroyed all human beings except a boy and a girl. With a magic knife the boy slew the

¹ This fruit is sometimes called by Malays the 'li-hu' fruit, from the belief that demons, on flying up to inspect it, see that it is not the real durian-fruit, and indulge in loud peals of madonic laughter.

angle, and from this pair all mankind are descended. The Sakai are said to indulge in ceremonial exorcism of the spirits of thunder, and it is believed that the forces of nature assist the souls of certain evil spirits or demons, which cause them to harm people, though the forces themselves are not demons. The earth is a thin crust resting on the nether ocean, and the heavens possess several layers, or tiers; the inhabitants of the uppermost are said to include a female deity who has to wash the sin-blackened souls in hot water.

The Blandas of Selanger say that the earth was originally the shape of a flat long betel-box (*siddak-iddak*), the nether ocean had the form of a globular tobacco-box (*lôpak-lôpak*), and the heavens were round and over-arching like an umbrella. The Blandas' account of paradise resembles that of the Batak. The latter hold that the souls of the good (or wise) pass away to the Island of Fruit-Trees, which they identify apparently with the moon, an eclipse being the work of a spirit that wishes to annihilate their spirit ancestors, the moon's inhabitants. This island of Fruit-Trees is reached by crossing a fallen tree-trunk which serves as a bridge, and from which the wicked fall into a lake or boiling cauldron. This happens only to those who allow themselves to be frightened by a big dog which sits at the parting of the ways by which the souls must go. The magicians of the tribe are reputed to be able to visit paradise and bring back fruit with them. Gaffer Engkoh dwells in the moon, which he reached by a ladder now broken, and protects from wild animals dead souls who visit the Island of Fruit-Trees.

The Mantri have not, to any extent, acquired Malay traditions as regards the form, character, and motion of the sun, moon, stars, etc. The dark spots in the moon they believe, however, to be a tree beneath which sits the moon-man Moyang Bertang, an enemy of mankind, who is constantly making nooses with which to catch them—a task which he is prevented from accomplishing by mice, who continually gnaw through the strings. Eclipses are not attributed to a snake or a dragon, but to a devouring evil spirit. The sky is a great (inverted) copper pot, suspended over the earth by a string, and around its edge the earth is constantly sending up sprouts which would join the stars if an old man did not cut and eat them. In addition the Mantri have a version of the sun-ropes belief, viz. an idea that the sun is a woman tied by a string which her lord is always pulling, while the stars are the moon's children. The sun once had as many children as the moon, but, having been tricked by the latter into eating them, now pursues the moon, and, when he succeeds in biting her, causes an eclipse to happen. This explains why the moon hides her children by day.

In the beliefs of the Banna Jakun the world is globular in shape and enclosed in the sky. Farthest north and south are the extremities of a great beam, the north being twenty days' journey from Boko, where there was a great hill from which the north winds issued. The sun and moon move round the earth, producing darkness and light alternately.

10. Origin of man.—(a) Malay.—What is now the most usual account of the creation of man, from the four elements of earth, air, fire, and water, appears to be a Malayized version of the Muhammadan story. Adam was formed from the heart of the earth by the angel Azrael, not without strenuous opposition and protests from the earth itself. A common feature of Malayan romances and legends, which also appears in Japanese folklore, and is probably to be attributed to an Indian origin, describes the supernatural origin of human beings in the interior of some vegetable product, as, e.g., in the story of a giant bamboo, which con-

tinually sent forth fresh shoots as it was cut down, and in which King Daksaratha, according to the story in *Sri Rama* (the Malay version of the *Ramayana*), found the princess, or, again, in the tradition of the discovery of Teh Parba in the river-foam.

(b) Pagan races.—The Batak story of the origin of the human race is that the first woman, seeing that all other animals had children, was desirous of having offspring of her own, but did not know how to obtain them. She and her husband took to carrying a brace of fire-logs under their arm-pits by way of make-believe. But one day the coco-nut monkey (*B'ro*), on noticing what they were doing, gave them advice, as a result of which they had four children, two boys and two girls. These married and had children of their own, but the ring-dove (*Stukur*) warned the children of the first generation that they had united within the forbidden degrees, and advised them to separate and 'marry other people,' in which case their children might intermarry without impropriety.

Among the Mantri the story of their origin forms an incident in a group of myths connected with Märtang, the first medicine-man, and his younger brother, Bli, who came from a place called 'Ruang Land' (Tanah Bangun) in the sky and returned there after a sojourn on earth. They were the children of two people called 'Drop of Water' (Ayer M-Titik) and 'Handful of Earth' (Tanah Sa-Képal), the latter being their mother. Märtang took his youngest sister to wife, and from them the Mantri are descended. Bli married the other sister, but had no offspring. When man increased in numbers to an alarming extent, To' Entah (or 'Lord-knows-who'), the first Märtang, a son of Märtang, drew his father's attention to the circumstances. Märtang wished things to remain as they were, but Bli suggested that 'men ought rather to die, after the fashion of the banana, which itself expires, although its young shoots survive.' Thus it was decided, and so the old now die, although they leave their children behind them. According to another version, the Mantri are descended from two white apes (*ungka putih*) who sent their young ones down into the plains, whereupon they developed so rapidly that they and their descendants became men. Yet another version says that men came down from heaven in a ship built by God, which floated upon the waters of the earth. The story of the princess found in the bamboo also occurs among the Mantri. She married the son of the first Raja, and she and her husband both live invisible to this very day.

Banna tradition says that a man and woman were created by Pirman when he formed the world. When the Lalumut mountains, the oldest land, rose out of the water, a ship of palm-wood, completely enclosed, in which the man and woman were contained, was left floating on the surface of the water. After the ship ceased to move, they nibbled their way out, and from this pair men are descended. As the male child was born from the right leg and the female from the left, children of the same womb cannot marry. The Jakun say that God created a man and woman in heaven who came down to earth in the State of Johor.

11. Personality; the body and personal possessions.—Malaya, in common with all peoples of a primitive civilization, have implicit faith in the magical possibilities of personality and of intimate personal possessions. This is very clearly shown in the beliefs relating to the spiritual or magical powers of the Rajas, the theory of the king as the divine man being strongly held and consistently adhered to. It is alleged that the Malay king originally had the right to slay any one at pleasure,

¹ *Alimuddin al-Bakri*, which furnishes the Malay substitute for earth.

without being guilty of a crime and without any inconvenient questions being asked him. Not only is his body sacred, but that sanctity extends to the royal regalia, which no one may touch, or even make models of, without incurring the risk of a grave illness, possibly even death itself. Any one who infringes the royal tabus, offends the royal person, or wrongfully makes use of the royal insignia or privileges will be struck down by the divine (quasi-electric) discharge of the royal sanctity (*doulat*). In the Malay romance the kings are credited with all the attributes of inferior gods; they are usually invulnerable and gifted with miraculous powers, such as that of transforming themselves, returning to life, and resuscitating the lives of others. As a divine man the Malay king possesses a number of prerogatives which enter into almost every act of life and effectually set him apart from ordinary man. One of these is the sole use of white for the royal umbrella, and the use of yellow cloth (the white umbrella, once the royal emblem throughout Indo-China, has now been abandoned for yellow). Linguistic tabus are also employed with reference to the king, such words as *asatip*, 'to eat,' *berdau*, 'to sleep,' *garing*, 'to be sick,' being substituted for the usual Malay words when reference is made to the royal person. At the Malay king's death his name is dropped and he is called *Marhum*, 'the deceased,' with the addition of a phrase descriptive of some prominent, and often uncomplimentary or grotesque, event of his lifetime. One of the most important and significant beliefs connected with the king is that which attributes to him a personal influence over the works of nature, such as the growth of the crops and the bearing of fruit-trees. This also, in a minor measure, applies to his delegates, and in modern times has even been extended to European officials employed in the government of the country.

In a lesser degree the magical property upon which the royal sanctity is based is a quality of the ordinary individual, though usually inversely in the sense that it is susceptible to evil influences, or, in the case of parts of the body, capable of conveying evil to the owner. The head is still, to some extent, regarded as sacrosanct. In cases of assault greater penalty is exacted for an injury to the head than for that to any other part of the person. Great circumspection is employed in cutting the hair; sometimes it is never shorn; more often it is not cut during a special period—e.g., after the birth of a child. Often a boy's head is shaved after birth with the exception of one lock in the centre of the head, which is allowed to grow until he begins to grow up, or even, in consequence of some parental vow, until he attains the period of puberty or marriage. These customs may be due to the sanctity of the head, or possibly to the idea that magic may be brought to bear upon the former owner of the hair by means of that which has been cut off. For this reason both hair-clippings and nail-parings are carefully disposed of, while they are invariably mentioned as part of the ingredients of the well known wax *mannikin* still believed to be most effective in bringing about the illness or death of an enemy. To the same category belongs the practice of kneading up with the substance of a *mannikin* the eyebrows or saliva of the intended victim, or soil taken from his footprint.

12. Holy places.—Notwithstanding the existence of the mosque as the centre of religious life, there is in every small district a sacred place, or 'high place' (*hirdmat*),¹ at which vows are paid on special occasions. Such spots are invested with a high degree of sanctity. In theory they are the burial-places of holy men, the early apostles of the

Mahammedan faith, or the first founders of the village, and persons of local celebrity; but, as a matter of fact, in many if not in most cases, they belong to an earlier state of belief than such an origin would imply. Many of these *hirdmat* are not graves at all, but fall into the category of those holy places which the Malays themselves, when asked to interpret them, explain as being 'spirit places' (*hirdmat jin*). For instance, the *hirdmat* of Nakhoda ('shipmaster') Hassan on Bukit Nyala, near the Johor frontier, consists of a group of rocks exhibiting no sign of any kind of burial. This (orthodox) *jin* presides over rain and streams and all kinds of water. Incense is burnt here to prevent floods and to get sufficient water for irrigation. It is probable that the name is a later accretion and the rite a relic of the worship of the spirit of streams of water. In another place the *hirdmat* is a tree with a protuberance on the trunk. This swelling is closely connected with the harvest; it increases in good years and in bad decreases.

In Klang there is a famous wishing-rock, called Batu Tre, to which the *Mantri* have resorted from time immemorial. A similar rock is situated on the top of Gunung Baramban ('Baramban Crag'), while other mountain summits also have similar wishing-places, each possessing its good spirit. The suppliant who visits these places carries with him a couple of white fowls and samples of various articles of food in a tray, which is suspended from a tree or placed on the highest peak of the summit. After his wishes have been silently addressed to the spirit of the mountain, the petitioner eats a meal prepared on the spot for the purpose.

It may be noted, however, that such sacred places were not recognized by the *Bumang*, possibly owing to their nomadic habits. The *Sakai* and *Jakun* appear to have set apart certain sites for the purpose of burning incense and registering vows, and they had, in addition to these shrines, medicine-buts, either solitary cells in the depths of the forest, in which the medicine-men kept a selection of his charms and spells, or diminutive shelters which screened him and his patients during the ceremony of exorcism.

13. Rites: prayer and sacrifice.—In the case of both prayer and sacrifice, the Malay standpoint is entirely materialistic. The prayer is invariably a request for material advantage; its efficacy is increased by repetition. Sacrifice, as is shown by the language of the charm, is, or was originally, regarded as a simple gift. There is evidence, however, of the progression from this point of view to that of homage, and, finally, to that of self-abnegation. The spirit or deity is invited to eat or drink of the offerings placed before him. An intermediate stage between the gift and the idea of homage is marked by the use of substitutes and a sacrifice of parts for the whole. For instance, in the instruction of the magician, 'if the deity demands a human sacrifice, a cock may be substituted'²—a statement which points, moreover, to the former prevalence of human sacrifices. In one case a more explicit declaration was made to the present writer, who was told that for a man a buffalo could be substituted, for a buffalo a goat, for a goat a cock, for a cock an egg—a statement which explains the frequent use of an egg in Malay sacrifices. The idea of abnegation among the Malays appears to be confined to votal ceremonies or vows in which the votary's offering is not regulated by custom, but there is often a tacit understanding that he will sacrifice something of value to himself.

The chief rites performed on various occasions, to which reference is made below in connexion with special beliefs, are: (a) rites performed at

¹ Arab. *maqām*, 'one who has found (divine) mercy.'

² From Arab. *hirdmat*, 'request,' 'consecration,' 'sacrifice.'

³ *Short, Malay Magic*, p. 221; cf. p. 144, note.

shrines; (b) the rite of burning the incense; (c) the sentering of the moribund rice; and (d) the application of the neutralizing rice-paste.

(a) The principal elements of the rite performed at shrines are the burning of incense, the offering of meat (mostly yellow-stained rice), and the killing of he-goats. The worshippers partake of the flesh of the goats and, in some cases at least, of the yellow rice, while the white ('sacred') cloth, five cubits in length, which is laid on the shrine now becomes the property of the deceased attendant (khalif), though formerly it doubtless went to the priest.

(b) The burning of incense is the counterpart of burnt offerings. An invocation is sometimes addressed to the spirit of the incense, saying it 'to pervade the seven tiers of the earth and the seven tiers of heaven respectively,' so as to ensure that the offering reaches the nostrils of the gods. Offerings are drawn from the way in which the smoke rises.

(c) The sentering of the moribund rice is performed with four varieties of rice-grain (parashed, washed, unfurrowed, and a special kind called 'ghost-rice' or 'pukut'). The parashed rice is generally used for sentering on the moribund tray after banana-leaves have been spread over it. The unfurrowed and the washed rice are sprinkled on the patient to be benefited, or upon the ground or house-door while the ghost-rice is generally used for heaps of high places.

(d) Lustration is accomplished by fire or water. Of the former the best examples are the fumigation of infants and the roasting of the mother after child-birth. One form of lustration by water is an integral portion of a large class of ceremonies, such as those relating to building, fishing, agriculture, marriage, etc. It is called 'sentering' or 'neutralizing rice-paste' (really rice-flour water). It consists in the application, by dabbing, painting, or sprinkling, of a thin paste (made by mixing the rice-flour with water, taken up in a leaf-bush or equivalent) on the objects which it is intended to protect or neutralize. The brush is made of bunches of five, seven, or nine leaves of certain plants bound with fibrous strings of shredded tree-bark or creeper. The materials and combinations vary, of course, with the object and occasion of the ceremony (whether, e.g., for a marriage, for blessing the planting, etc., or for lustrating the rice-owl). Short rhythmic charms were often used to accompany the rite, but were not repeated publicly.

Developments of the kind of lustration by water are to be found in the bathing of the mother and child after birth and the washing of the hair on similar occasions, the ablation of the sick, of the bride and bridegroom, and of corpses, and the annual bathing expeditions which purify the bathers and protect them from evil. Fasting in the form of religious penance is now seldom practised, but used in former days to be undertaken to secure a state of exaltation, to induce visions, or to acquire supernatural powers. The fast always took place in a solitary place, usually on the summit of a lofty hill or mountain. Such fasts did not imply complete abstinence; a small medium of rice was allowed daily, with the result that they might be prolonged almost indefinitely.

14. Magic and the medicine-man. — (a) Malay. — Although the office of the medicine-man, or magician (*pusang*), is falling into abeyance in towns, it was at one time of great importance; and this is still the case to a large extent in country places. The *pusang* is the accredited intermediary between man and spirits, and, although he has no connexion with the Muhammadan religion, without him no village community would be complete. The office is often hereditary, or at least confined to the members of one family. Certain properties, such as a peculiar kind of head-dress, are, as it were, the regalia or official insignia, and are handed down from one generation to another. The functions of the medicine man are many and diverse. Few of the operations of life can be undertaken without his intervention. In fishing, trapping, and hunting, in the gathering of jungle produce, in agricultural matters, such as sowing, reaping, irrigation, and clearing the jungle, in prospecting for minerals of all kinds, in every crisis of life—birth, adolescence, and marriage—of sickness, death, and burial, his aid is invoked to decide the propitious moment for action, to prescribe the ritual, and to carry out the rite. Not the least important of his powers in former days was that of controlling the weather—traces of which are still preserved in Malay weather charms. For his services in these matters he receives a small payment.

For the most part the *pusang's* instructions consist of prohibitions, or *pantang*; e.g., it is *pantang* in some places to work in the rice-fields on

the fourteenth and fifteenth days of the lunar month; certain instruments are proscribed; in the interior a reaping-hook may not be used for cutting the padi, or at least the *tuai* (a small instrument consisting of a crescent-shaped blade, set transversely in a slip of bamboo, which will cut only one or two heads of rice at a time) must be used to begin the reaping. By these prohibitions, it may be concluded, the *pusang* preserves the traditional method of an older régime—e.g., in enforcing an adherence to the custom of the fixed maximum prices for the sale of rice and other articles within the village, infraction of which entails a bad harvest.

The *pusang* is sometimes supposed to keep a familiar spirit which is hereditary in the family, enabling him to deal summarily with wild spirits of a noxious character, and also to bewitch and thus to punish people who are bold enough to dispute his authority. Such punishment is usually inflicted by a 'sentering' or 'pointing,' one form of which consisted in pointing a kris in the direction of the intended victim, the point of the dagger beginning to drip blood as soon as the charm began to work. Another form consists in burning the point of the cordiform top of a newly opened bunch of bananas growing on the tree; this causes excruciating agony; then the *pusang* cuts off the top and the victim dies vomiting blood, his heart having fallen out of its proper position. The Malay witch also commonly keeps a familiar, which may have as its embodiment a night-owl, a badger, etc.

In certain respects, it is important to note, the *magician* stands on the same footing as the divine man or king; e.g., he possesses a regalia which is called by the same name (*badakron*) as the insignia of royalty, he may (at least in some cases) use the royal colour, and he may, like the king himself, enforce the ceremonial use and misuse of certain words and phrases. Probably both offices are held to be dangerous. Other powers and attributes of the medicine-man which may be mentioned are his ability to act as a spirit-medium and to give oracles in trances, and his practice of asceticism and observation of chastity for the time being. His use of mesmerism is not yet recorded, but motor automatism certainly occurs.¹

Although the office of magician is hereditary, the power may be acquired by certain recognized methods. One of these is to raise and meet faces to face the ghost of a recently murdered man or of an infant, by means of incantations and fumigations performed at the grave-side.

The Malays themselves make some distinctions between the *pusang* and the *demor*, the latter being the medicine-man who is concerned especially with the curing of diseases. The two terms are, however, sometimes used as if they were interchangeable. The basic principles of the medical man's art are identical with those of the *pusang*; they depend upon a belief in spirits, and the aim of his treatment is either to propitiate or to overcome their influence.

The *demor's* procedure in dealing with disease falls under two clearly distinguished headings. First comes the ceremonial inspection or diagnosis, when the character of the therapeutic treatment is determined by divination, by means of omens from the smoke of burning incense, by the position of coins thrown into a water jar, or by the aspect of parched rice floating on the water's surface.

The therapeutic rites are various in character:

(1) *Propitiatory ceremonies*, the most popular of which is the use of the moribund tray called *cekoh*, a small frame of bamboo or wood decorated with a fringe of painted coconut-leaves, on which offerings of food are laid for the spirits to eat when it has been hung in a suitable spot outside the house.

¹ *Shed, Malay Magic*, p. 78.

¹ *Shed, Malay Magic*, pp. 495-496.

As an alternative method models of certain objects are placed upon the way, the evil spirits are invited to enter them, and the way is then got rid of by being hung up in the jungle or set adrift on the sea or nearest river.

(2) *Neutralizing ceremonies*—the use of counter-charms to neutralize the active principle of poison, introduced by the medicine-man to cure all cases where any evil principle (even a familiar spirit) is believed to have entered a sick person's body. The ceremony of applying such charms usually consists in mixing powder from a ground beetle-shell or salt with water and drinking it after reciting the incantation.

(3) *Expulsive ceremonies*—those intended to expel from the patient's body all kinds of evil influences or principles, such as may have entered him on his touching a dead animal or bird, or from meeting the 'Wild Huntsman.' The evil principle known as *badu* attaches to everything that has life, including inert objects such as trees, and even stones and minerals, which, in the Malay view, are animated. Of these evil principles or 'spirits' there are one hundred and ninety, or, according to some, one hundred and ninety-three. To 'cast out the mischief,' the patient is stretched down with a brush (made of certain prescribed leaves and plant-stems) which has been dipped in water in which woods have been grated or pieces of soap-iron allowed to soak, or else he is rubbed with lime, appropriate charms being recited in either case. In another form of the ceremony the 'sacchar' is driven from the body along a red thread, which the patient holds in his hand, until it reaches certain dough images of birds, beasts, and fishes, placed upon the ground. A 'demon-boat,' sometimes a more real, is also used as a vehicle for the spirits and set adrift on sea or river. The evil may also be expelled by a long and elaborate ceremony in which a protective spirit, such as the tiger- or elephant-spirit, may be summoned. In such cases the spirit, riding upon the medicine-man, who, while in a state of procession, circulates the movements of the animal-spirit summoned, expels the evil by its superior magical powers.

(4) *Revivifying ceremonies*—ceremonies to recall the sick person's *chamangai*. In one such rite dough is rolled into a human figure, which is laid upon five cubes of white cloth. Rice is scattered, incense burned, and a charm recited to induce the *chamangai* to enter the dough image and be transferred thence to the soul-sick, and thence to the patient. Similar ceremonies are used to prevent the *chamangai* of a swooning person from escaping.

(5) *Pagan roces*.—The *belian* (shaman, or medicine-man) is the most important member of the tribe among the Semang. In normal circumstances the chiefs or head-men are always *belians* of more or less reputation. They obey certain prohibitions which do not affect ordinary members of the tribe: they may not eat the flesh of domestic animals, like the goat or buffalo, and that of domestic fowls but rarely. They receive a special form of burial, traditionally regarded as specially honourable, consisting of a rude shelter built in a tree, in which are placed a medium of food and water, a jungle-knife, etc. It is believed that they are able to proceed to paradise in trances and to drive out devils. They alone know the love-charms that never fail, and can slay men by 'sendings' at a distance of several days' journey. They alone have the power to change themselves into vortices, and at their death their *chamangai* passes into the body of an elephant, tiger, or rhinoceros. When the latter dies, they proceed to paradise.

Not merely are diseases caused by demons, but they are demons, and have to be exorcised as such. They are attracted sympathetically from the body by pulling up sapling stumps at or near the place where the disease is believed to have entered the patient. The affected part is rubbed with earth taken from the hole in which the root grew; chewed betel is ejected on the body (in imitation of the Malay medicine-man), and the hurling of dead saplings into the wood, so that the evil spirits may be cast out likewise, ends the ceremony.

'Sendings' or 'pointings' are achieved by a minute dart or splinter of bamboo about two inches long, which is laid on the right palm and is ordered to go forth and slay the victim. This dart or splinter flies through the air and, reaching the victim, pierces his heart and kills him. Sometimes a taper formed of wax from a deserted bees' comb is burned at the same time. Such 'sendings' were said by the Semang to be effective at 'a distance of probably two days' journey.'

The Mantri believe that all diseases are caused either by the spells of bad men or by spirits.

Among the latter are the smallpox demon, which the Mantri avoid even mentioning by name; the dropical demon (*Asadu Asadong*), which haunts the abodes of men and afflicts them with pains in the stomach and head; the Demon Huntsman (the *Asadu* of *Asadu* of Malayan origin), who dwells in lakes or pools, is black, and has three dogs which he will cause to chase a man in the forest; if they catch him, they will drink his blood. In every stream, in the ground, in trees, and in caves and overices of rocks dwell malignant demons who cause disease or mischief to men in various ways, as by sucking their blood and thus causing their death. When a person is wounded, the *Asadu* parasites on the lesion and causes the blood to flow by sucking. The Berumbun tribes believe that diseases are inflicted by the spirits of the rivers (*Asadu sungai*), which are evil and feed on the human *chamangai*.

The Mantri magician's most noted form of 'sending' is the *filya*, or pointing ceremony, which is achieved by the use of wax from an abandoned bees' nest.

When a wind blows in the direction of the victim, the magician takes a vessel of water and a lighted candle or two, and mutters an incantation while 'gazing' into the water. When he discerns the image of his intended victim in the water, he throws the wax into the air, and the wind instantaneously carries it to his victim. The latter feels as if struck by some unseen assailant, and is immediately seized by sickness, which may result in death, should the strength of the spell be great enough.

This attack may be averted if the victim has surrounded himself by counter-spells or charms of a prophylactic character. These may not only ward off the blow, but may even prevent the magician from seeing the image of the victim in the water. Amulets are much used as prophylactics against those diseases which are most frequently attributed to 'sendings,' but which may also be due to unsatisfied cravings (*akut pison*).

Among the Benua Jakun the magicians are an order combining the offices of priest, physician, and sorcerer. They and the *Bani* medicine-men are much dreaded by the Malays, who believe them (as autochthones) to be more powerful than their own magicians, especially, e.g., in matters in which the performance of the *Bani* *Shamans* ceremony is likely to be effective. Not only can the medicine-men cure, but they can inflict disease and death-sickness. This is usually effected by the 'pointing,' or *filya*, ceremony. Even figure are subject to these medicine-men, and every magician of repute is believed to have one in constant attendance. In curing disease, incantations are accompanied by the music of the *gelandang*, a long bamboo struck by sticks, which are always made of wood of the *akrawan* tree. Conjurations are addressed to *Jiwa-jiwa* (=Mal.-Skr. *deus-deus*), who resides in heaven and alone can approach *Pirman*. The incantations last all night for one, two, three, or four nights, until the medicine-man announces that he has received the medicine or that the deity is inexorable. The Berumbun tribes, like the Malays, attribute the magician's powers to his command over spirits. Every shaman has disciples, who accompany him when he visits the sick. These pupils alone enter the small hut of leaves erected near the house in which the medicine-man performs his incantations, these being continued until the wizard is possessed by the spirit. The latter then answers the medicine-man's questions respecting the mode of treating the diseased person. The Jakun of Madak (Johor) believed that the great magicians (*payang idan*) of the tribe could reach heaven itself, and that they could disappear without dying, or else, on sickening for death, by arranging to have incense burned over them for two days after their apparent decease, they could return to life again.

A ceremony of exorcism known as *alai*, or, more commonly, as *asalai*, is employed by the *Blandas* in case of illness or when an answer is required to a question concerning the welfare of an individual.

The ceremony takes place in a hut in complete darkness. After incantations accompanied by the rhythmic drumming of bamboo 'stampers' on the central beam of the floor, the spirit demands upon one member of the company, who answers any questions put to him while he is in a state of trance or possession. In the case of *Blandas* the magician erects a small hut-chamber or cell (*balei bumbun*) near the walls of the hut, in which he encloses himself while the ceremony progresses.

The *Blandas* employ spells and exorcisms to cast out disease and evil spirits. Spirits of tigers, elephants, and monkeys are summoned to enter the magician's body, and the sick man is then brushed with leaves seven times downwards from head to foot while a charm is repeated. In the blood throwing charm water is used, and a charm against the Wild Huntsman is also recited.

15. Birth ceremonies and beliefs. — (a) Malay. — There are four spirits, or, rather, demons, which are specially feared by the Malays in relation to child-birth. The *bayang*, a demon which appears in the form of a divet cat, is evoked by incantation over the grave of a still-born child. It may, however, be inherited, and its possessor can send illness, usually in the form of convulsions or delirium, to an enemy. It is especially inimical to children, who are sometimes made to wear a black silk string armband as a protection against its attacks. The *langewir*, a woman who has died in child-birth, becomes a flying demon, or *lanahoe*, who, through a hole in the back of her neck, sucks the blood of children. It is believed that these demons have on occasion become wives and mothers, but, when allowed to dance at village marrymakings, they will assume their original form and fly off again into the forest. The *ponsanak* is the still-born daughter of a *langewir*. As a precaution intended to prevent the dead mother or still-born child from originating these mischiefs, the *langewir* and *ponsanak* are buried with glass beads in the mouth (to prevent them from shrieking), an egg under each armpit (to prevent them from waving their arms in flight), and needles in the palm of each hand (to prevent them from opening and shutting their hands in flying). The *ponsanak* appears under the form of a species of night-owl. The *pinanggalan*, a colossal flying head with hair matted by clots of blood, a species of monstrous vampire or *lanahoe* that sucks the blood of children, sits on the roof-tree, or endeavours to force its way through the floor, whenever a child is born, to attack the infant. In addition to these four spirits specifically connected with child-birth, there are the familiar two, called *polong* and *pidais*, which also give rise to anxiety at this time, though they do not confine their activities to new-born children. The *polong* originates from the blood of a murdered man which has been placed in a bottle and over which certain incantations have been recited. It is described as a diminutive female figure about as large as the top joint of the little finger, and is usually preceded by the *pidais*, its pet or favourite, which, in the form of a cricket, searches for a victim and enters his body, when found, tail foremost. The *pidais* is obtained by exhuming the body of a first-born child, a first-born mother's offspring, which has been dead for less than forty days, and burying the child's tongue, with incantations, in a spot where three cross-roads meet. It has been noticed that these demons belong to the category of familiar spirits who are sent to attack their victims by an owner, and, as such, are sharply distinguished from the more primitive animistic ideas relating to disease, etc., which are held by the *Bomors*.

In regard to the observances at and after child-birth, it is usual to purify the midwife (*bidan*) in the seventh month by sending her a copper funnel containing four or five green nuts, three or four packets of betel-leaf, tobacco, and so forth, all of which the midwife charms and then empties upon the floor for the purpose of taking the curse. She then shows some of the betel-leaf and ascertains the child's horoscope. At the appointed time she chooses the luckiest place in the house for the child to be born, by dropping an adam-blade, point downwards, first in one place and then in another, until it sticks upright in the ground (under the usual Malay pin-dropping). Beneath this spot, under the raised floor of the house, are fastened a bunch of freshly cut pine leaves, the 'acid' egg plant, or *brayawal*, and a *lathu jendak* (rotten stand for a cooking pot) as a source for and protection against any evil spirit (who will, it is believed, prick himself with the former and catch his head in the latter as in a snare). Incense might have been packed to death by the fowl. A tray covered with washed uncooked rice and two mats with several thicknesses of cotton between are prepared for the child's reception. As soon as the new-born infant is laid upon this, it is formally adopted by the father, who (*corodays*) breathes into its ear a *Shahamandan* formula. Mother and child are purified by bathing in warm water containing various kinds of leaves, with *arum* palm- blossoms. The child is then swaddled. Mother and child are next marked, especially the latter, as a precaution against convulsions and straining, and also, in the case of both, by way of protection against evil spirits. For this ceremony chips of wood from the thin end of the threshold, from the house-ladder, or from the house furniture, in combination with a coat of garlic, a coat of an onion, *asamutida*, a rattan pot-stand, and five taken from the monkey-face of an unfermented coco-nut, are collected and burned, and the ashes are mixed with a small bowl-water. The proper charms to recite, and, the *lathu jendak* having been dropped in the mixture, the centre of the child's forehead is marked — if a boy, with an arrow-shaped mark; if a girl, with a cross, and also with dots on nose, cheeks, chin, and shoulders. The mother is marked with a line from breast to breast and on the end of the nose also. The evil ones will then, it is thought, take woman and child to be his own (who are supposed to be similarly marked) and refrain from harming them. In addition, if the child is a girl, the eyebrows are shaved, and a curve is drawn in their place, extending from the root of the nose to the ear. If the head is considered to be 'too long' (the Malays being on the whole a round-headed race), a *jam-bat* cap is made to compress it.

Other ceremonies affecting the child are the administering of the 'mouth-opener,' the rite of giving the first drink from half a green coco-nut, followed by the laying of a gold and a silver and an amalgam ring on its lips, and by fumigating it before it is laid for the first time in the swing-net, which takes the place of the Malayan cradle. The cot is protected by a funnel-shaped bunch of leaves of the *brayawal* and other materials, including the casing of the charred torch used at the severing of the umbilical cord, a spice-block, and a trap against blood-sucking demons, made of a *porang*-blade, a coco-nut scraper, and a rattan pot-stand. This trap hangs under the bunch of leaves. The spice-block is explained as being a substitute for the child itself; it is laid in the cot during the first part of the fumigation ceremony, and for the first seven days, whenever the child is taken from the cot, the block must replace it. The naming ceremony takes place usually within the first week, and the first head-shaving and nail-cutting a few days later. Of the naming ceremonies the most characteristic is represented by the east-coast practice of writing seven different names on as many separate banana fruits, and then allowing the infant to choose between them.

The most characteristically Malayan custom connected with child birth is that which requires the mother to 'ascend the roasting-place' (*naik asikan*) daily. A rough couch is prepared for her on a small platform, beneath which a large fire is lighted, and upon this bed she has to recline two or three times a day, and that, moreover, for an hour or two together. Sometimes heated hearth-stones wrapped in rags are applied to her stomach. This is said to continue for the whole period of the forty-four days of convalescence. In some cases the 'roasting' was carried out with such rigour as to cause aberration of mind or even the death of the unfortunate patient. At the end of the forty-fourth day a purificatory ceremony takes place, wherein the floor is smeared with rice cannolis

and scratched over by the claws of a fowl held tightly in the grasp of the cleanser. At about the same period, of the fortieth day, the child (in Perak) is presented to the river-spirits, being made to stand with one foot on a couple of coco-nuts and the other on a fowl (both of which have been deposited in the water). A boy then, if the infant is a boy, is sent up-stream to catch a fish with a casting net; if a girl, a girl acts as the fisher. In Upper Perak the baby himself, with a number of other young children, is caught in the net; he will then never want for fish to feed on.¹

During the forty-four days' period there are many food prohibitions—e.g., any foods which, from the Malay point of view, are lowering, such as certain vegetable foods, things which irritate the skin or cause faintness, sugar (except coco-nut sugar), coco-nuts themselves, and chillies are prohibited.

Both before and after child-birth many prohibitions are laid not only on the wife, but also on her husband. The latter may not shave his head or cut his hair until after the child's birth; he may not sit in or obstruct the doorway. Any untoward act may cause deformity: a child was born with only a thumb, forefinger, and little finger on the left hand owing to the father having, just previously to the child's birth, killed a crab with a cutlass. In fact, it was at one time prohibited for him to cut the throat of a buffalo or a fowl preparatory to cooking it, or even to take any life whatever. In Perak any log marked by, or distorted in growth by, a parasite, if used in building the house, would cause deformity, protract delivery, and endanger the life of both mother and infant.

(b) *Pagan rites*.—Superstitions and practices connected with birth, so far as known among the pagan tribes, or, rather, among those pagan tribes for whom Malayan origin and affinities are here claimed, strongly confirm the view that the popular beliefs of the more highly civilized natives of the peninsula are essentially primitive in character. The practice of roasting the mother, e.g., of course on a quite minor scale, is found among the Jakun, Batin, and Mantri, while among the Blandas the charms used at birth are directed against the demon, the *langhas* (Malay *langgar*), *polong*, and *ponganah*—identical, at least in name, with those of the Malays. Another incantation is repeated at the moment of removing the caul as a charm against the evil-demon, which licks up the blood of the sufferer. The Sakai bury the umbilicus and placenta under human habitations so that the rain may not beat upon them and turn them into birth-demons.

It must be stated, however, that our knowledge of the birth customs of the pagan tribes is by no means adequate, and the whole subject awaits further investigation. In one account of the Semang, for instance, it was alleged that their birth customs were based upon a belief in a bird-soul which was carried by the expectant mother in a bamboo receptacle; but, although the conception of the *sinungat* as a bird is certainly familiar to the Malays, this statement still awaits confirmation among the wild tribesmen. Both Sakai and Jakun make use of the services of a *sage-femme*, who, among the former, has a special hut used by the women of the tribe for purposes of confinement.

The Batin decorate the mother's mosquito-curtains with the leaf-hangings used on all important ceremonial occasions, while among the Mantri a cup of water is charmed during labour and administered to the mother. The cap of certain leaves is given to the child, and a charm is repeated. A name, which is retained until marriage, is given to the child at the moment

when the umbilical cord is severed. The Batus Jakun fastened round the neck of the child at birth a string to which pieces of tamarite, and so forth, were attached. The Jakun also observed a number of food prohibitions: while the children were unable to walk, the parents abstained from certain fish and animal foods, the latter including fowls and eggs, deer of all kinds, tortoises, and lizards.

16. *Adolescence and maturity customs*.—(a) *Malay*.—Of the purely Malay ceremonies at adolescence the most important are the filing of the teeth and the cutting of the first locks of hair—the latter, of course, only when, owing to some vow of the parents, the 'first head-shaving' operation has been postponed until marriage.

Tooth-filing is done by a professional tooth-ward (*pasung paku*). He is wearing rice-pots, chevrons, and the wearing of the several kinds of ceremonial rice and rings of precious metal are employed by the *pasung* in order to avert the 'mischiefs' (*dati*) from his treatment, as well as from the teeth of the patient. The medicine-man's eyes are considered to be especially endangered by the dust emanating from the teeth, while an unskilled performer may cause much pain to the patient if he does not know thoroughly how to 'sanitize' the teeth.

The rings of precious metal which are pressed against the patient's teeth as part of the rite of extracting the hair are also used in the hair-cutting ceremony. The bride's hair is arranged in seven long tresses hanging down her back below the veil which, on this occasion, she wears her head, to each of these is attached a ring of precious metal, and then each tress of hair, on being cut, is allowed to fall with the attached ring into a coco-nut vessel (ornamented for the purpose with a chevron edge), which is half full of fresh coco-nut milk. For this ceremony also the *pasung* is employed by the appearance of the bride with the *pasung* rice-ward, some of it being also sprinkled on the palm of her left hand, by those who take part in the ceremony.

The ear-boring ceremony appears to have fallen into abeyance, though in some of the Malay States a special kind of large, round, ornamental ear ring, or ear-stud, is still the mark of virginity. Significantly, the ear-studs of a virgin bride are tied on to the ear-lobes of a widow who remarries, the latter being regarded, so to speak, as a sort of 'marry widow,' and being, in fact, actually called jeeringly 'the widow adorned' (*penda ber-ayau*). Ear boring is now usually performed when the child is quite an infant.

Circumcision is practised, the instrument being traditionally a knife of bamboo, but in all the more accessories of the practice it seems to be entirely a non-Muhammedan rite. Especially in the Northern States it is accompanied by such a wealth of irrelevant detail as to suggest that it has been grafted upon an ancient festival (probably the tonsure ceremony) belonging to an older faith than that of Islam.²

It is accompanied by the usual purificatory rite, and the ceremony is made the occasion for a banquet, at which the boy is dressed like a pilgrim and stained with henna like a bridegroom, after which the customary gifts are offered. In Perak he is then taken aside and robed in rich raiment, his mouth filled with the marinated mignon-shallot rice, and his body sprinkled with the purifying rice-dust. After this, two chevrons and two small packets of rice are slowly rolled over him from head to foot. A hen is then placed 'on his chest to pick him gratis of the yellow rice from his mouth. This is done to drive away ill-luck.'³ The boy's teeth are next tapped with a stone by the operator, and, after fasting, a procession to the river follows, the object of which is to propitiate the water-spirit. The boy then has his top-knot shaved off and returns to the house for the actual circumcision, during which he takes his seat either on a mat of rice or on the stem of a banana. In the procession the youths are sometimes carried on men's shoulders, sometimes (most usual) in a litter shaped like some strange bird or mythical animal.

The girl's ceremony is much simpler, much more private, it was formerly accompanied by ear-boring and tooth-filing, and by staining the teeth 'black as a bear's eye ring.' Large round ear-studs were also formerly assumed by girls at this period, as emblems of maidenhood, but, though these are still sometimes worn on the east coast, they are now reserved, on the west coast, only at the wedding ceremony in preparation for the rite of disavowing them a few days later.⁴

In the same part of the peninsula (east coast) the ceremony is not called, as on the west coast, 'entering into Islam,' but, most significantly, *manak paku*,

¹ R. J. Wilkinson, in *Papers on Malay Subjects* (printed for the F.M.S. Government), 1911, 'Life and Customs,' pt. I, p. 6.

² Cf. Wilkinson, p. 65.

³ *Id.* p. 171.

⁴ *Id.* p. 18.

which means literally 'admission into the body of the Malay people'—the most usual meaning of *jomb* being the vernacular, or 'Malay,' language. Yet another term for the ceremony in these parts was 'purification' (*shuchi tsōka*), literally 'cleansing of the person'—a phrase which is also applied in the same parts of the country to marriage.

(b) Pagan rites.—Of the various operations with which it is usual among primitive peoples to mark the attainment of maturity, neither incision nor circumcision is practised by the wild tribes except in the case of the former, among the Semang and Jakun of the Batu Pahat in Johor, and the Benua, and, in the case of the latter, as elsewhere, only where Muhammadan influence has penetrated. It may, in fact, be said that the rite is virtually synonymous with conversion to Islam, and that it may be taken as the broad dividing-line between Muhammadanism and more paganism. Nor, with the exception of a single record from the Perak Sakai, is there any taint in the strict sense of the expression. Scarification, however, is found among both Semang and Sakai, but not among the Jakun, and, judging both from distribution and from frequency, there is good reason to believe that the custom originated among the Sakai, and was introduced, though only to a limited degree, among the Semang. The scarification consists of divergent lines on the cheek from the nose towards the ear, produced by the scratches of a thorn or edge of a sugar-cane leaf, charcoal being rubbed into these scratches by way of pigment. Body-painting is of wider distribution, and is to be seen among Semang, Sakai, and Jakun, but more especially among the Sakai. The colours used are black, white, red, and occasionally yellow. The designs are decorative and magical rather than tribal. Perforation of the nasal septum with the wearing of a nose-bar or peronipia's quill also appears to be more especially a Sakai practice. Boring the ears, however, is, as a ceremony, practically universal, whilst the ceremonial filing and blackening of the teeth may belong rather to the Malayan order of ideas. It occurs among the Semang of Kedah and Kelantan, but is there undoubtedly borrowed from the Malays of the neighbouring country.

The shaving of the head, with the exception of a top-knot, which is temporarily removed at puberty, is found among the Semang, but, though also found with differences among the Malays, is most likely a native custom of the wild Negritos, as it is also found among their Andamanese kindred.

17. Betrothal and marriage. —(a) Malay. —Negotiations for marriage and the ceremony of betrothal are carried out by representatives of the families implicated. The betrothal is a simple affair, consisting chiefly of the offering of betel-leaf by the representative of the prospective bridegroom and its acceptance by the bride's parents, the two parties meeting in a 'family circle,' at which the offer used originally to be made, and the reply given, in rhyming stanza. The terms of the engagement is then settled. The amount of the marriage settlement is fixed by custom at two *sharats* of dollars (\$22, about £2, 5s.) in Selangor, or \$31.25 (about £2, 5s.) in Perak, etc. The sum is not usually mentioned unless a modification of this arrangement is to be made. A breach on the part of the bride's parents involves forfeiture of double the marriage portion. The affianced pair avoid one another, but there is a regular system of exchange of presents, those given by the girl being deposited in exquisitely woven baskets made in the shape of birds or fishes. It should be added that the Malay name of the ceremony in the peninsula, *berpinang*, is an interesting parallel to the splitting of the betel-nut (*pinang*), which is the

symbolical act of betrothal to this day among the Dayaks of Borneo.

The actual marriage ceremonies cover a period of four days, beginning with the work of decorating both houses, which includes the erection of a dais, with two standard candlesticks, often 6 ft. high, before the door of the bride's chamber. The arrangement of the dais (*pelaminan*) is of extreme importance, since the number of big white (or in case of a Raja, yellow) pillows used indicates, according to a rigid code of etiquette, the rank of the contracting parties. The whole of the dais is covered with a mosquito-curtain, and the walls of the chamber are adorned with striped or 'rainbow' hangings (*lamin pelangi*), while the ceiling is decked with an awning or 'heaven' (*langit-langit*).

The basic forms of the rite, which were those of a royal wedding, include the so-called 'bride-price,' the food sharing ceremony, and the appropriation of the dress of the bride (who on this occasion wears trousers) to that of her husband (who wears a skirt). It is this last that, as A. E. Crawley¹ has explained, helps to account for the apparent resemblance to royal ceremonies that may be noticed in so many Malay customs. The idea seems partly to disguise the subjects of the ceremony in order to avert the possible danger attaching to what is certainly regarded as a critical occasion, and partly to promote a more perfect union between the pair by means of (1) a pledge passing between them (i.e. the 'bride-price') as well as by (2) the sharing of a meal together, and (3) the obliteration (so far as may be practicable) of the distinctions of sex. The pretence of kingship by which the bridegroom is made to wear the bracelets, chain, neck-ornament (and, if we may go by the analogy of Malay funeral custom, even the kris) is simply, therefore, an attempt to secure a really effective disguise for the party in danger. The shaving of the bride's forehead may be similarly explained, since the bridegroom is also shaved. Although these are all likewise usages of royalty, it is wrong to regard them merely as a species of social self-advertisement; they are really the paraphernalia worn by all persons of the Malayan race on certain critical occasions,² in order to banish the spirits of evil and thus to avert mishap and danger. Till recent years the ceremonies over the greater part of the peninsula were almost entirely non-Muhammadan, and often took place in country districts without the intervention of any mosque official whatever. Lustrations followed, and on the *hari gembira* processions in monstrous or bird-shaped litter.

In certain details the wedding ceremonial has now become Muhammadan in character, among these is to be included, most probably the staining of the fingers of the bride and bridegroom with henna. The henna-staining at first is done in seclusion ('by stealth'), the initial public appearance of the married couple at their respective dwellings occurring on the second night, when ceremonial rice-water is sprinkled, offerings of rice made to each of the parties, and the 'henna dance' (*hor-ahmad*) performed; on the fourth day the presentation of the bridegroom to the house of the bride's parents takes place. Here, on his arrival, his progress was in former days occasionally opposed by a mimic conflict (*uffness*), which terminated only on his payment of a small fine or ransom to them (for the nonce) self-constituted 'authorities.' This part of the ceremony, which used to be explained as an example of the so-called 'marriage by capture,' is now taken to be merely an expression of the antagonism between the sexes. In some cases a rope or piece of red cloth barred the way, and a stout resistance was offered until the bridegroom had paid the sum demanded. Even then admission to the house had to be made against the resistance of women of the bride's party. The simple marriage service—a mere bald statement of the fact and of its acceptance by the groom—is now performed by *Ulama* (Muhammadan priests) in the presence of the bridegroom only. It is said that, according to the old custom, the ceremony took place on the day before the presentation. The groom

¹ *The Malay Race*, London, 1902, p. 285, quoting the Malay ceremony.

² Not especially in connection with kingship.

is then taken to the bride, and both are seated ceremonially side by side (back-to-back). On the table and plates of rice, each having the other from a specially prepared receptacle (most often a *blin*—a small, round, shallow bowl)—an octagonal creation of three tiers which holds the 'rice of the parents' (most often a *blin*), coloured eggs (after Java), etc., and stands before the participants. The eggs, which have coloured streamers, and represent a fruit, with sugar and honey, are given to the guests as wedding favours. On the third day of the betrothal which follows the marriage the ceremony of bathing for good fortune takes place in the evening. Later, at night, a brazier was formerly lit outside the house and the groom 'stole' (i.e. carried off to his parents). He was escorted back to his home next day, and a water-light with syringas (called 'water house') took place (sometimes in a specially-erected pavilion) between the friends of the two parties. After this the bride and bridegroom each pulled one of the ends of a slip-knot made of a young coconut frond, and the bridegroom broke through threads wound seven times round himself and the bride, in some cases (Pahang) the threads were covered by burning. Seven days after the concluding feast-day the rite of the 'dismantling of the marriage'—the emblem of the bride's maidenhood—takes place. For two years the bridegroom may be expected to remain under the roof of his mother-in-law. It has been remarked that in the 'bride's rice' (most often a *blin*), in the 'bride's thread' (before marriage), and in the 'bathing pavilion' (before marriage) we have not only Indian customs, but Indian names.

In addition to this regular form of marriage with the consent of the girl's parents, the Malays recognised another form of marriage when the parents were notoriously unwilling, the essential feature being that the would-be bridegroom, fully armed, must force his way to the woman's apartment and secure the person of his bride, or prevent her from escaping. If the parents should then give their consent, the customary payments were doubled. This procedure was known as the *pasaj* *anghara*.

In a second and more peaceful form, the *pasaj* *andak* (once frequently employed by Malayan Rajas), the groom did not break into the house himself, but sent his kins, accompanied by a message that he was ready with the dowry, doubled in accordance with custom. If the kins was returned (e.g., on an unfavourable answer), the parents must send back with it a double dowry.

W. E. Maxwell gave both these forms of marriage as being recognised by Malay custom.¹ Wilkinson, however, according to the second, regards the first as a mere crime passionnel.²

The marriage ceremony is called in most parts of the peninsula by terms which are obviously of Arabic or Persian origin; on the east coast, however, where Muslim influence is less strong, it is often termed, significantly, by a Malay word denoting 'purification.' Like their Polynesian colleagues, certain Malays (e.g., Negeri Sembilan) forbid the marriage of two brothers' (or sisters') son and daughter, but not that of a brother's son and a sister's daughter.

(b) *Pagan ruses*.—Among the pagan tribes the essential feature in the marriage ceremony is a ritual purchase and a repast shared between bride and bridegroom. Among the Semang the price consisted of the blade of a chopper (*parang*), presented by the bridegroom to the bride's parents, and a coiled girdle of great length, said to be manufactured from the roots of the sugar palm, given to the bride. This act of purchase, so long as it was performed before witnesses, was in itself binding. The Semang, as a rule, were monogamists, and conjugal infidelity was strongly disapproved, the immemorial penalty being death, which would now be commuted for a heavy fine. Among the Perak Sakai the nuptial present was, as among the Semang, a knife or yam-labors.

According to one account, the bride and bridegroom attended

at the house of the chief, who, after an inquiry as to their prospects, declared the man and wife united. Another account states that the relatives of both parties assembled at the bride's house, and that the two betrothed persons ate rice out of the same dish together. The little finger of the man's right hand was joined to the little finger of the left hand of the woman, and they were pronounced husband and wife by the chief of the settlement.

The Sakai occasionally, but rarely, took more than one wife. Death or a fine was the penalty for infidelity.

The Jakun ceremony embodied several features of peculiar interest and importance.

In addition to the nuptial presents for the bride and her parents—beads, white cloth, etc.—the husband was expected to provide a hut, cooking pots and pans, and other household requirements. Either party or both were questioned as to their ability to carry out the duties of their future state, the requirements in the case of the man being particularly the use of the blowpipe, ability to kill venom or to climb after fruit in the jungle, and even ability to make a native cigarette. The bride (hand-maid of the wife), as a rule, was present and pronounced the parties husband and wife at the end of the ceremony. Among the Batak of Sumatra the bride and groom gave the bride and bridegroom a new name. According to one account, among the Jakun Sakai, the smoking of a native cigarette was substituted for the common meal. The Batak bride and bridegroom presented a bowl-table of betel nut to one another before the feast, at which they ate together from the same plate. The most distinctive feature, however, in the Jakun marriage was the use made of a criminal or, rather, half-criminal of earth (sometimes an actual anti-bug) dressed with natural and artificial flowers, the latter being representations in the color blue with rays, etc., and other ornaments. Around this mound the bride was pursued by the bridegroom, in some cases three, in others seven, times; if he succeeded in catching her, they were declared to be married. Among the Batak of Kuala Langat (Sumatra) the bridegroom was conducted before the present writer seven times round this mound at a walking pace, and the bride came, before they partook of a common repast, mounting a dish of rice and drink from a bowl of water, which had been placed on top of the mound (above). This was, of course, a survival of the mound-race ceremony. In one form of this rite among the Batak there was no mound, but the pursuit took place round a circle of varying size; in the case of the Batak of Puhang, a fire was kindled. In the case of some Jakun tribes of Johor, in the middle of a dance the bride ran into the forest, and was followed by the bridegroom. The counterpart of this ceremony among the Land Yaka (Orang Darat) was, it is important to note, among the Sen-Tribes (Orang Laut) of Johor a ceremony in which the bride had to be pursued by the bridegroom for a given distance on the river, in canoe.

Monogamy was generally, though not invariably, the rule. Although marriage was recognised as strictly binding by the Batak and other Jakun, yet at their drinking carnival (*masa jo'ah*), which took place at the end of the rice-harvest, they were allowed to exchange their wives promiscuously.

(c) *Burial customs and mourning*.—(a) *Malay*.

—The Malays are not among those races who fear, but rather among those who pay respect to, the ghost of the departed.

After death the body is shrouded in coverings and laid on the back, with hands crossed on the breast, on a mattress which, in turn, rests on a new mat of pandanus. A pair of cottons are in the preparation of betel-nut is placed on the chest, the explanation being that should a man by any accident come in contact with, or brush against, the body, the touch of betel will prevent the corpse from returning to life, as once happened. One is always careful from the house while it contains a dead body, and the corpse is washed day and night in case evil should come near it. The preparation of the body for the grave includes ceremonial washings, which should be performed while it rests on a hill outstretched here of four people (members of the family) sitting on the floor. Pulling coverings for this often, banana-stems are used as rollers. A final washing of 'nine waters' is performed by the kins (if available), 'three sponges' of water being scattered to the right, three to the left, and three over the body from head to foot. The orifices, including the nose, eyes, and ears, are plugged with cotton, and the corpse is wrapped in a white cotton shroud, the end-edge of which is torn off and held up the body at the waist, hips, knees, head, and feet, the shroud having been smeared with the 'five kinds.' The corpse is then placed on the matress in the position which it is to occupy in the grave, lying, and in, on the right side with the head to the north, and feet looking towards Mecca (westward). When the relatives give the last kiss before the shroud is fastened, they must be careful that no tears fall on the face, as these might disturb the deceased's spirit. The position of the body in the grave depends upon the kind of coffin used. If it is a single-plank box (pagan or heathen), the body is placed in a room at the left side of the grave, and the plank is fixed in a sloping position with plank cherting the aperture, so that the plank itself may neither touch the body nor allow the earth to fall upon it. Another kind of coffin

¹ Wherever the old Palembang (Sumatra) tradition exists—in Pahang, Johor, Rias, Malacca, Selangor, and Perak—the entombment or burning varies very little. But if we leave the Palembang area and come into Pahang, the ceremony is different, the rituals are different. We are before us the ghost of the ancient Northern Courts and of the old and high civilisations that have been crushed out of existence by the *Siamese* (Wilkinson, p. 70).

² Wilkinson, p. 64.

⁴ P. 22.

(the *shrimda*), a plank sitting box, is placed in the middle of the grave-pit. The *ang-pu*—made either of two planks cut side by side or of a single plank with a hole in the middle—serves as a guide with binding strips or of three planks fastened together like the sides of a box without bottom—is placed over a trench in the middle of the grave which contains the body. While the grave is being filled in by the *brayandara*, the diggers, who must not leave the grave until the operation is completed, tread off the earth from the body with small burdens. A relative fastens two small (temporary) grave-poles of wood, one of which is placed over the head and one over the waist, to both of which strips of white cloth (as signs of recent death) are fastened. The *andara*, after pouring libations on the grave, and scattering shredded blossoms of scented flowers, reads the *betidin* ('exhortation') and profound silence. The reason given for this silence is that the dead man is supposed to open his closed, the fastenings of which have been loosed for his journey, and, feeling that the border has no saviour, thus first becomes cognizant of the fact that he has died, beyond any possibility of doubt. He then sits up to listen to the preacher, supporting himself on his elbow until, at the end of the reading, he falls back really lifeless. The mourners, led by the *andara*, then recite the *shakati*, the Buddhist profession of faith, one hundred times, beginning very slowly and increasing their speed of regular periods (usually at an extremely rapid rate), after which they return to dance in a line given by the head of the household. Before they leave, however, the contributions collected in the *shakati* which stands near have been divided among all present. Funerals follow on the third, seventh, and fourteenth days, and, in the case of the wealthy, on the fortieth and hundredth days, and on the anniversary. Then the grave is made up, and a framework of planks is placed round it to keep the earth of the grave-mound heaped up properly. In the case of a child, a small hut or shelter is often erected over the grave, and this writer has sometimes seen furnished solemnly with a mosquito-curtain.

No special sign of mourning is worn, but the sarongs in which the corpse is wrapped and the pall must be as costly as possible, consistently with the rank and wealth of the deceased person.

In the formerly Malayan district of Singapore, north of Patani, various forms of exposure of the dead frequently took place until recently, when the Siamese Government prohibited the custom with great strictness. One of these consisted in suspending the corpse in a cigar-shaped receptacle or wrapper between a couple of trees in the jungle, at a height of about 5 ft. from the ground. Another consisted in depositing the body of the deceased person (placed at an angle) in a large rectangular box, supported on lofty posts—a method which is of exceptional interest, since it may be linked up with the custom of burial in a chest on high posts, still practised in Borneo. The remarkable point about these forms of tree-burial, or corpse-exposure, is that they were in both cases explained by the people who employed them as being reserved for any one who had died a 'bad' death, the idea being apparently that ordinary interment or cremation would not suffice in such an instance to bring peace to the *shrimda*. The Patani Malays also had once a similar custom—eating out to be eaten by dogs and vultures the bodies of those who had died a bad death. Yet from the statements of medieval Chinese writers (e.g., Ying Yai Sheng Lan, A.D. 1416), though quoted by Wilkinson, it is clear that such exposure, from the analogy of ancient Java, was in no way limited to bad deaths, but was an honourable and pious form of burial offered even by the children of a family to their parents, so that it falls into line, in this regard, with the funeral customs of modern Tibet, where dead relatives are dismembered and given to the dogs and vultures. It would, on the other hand, perhaps readily come about that such methods should be regarded as barbarous and even 'wicked,' when the country was settled by a people to whom such forms of burial were alien.

A third remarkable method was practised by the so-called 'white Franks' of the Malayo-Siamese region, who had a small cemetery in Patani, wherein their dead were deposited in a sitting position.

(b) *Pagan rites*.—Among the pagan tribes the

burial customs exhibit considerable variation, but they are especially significant as revealing the attitude of the various groups towards death, and particularly towards the spirits of the departed. The Semang appear to have no special fear of the dead, although they do exhort their deceased friends to think of the spirits of their departed ancestors and not to trouble the living. The Sakai, on the other hand, appear to have great terror of the spirits of the dead, and it is usual for them not merely to desert the house in which any one has died, but to abandon the whole clearing, even if the crops are standing. The Jakus are distinguished from both the Semang and the Sakai by the tender care which they show for their dead relatives.

The Semang method of interment is simple.

Among the Sakai Semang the grave is usually surrounded by a low fence of palm-leaves, and the two *shrimdas* upon which the body was carried to the grave are laid upon it. The corpse is placed on its side, with the head and knees to the right, on a seat or rough platform of twigs, and a screen of sticks, driven diagonally into the side of the grave and rooted with palm-leaves, prevents any earth from falling on it. The legs are drawn up, probably, as the grave is only 5 ft. long, for the sake of more convenience. Three cross-cut sticks containing rice are placed in the grave-pit at the head and sides, and a cross-cut stick at the foot holding water.

It is probable that at one time the Negritos (Semang) practised tree-burial. The bodies of their medicine-men may still occasionally be exposed in trees in the forest—this being a more honourable form of burial. Among the Malays a tradition is current that the Semang used once upon a time to devour their dead. It is unnecessary to place any credence in this statement; its importance lies in the fact that it probably alludes to the existence at one time of a custom analogous to that of the Andaman Islanders, who disinter and dismember their dead after a certain interval.

Of Sakai methods of burial little is known with certainty, the reason being apparently the fact that they threw the bodies of their dead into the jungle, or simply left them to rot away in their primitive hut-shelters. It is certain that they have always shown the utmost abhorrence and terror of the dead, abandoning their huts—and even clearings with growing crops—when a death had happened in their encampment. A modified form of survival of platform-burial is found among the so-called Sakai of Selangor (Ulu Langat), by whom the body was exposed on a platform in front of the house for twenty-four hours.

Jakus (or Malayan) ritual and practice are more elaborate than those of the Semang, and in the solicitude shown for the welfare of the departed imply an entirely different mental attitude towards death from that of the Sakai and the Semang. In many respects there is close affinity with Malay customs.

The body is carefully washed and prepared for the grave. It is covered with white cloth, and laid on a mat, which, in turn, is placed upon a tree-bark wrapper. This tree-bark is then heaped round the body and used for carrying it to the grave-site. Frequently the blade of a chopper (*parang*) is laid on the breast of the departed. The Orang Buiti cut a hole in one of the cloths in order that the corpse may 'breathe' more fully. It is customary also for them to make crosses on the palms of the hand and sole of the foot with a yellowish red ochre, on being bruised, leaves a stain behind it. By these marks the deceased person recognizes, on waking in the other world, that he or she is really lifeless. At the grave the tree-bark wrapper is removed, and the body is laid on its back, or sometimes facing out if an adult, or if a child (*Mantri*). A gable-like covering, in accordance with the Malay custom, is formed from pictures covered with tree-bark or a sloping plank (this being also a Malay name) to keep the earth from falling on the body. The Orang Buiti (Hill Men) place a dish of boiled rice at the foot for the spirits, and one of the middle for the departed. It is commonly the custom to lay in the grave some or all of the property of the deceased, usually articles most distinctive of the daily duties of the owner. An extremely interesting practice among the Buiti consists in their erecting, a yard or two away from the foot of the grave, a small triangular hut thatched with a big fan palm-leaf made to lean against it, fitted with a stick-ladder by which the ghost may climb up. In the hut are

placed models of domestic and other vessels and implements, again distinctive of rice, betel-nuts, seed rice, and fish, and fruit, water, and sugar. When the grave has been filled in, the seed rice is scattered on the mound and about the grave in order to provide the ghost, when the grain has grown up and ripened, with suitable nourishment. Among these people it was also the custom for two men to stand one on each side of the grave and simultaneously to let fall two chop-pan, hurling them, upon the mound at about the spot where the breast would be, this being done in order to 'fix the ghost in the grave' and to 'prevent it from haunting the living.' The Malay broke a newspaper (no doubt that of the deceased) and scattered the fragments on the grave-mound. At each end of the mound the Jaksas customarily placed wooden tomb-posts bound with white cloth similar to those used by the Malays, and, again like the Malays, they enclosed the grave, when made up, with a framework of wooden planking.

The feeding for the welfare of the dead which is expressed among the Malays by the seed-rice sown over the grave is also responsible for the depositing of a number of offerings at or near the place of interment. The Malays themselves plant yams, sweet potatoes, etc., near by, while on the grave of a Jaksak ('tribal chief') described by D. P. A. Harvey (*JRAS*, Straits Branch, no. 8 [1912], p. 110), were skulls to serve as incense for the soul to climb up, coco-nut shells, a torch in a stand, and a cooking pan, as well as the basket in which firewood is usually carried. This grave was also provided with a branch in which the dead man would paddle his canoe—apparently a link with boat-burial. Among the Europeans a bamboo was placed upright near the face of a child, with one end projecting from the ground—undoubtedly a survival of an earlier custom of leading the corpse through the branches, as is still done by the Dayaks of Borneo. It was not uncommon for a fire to be lighted near the grave for three days, while the families visited the grave on the third and seventh days and one month after interment. The Jaksas sometimes, though not usually, abandoned the house and clearing after a death; usually, however, this took place after a month's interval.

19. Omens, divination, and ordeals.—Astrological calculations based upon the supposed values of times and seasons or the properties of numbers are largely employed in divinatory ritual. Exhaustive tables of unlucky and lucky times and seasons have been compiled by the Malays, but are proved to have been largely translated from Indian or Arabic sources. The oldest and best known of the 'magic squares' founded upon these systems is that known as the 'five times' (*Aditika Lima*), in which the day is divided into five parts, while five days form a cycle, the name of a Hindu divinity being assigned to each division. Mystic values are also attached to certain colours in connexion with these divisions. Another scheme is based upon the seven heavenly bodies, the divisions being correspondingly seven in number. Malayan astrological knowledge and the signs of the zodiac upon which the various systems are founded appear to be largely Arabic in character, though there can be little doubt that the original home of this lore was Babylonia (or Chaldaea), and some part of it may have come in through Indo-Persian channels. The division of the month into *rijangs*, thirty in number, each with a separate symbol, is based upon the twenty-eight *nakshatras*, or lunar mansions, of the Hindus, rather than upon the names of the Arabs. The Malays are especially partial to the magic square, which generally takes the form of the magic square once used in Europe, but sometimes works conversely—the latter being, no doubt, the older native form proper to the Malays of the peninsula. As has been remarked, the Malays introduce both coloured squares and the names of five of the greater Hindu deities. Besides these squares, many other magic figures—pentacles, compass-figures, and the like—are much used by Malay diviners.

In interpreting omens from dreams the method usually employed is that the initial letter of the thing dreamed of determines the character of the omen. *T* is very unlucky, *N* indicates sorrow, *H* a visitor from a distance, and so on. In another system an almost entirely arbitrary interpretation is put upon the subject-matter of the dream, or, at most, it is interpreted by analogy. In a third method, however, the nature of the thing dreamed does actually suggest its interpretation, with the

proviso that so-called 'direct' dreams come only on the eve of a Friday, whereas on other days the dream works backwards.

It may be added that the doctrine of luck plays a most important part in what may be called Malay 'natural religion.' By certain signs and indications not only human beings but also birds and animals are either credited with the possession of luck or believed to be invested with the power of bringing it to others; in a fine passage the Malay deer-wizard chants as follows:

'From the seven hills and the seven valleys
Comes the intense barking of my Hounds.
My Hounds are Hounds of Luck,
But Luck that is adventurous,
But Luck incarnate with their bellies.'

Even inert objects, such as kris and other weapons, may be brimful of luck, or otherwise.

(a) Malay.—Omens and divinations play a part of paramount importance in every department of life's activities in Malaya. Equal significance is attached to signs deduced from the acts of men and those taken from the events of nature.

Among the acts of men may be mentioned sneezing, which is held to be fortunate, since it leads to drive away the demons of disease. Yawning, on the other hand, when audibly, is a bad sign; but, if the yawning is silent and happens when the stomach is craving for food, it implies that the craving will soon be satisfied. It is unlucky for a child to lie on its face or knot its feet together in the air; this is a sign of the approaching death of one or other of its parents.

The evil eye is much feared, and praise of children is conveyed in a roundabout way to avoid ill-fortune.

Among omens drawn from natural events, the following may be mentioned.

A star is supposed proximate to the moon portends an approaching wedding. The entrance of an animal which does not usually frequent the house denotes ill-fortune; to be barked at by a wild jungle-dog is a fatal portent; a wild bird entering the house should be caught carefully and consumed with oil and then released in the open air, a formula being recited which bids it fly away with all the ill-luck or misfortune of the household. Omens are taken from the flight and cries of certain birds, such as the night-owl, night-har, or *strepitator*, the crow, and certain kinds of wild dove, as well as from a bird called the 'rice's husband.'

Such prognostics are drawn from entirely fortuitous events, but they may also be the natural reply to actions initiated by the inquirer. In such cases we have the rite of divination properly so-called (*ritak*—*Skr. ritaka*, 'mark').

One form of divination is effected by means of a lamen which, after offerings have been made and certain ceremonies performed, is suspended with incantations over a brazier by seven strands of coloured silk thread, the frill being thrust through by a needle. The motions of the suspended lamen answer questions in the negative or affirmative, and will discover a thief by indicating which of a number of names written on paper is that of the guilty man. The mirrored surface of water held in the palm of the hand, or silver, or a bowl filled with water and covered with a cloth upon which the names of suspected persons are successively placed is employed to discover those who may have been guilty of stealing. In the last-named case, two men each place a finger in the bowl, which begins to turn when the name of the culprit is placed upon the cloth above it. Another method is the use by the medicine-man of a divining-rod composed of one, three, or more rattan-stems, incised with magical devices and connected at the base or butt-end, which vibrates when the third approach, these rods may also be used for treasure or water finding, as by our own 'dowsers,' and also even for ascertaining disease.

It is noteworthy that the Malays attribute the arts of the diviner to animals as well as to men; thus the tiger is said to employ divination when it wishes to secure a human victim, just as tigers are believed to poultice themselves with *dad dadad* (the medicine applied to the newly circumcised) when wounded.

An important and solemn ordeal was that by diving. This required the consent of the Sultan, and could be conducted only in the presence of the four great (west coast) chieftains.

In the case of a dispute, each of the adversaries in defence of his own case writes a solemn statement. After certain formal preliminaries, the document is enclosed in a bamboo sheath or covering. One of these bamboo receptacles is given to each of the two

adversaries, who are chained to the river and placed up to their necks in the water. A bamboo pole is then made to rest upon their heads and, at a given signal, they are both pressed downwards. That remains under the water as long as he can, but, as soon as one of the two gives in and appears above the surface, his tube is crushed from him. The winner is led back, his bamboo opened, and the result declared to the bystanders.

(b) *Pagan races*.—The savage Malays of Malacca also paid much attention to omens when a new clearing was to be made, and charms were used to expel the jungle spirits. The Mantri, in choosing a new locality for a clearing, paid strict attention to the attitude of the spirits toward his undertaking as signified by the dreams of the party. To dream of being chased by a dog or an enemy, entering water, or being flooded out was an evil omen; to dream of felling or climbing trees, of ascending trees, or of growing plants was of good import.

Divination among the Sakai, so far as records go, is practically non-existent. Among the Jakun it is employed as a part of their medical diagnosis, but, whether used as a part of a tribal or group ceremony or by the medicine-man alone, it falls more properly under the category of exorcism.

30. *Charms, amulets, and talismans*.—(a) *Malay*.—Not only does the Malay attempt to forestall the coming of evil, but he endeavours to ward it off by charms and talismans. Charms in the shape of invocations are extremely numerous, and are addressed to every conceivable form of spirit on every conceivable occasion. But, in addition, free use is made of charms of a more material character. Examples of this class include a length of the *almamôn* (Malacca cane) with a joint equal to the height of the owner, which protects him from snakes and animals; so, too, the 'coco-nut pearl' (apparently a form of 'tabasheer'), the 'eyeless coco-nut' (which confers invulnerability by 'sympathy'), the 'dragon's blood' rattan or cane, the tiger's whiskers and claws, and many others are all, for various reasons, much sought after by warriors. Some of these are directly effective, others work only by influencing the volition of another mind, as in the case of love-charms, charms for securing conjugal fidelity, and so forth. In most cases the charm consists of a short Arabic or Malay and Arabic prayer or a few magical letters or figures inscribed on paper or cloth and worn on the person. One important use of a charm is to enable the devotee of this magic to abduct the *almamôn* of a person from his (or her) body, for the purpose either of benefiting the operator or of harming the intended victim. There is a variety of methods of attaining these objects. In some the charm works without contact; in others contact is necessary. Although there is considerable variety, the principle in all cases is the same, and is based upon the Malay theory of the *almamôn*. Thus, e.g., soil is taken from the intended victim's footprint and treated ceremonially by wrapping in red, black, and yellow cloth; and this, when suspended from the centre of the magician's mosquito-curtain, becomes the embodiment of his victim's *almamôn*. As such it is switched with seven strokes three times a day for three days and then buried in the middle of a path where the victim is bound to pass; on doing so, he becomes distracted. Wood scraped from the floor where he has been sitting, parings of his nails, and clippings of his hair are utilized in various ways; sometimes they are kneaded into a wax figure, which is either transfixed with a thorn in the member that the enchanter desires to injure or burned to ensure the victim's complete destruction.

Of the various methods of abducting the *almamôn* without contact, the simplest is to go out when the sun clears or when the newly-risen moon glows red, and, standing with the big toe of the right foot resting on the big toe of the left, make a

trumpet of the right hand, and recite the appropriate charm three over. At the end of each recital, blow through the hollowed fist, using it as a trumpet. The words of the charm, 'I loose my chest,' suggest a 'cudding,' analogous to that of the medicine-man. Other methods are to beat one's own shadow, to hang a seven-fruited lime-branch from the top of one's mosquito-net on three successive nights, to wave the end of one's head-cloth in the direction of the moon seven times for three successive nights, and so forth, the appropriate charms in each instance being, of course, recited.

With their customary logical thoroughness, the Malays attribute the use of charms and amulets in some cases to wild animals, and even to reptiles. The wild boar, e.g., is believed to possess a talisman of extraordinary power called *rundai batu*, 'the wild boar's charm,' which is hung up on a neighbouring bush by the animal whilst he is occupied in wallowing, and which can therefore sometimes be stolen by a lucky native. Another talisman carried by the boar for defensive purposes is the *kulam batu*, 'boar's sucking stone'; the two together made a wild boar invulnerable. A similar 'lucky stone' was sometimes worn by serpents. Any magically potent object is called *ber-tuah*.

(b) *Pagan races*.—Amulets and talismans are common among the wild tribes. Coins are strung on necklaces to serve as 'medicine,' and necklaces of tufts of squirrels' tails, teeth of apes, wild pigs, and monkeys, and bones of birds and animals, as well as the bristles, teeth, and claws of tigers, were first worn, as among the Malays, quite as much for magical purposes as for ornament. The Mantri strung pieces of tamarite on strings of *artocarpus* bark, and these were worn round the neck, wrists, or waist as prophylactics against demons, bad winds, and, generally, all kinds of evils. They also placed great reliance on the efficacy of spells to render them invulnerable. Samang women wear amulets of *palas* (*Leucaena peltata*) leaf, and men wear similar ornaments of the 'rock vein' (*urat batu*) fungus. It appears that among these tribes, as elsewhere, much of their personal adornment was intended to protect them against evil from the spirits by which they were on all sides surrounded. The elaborate patterns of the combs of the Samang and half-breed Sakai-Samang women were similarly designed to ward off accidents and diseases, and the copper bracelets, rings, and other objects worn by the Sakai were in effect talismans which preserved the wearer from ill-health and misfortune. The Samang, when wearing the Malay sarong, frequently still retain underneath it the primitive string girdle of 'rock-vein' fungus, possibly from habit, but more probably for magical reasons.

The most important class of charms or talismans employed by the wild tribes is undoubtedly the ornamental geometrical patterns with which they adorn various objects of common use. These designs are intricate and have as yet been adequately studied and elucidated only to a small extent. So much, however, is clear: the pattern, as a rule, is symbolical of the use to which the object on which it appears is to be put, and its aim is to secure the successful attainment of that object. Exception to this rule may be made in the case of the women's combs and other articles, the patterns on which are intended to ward off diseases, the attacks of reptiles, animals, and noxious insects, and other accidents. The difficulty of comprehending and interpreting these designs is increased by the fact that, in the usual fashion of primitive artists, the wild tribes make a part stand for the whole. The slots of deer on a bamboo quiver, e.g., represent the whole animal, which, it is hoped, will be induced, by being represented as approaching towards certain wild jungle-fruits beloved of the deer, to visit a particular feeding-ground, when they can be the more easily marked down and captured. The articles decorated in this manner

with magical intent include, in addition to the Semang combs, large bamboo tubes used as quivers for darts and arrows, the last being covered with patterns intended to ensure success in hunting. Other articles similarly adorned are 'stampers' (i.e. bamboo struck on the ground during magical ceremonies, amulets against disease, insect pests, drought, etc.). Besides these they decorate bamboo rice-dibbers, poison receptacles, tobacco receptacles, blowpipes, arrows, nose-sticks, etc., mats and wallets (Sakai and Jakun, not Semang), bark-cloth (with painting only), and the human body, the last not only with painting, but also with tattooing and scarification (likewise especially among the Sakai).

LEMMERVEN.—This is cited throughout the article. Special use has been made of W. W. Skeat, *Nalay Magic*, London, 1900, and Skeat and C. O. Davidson, *Paper Magic of the Malay Peninsula*, do. 1906 (with full bibliography).

MALE PRINCIPLE.—See PHALLEN, SEE.

MALIK IEN ANAS.—Malik ien Anas, the founder of the Maliki school, was born in the month of Rabi' al-Awwal A.H. 96 (A.D. Nov. 719). He was of pure Arabic stock, being descended from Dhu Aqba' al-Harith, who belonged to one of the tribes of Yaman. When still a youth, he had already acquired a full knowledge of the Qur'an, the *Hadith* (tradition), and other Muslim sciences, and soon he was held in reverence as a great authority in these matters.

During his long career Malik ien Anas resided in his birthplace Medina as a *mufti* and teacher of Muslim law. Like many men who have spent their lives in study, he has not left much for his biographers to record. His chief work was the so-called *Muwatta'* (lit. 'The Beaten Path'), the basis of the whole Maliki system of Muslim law. This book is not a mere collection of traditions. It deals not only with the sayings of the Prophet but also with the opinions of several famous *fuqaha* in Medina and with Malik's personal views on various matters of canon law. It is often alleged that Malik rejected every kind of reasoning by means of argument and kept exclusively to the literal sense of the sacred texts. But the contents of the *Muwatta'* prove the contrary. According to his later biographers, Malik repented of this in his old age. It is told that, when he sat down in his last illness and wept, he was asked: 'What makes thee weep?' He answered: 'Who has more reason to weep than I? By Allah, I should wish I had been flogged and re-flogged for every question of law on which I pronounced an opinion founded on my own fallible judgment!'

The text of the *Muwatta'* is handed on by Malik's disciples in different versions. The best known is the text of Yahya' al-Maqdisi, which was printed with the commentary of Muhammad al-Zarqani in 4 vols. at Cairo (1863). Another version is that of Muhammad al-Shaibani, the famous disciple of Abu Hanifa, who studied three years in Medina (printed at Lucknow, 1879).

It seems that the opinions of Malik ien Anas were not always in agreement with the views of the government. In the year A.H. 145 (A.D. 762), as some persons had accused him of declaring that he did not consider the oath of allegiance to the 'Abbasid khalifa as binding, he was even flogged and treated in a most scandalous manner. After this cruel punishment, however, he rose still higher in public estimation in Medina, where he died on the 10th of the month Rabi' al-Awwal, A.H. 179 (A.D. 3rd June 795).

Malik ien Anas enjoys the reputation throughout the whole Muslim world of being one of the greatest *fuqaha* and traditionalists of Islam. At the present day his school is still dominant in the

west of the Muslim territory, in the French and Italian possessions (Morocco, Algiers, Tunis, Tripoli), and in many other parts of Africa.

TH. W. JOYNSON.

MALTHUSIANISM.—Some economic and social investigations seem to be haunted by an evil fate. The subject with which they are concerned seems popular attention for a time, and the results of the inquiry come to be represented in a form which is little more than a travesty of the original meaning and intentions. One of the most remarkable instances of this tendency is to be found in the reception accorded to the work of Thomas Robert Malthus (1766-1834) on *Population*. Popular interest in his work grew much more rapidly than the time or the capacity for assimilating it, and he was criticized by many who had not read his books. He was accused in his own day of being an enemy of the human species, and of being guilty not merely of heterodoxy but also of atheism. It was said that 'the insults the theory of Malthus levels at God, and the injuries it meditates inflicting upon man, will be endured by neither' (M. T. Sadler, *Law of Population*, I. 18). Further, the principles of population enunciated by Malthus have been expanded and developed in several directions by subsequent writers; and all these views are described roughly by the vague and comprehensive term 'Malthusianism,' which means little more than the consideration of the relation between increase of population and the available food supply. Malthusianism, in fact, has no more definite meaning than 'Smithianism' in Germany.

It would be a mistake to consider that Malthus was the first economist who treated of population. The Mercantilists had explicitly advocated 'populousness' as an important condition of national wealth, and their views had influenced social legislation and poor-law administration in England during the 18th century. In 1776 Adam Smith had mentioned that 'every species of animals naturally multiplies in proportion to the means of their subsistence, and no species can ever multiply beyond it' (*Wealth of Nations*, bk. I. ch. viii. (ed. J. E. T. Rogers, Oxford, 1909, I. 84)), but it was not till almost the end of the century that Malthus selected the subject of population for separate treatment. It is true that more than a century earlier William Petty had published several essays relating to the numbers of the people, but his point of view was entirely statistical, whereas that of Malthus was directly related to the conditions of progress. In a sense the work of Malthus was begun to oppose the theories of William Godwin, who had published his book on *Political Justice* in 1793 and his *Enquirer* in 1797. Godwin had been influenced by Condorcet and other writers of the era of the French Revolution, and he advocated human perfectibility by means of a gradual equalizing of wealth, under which condition there would be a sufficiency for the reasonable wants of all. In time the peaceful influence of truth would render force and even government unnecessary, so that a state of human perfection was possible on earth. Godwin's views formed a common topic of discussion among those who were interested in political sciences. One such

conversation was destined to have important results. It took place between Malthus and his father. The latter, Daniel Malthus—a friend of Voltaire and the literary executor of Rousseau—was favourably disposed towards Godwin's views, while the son had doubts, which he afterwards placed in writing. The treatise which resulted was his *Essay on Population*, published anonymously in 1798.

Malthus believed that a fatal objection to the thesis of Godwin and other writers who maintained the same view was to be found in the relation of population to the means of subsistence. Population, when unchecked, doubles itself every twenty-five years; the means of subsistence, under circumstances the most favourable to human industry, could not possibly be made to increase faster than in an arithmetical ratio; i.e., the progression for population, if unchecked, would be 1, 2, 4, 8, 16, 32, 64, 128, 256, while that of subsistence could not exceed 1, 2, 3, 4, 5, 6, 7, 8, 9. Population had not increased in a geometrical ratio, owing to the checks imposed upon it by misery and vice, the former being certain and the latter probable. Society as a whole makes 'a constant effort towards an increase of population,' with the result that there is a constant tendency towards distress among the lower classes (*Essay*, 1798, p. 20). As against Godwin, Malthus pointed to the grim spectres of famine, war, pestilence, and evil-living as the necessary limitations to the natural increase of mankind—either positively by reducing a redundant population, or negatively by the dread of these evils. The first edition of the *Essay* can be understood only by remembering the controversial purpose out of which it arose. In opposition to the optimism of Godwin and his sympathisers it overstates the darkness of the situation. An attempt was made to correct this in the second edition (1803), which is practically a new book. The treatise of 1798 was in the main the critique of a Utopia from the point of view of the support of a growing population; that of 1803 was a scientific examination of the principle of population, as far as possible in isolation from other phenomena. There was, however, a greater change than that of external form; the two progressions remain, but the exposition of the checks to increase of numbers is worded differently. Misery and vice become subordinate to what Malthus terms 'moral restraint.' This new characteristic anticipates, and so prevents, a pressure on the means of subsistence; and, where it is observed, actual misery, as a result of population, need not arise. Moral restraint is, strictly speaking, 'moral' only in so far as it is exclusive of 'irregular gratifications'; its main characteristic is rather that of rational prudence, based on man's 'reasoning faculties which enable him to calculate distant consequences' (*Essay*, 1803, pp. 9, 11), such as his capacity to support a large family without lowering a suitable standard of life. Hence moral restraint operates in the direction of postponing early marriages as well as irregular connexions. It means, in fact, as J. Bonar puts it, simply continence (*Malthus and His Work*, p. 63).

Much of the popularity of the principles of Malthus may have been due to his summing up the foundations of his theory in a formula which is capable of being apprehended easily and remembered, especially as the geometrical and arithmetical ratios seem to provide the certainty of a mathematical demonstration. But the formula suffers from a false simplicity; the first important objection is that Malthus founds his argument upon two alleged necessities which he claims as co-ordinate, but it is clear that a supply of food

is much the more urgent need. The celibate must be fed if he is to live. It follows that the tendency towards increase of population is a conditional one, and hence any ratio which is established at a given time is susceptible of alteration, irrespective of changes in the quantity of food. Malthus often speaks as if population must increase up to the limits of the means of subsistence; but since his day there have been cases of countries where increased resources have been followed, not by an increase in population, but by an improvement in the general standard of living. The arithmetical ratio, as the maximum possible increase in the production of food, was never formally and fully proved by Malthus; indeed, his sections on the state of population in America (*Essay*, 1798, p. 20) partially contradict his view of the ratio. Moreover, not only the production of food but its consumption must also be taken into account. Economies in consumption without loss of efficiency would enable a larger population to be maintained by the same supply. The whole statement of Malthus regarding agriculture in his earlier editions is embarrassed by his ignorance of the Principle of Diminishing Returns; some of his expressions almost suggest it, but he makes no real use of this law. This theorem, which was stated clearly by West in 1815, soon changed the manner in which the population question was formulated. Torrens, James Mill, and McCulloch understood Diminishing Returns not so much as a theoretical tendency, but as a condition of the working of the extractive industries in practice. Accordingly, in spite of improved methods of production, they thought that the increase of population drove agriculturists to cultivate more and more inferior soils, so that a larger and larger proportion of the world's labour would be required for providing the necessities of life. J. B. Mill stated this point of view concisely when he wrote: 'It is in vain to say, that all mouths which the increase of mankind calls into existence, bring with them hands. The new mouths require as much food as the old ones, and the hands do not produce as much' (*Principles*, bk. I. ch. xiii. § 2). Mill, like the rest of the Classical School, regarded Diminishing Returns as a 'law' which could be suspended only temporarily by the disturbing influence of improvements. The present disposition of economists is to consider Diminishing Returns as a tendency which is subject to frequent counteraction. The difference of outlook removes some of the gloom which settled on the population question during the 'dismal' era of economics in the first half of the 19th century. The real influence of Malthus survives in a much modified form, on the one side in the responsibilities of parents in being able to provide for their offspring, on the other in a ceaseless effort to effect improvements in the productive arts, particularly in those connected with the provision of the world's food supply.

It is scarcely necessary to add that the doctrines and practices of 'Neo-Malthusianism,' or the voluntary restriction of the birth rate, form no part of Malthus's own teachings and would doubtless have been indignantly repudiated by him.

W. R. SCOTT.

MALUK DĀSIS.—The Maluk Dāsīs form a small Vaishnava sect of northern India. It is an offshoot of the Rāmāṇandīs (see *ERE* ii. 546), and is named after its founder, Maluk Dās, a trader by occupation, who lived in the reign of the Emperor Aurangzib (latter half of the 17th cent. A.D.). He is said to have been born at Karā, in the present District of Allahābād, where there is a shrine in his honour and a monastery of his followers. The neighbouring village of Sirāthū is said to have been granted to him by the emperor.

The main point that differentiates Maluk Dāsīs from other Rāmāṇandīs is the fact that their teachers, like their founder, are laymen. Wilson adds that there is also a shorter streak of red in the sectarian mark on their foreheads.¹ Like other Rāmāṇandīs, they worship the Rāma incarnation of Viṣṇu. Wilson mentions six other monasteries of the sect in the Ganges valley, and also one of great repute at Jagannāth, in Orissā, where Maluk Dās is said to have died.

So far as the present writer is aware, none of Maluk Dās's works have been published. He is said to have written a poem called the *Dās Rātna*, or 'Ten Jewels.' Two lately discovered works of his are the *Shakti-saṅgīta*, dealing with Kṛṣṇa's regard for devotees, and the *Rātna-kāśha*, a dissertation on the soul and God,² and he is also the reputed author of many well-known detached verses and apothegms. One of his verses is probably the stanza that is best known and most often quoted in the north of India, and offers a striking resemblance to the leading thought of Mt 6.³ According to Hindu belief, the *ajagara*, or python, is unable to hunt for its food. It can only lie with its mouth open to wait for what will walk into it. The verse runs as follows:

Ajagara harai na chāharī *Paṭhahī harai na bhāra,*
Dāsa Maluk hāṭī pad *Bahā-bā dāsa Rāma,*
'The python doth no service, nor hath the lord of the air a duty to perform (to earn his living);
Quoth Maluk Dās, for all dāsa, Rāma provide their daily bread.'

Letamvura.—Jivardina, *Śat Śaṅkṣapāṭha Śhaktāṇḍī*, Bankipur, 1897 (necesse 19 deals with Maluk Dās, and the commentary gives some legends about him), H. M. Wilson, *Sketch of the Religious Sects of the Hindus*, London, 1891-92, i. 100-101; F. E. Grove, *Malabar A District Memoir*, Allahābād, 1890, p. 213. *Quarter of the Allahābād District*, 1911, pp. 860, 871. R. G. Bhandarkar, *Volgarium, Sanskrit and Minor Religious Systems* (—*GIA* III. 6), Strassburg, 1912, p. 76.

G. A. GRIERSON.

MAMMON.—The word occurs three times in Lk 16 among the somewhat disconnected Logia that follow the parable of the Unjust Steward (16¹⁻¹³), the last of which, 'Ye cannot serve God and mammon,' is found also in Mt 6.²⁴ It is a

transliteration of the Gr. *μαμωνά*, a form which, with *μα*, appears in TR, with Latin Vulgate, six Old Latin, and a few Greek minuscules. The correct Greek, however, is *μαμωνά*, which is found in RV, with all Greek uncials, and most minuscules, as well as in the Complutensian and the first two editions of Erasmus; but the influence of the Vulgate led to the appearance of *mam* in the later editions of Erasmus and in AV (for further details as to spelling see E. Nestle, in *EB*).

The word is not Greek, nor is it found in the Hebrew Bible. It is a hellenized form of the Aram. *מָמָנָא*, which means 'money,' 'riches,' 'worldly goods.' Wyclif and Purvey translated the word by 'riches' ('richenia'), but Tindal followed the Vulgate in transliterating the word, and *mi* did all later English versions, except Geneva.

1. Derivation.—The Aramaic form *מָמָנָא* (*מָמָנָא* *מָמָנָא*) follows a well recognized form of nominal inf. *מָמָנָא*, but scholars are divided as to what is the verbal root.

(1) J. Druas (quoted in J. Buxtorf, *Lexicon Chaldaicum*, Basel, 1640, c.v.) and Dalman (in *PRS* xii. 163) derive the word from *מָמָנָא*, i.e. *מָמָנָא* = *מָמָנָא*, which would mean 'that on which man trusts,' or, as Dalman prefers, 'that which brings man into safety.' (2) Jastrow (*Talmud Dictionary*, p. 794) derives it from *מָמָנָא*; and thus *מָמָנָא* = 'that which one accumulates.' (3) Levy (*Neuhebräisches und chaldaisches Wörterbuch*, iii. 125) considers *מָמָנָא* = *מָמָנָא*, 'to distribute,' to be the root, and thus our word means 'that which is distributed.' (4) W. Gesenius (*Thesaurus linguae Hebraeae et Chaldaeae*, Leipzig, 1829, ii. 533), as if *מָמָנָא* were the true form, derives it from *מָמָנָא*, 'hide,' whence *מָמָנָא* = *מָמָנָא*, 'that which one hides or treasures' (Ga 4²⁵, Job 3², Pr 3¹, Is 45², Jer 41²). However much the learned may now differ as to the derivation, it seems certain to the present writer that the Syriac versions all derived the word from *מָמָנָא*, and that they assumed a paronomasia to exist between our word *מָמָנָא* and *מָמָנָא* (pass. part. of *מָמָנָא*), which means 'faithful' or 'trustworthy,' thus: 'He that is trustworthy in little is trustworthy also in much; and he that is not trustworthy in little is not trustworthy in much. If ye have not been trustworthy (*מָמָנָא*) in the unrighteous mammon (*מָמָנָא*), who will entrust (*מָמָנָא*) to you the true?' But, since the verb *מָמָנָא* is as common in Galilean Aramaic as in Syriac, may we not go further, and say that the paronomasia was probably intended by our Lord in the original Aramaic?

2. Usage.—The trade of the world, before the time of Alexander, had long been in the hands of Phoenicians and Aramaeans; and we have evidence that in both languages *mamon* was the word for 'money.' As to the former, it occurs on Phoenician inscriptions on tombstones; and Augustine, in two passages (*de Sermon. in Monte*, ii. xiv. 47, and *Quest. Evang.* ii. 34), states that the Punic word for increase ('wealth') is *mamon*. Its Aramaic usage is also abundantly attested. Jerome (*Ep. cxxi. 6*) affirms:

'Non habemus sed Syriacum Regem, *mamon* dicitur occupator.'

Iraneus (III. viii. 1) attests its use

'secundum Iudeorum loquendum, quia et Samaritanorum.'

The Aramaic Targums often contain the word; e.g., Pr 3¹, 'Honour the Lord with thy *mamon*'; Is 55¹, 'O ye that wish to learn . . . come and learn without price and without *mamon*'; Jg 8², 'They accepted no *mamon* of silver'; in Ex 18²¹ the ideal judges are those 'who hate the receiving of *mamon*.' In the Aramaic sections of the Palestine Talmud the same story is told twice (*Nedar*, v. 3; *B'rakhot*, vii. 2) of 300 poor Nazirites who came for purification. R. Simeon asked King Jannai to give half the cost, but it turned out that the king paid all

the money (matan) and the Rabbi's half was his knowledge of Torah. Bruck. Sh" says:

¹There are men whose money (wealth) is dearer to them than their own body.

There is also a classification in lawuits between those which concern money (שקל ופד) and those which concern the person (נפש וזרע). This is found often in the Talmud and also in *Jerus. Targ.* to Dt 1st. The pre-Christian usage of our word even in Hebrew is shown from Str 31^o, 'Blessed is he . . . that has not yet gone after *misdom*.' The translators of LXX show themselves acquainted with the word, for in Ps 36 (EV 37^o) they misread נפש as שקל, 'Thou shalt dwell in the land and be fed on its wealth'; and in *Pierf d'Abba* (II. 16) we have a 'saying' of R. Jose: 'Let the property (שקל) of thy friend be as precious to thee as thy own.'

The very phrase 'mamon of unrighteousness' is quite common in Jewish literature; in the pre-Christian *Book of Enoch* the wicked say:

'Our soul is tainted with unrighteous manumens, but this does not prevent OUR descending into the scene of the pains of Sheol' (1914)

The phrase *מָהָרְךָ* for is a well recognized phrase in the Targums for 'money earned through deceit or fraud.' The crime of Samuel's sons was that 'they turned after mammon of fraud' (1 S 8⁹; cf. also Ps 15ⁿ, Is 33ⁿ Ek 22ⁿ, Hos 5¹¹).

3. **Exegesis.**—(1) In Lk 16, 'Make to yourselves friends by means of the mammon of unrighteousness,' the difficulty is: to whom was Christ speaking? Lightfoot (*How Hebraeus*, iii. 180 E.), A. B. Bruce (*Expositors' Greek Testament*, i. [1897] 583 f.), and Merz (*Die Evangelien Marcus und Lucas*, p. 228 f.) hold that He was speaking to the Pharisees and publicans to whom ch. 16 was spoken (16^a), and who were still in the crowd (16^a). It was certainly more suitable for them than for the Twelve, who had not much 'mammon' of any kind; and, if so, the phrase has the same meaning here as in Jewish literature—'money ill gotten,' 'money gained by fraud.' Thus the advice which Jesus gives to the Pharisees is that they should make restitution to God by deeds of benevolence. Christ's advice is, says Merz (p. 228), 'Ye who have acquired money unrighteously and cannot refund it, use this wealth in making friends for yourselves,' as Zacchæus, when converted, volunteered to give half his goods to the poor.

'The counsel is to use wealth in doing kindness to the poor, . . . only care must be taken not to continue to get money by unrighteousness in order to have wherewith to do charitable deeds' (Bruce, *loc. cit.*).

The alternative view, that the words are said to the Twelve, and that *passus est* *ad* *hanc* is the evil stamp placed on all wealth, 'because great wealth is seldom gained or employed without injustice,' is forcefully presented by Moffatt, in DCG li. 108 f.

(2) In Lk 16¹¹ we have a contrast between *ὁ ἀληθὺς πῦρ* and *τὸ ἀψύχον πῦρ*, which seems to turn on a second meaning of *ψ*. In the original Aramaic, *ψ* means (a) 'deceit,' 'fraud,' and (b) 'nothingness,' 'illusion,' 'vanity.' We believe that *ἀψύχον*, here as elsewhere in NT, means 'real,' 'permanent,' 'belonging to the spiritual world,' in contrast with the present life of illusion and vanity, where 'the things that are seen are ephemeral' (2 Co 4¹⁸). We surmise, then, that *ψ* *πῦρ* would, in the original Aramaic, appear in both v. 9 and v. 11 but in v. 9 *ψ* means 'deceit,' 'fraud,' while in v. 11 it means 'illusion,' 'vanity,' and thus presents a contrast to the 'true,' the 'real,' 'spiritual' riches. Our Greek translation, of course, obliterates or ignores the distinction between the two meanings of *ψ*.

(3) In Lk 16¹³, 'Ye cannot serve God and mammon,' the emphasis is on 'serve' (*δουλεύω*). No man can at the same time be the *slave* of God and of worldly wealth. The ordinate pursuit of wealth is not

condemned. It is the undivided concentration of mind—the surrender of body and soul to money-getting—that is censured, as being incompatible with whole-hearted devotion to God and to His service. Mammon is personified as the object of undivided attention and service, as in Ro 16¹⁸ Paul speaks of those who 'serve' their own sensual nature (*συνεχόμενοι . . . τῷ σαρκὶ καὶ αἰσὶ*), and as in Col 3⁵ he utters a warning against 'covetousness, inasmuch as it is idolatry,' i.e., wealth as easily erects itself into an idol, which woe men's affections from God and makes men averse to giving cheerfully what they acquire. Here and in Lk 16¹³ there is, no doubt, a personification of wealth, as also in Tertullian (*adv. Marc.* iv. 33).¹ When Milton, therefore, speaks of Mammon as one of the fallen angels in hell, 'the least erected Spirit that fell from heaven,' who even in heaven was

'admiring more
The riches of Heaven's pavement, trodd'n gold,
Than aught divine or holy, else enjoyed
In vision beatific'

(Pop. Zool. 1, 6732; cf. also H. 1974)

we have, perhaps, not so much the flight of the poet's imagination as an indication of his familiarity with apocryphal lore. The phrase 'mammon-worship' has been made familiar by Carlyle (*Past and Present*, bk. iii. 2, bk. iv. 4, 5, etc.), and is, so doubt, useful in emphasizing strenuously the warning of Jesus, 'Ye cannot serve God and mammon.'

MAN.—See ANTHROPOLOGY, ETHNOLOGY, EVOLUTION, PSYCHOLOGY, SOCIOLOGY, etc.

MAN. ISLE OF.—See **CULE**.

MANA.—*Mana* is a native term belonging to the Pacific region, but, for the purposes of the science of comparative religion, serves likewise as a category of world-wide application. The local sense will be found to stand in close relation to the scientific, despite the fact that the latter represents but the generalized content of various concepts prevailing in different ethnic areas and presumably of more or less independent origin.

1. Local meaning of *mana*.—"The word," says R. H. Codrington (*The Melanesians*, p. 110 n.), "is common I believe to the whole Pacific, and people have tried very hard to describe what it is in different regions. I think I know what our people mean by it, and that meaning seems to me to cover all that I hear about it elsewhere." For the twofold reason that Codrington's account has in no respect been impugned by later observations, and that it is the classical source from which the scientific use of the term *mana* is derived, it will mainly be followed here, though one must bear in mind that it deals primarily with the Melanesian usage, whereas there is reason to suppose that the actual word is an importation from Polynesia. It will be convenient to consider the *mana* of the Pacific region under two aspects: (a) theoretical, comparing the native view of what it is, how it is

² W. Taylor Smith calls the attention of the present writer to a passage in the "Pamph. Sancti Bartholomae Apostoli in Actis Apostolorum & Episcoporum, ed. H. A. Lippman et M. Dreyer, Leipzig, 1897-1904, pt. II, vol. I, p. 164: "Vidit [Gottlieb] adiectorem illarum capitulum apostolicum, qui Manasios adiectionem suam ex rebus huiusmodi procedens sibi appropinquavit, ut quoddam gloriam quod est in hoc mundo et dicitur: Nec novum esse dicit de adiutorio suo."

manifested, where it resides, and whence it comes; and (b) practical, involving the methods by which it is sought to turn the supposed fact of its existence to human advantage.

(a) *Theoretical aspect.* — *Mana* is defined by Codrington thus:

'It is a power or influence, not physical, and in a way supernatural: but it shows itself in physical force, or in any kind of power or influence which a man possesses. This cause is not fixed in anything, and can be conveyed in almost anything, but spirits, whether disembodied souls or supernatural beings, have it and can impart it; and it essentially belongs to personal beings to originate it, though it may act through the medium of water, or a stone, or a bone' (p. 119 n.). Or, again, he describes it as 'a force altogether distinct from physical power, which acts in all kinds of ways for good and evil, and which is of the greatest advantage to persons or control' (p. 119 n.).

In this account three points are specially to be noted: (1) that the power or excellence for which *mana* stands is 'in a way supernatural,' namely, in so far as it is 'what works to effect everything which is beyond the ordinary power of man, outside the common processes of nature' (p. 118); (2) that, even if it be in itself impersonal, resembling a contagion, or such a force as electricity, in that it can have a material object for its vehicle, 'it essentially belongs to personal beings to originate it'; (3) that it 'acts in all kinds of ways for good and evil,' or, in other words, may be used 'to benefit or to afflict friends and enemies' (p. 200), and is thus indiscriminately at the service of religion or of the black art. So much for the nature attributed to *mana*—which, be it noted, is noun, adjective, or verb, since it is equally a property, quality, or state. It may next be shown how such an attribution is a result of experience and sometimes even of experiment.

'If a man has been successful in fighting, it has not been his natural strength of arm, quickness of eye, or confidence of resource that has won success; he has certainly got the essence of a spirit or of some detached warrior to empower him, conveyed in an amulet of a stone round his neck, or a tuft of leaves in his belt, or a tooth hung upon a finger of his bow hand, or in the form of words with which he brings supernatural assistance to his side. If a man's pigs multiply, and his gardens are productive, it is not because he is industrious and looks after his property, but because of the charms full of *mana* for pigs and plants that he possesses. Of course a man naturally grows when planted, that is well known, but it will not be very large unless *mana* comes into play; a *mana* will not be very large unless *mana* be brought to bear upon it, a net will not catch many fish, nor an arrow inflict a mortal wound' (p. 120).

Moreover, in this matter the native mind proceeds logically enough by the method of hypothesis and verification.

'A man comes by chance upon a stone which takes his fancy; its shape is singular, it is like something, it is certainly not a common stone, there must be *mana* in it. So he argues with himself and he puts it to the proof; he lays it at the root of a tree to the fruit of which it has a certain resemblance, or he buries it in the ground when he plants his garden; an abundant crop on the tree or in the garden shows that he is right, the stone is *mana*, has that power in it' (p. 119).

Hypothesis and verification even lurk behind the forms of prayer.

Thus at Florida, one of the Solomon Islands, a fisherman addresses *Daka*, a *stinale*, or ghost, connected with the frigate-bird, in these words: 'If thou art powerful, *mana*, O *Daka*, put a fish or two into this net and let them die there.' If he thinks a good catch, he then says, 'Powerful, *mana*, to the *stinale* of the net' (p. 108).

Again, the heir of a famous chief must live up to the reputation of his predecessor, or society decides that the *mana* has departed (p. 68).

For instance, a man claimed to have received from the ghost of a late chief, a very great *mana*, a stone for producing pigs together with the *mana* chant for working the stone; the people were ready enough to believe this, but the *mana* proved unproductive of pigs, and so the departed chief had no spiritual success (p. 87).

To pass on to the question who or what may act as a host or vehicle of *mana*, it is plain from the foregoing examples that it may reside (though always conditionally and, as it were, by favour) either in a man or in a thing. For a man to have *mana* and to be great are convertible terms.

'To rise from step to step (in the *Saga*, i.e. most society or club) money is wanted, and food and pigs; no one can get these unless he has *mana* for it; therefore he sends gets a man on in the *Saga*, so every one high in the *Saga* is certainly a man with *mana*, and a man of authority, a great man, one who may be called a chief' (p. 108). At p. 116, in the other life, the ghost who is to be worshipped is the spirit of a man who in his lifetime had *mana* in him; the souls of common men are the common herd of ghosts, *soletia* alike before and after death. The supernatural power residing in the powerful living man abides in his ghost after death, with increased vigour and more ease of movement' (p. 120).

As for the *mana* associated with inanimate things, the following examples will show how it may come to be attributed.

'If a man comes upon a large stone with a number of small ones beneath it, lying like a sow among her litter, he was sure that to offer money upon it would bring pigs, and such a stone would be thought to have *mana* (pp. 121, 122). Moreover, the *mana* (herein, as has been said, resembling a contagion, or such a force as electricity) may be transmitted by one thing to another.

Thus, to make candles, candles leaves are held over a fire, and a song is sung to give *mana* to the fire, which given comes to the leaves, so that, when the latter are hung high upon a tree, the wind may blow about the *mana* derived from the fire, and candles may result (p. 120 t).

In other cases, the *mana* is seen to lend itself not only to transmission, but likewise to a sort of accumulation.

To make rain, men say that are *mana* for this purpose are caused to ferment so that a steam charged with *mana* may rise up to make clouds, and at the same time a stone that is *mana* for rain is placed among them to assist the process (p. 121).

It remains to notice the native theory of the ultimate source of *mana*. It has already been noted that, according to Codrington, 'it essentially belongs to personal beings to originate it' (p. 119 n.)—namely, to a dead man's ghost, a spirit (which was incorporeal from the first), or a living man (p. 151). The claim of the living man to originate *mana* is, however, somewhat doubtful, inasmuch as, if a man has *mana*, it resides in his 'spiritual part,' which after death becomes a ghost, while, for the rest, it is permissible only to say that a man has *mana*, not that he is *mana*, as can be said of a ghost or spirit (p. 101). In short, the native theorist would seem to have arrived at the view that *mana*, being something supernatural (to use Codrington's own term), must ultimately come from pre-eminently supernatural personalities such as ghosts or spirits. The existence of such a view, however, need not blind us to the fact that it is the man who does great things in his lifetime that is after death supposed to be a ghost with *mana*, a fighting man's ghost, for instance, being known specifically as a *horume*, or ghost of killing, and hence much prized as a spiritual ally who can give *mana* (p. 123). Similarly, it is because the stone with little stones round it is like a sow among her litter that it is credited with *mana*; and the doctrine that it belongs to spirits (p. 123) is, clearly, but an explanatory after-thought. Thus neither animism (in Tylor's sense of 'the belief in spiritual beings') nor even animatism (the attribution of life and personality) would seem to be essentially involved in the native experience of the wonder-working thing, whatever be the last word of native theory on the subject.

It must be allowed, however, that, if *mana* does not necessarily imply personality in the case of the thing with *mana*, it is none the less perfectly capable of co-existing with it, as in the case of the living man with *mana*; and, being itself something indwelling, comes to be intimately associated with the indwelling 'spiritual part.' In this way *mana* and its derivatives have come in various Polynesian dialects to supply all that is needed in the way of a psychological vocabulary, standing not merely for 'heart' and 'bally,' but for the 'interior man' and all therein comprised, namely, 'desire,' 'love,' 'wish,' and 'feelings' generally, as also 'thought' and 'belief,' and even in some senses 'conscience'

and 'soul' (see E. Trugear, *Maori-Polynesian Comparative Dictionary*, s.v. 'Mana'). Even if, however, mana thus in certain contexts almost amounts to what we term 'personality,' it must be remembered that, according to the native view, such personality is transmissible (just as we are liable to think of a man's—say, an artist's—personality as attaching to his work), so that the mana as the realized personality of a powerful individual may be operative through the medium of what he makes or owns or leaves behind him at death.

(b) *Practical aspect.*—Codrington roundly declares that 'all Melanesian religion' consists in getting mana for oneself or getting it used for one's benefit—all religion, that is, so far as religious practices go (p. 119 n.). As he shows by numerous examples, to obtain mana is the object to which all prayers and sacrifices are directed. Or, again, as can be gathered from Trugear's *Dictionary*, mana may be used to express the performance of miracles, the exertion of a gift of healing, the interpretation of omens, an act of prophecy, in short, all the manifestations of a wonder-working beneficence which a religious man may aspire to set in motion. On the other hand, mana is a two-edged sword which may just as readily be employed in the service of malefices. Those who have the mana to produce wind or calm, sunshine or rain, are wont 'to turn it either way as it is made worth their while to turn it' (Codrington, p. 200). Healing medicine and poison are alike mana (*ib.* pp. 194, 200). As Trugear's citation of phrases shows, accident and misfortune, cursing and intimidation, involve the exercise of mana no less than does any and every form of blessing. In short, all traffickings with the unseen and occult, whether licit or illicit, involve mana; and, just as electrical energy may be exploited alike in the public service and with criminal intent, so mana lends itself to the manipulation of the expert, be his motive moral or the reverse. Further, whatever is mana is likewise, in a complementary aspect, 'not to be lightly approached,' or, as we find it convenient for comparative purposes to say, 'tabu,' though, in Melanesia at all events, the word *tambu* (= *tabu*, *tapu*) has a rather different sense, implying human sanction and prohibition, the sacredness involving a supernatural sanction being rendered rather by *renga*, or, where it is held to be especially severe, by *buto* (*ib.* p. 215; cf. pp. 190, 31). Whatever has magico-religious value in any degree is treated with more or less of awe, not to say fear, because in a corresponding degree it has supernatural power which it is liable to exercise on the unwary with such effects as usually attend the careless handling of something extremely potent. In sheer self-protection, then, the profane, that is to say, ordinary folk in their ordinary manner of life, observe a number of tabus towards the person or thing that is mana. Meanwhile, conversely, such tabu may be looked upon as helping to keep the holy person or thing inviolate, or guarding the mana from demergering influences that will somehow spoil its efficacy.

■ *Scientific meaning of mana.*—It remains to determine what mana may appropriately mean when used as a class-name of world-wide application. Just as *tabu* has been turned into a general category standing for any prohibition resting on a magico-religious sanction, despite the fact that in Melanesia another shade of meaning apparently attaches to the term, so mana has of late obtained a wide currency as a general name for the power attributed to sacred persons and things, and is so used without reference to the particular associations which may have gathered round the word in this or that part of the Pacific region. Thus, even if it be true, as Codrington's somewhat guarded

account leads one to suspect, that in Melanesia mana has been more or less successfully incorporated in an animistic system, so that its ultimate source is usually supposed to be a ghost or spirit, that is no reason why, for the general purposes of comparative science, mana should not be taken to cover all cases of magico-religious efficacy, whether the efficacy be conceived as automatic or derived, i.e., as proceeding immediately from the nature of the sacred person or thing, or mediately because a ghost or spirit has put it into the person or thing in question. Meanwhile, the simplest way of ascertaining what modifications, if any, need to be imported into the local meaning of mana in order that the term may be employed generically, so as to cover analogous ideas hailing from a variety of other cultural areas, will be to review sundry examples of such kindred notions.

(1) *Orenda.*—This word is Iroquoian, belonging more especially to the Huron dialect, and apparently has the literal sense of 'chant' or 'song,' whence it comes to stand for the mystic power put forth by means of a magic song or in any other magico-religious way. Thus we are near the original meaning when we find 'one who exerts his orenda' as the regular expression for a soothsayer, or hear of the orenda of the dead, which is known as the 'maise-ripemur' because, if it sings in the early morning, a hot day follows. Not only the soothsayer, however, but the mighty hunter likewise, or he who succeeds in a game of skill or of chance, is credited with great orenda, though, if the hunter fails, or the gambler is worsted, then his orenda has been thwarted by the greater orenda of the game or of the rival player (J. N. H. Hewitt, *American Anthropologist*, new ser., iv. [1902] 28 f.). Indeed, everybody and everything would seem to have orenda in some degree, the world being regarded as a sort of battle-ground where unequal forces are matched against each other, and the strongest obtains his desire ('he is arrayed in his orenda' is the regular way of expressing 'he hopes' (*ib.* p. 39)), while the weaker must submit ('he lays down his orenda' is equivalent to 'he prays' (*ib.* p. 40)). Whether it implies personality may be doubted; for, whereas at one end of the scale it is associated with personal activities such as singing, charming, praying, hoping, and so forth, and sometimes almost amounts to 'intelligence,' as when it is said of a shy animal that 'its orenda is acute' (*ib.* p. 39), at the other end of the scale we find it attributed freely to trees, plants, stones, meteors, water, a cloud, a storm, or again to medicine, to a ceremony, and so forth (*ib.* pp. 33, 41, etc.). Sometimes orenda seems to come near to what we should term will-power, and doubtless such will-power is freely attributed to what we consider to be inanimate objects, as when 'it is making its orenda' is said indifferently of an animal in a rage or of a storm brewing. But sometimes the orenda would seem to act automatically and independently of the will of those who seek to bring it into action, as when the condolence ceremony, whereby a sort of figurative resurrection is accorded to a dead chief, has to be performed in winter lest its association with death should exert an evil orenda on the crops (*ib.* p. 34). For the rest, orenda may work either for good or for evil, though a separate word *eyon* may be used to denote the specifically bad kind of orenda, and is actually displacing the more general term, as if the malign aspect of its manifestations made the more lasting impression on the tribal mind (*ib.* p. 37 n.). See further, art. *ORENDA*.

(2) *Wakan.*—This Siouan word is strictly parallel to orenda, and stands for all 'power which makes or brings to pass.' It may come near to the idea of will-power, as in the Omaha act of

wa-shin-dé-dé, the 'sending of power' by singing to an absent friend engaged in war, or in the chase, or in a game of skill. On the other hand, monstrous blood is *wa-shin* (whence the rudity charm described by H. R. Schoolcraft, *Indian Tribes*, Philadelphia, 1853-57, v. 70 [see A. C. Fletcher, *Proc. Amer. Assoc. for Adv. of Science*, 1907, p. 396]). In short, the term may be applied indifferently to a shaman, to sun, moon, thunder, to animals and trees, to fetiches and ceremonial objects of all sorts, and, in fact, to anything that exhibits wonder-working power (cf. W. J. McGee, *IS BBEW* [1907] 182).

(3) *Manitu*.—Here once more we have an Algonquian word that is generically identical in meaning with *orenda* or *ouaba*. It is primarily an impersonal substantive; for in the Algonquian dialect a rigid distinction of gender is made between things with life and things without life; and, when *manitu* stands for a virtue or property, the form expressive of inanimate gender is used, though, 'when the property becomes identified with objects in nature, the gender becomes obscure and confused' (W. Jones, *AJFL* xviii. [1905] 189 f.). The following account by an Indian of the Fox tribe of the beneficent effects of the sweat-lodge brings out very clearly the non-personal nature of the force set in motion by a man for his personal betterment; he might almost as well be describing an electric bath.

'Often one will cut oneself over the arms and legs . . . in order to open up many passages for the manitu to pass into the body. The manitu comes from the place of clouds in the sky. It becomes aroused by the heat of the fire, . . . proceeds out of the smoke when the water is sprinkled upon it, . . . and in the steam it enters the body, . . . and imparts some of its nature to the body. That is why one feels so well after having been in the sweat-lodge' (ib. p. 183 f.).

See, further, art. *MASTRO*.

(4) *Hasina*.—This word is used in Madagascar to express the power or virtue which makes a thing unusually good and effective, such as the efficacy of a remedy, the power of a prophecy to come true, the virtue residing in an amulet or in a spell, the sanctity of holy persons and things, and so on. *Hasina* belongs in a high degree to the king, seeing that he is born in a family which has it, and is strengthened by the ceremonies of people having it, such as sorcerers and his own relatives. Hence his *hasina*, being highly contagious, is apt to cause his subjects to fall ill and die, if they but touch him. He dare not even speak to them, save through an intermediary. Meanwhile it is his duty to guard his *hasina* intact for the public good, so that A. van Gennep is probably right in regarding such a *tabu* as that which prohibits the subject from entering the court of the palace with his hat on his head as a *fady* (= *tabu*) *de conservation* (*Tabou et totémisme à Madagascar*, p. 17). Indeed, the native theory of kingship turns entirely on this notion of *hasina*. Thus, at the king's enthronement, the monarch-elect stands on a sacred stone charged with *hasina* and cries aloud to the people, 'Have I, have I, have I the power?', to which they reply, 'The power is thine' (ib. p. 88). Taxes paid to the king are called *hasina*, being derived from firstfruits and hence inherently sacred, in fact, a tithe. Even when the king is dead, his body transmits its *hasina* to the place of the grave, which is henceforward sacred (ib. p. 104). It may even be, as van Gennep suggests, that the royal practice of strict endogamy, which was carried as far as sister-marriage, was due to the desire to keep the *hasina* in the family (ib. p. 102). *Hasina* is, however, by no means the exclusive property of the king. Nobles have it too, but in less degree. Even common men have some, and the very animals, trees, and stones have their share likewise. *Hasina*, in short, is relative. If

I plant something in my field, I put into it some of my *hasina*. Another man will therefore respect it, unless he feel his *hasina* to be greater, in which case he can receive no harm (ib. p. 18). Meanwhile I shall do well to fortify myself by protecting my property with amulets full of *hasina*, these often amounting to veritable boundary-stones (ib. p. 186). For the rest, whatever is sacred has *hasina* and for this reason is likewise *fady*, or *tabu*, so that, for instance, the stranger who has *hasina*, and is therefore *fady*, must be received with rites of admission the object of which is *distabou*, 'to remove the *tabu*' (ib. pp. 40, 46).

(5) *Baraka*.—This is the term used in Morocco to describe the holiness attributed to 'saints,' male or female, as well as to places and natural objects, which are, however, thought of as deriving their holiness from the saint. The name *synd* (i.e. *synd*), 'saint,' is meanwhile bestowed impartially on persons or places, implying a certain 'confusion of categories' (E. Westermarck, in *Anthrop. Essays presented to Tyler*, London, 1907, p. 366). To secure that the power shall be exercised in his favour, the Arab puts a conditional curse (*dr*) upon the saint by throwing a stone on the cairn marking his tomb, or by tying a rag near by. The most efficient conductor of such a curse is, however, the blood shed in a sacrifice, for the blood contains *baraka*, supernatural energy, in itself, and hence lends potency on its own account to the curses with which it is loaded (ib. p. 365). *Baraka* is, however, by no means necessarily noxious (as it is when it provides the sting of a curse); for it stands equally for the blessing, *f-baraka del id*, 'the benign virtue of the feast,' which flows from the sacrificial meal, and is further distributed among the worshippers by a man clothed in the victim's skin (Westermarck, *MF* I. 445). Or, to take another example, the *baraka* inherent in the Moorish bride 'implies not only beneficial energy, but also a seed of evil or an element of danger,' so that people partake of her dried fruit to rid themselves of evil on account of her *baraka*, even while they regard a gift from her as bringing a blessing, and likewise suppose her *baraka* to give efficacy to the ceremonies practised with a view to producing rain for the good of the crops (Westermarck, *Marriage Ceremonies in Morocco*, London, 1914, p. 380 ff.).

(6) *Managur*.—This word among the Kabi tribe of Queensland is used to express the 'vitality' with which the doctor is full and whereby he effects his miracles. He is also known as *manu*, 'the man full of life' (*manuburnan*, 'to live'). The force that pervades him is conceived, hylomorphically, as a number of those magic crystals which are so much in evidence when he engages in his acts of healing. As a native witness put it, 'always pebbles in his inside are. In the hand bones, calves, head, nails' (J. Mathew, *Eagichamk and Crow*, London, 1899, p. 191). These pebbles enter the patient, so that he in turn becomes *managur bathan*, 'full of vitality.' Or, conversely, the *manu* *manu*, the man full of life, sucks out the pebbles which some other ill-disposed person has put into the victim, so that the latter recovers, the potency resident in the pebbles being thus equally capable of killing or curing according to the intention of the powerful man who has control of them (ib. p. 191 f.). Or the medicine-man may relieve his patient by drawing out the evil by means of a rope, and such a rope he obtains from Dhakka, the rainbow, whose himself *managurugur* (superlative of *managur*), superlatively potent (ib. p. 192).

These examples, which might be multiplied indefinitely, will suffice to show that there is a widespread tendency on the part of the peoples of the lower cultures to isolate in thought and invent with

a more or less independent being of its own the power whereby a holy person or thing proves his or its holiness by means of action supremely efficacious, whether for good or for evil. Modern anthropology lays great stress on this notion of the savage (whether it be conceived and expressed by him with full explicitness or not), because it appears to stand for something which lies at the very centre of what he feels, thinks, and does in regard to the supernatural and unseen. Whether it is more or less central and fundamental than the notion of spirit is a question that need not be raised here. In any case it would be quite beside the mark to seek to assign exact relations of logical priority and posteriority to these two ideas, seeing that savage doctrine is tolerant of confusion, not to say downright contradiction, and uses the one or the other conception alternatively or in manifold conjunction as a particular situation may seem to suggest.

Here, then, it will be more profitable to indicate shortly what general purposes of theory are served by reference to the group of ideas for which *mana* may by convention be allowed to stand when used in its scientific as distinguished from its purely local sense. In the first place, *mana* usefully calls attention to the element which magic and religion have in common. Among savages my religion corresponds roughly to whatever system of rites is resorted to by the community in general for self-preservation in the face of all the dangers, real or imaginary, that beset them. If you are a member of another tribe in perpetual strife with mine, I am not disinterested enough to attribute to you any religion worth speaking of, even if your rites bear the closest family resemblance to mine; but rather incline to pay you the compliment of supposing you to wield a most malignant magic, in proportion as I feel respect for your power of getting the better of me. It is a case of me and my gods against you and your devils. Gods or devils, however, they have power alike, and to the stronger power, whichever it be, the victory goes. Similarly, within the tribe a particular individual may have recourse to mystic rites to help a public cause or to help himself in a way of which the public approves, or contrariwise in order to wreak his private spite on his neighbour. In the former case he is behaving piously, in the latter he shows himself a wizard and deserves to die the death; but in either case indifferently a wonder-working power is set in motion. *Mana*, then, as representing what may be broadly described as the element of the miraculous, enables theory to treat the magico-religious as a unity in difference, the unity consisting in wonder-working power and the difference in the social or anti-social use to which it is put by the rival systems. In the second place, *mana*, taken together with *tabu*, provides a minimum definition of the magico-religious, such a delimitation coinciding accurately with the distinction which the savage both in theory and in practice draws between the world of the supernatural and the world of the workaday and ordinary. Whatever else it may be as well, and however diverse the characters it may otherwise wear, the magico-religious in all its manifestations is always hedged round with respect because of the potency inherent in it. *Tabu* and *mana* always imply each other, so that either can stand by itself for the whole two-sided notion. Thus *tapu* (= *tabu*) was 'a general name for the system of religion' in Hawaii (Tregner, s.v. 'Tapu'). Conversely, *mana*, a word of the *mana* type, is translated by McGee 'mystery,' because the notions of 'power,' 'sacred,' 'ancient,' 'grandeur,' 'animata,' 'immortal' all fall alike within the wide circle of its implications (26 *BBW*, p. 183). *Mana*, however,

taken by itself offers the more adequate characterization of the nature of the magico-religious, since it reveals the positive ground of the negative attitude of fear and shrinking which *tabu* involves. It only remains to add that, having by means of such terms expressed the generic characters of the class of objects to which magic and religion relate, the anthropologist is merely on the threshold of his task, and must go on to distinguish by means of fresh terms of narrower connotation the specific types in which this class abounds. Thirdly, *mana* is well suited to express that aspect of the magico-religious or sacred in which it appears as a transmissible force or influence. Thus van Gennep shows the notion of *mana*, which is of the *mana* type, to be closely bound up with that of *totem*, contagion (*Tabou et totémisme*, p. 17). The idea of spirit, on the other hand, does not lend itself so readily to the representation of such transmissibility or infectiousness on the part of what is sacred, except where some sort of dual personality is manifested, as in the case of what is known as 'inspiration.' Meanwhile the passing on of sacredness between one person and another, one thing and another, or a person and a thing in either direction, is a constant feature of primitive belief, corresponding as it does to that play of association to which the uncritical mind is prone, more especially when rendered suggestible by emotional excitement. Thus, in the Melanesian charm for sunshining, the operator's desire, as expressed in his song, starts a train of actions—the lighting of a fire, then the placing of leaves therein to warm them, then the hanging of the leaves upon a tree to impart their warmth to the wind; and the whole process is interpreted in terms of the transmissibility of *mana*, from the song to the fire, the fire to the leaves, the leaves to the wind, the wind to the sun, in strict accordance with the associational flow of the interest (cf. Codrington, *Melanesians*, p. 201). Lastly, *mana* is the term best suited to express magico-religious value as realized in and through ritual; and ritual, as Robertson Smith has shown once for all, comes before belief in order of importance for the peoples of the lower culture. If *mana* is, regarded in itself, an impersonal and quasi-mechanical force operating on its own account, even though personal beings may have set it in motion, this is largely because a more or less automatic efficacy is imputed to ritual as such. Whereas the reason and conscious designs that are immanent in the ritual are at most but dimly apprehended, the rite itself, on the other hand, stands out clearly as something that can be seen and enacted, and thus acquires independent value. Whatever it may exactly mean, at all events it works. Thus the ideas of *mana* and of ritualistic control go very closely together, the former being little else than a projection of the latter into the world of objects, which are thought of as so many foci in a system of partly co-operating and partly conflicting controls. And so it is also with the ill-defined man's notion of luck, which is a genuine, though degraded, member of the *mana* group of conceptions. Those who still hold to a belief in luck are precisely those who likewise believe in the possibility of controlling it.

LOVINGHAM.—For the local use of the word *mana* the best authority is R. H. Codrington, *The Melanesians*, Oxford, 1900. Cf. also E. Tregner, *Maori-Polynesian Comparative Dictionary*, Wellington, N.Z., 1903, s.v. 'Mana.' For the kindred words, *arua*, *arua*, etc., see the references given above. A. van Gennep, *Tabou et totémisme & Hétérogénéité*, Paris, 1900, deals with *mana* in strict relation to the local context, yet in a broad way that suggests interesting applications to general theory. On the scientific use of the term see various essays, the earliest going back to 1889, by R. E. Marett, reprinted in *The Threshold of Religion*, London, 1914. In 1904 Marett, in 'From Spell to Prayer,' etc., and H. Hubert and M. Mauss,

In *J. A. S. vii.*, independently made upon the basis of a theory of magic. See also I. King, *The Development of Religion*, New York, 1910, and J. H. Leuba, *A Psychological Study of Religion*, do. 1912. Important papers dealing with the subject from various points of view are E. S. Hartland, *Address to Section II, British Association*, York, 1903, and *Address to Section I, 2nd International Congress for the Study of Religions*, Oxford, 1903; A. Lerooy, *The Herald*, xvi, (1908) no. 3; V. Greenbach, 'Soul or Man,' *2nd International Congress for the Study of Religions*, Leyden, 1912; P. Saltykov, *La Force mystique*, Paris, 1914. Important books illustrating the theoretical applications of the idea of mana are L. Levy-Bruhl, *Les Fonctions mentales dans les sociétés inférieures*, Paris, 1909; E. Durkheim, *Les Formes élémentaires de la vie religieuse*, do. 1912; J. E. Harrison, *Themis*, Cambridge, 1913.

R. R. MARRETT.

MANCHURIA.—See SHAMANISM.

MANDAEANS.—2. Introduction.¹—The Mandaeans claim our interest not only as being a separate surviving branch of the Semitic stock, but also on account of their religion, their language, and their sacred literature. Besides the records of their religious teaching and their religious poetry, that literature includes fragmentary remains and revisions of ancient Gnostic speculation and myth. Adherents of the Mandaean faith, either as larger communities or as distinct family groups, were to be found some forty years ago—and may perhaps still be found—in cities and smaller market-towns on the lower Euphrates, the lower Tigris, and the rivers which water the eastern Iraq al-Arabi and the adjacent Persian provinces of Khuzistan (Arabistan). It is, indeed, necessary for them to live in the neighbourhood of rivers, since immersion in flowing water is an essential, and certainly the most characteristic, feature of their religious practices.

As far back as our records carry us, we find them subsisting in very humble conditions, earning their living as tradesmen—carpenters, smiths, locksmiths, goldsmiths—or as shopkeepers. Upon their priests rested the duty of preparing and directing the public religious ceremonies, which were few and by no means sumptuous, as well as that of performing certain rites on behalf of individual members of the community. At these functions it was their regular task to recite a number of extracts from the sacred books. In the Mandaean religion, as in others, such recitations take the place of the incantations that are no longer permitted, and in conjunction with the religious rites they serve to effect or to ensure the salvation of the soul.

From the time when the Mandaeans began the serious collection of their religious texts—their mythological and legendary documents may also be regarded as revelations—the transcribing of their sacred books, and even a monetary contribution to the expense of such labour, ranked among them as a work which could purge from sin; hence not merely priests, but also a considerable number of laymen, possessed copies. Some of these were obtained by Christian missionaries from their converts, and others were bought, with the result that since the middle of the 17th cent. not a few Mandaean MSS have found their way into European libraries. The books are composed in a distinct Semitic idiom, and written in a special script.

3. Mandaean writings.—The most valuable, from the historical point of view, and—at least in the main—the most ancient portions of Mandaean literature are collected in the voluminous *Sidrâ rabbâ* ('Great Book') or *Gonâ* ('Thesaurus'), which is divided into a right and a left part.² This consists largely of theological, mythological, ethical, and

historical treatises, which are interspersed with revelations, prayers, and hymns. All these components, so varied in their matter, may be called 'tractates,' though only by way of having a uniform term by which they may be enumerated and cited. From the introductory 'blessings,' which occur some twenty times, and from postscripts, we may infer that the sixty-four pieces, with three collections of hymns, were gradually incorporated in the 'Thesaurus,' now singly, now in groups. Originally each tractate was independent, though in the very first three or four separate writings have been brought together. The last tractate of the Right is the 'King's book,' which contains a survey of cosmic events as they appeared to a Mandaean who expected the end of the world to take place one hundred and fifty years after the foundation of the Arabic sovereignty, and assigned to that sovereignty a duration of only seventy-one years; hence the tractate must have been composed in the early years of the 8th cent. A.D. The short tractate, xix. R, speaks of Mahomet the Arab (Muhammad) as one who had lived at least from two to three generations in the past. To the much more important I. and II. R, however, notions referring to Muhammad have been attached only at the end, the redactors of these tractates evidently thinking that they must fill out the historical sketch; no other tractate exhibits any knowledge of Muhammad or any trace of his teaching. As regards the narrative tractates, we can distinguish between those of more and those of less importance, the latter having taken their materials or their themes from the former. In some we find fragments interpolated from older works not now extant, while not a few are a mere patchwork of remnants of what they originally contained. When all has been said, it cannot be doubted that these documents of the *Gonâ* which speak authoritatively of Mandaean thought and sentiment were composed prior to Muhammad's day, and such later redaction—often far from competent—as they have undergone was the work of Mandaean priests who were concerned to transmit in some form to future generations the greatest possible amount of their ancestral literature. The formal nucleus or focus of the entire collection is a manifesto of the Mandaean priesthood to the community (xxvii. R; cf. *M.R.*, supplement A).

Like the *Gonâ*, the *Sidrâ d'Yahyâ* ('The Book of John'), or *Drâš d'malkê* ('Recitations of the Kings'), more rarely designated *Drâš d'Yahyâ* ('Recitations of John'), is also a collection of tractates, many of which have come down in an incomplete, or at least in a corrupt, textual form. A considerable number of them relate to the experiences and the teachings of John the Baptist. The book also contains narratives (e.g., one about the 'fisher of souls'), instructions in conversational form, etc. The diction is still good, but the legend of the baptizer of the Jordan, who is mentioned only once in the *Gonâ*, where he is described as a truly wise and devout prophet, is here brought down to the sphere of popular taste, and expounded with entertaining stories. The older form of his name, 'Yôhannâ,' is superseded by the Arabic 'Yahyâ' (cf. § 40), and from these facts we infer that the contents of this collection are of considerably later origin than those of the great 'Thesaurus.'

The *Qulastâ* is a volume containing the liturgies for the annual baptismal festival and the services

in liturgical form as *Thesaurus* also after manner, Leipzig, 1867. We shall cite from this ed., using the letters R and L for the right and left parts respectively, while the accompanying figures will indicate the page and line. The right-hand pages are for the living, the left-hand for the dead.

¹ ed. M. Lidzbarski, *Das Johannesevangelium der Mandäer*, I, Göttingen, 1903; a second vol., with II., is promised for 1914.

¹ In this art. the abbreviations *M.R.* and *M.S.* indicate respectively the present writer's *Mandaean Religion* and *Mandaean Scriptures*, cited at the end of the literature.

² A transcription of a complete MS with a list of variants from three others, executed by H. Posnermann, was published

for the *hmal* (messengers).¹ Its poetical sections, which are intended to be recited as hymns or prayers, are worthy to stand beside the songs in the *Gemad*, though they are possibly not so ancient. The liturgical directions attached to them are certainly of much later origin, being the work of writers who were not familiar with the pure form of the Mandaean language. The same statement holds good of the two sections of the *Marriage Eweal*, which has not yet been printed, though there are MSS of it in Oxford.

To the liturgical rubrics of the two works just mentioned corresponds the *Dieda* preserved in the Bibliothèque Nationale in Paris. The name *dieda* is given by the Mandaeans to a work written on one long strip of paper. The Paris example is 136 x 8 cm., and gives the procedure for the expiation of ceremonial offences (cf. T. Nöldeke, *Mandaäische Grammatik*, p. xxiv). Another *Dieda*, now in the Vatican Library, is 78 metres in length, and consists of a series of sketches representing the halting-places through which the soul of a deceased Mandaean must pass in its ascent (cf. § 28), and, at its destination, the scales and the throne of Abatur. Its numerous figures have been drawn mainly with ruler and compass, and might be the work of a child's hand, while some parts of the text found between or at the side of the figures have been rendered illegible by stains and dilapidation of the paper. The Latin notes added by Ignatius a Jesu to explain the figures sometimes do not agree at all with the original text, and at certain points there is convincing evidence that the missionary could not read a word of the Mandaean language. It would appear that he had the work explained to him by one of his converts, but that he frequently failed to understand his informant, and made fresh errors in writing his notes.²

Another Mandaean work, one main division of which bears the title *Aḡar maldad* ('Book of the sodical Constellations'), is found in the Royal Library of Berlin.

According to Nöldeke (loc. cit.), 'It is a compilation, containing all sorts of astrological material of very diverse date, and translated in part from Arabic and Persian; portions of it are of Jewish origin.'

Mention should also be made of the recently discovered earthenware bowls with Mandaean inscriptions intended to avert a curse or an evil spell.³ They furnish melancholy evidence of the complete decay of Mandaean theology.

3. The Mandaean language.—The idiom in which this literature is composed is recognized by Nöldeke as of importance for the study of the Semitic languages; it is the form of Aramaic which developed in lower Babylonia, and its nearest congener is the special dialect of the *Talmud Babil* (i.e. the Aramaic of Upper Babylonia). The script (see below, § 19) has the advantage of expressing the vowel-sounds by letters, and does not require diacritical signs. A correct interpretation of the texts—at least so far as they are accurately written and in good preservation—has been made possible by the grammar which Nöldeke has drawn up from them (*Mandaäische Grammatik*).

4. Translations.—Ignatius a Jesu, who, as a missionary in Bagdad in the 17th cent., was in close

contact with Mandaeans for nearly thirty years, simply says that he had some knowledge of their language, while his successor, Angelus a S. Josepho, thought himself able to furnish the key to their writings. The material extracted by the learned Maronite, Abraham Echellensis, from three Mandaean books, and given to the public in a work printed in 1680 at Rome, that scholar had doubtless succeeded in reading with the assistance of Mandaean converts then resident in Rome (cf. *MS*, p. 51.). From the same period come three renderings of the supposed Mandaean baptismal formula, but these show how utterly bewildered the translators were even with the first line of the Mandaean books, for it is in reality their introductory formula. Later essays in translation, the most notable of which were the arbitrarily conjectural version by M. Norberg and the more careful but still very erroneous studies of G. W. Lersbach, are considered in some detail in *MS*, pp. xiv-xix. In the latter half of the 19th cent. it also transpired that there was no such traditional interpretation as scholars had expected to find in the hands of the Mandaean priests (cf. *MS*, pp. 7-20). The specimens of translation offered by H. Petermann simply repeat the errors of Norberg (ib. pp. 99, 106, 214, 234).

Even with Nöldeke's *Grammar* at our disposal, there are still serious obstacles to a complete translation of the Mandaean writings. These contain a large number of expressions which we can interpret only conjecturally or else not at all; some appear to be Persian in origin, but there are also a number of genuine Aramaic words whose usage in other dialects does not suit their Mandaean context, while in other cases the context does not clearly show which modification of meaning has been developed from their etymological root. In some instances, again, it is obvious that words and phrases have acquired a theological or ritual sense which is not clearly determinable. All this, however, has to do with matters of detail; the course of thought and most of the constituent elements lie within the scope of literal reproduction. H. Pognon (sup. cit.) has taken the utmost care in establishing the renderings of the inscriptions, and has also, in connexion with them, translated numerous passages in the *Gemad* and the *Qolasta*—though he, too, has made mistakes. The same may be said of *MS*.

5. Interest of the Mandaean texts.—The largest and most interesting portion of the Mandaean writings is liturgical and mythological in character. The myths relate to the origin and nature of the world of the gods and that of man, and also to the religious history of mankind. They are not derived from conceptions of nature, nor did they originate in the popular mind, but were constructed in accordance with theological views. The scientific gains which this vein of liturgy and myth seems to promise—and it is the prospect of such gains that draws us to the study of the Mandaean texts—are in the main as follows: (a) enlightenment regarding the meaning of the Mandaean rites; (b) a tenable view of the origin and early history of the Mandaean religion; and (c) an advancement of our knowledge regarding the character of Oriental Gnosis and its religious bearings.

6. General contents of the *Sidrâ rabba*, or *Gemad*.—In seeking to solve the riddle presented by the Mandaeans and their writings, we must begin with a critical examination of the oldest portions of their literature. We shall, therefore, first direct our attention to the matter found in the *Gemad*. There we find a teeming world fabricated by religious and theological fantasy. Gods and demons, or beings of like nature, come before us with actions and utterances which, almost without exception, relate to the creation of the world, the

¹ A copy, beautifully illuminated and ed., with various readings, by J. Euting, was published as *Qolasta oder Gebete und Lehren von der Tugend und dem Ausgange* (ironically, the original having, not *QOLASTA*, 'emitted,' but *QOLASTA*, 'secret') der Santa, Stuttgart, 1867.

² A photographic facsimile of this *Dieda*, ed. J. Euting, was published at Strassburg, 1904.

³ H. Pognon, *Une inscription araméenne des grottes maldadées de Babylone*, Paris, 1900, and *Inscriptions maldadées des grottes de Babylone*, ib. 1907-09. Cf. H. Lichtenberg, 'Mandaäische Zaubertexte,' in *Epigraphische Mittheilungen*, I. (1908) 66-104. A few Mandaean texts are to be found in J. A. Montgomery, *Iranian Inscriptions from Susa*, Philadelphia, 1912.

founding of religions, and the destiny of the human soul. Not infrequently it seems as if one and the same being stood before us under different names, while in other texts the bearers of these names are found in company with one another; sometimes, again, a particular action is ascribed to beings of altogether diverse character, or, as the action of one and the same being, it is described and characterized with much variation in different texts. It would be impossible here to set forth or unravel all this, and we shall seek only to give a concise survey of the most important trains of thought and imagination to which the vast variety of the materials may be reduced.

7. Ancient Gnostic elements in the *Genes*.—The treatates that first claim our interest, as being probably the oldest, are those which exhibit polytheistic beliefs, or are at least ultimately based upon polytheistic views. Some of these open with speculations regarding the origin of all things, including the world of the gods, and to this group belong the sections in which emanational doctrines are set forth (cf. *M.R.*, p. 24 ff.). Here 'the Great Fruit,' from which innumerable other fruits have sprung, and—as a personal divine being—'the Great Mānā of Glory,' from whom, in like manner, other 'Great Mānās' have arisen, are spoken of as primal entities. Beside the Great Mānā we frequently find 'his counterpart,' 'the radiant other' (*ayar stud*), or 'the great other of life' (*ayar rabbā d'ayyā*), who appears sometimes as a primitive being, sometimes as one of the first emanations; and the same holds good of 'the First Life,' also called 'the Great Life,' and of 'the Great Hidden First Nefutā' (i.e. 'drop,' perhaps thought of as a sperm-drop). In all the sections of this type we read also of 'the great Jordan,' which is always represented as a river of white water, as 'the living water,' 'the gleaming and lustrous water.' It encircles the realm of the *ayar*, the world inhabited by the higher beings, and in its descent it is joined by innumerable other Jordans which water the *ayar*-realm; or, again, it traverses that realm as 'the great artery of life.' So unorganized is the system, however, that as early as the middle period of the *Genes* we find the personified figure of Wisdom making request for revelations as to the gradation of the higher beings according to their period and dignity (*M.S.*, p. 202 f.). Nor do the texts in question present us merely with diverse elaborations of a single underlying view, or with various attempts to reconstruct an imperfectly conceived system; on the contrary, they contain originally divergent conceptions of the origin of things—conceptions either fabricated or gathered from foreign sources by the Mandaean scholars themselves at a period before the transmitted texts were written. Of the authors of the *Genes* it is only the polytheistic group that have made use of these conceptions.

Of the narratives describing the creation of the terrestrial world, some still bear a relation to the theogonies, the relation being peculiarly close in the long and important treatate vi. R, which we may call the Mandaean Genesis. In this text 'the Life' calls 'the Second Life' into existence by a 'request to itself.' Then this 'Second Life' creates for itself a second celestial world, and among the spirits of this higher realm of second rank (the 'devs of the Second Life') arises the idea of creating a third world, viz. our earth, with inhabitants who should know and worship only the Second Life, not the First. Then the Great Mānā of Glory, in order to frustrate this design, calls into existence the Mānā d'ayyā, who was to see that the First Life was worshipped also upon the earth.

¹ According to Hippolytus, *Ref.* (= *Philosophumena*) v. 8, vi. 27, viii. 8 (cf. x. 16), the Naemann, Valentinus, and the Docetists had a similar idea (cf. *M.R.*, p. 120 ff.).

In the Mandaean dialect *mandā* is a by-form of *mandū* or *mandā*, a noun from the root *ṣṣ* (cf. *ṢṢ*, *Hand. Gram.*, p. 75), and *mandā d'ayyā* is equivalent to *ayyā d'ayyā* (i.e. 'the knowledge of life'—namely a knowledge of life as given and a portion to life. The term 'Mandaean' is a rendering of *mandā d'ayyā*).

8. The polytheistic strain in Mandaean theology.

—While the Mandaean writers esteem the theological speculations of their books as mysterious and ancient revelations, in their own religious thinking they retain only the belief in 'the Great Life'—or simply 'the Life'—whom they regard as the deity of the world of light. They use the word *ptā* for the most part as equivalent to 'fruit' in the ordinary sense, and the term *ayar* (ultimately derived from Gr. *ἀἴρ*) as denoting the air of the celestial world and the north wind associated with it. The word *mandā* (usually = 'vessel,' 'instrument') is still found in a group of hymns (L 30-74) in which the soul of the Mandaean asserts its heritage in the higher world, declaring, 'I am a *mandā* of the Great Life,' while occasionally an exalted celestial being is distinguished by the epithet 'pure *mandā*.' At first the deity referred to as 'the Life' is still regarded as a plurality, being designated 'the Fathers,' and is thus conceived as a council of gods—though one that is small and always unanimous. Very soon, however, 'the Life' comes to be spoken of in the singular. In the polytheistic writers a number of other gods appear besides 'the Life'—not, indeed, as its subordinates, but inferior to it in power and prestige. These are not called 'gods'—among the Mandaeans, in fact, that term was long restricted entirely to the false foreign deities (*M.R.*, supplement C)—but are referred to each by his proper name. The heavenly beings created for a special purpose are called 'devs' (lit. 'wealth'), as are also the countless angels who play a more ornamental part.

Far below the realm of *ayar* lies a world of darkness—'the black water' (*mayyā d'ayyā*). We are nowhere told that the black water is merely a portion of the under world, or that it bounds or covers it, and yet the idea that the under world is in a liquid condition is quite irreconcilable with a large number of its features as presented in the narratives.

The creation of the earth which lies solid in the black water, and of the firmament expanded over it, is ascribed by the writers of this school to Ptahil (on whom cf. *M.S.*, p. 60 f., note). The characterization of this demiurge shows a remarkable degree of variation. Ptahil merely resembles the higher beings, and has arisen out of the black water; he acts only by permission, or, indeed, upon the authority, of 'the Life,' and with the means vouchsafed to him by the latter, but he oversteps his orders; or he has accepted the proffered help of the evil spirits. Again, he is in fault solely because he has not boldly resisted such an evil spirit, or, once more, he himself has committed no transgression, and it is only after he has duly performed his work that evil comes into the world.

The creation of man is wrought in part either by Ptahil or by the evil spirits, but is left incomplete, the soul and the finer organs, or at least the former, being still lacking. The soul—that which makes man live—is breathed into Adam by Mānā d'ayyā, or else brought down from the treasure-house of 'the Life' and placed in Adam's body by one of the celestial beings. By this means, and also by the fact that the first man was at once enlightened regarding his origin and the true religion, the design of the subordinate spirits (those of the Second Life) to create a world whose inhabitants should belong to them and worship them alone was foiled.

The wicked spirits, however—of the 'devs of the

Second Life nothing is said even in the 6th tractate—do not at once accept defeat. By magic they create all manner of noxious things—poison and corruption, predatory animals and serpents, devouring fire and earthquakes, etc., as well as evil passions—and mingle them with the good creation. According to vi. R, the first to be deluded by the wicked ones was the son of the first man (*Adām bar Addā*); and *Mandā d'hayyā*, or his representatives (*Hibil*, *Sitil*, *Enōā*), must once more appear to fortify and maintain mankind in the true faith. These evil spirits are the *Rāhā* (Jud.-Aram. *rm*) and her children, viz. the spirits of the seven planets and of the twelve zodiacal signs. Prior to the creation of the earth her abode was the region overlying the black water, and from her and her sons all evil things have come into the world—demons, founders of false religions, teachers of heresy, and men of violence. The *Rāhā*, who also bears the epithet of 'world-mother' or 'mother of the world,' bore these children to 'Ur, the Mandaeans devil, who was himself her son. He is a most villainous creature, and had to be laid under restraint before the earth and the firmament were created, the reason evidently being that the 'solidification' of the land in the black water would otherwise have been impossible. According to vi. R, it was *Mandā d'hayyā* himself, according to viii. R, it was his son *Hibil d'wā*, who cast 'Ur to the ground, loaded him with chains, and set warders over him—or, on another view, immured him in 'Ur's own dark realm. Detailed accounts of how these measures were carried out—mainly by magic and trickery—are found in the tractates cited; and viii. R (one of the later portions of the *Gonad*) relates further, with reminiscences of Bah. myths, how the 'fathers' of 'Ur, the lords of three deeper regions of the under world, were rendered harmless (complete tr. in *MS*, pp. 127-101).

g. Biblical matter in the tractates of the polytheistic earlier school.—The *Rāhā* and her son 'Ur, dwelling upon the surface of a watery expanse that existed before the creation of the solid land, and in some way interested in that work of creation, since their names are not Mandaean, but of Heb. origin, can be none other than the female *erba m* who, according to the opening words of the Heb. *Gonosis*, 'brooded upon the face of the waters,' and the light (*ur*), which is said in the same passage to have been the first work of the creation. The Gnostic writer here adopts a theory according to which the light was born of the *Rāhā* (of God), as were also, subsequently, the lights of the heavens. The word *ur*, 'call,' as used for 'call into being,' can be traced to the Biblical *Genesis*, as well as the names of *Adām* and his wife *Hawwā*, and, consequently, also that of their son *Sitil* (i.e. *m*), lengthened in Mand. to *šitil* and the names of the other two sons *Hibil* and *Enōā*. The exaltation of *Abel* (*šab*), slain in his innocence, as *Hibil d'wā* seems to the present writer to be of later origin (cf. § 14). The Heb. narrative of the Fall, in which knowledge is described as a forbidden fruit, is one that the Gnostic author could not use at all, since he must have regarded it as directly in conflict with the view that the knowledge of good and evil, of truth and error, was revealed to the first man immediately after he had received a soul from the higher worlds, and that that revelation marked the founding of the true religion.

In connexion with the account of the origin of the worlds and the true religion, the Mandaean *Genesis* refers to the false religions. It states that all of them, as well as the peoples who profess

them, were called into existence by the planetary spirits, and that, in particular, Judaism was created by *Sāmēd* ('the sun'), 'whom all people call *Adōnai*.' The writer does not mention Christianity by name, but in the place of Mercury he inserts the *Mandāh* (*Mandā*), of whose followers he says that they 'all accuse one another of lying,' and of himself that he had distorted the teaching of the true religion. This reference to the mutually conflicting teachings of the Christian Church (R 120. 7 ff.) comes doubtless from the hand of the Mandaean redactor.

10. Possible traces of a Gnosis entirely independent of Christianity.—In the texts relating to the cosmogony (and theogony) there is nothing to remind us of Christianity except the fact that the rivers which contain the 'living' water are each called 'Jordan.' Among the Mandaeans the word *yordan* is used as an appellative; but, as it is not a native Mandaean formation, this usage is, no doubt, to be explained by the peculiar respect accorded to the chief river of Palestine by the Gnostics, whose writings had been appropriated or used by the Mandaeans. There are certain facts which lend support to the opinion that the high honour paid to the river Jordan is of an older standing than the gospel narrative of John the Baptist and Jesus (cf. *MS*, p. 16 f., note; Brandt, *Elchami*, p. 154); and upon this point depends the answer to the question whether the Mandaean documents show vestiges of a Gnosis that was not affected by Christianity, and was perhaps pre-Christian.

11. Jesus Christ as *Mandā d'hayyā*.—Tractates bearing unmistakable signs of dependence upon a tradition of gospel history, and emanating, at the same time, from the polytheistic school, are found in ix. and xi. R. These two tractates stand out from the rest of the *Gonad* in that they alone speak of the *Mandā d'hayyā* as having appeared 'in Jerusalem and Judah,' or in company with *Yōhannā* the Baptist at the Jordan, with a view to 'selecting' the believers in the true religion 'from amongst all peoples and families' (R 175. 10), while the proclamation of the true doctrine, which, according to the view otherwise universal among the Mandaeans, was revealed in the days of Adam, is in these tractates utterly ignored. The Mandaeans gave their sanction to the narratives without suspecting that they related to the Lord of Christian believers, and also without adjusting their own theological views to the contents. The appearance of the *Mandā d'hayyā* among the Jews, or among a human race long in existence, is never again mentioned—so far, at least, as the *Gonad* is concerned—by later Mandaean writers.

12. The monotheistic school, or doctrine, of the king of light.—With the polytheistic Gnostics described in the foregoing paragraphs Mandaean writers of, we would surmise, the 4th or 5th cent. A.D. conjoined a strictly monotheistic Gnosis, which, from its leading theme, we shall call the doctrine of the king of light. I. and xxv. R furnish a complete and almost unvarnished account of it.

'One is the lofty king of light in his kingdom'—lord of all heavenly beings, source of all good, creator of all forms, of infinite greatness and goodness, highly extolled by the 'kings' or 'angels' who stand before him and laud his praises. Of distinctively Mandaean character are the features noted in 2. 11 ('he sits in the lofty earth') and 6. 17 ('victims are not sacrificed before him'), and the description given in 9. 5: 'The Jordan of the worlds of light are white waters, full, whiter than milk, cool and desirable. . . . And the birds and kings who drink do not taste of death'; their garments and crowns are things of splendour and light. A complete contrast to all this is seen in the realm of darkness, with their black waters, and with a king who, like the Mandaean devil, has the head of a lion, the body of a serpent, and the wings of an eagle. . . . he is hideous and of terrible proportions. . . . from within the obstructions of his mouth, the smoke is burned up by his breath. . . . when he lifts his eyes the mountains tremble, the plains quake at the whisper of his lips. With all his domains he once projected an assault against the realm of light, but, coming to the border of his kingdom, he

¹ In the pronunciation of the word the Mandaeans may quite well have made the mistake of substituting *d* for *h*, just as they call *Yōhannā* instead of *Yōhannā*. On the initial *f* of *Mandāh*, *Mandā*, *Gonad*, *Enōā*, p. 7.

found no gate, no way, no means of ascending to the celestial heights. Then the lofty king of light entered the earthly world by proclaiming that 'All the projects of the Dayrê ('demon') come to naught, and his works have no continuance' (cf. *MS*, p. 481, *MS*, p. 221 f.).

According to the theology which finds expression here, the earth and the firmament, with all that they contain—stars, winds, fire, plants, animals, and human beings—were created by command of the king of light through the agency of an 'eldest' named Gabriel the Ambassador.

In the course of the mandate given to Gabriel the Mandaeans further have interpreted a passage referring to the subjugation of the world of darkness (R 12, 2-15), but nothing is said of this subjugation in the account of the actual creation. The creation of man is briefly recorded as follows (R 9): 'And the man Adam and his wife Hawwâ were fashioned, and the soul fell into the body.' Then (R 11-15) 'the two angels came, they made circumcision to Adam; they came and worshipped before him, and changed not his word. One was the evil one, by whom wickedness was turned, who departed from the word of his lord; and the lord favored him with a favor.'

13. The moral code.—With this theological exposition in i. R and also in the parallel ii. R is associated a code of practice, which seems to be of identical origin, and which, at all events, has been transmitted (R 12-26; cf. *MS*, pp. 24-43) as a record of the doctrine of the king of light. Here, e.g., we read:

'I say unto you, all who give heed to the name of God: in your standing and your sitting, in your going, coming, eating, drinking, resting, lying—in all your doings name and glorify the name of the lofty king of light.'

That the record in question is derived from a non-Mandaeans original appears from its use of the term *alldâ*, 'God,' and also from its repeated mention of 'the Sajan,' and of 'Sajana.' The laws relating to food are of special significance; they forbid the faithful to partake of the flesh of animals that have died otherwise than by slaughter, or to taste of blood, and of meats and drinks that have been prepared by heterodox hands. This portion of 'knowledge' (*mandâ*, R 12, 25), however, has likewise been moulded into conformity with the Mandaean faith, and distinctively Mandaean commandments have been inserted in it—those enjoining white clothing with girdle, immersion in a river, the Mandaean communion, the *masnêp* for the dead, and the washing of all foods, as well as those prohibiting lamentation for the dead and condemning fasting.

14. Judaeo-Christian Gnosis in the doctrine of the king of light.—The monotheistic concept of the king of light, as set forth, with marked Parsi colouring, in the *Gesâ*, must be originally Jewish or Judaeo-Christian. The present writer is of opinion that it reveals a Judaeo-Christian Gnosis. From what was said above (§ 10), the mention of the 'Jordans' of the world of light must not be regarded as decisive evidence; but in the moral code (R 26, 30, 48, 9) we find the injunction:

'Arm yourselves with the weapon that is not of iron; let your weapon be *Naqôrâ* (*naqôrâ*, variant *naqôrâ*) and the direct utterance of the place of light.'

In the *Gesâ* the terms *Naqôrâ* and *Mandâ* are used synonymously; according to the Mandaeans, both terms apply, or, at least, should properly apply, to themselves alone. We know, however, that down to the end of the 4th cent. the former designation was specially used of the Jews who believed in Jesus, and that it is applied in the *Qur'an* (ii. 69, 108, 107, 114, 129, 134, iii. 60, v. 17, 21, 56, 73, 85, ix. 30, xii. 17) to the Christians generally. The injunction just quoted permits us to hazard the conjecture that the doctrine of the king of light was the source from which the Mandaeans adopted the name *Naqôrâ*.

No other unmistakable features of a specifically Christian character occur in the tractates of the school under notice. In the final sections of its two most notable documents (i. and ii. R), 'the Messiah, the prophet of the Jews,' is actually described as a leader among the wicked spirits who

make the human race abandon the true religion. These sections, however, retain only the scantiest elements of the original doctrine of the king of light. Such residual elements might with most likelihood be found in the figure of Hibl d'wâ, who (like Mandâ d'hayyê in the polytheistic Gnosis) instructs the first man in all that is necessary for salvation, and 'Endâ d'wâ, who in the course of the world's history comes forth to rehearse that instruction (R 20; cf. *MS*, p. 48).

15. 'Endâ and the cloud; *Mandâ kndâ*.—The Mandaean 'Endâ (*sw*, *son*) rests upon an identification or fusion (dea, possibly, to the author of the Judaeo-Christian doctrine of the king of light) of the OT 'Endâh (Gen 22) with the Son of Man (*bar 'endâh*) of Dan 7. Abel, Seth, and Enoch—or, in their Mandaean form, Hibl, Btil, and 'Endâ, three *'dwrê*—are associated with Adam as messengers of the true religion and as his auxiliaries. 'Endâ, however, comes forth again, appearing in Jerusalem at the same time as 'lât-mâhâ (Jesus Messiah), who poses as a wonder-worker, and whom he unmask as a deceiver; he performs miracles of healing (perhaps on the basis of Mt 11), proclaims the true religion, enlists three hundred and sixty (or three hundred and sixty-five) 'disciples' to go forth from Jerusalem, and ascends to 'the Life,' by whom (his father (here *dag*)) he is charged to destroy the city, and does so in the form of a white eagle—corresponding to the white falcon in *Brhadâra*, xix. 23 (*SBH* v. [1890] 711; cf. *MS*, p. 185 f.). In all these acts 'Endâ has at his disposal a cloud, in which he dwells; and from its matter he fashions the body in which he appears upon the earth as a man. This cloud is in its origin doubtless the cloud of the gospel narratives (Mt 9, Mt 17, Ac 1), and this, again, probably has its source in the clouds of heaven which form the vehicle of the Son of Man in Daniel (7th); cf. 2 Es 13th, Mt 24th etc.). In the closing period of the *Gesâ* literature the Mandaeans began to depict the cloud of 'Endâ in conformity with the Parsi conception of the garden of Yima (see art. *BLST*, *ABODE OF THE (Pardal)*), and it then came to be conceived as a country floating above the earth—a realm called *mandâ kndâ* from the 'righteous translated ones' who inhabit it (R 220 f.); the name recalls the Jewish traditions about the righteous ones (Enoch, Elijah, Isaiab) who were translated to heaven (cf. *MS*, p. 77, note).

16. The Christian Redeemer in the *Gesâ*.—From all this we seem to be entitled to infer that the Mandaeans became acquainted, first of all, with the figure of Mandâ d'hayyê in the framework of a Gnosis working with polytheistic ideas, and appropriated it, and that they afterwards adopted the figure of 'Endâ from the Judaeo-Christian doctrine of the king of light, while, at a still later date, they met with the Messiah Jesus in writings of another origin. The tractates or books in which they found the name last mentioned were, as regards their contents, more closely related to the gospel narrative than were their other sources, and in them the Christian Saviour was intimately connected with the Holy Spirit. Hence, as the Mandaean scribes identified the Holy Spirit (*rdâ d'qudâ*) with the Râhâ whom they had long known as an evil being, the mother of 'Ūr, they could not but regard 'lât-mâhâ likewise as belonging to the group of evil spirits. In the later sections of the *Gesâ* tractates which profess to relate the religious history of man—in other tractates the Messiah does not appear at all—He is usually unnamed the 'liar' or 'impostor,' on the ground, of course, that He sought to usurp the rôle of Mandâ d'hayyê and 'Endâ. Where the writers of these sections still employ the scheme of the earlier system, they assert that He is the planet Mercury, and, similarly,

that Rāhā is Venus, and that Adnāi, the god of the Jews, is Šamēd, the sun (on the Mandman names of the planets of *MS*, p. 48). The observance of Sunday was not as yet a Mandman practice, though it later became obligatory (*R* 80, 18; cf. *MR*, p. 80, and below, § 32).

An account of the baptism of Jesus in the Jordan is given in the *Sufra d'Yahya*, which, however, narrates the incident in the following way: the Baptist is at first unwilling to perform the rite, and does so only after he has received from heaven (Abatār) the written mandate, 'Yahya, baptize the Son in the Jordan.'

17. The relation of the Mandman religion to Judaism.—Besides the OT characters already mentioned, several others are named in certain sections of the *Gomā*, but are of no importance in Mandman theology. Virtually all of them are enumerated below.

It is curious to note that in one passage (*L* 18 f.) the promise is made to Adam that, 'on the great Day of Resurrection' he and all his race will rise again and be transported to his own land, while in the same tractate, immediately before, the soul of Adam is said, quite in keeping with the Mandman view, to have ascended to the 'house of the Life.' The idea of a resurrection from the dead is altogether foreign to Mandman theology, so that the passage about the promise must have been carelessly transferred from a Jewish or Christian-Gnostic work. The Jewish materials in the *Gomā* were drawn, not directly from the OT, but from Aramaic sources, including some of a Gnostic character. The ark of Noah (*Nā*) ran ashore—as the Targums also tell—on the mountains of Qardō (Gordynea, i.e. Kurdistan); Abraham and Moses were prophets of Rāhā; King Solomon, like King Jamād in Iranian legend, held the demons in subjection until he ceased to give thanks to his Lord, and let himself be adored; the world-conflagration which had once annihilated the human race before the Deluge was kindled by 'the angel Daniel, to whom was given power over fire,' at the order of 'El-rabbā and Rāhā' (*MR*, pp. 120 f., 123).¹

The assumption that the Mandmans were originally a Jewish or Judaeo-Christian sect (Hilgenfeld, Wallhausen) seems to be at variance with the following facts. Their knowledge of the most eminent names associated with the teachings of Judaism was not obtained from oral tradition; on the contrary, they found the names in written documents—found them, moreover, as foreign words, for they read them incorrectly. Thus they render the name of Moses as Mōšā, Miriam as Miryā, Abraham as Abraham, Israhel as Urrīl, Jacob as Ya'qīl, Sabbath appears as Ša'īd, malakūt, 'angels,' as malak, 'kings,' and Benjamin actually as ben 'Amōn, 'the sons of Amin.' The inevitable inference is that the Mandmans had been throughout complete strangers to the religious tradition of Judaism. The same may be said of Jewish religious life. In the entire Mandman literature there is no evidence to show that the Mandmans ever observed the Sabbath, or practised circumcision, or turned towards Jerusalem in their prayers. Like the *Kesenes* (q.v.), they rejected animal sacrifices, and believed that the soul was liberated from the body at death; but marriage—in the form of monogamy, though with a succession of wives—and the procreation of children were enjoined upon them as a religious duty; they had nothing like the organized communal life characteristic of the *Kesenes*, while their views regarding the planets are quite inconsistent with such a practice as that of according

¹ The *Gomā* refers also to the Iron Mountain (*L* 17, 5 *pard d'pārd*), which, though not noticed in the OT, is mentioned in the Targum of Jonathan in connection with the fixing of the eastern frontier of Palestine in *Isa* 23-24 (also in Josephus, *BJ* iv. viii. 218-219, ed. Nöldeke).

an adoring salutation to the rising sun. A further point of importance is that in their prayers the Mandmans turned towards the north, where the exalted king of light sits upon the throne, while the common Jewish view (held also by Elkesai) is that the evil spirits and their chief Šammāl (from *šmal*, 'the left,' i.e. the northern one) have their abode in that very region of the heavens.

18. Conjectures regarding the origin of the Mandman religion.—The relation between the Mandman teachings and Manichaeism (q.v.) cannot be fully discussed here. The parallels have been collected by the present writer in *MS*, pp. 223-226 (cf. *Elkesai*, p. 142 f.), and to that list should be added the correspondences between a passage in the Manichaean narrative regarding the awaking of the first man to life (as quoted by Pognon, *Isac. mand.*, p. 120 f., from Theodore bar-Khōnī's *Book of Šāwōn*), and one in *L* 46 f. In the verifiable parallels the Mandman versions seem to be secondary, and we must infer that both sides are indebted to the same group of sources. A large proportion of the material common to both is explained by the mass of Parai ideas in the Judaeo-Christian groundwork of the doctrine of the king of light on the one hand, and in the theology of Mānī on the other. Doubtless, too, the Mandman redactors introduced into their tractates a number of fragments from Manichaean documents unknown to us (cf. *MR*, p. 198 f.). The religious teachings of the two faiths, however, were essentially distinct in character; the fundamental dualism of the Manichaean system—a doctrine that finds a soteriological design even in the creation of the world, and involves an ascetic mode of life—is far removed from the Mandman view. It may also be noted that, according to a passage in the *Kuṣṣā d'Fāwst* (ed. G. Flügel, Leipzig, 1871-72, p. 320, line 5), the father of Mānī, shortly before the latter's birth, joined the Mughtasila, a sect akin to the Mandmans; this point, however, need not be further discussed here (for fuller details cf. Brandt, *Elkesai*, p. 137).

On the other hand, we cannot place the slightest reliance upon bar-Khōnī's statement (in Pognon, pp. 154 f., 224-227) that the sect of the Mandmans was founded in the land of Mānān by a beggar named Ado, of Adiabene: 'Companions came to him, and there they played on cymbals, as beggars are accustomed to do.' Some of the names of Ado's relatives, as given in the context, are also borne by well-known figures in the Mandman religion, while most of the others would at least be quite suitable for such. Nöldeke is doubtless right in his conjecture that Ado is simply a corruption of Adam—*Qy* from *ŠQy*. Here, in fact, we recognize a blunder on the part of the historiologist, due to his habit of regarding alien religions as sects, and tracing each to a distinct founder.¹

The religious teaching of the Mandmans must, however, in the opinion of the present writer, be explained in other ways than those suggested by the theories discussed, and the view to which our critical examination of the *Gomā* leads us will be found to do justice to all the data, and has at the same time the merit of simplicity; moreover, it derives some degree of support from what can be ascertained regarding the age of the Mandman script.

19. Age of the Mandman script.—Comparing the Mandman written characters with the various alphabets collected by Julius Euting in his *Tafeln scriptura aramaica* (Strassburg, 1890; the work contains also the Pahlavi script), we find that, while they are somewhat like the characters employed in the Nabataean inscriptions of Sinai, dating from the 2nd-5th centuries A.D., they

¹ On bar-Khōnī's designation of the Mandmans as *Qesenes* see especially *PRP* 28, 107, 109 f.

approximate more closely to those found in the inscriptions of El-Hajr, written in the 1st cent. A.D. (in these comparisons we must, of course, disregard the hair-strokes due to the cursive mode of writing). In particular, the circle by which the Mandaeans represent *Ṣ* is closely matched by the corresponding characters in col. 53 of Euting's *Tobias*, and the *Ṣ* of an inscription at Beqra, dated 17 A.D., is similar in form to the Greek minuscule *σ*.¹ Thus, as the Mandaean written character dates from about the beginning of the Christian era, and as there is no ground for supposing that the Mandaeans had previously used a different alphabet, the rise of the Mandaean literature cannot well be dated earlier than the 1st cent. A.D.

20. *The baptistic nature-religion.*—The idea that the rivers descended from the celestial world by way of the mountains in the distant north and that their waters impart fresh energies to the pious who bathe in them—a naturalistic element of belief retained by the Mandaeans amid all the thoughts and fantasies subsequently acquired—was probably inherited from their ancestors. In explanation of that belief we would advance the conjecture that this Semitic people had not always lived among the lower courses of the river, but at an earlier period had dwelt in a locality much further north, and nearer the sources—in a district from which they could see, upon their northern horizon, huge mountains towering to the sky (cf. *MR*, pp. 69-72; *MS*, pp. 213-217). We sorely need to explain how these facts would provide a basis for the belief in question, and we can easily understand, too, how a people, if driven from their native region and compelled to endure a miserable existence in their new abode, should seek, in conformity with the practices of their ancestors, i.e. by means of immersions, constantly repeated, to absorb the virtues which the river brought from the higher world to the low-lying plains. We do not claim, of course, that this is more than a surmise, yet we would draw attention to the fact that there are linguistic phenomena which might be adduced in its support. Thus the Syriac idiom used in Kurdistan and on Lake Urmia is found to agree with the Mandaean dialect in the formation of the infinitive and in not a few features of the pronoun—a fact which Noldeke (p. xxvii) recognizes as 'of great importance.' If, however, we set the theory aside as over-hamorous, we must be content to suppose either that the very simple religious ceremony of ablution had prevailed from primitive times among the country people of Lower Babylonia or that by some means or another it had spread to that district from Syria (cf. Brandt, *Reichent*, pp. 151, 154).

21. *The adoption of Gnostic tractates.*—The Mandaeans, then—though not yet bearing that name—practising their religious ablutions, and sharing the general Semitic belief in demons, were living in Southern Babylonia at a time when the intermingling of religions had proceeded so far in the districts in which the Aramaic and Persian languages were spoken that it had at length evolved those creations of theological fantasy commonly called Gnostics, with which, however, we must here combine the Manichaeism teachings and, in great part, the substance of the Pahlavi books (*Bundahish*, etc.). The priests of this baptistic tribe were not, intellectually, sufficiently advanced to share in the reflective activity which strives to interpret the objects of faith and the influences of religion as cosmic entities and occurrences; nor

¹ Noldeke (*Hand. Orien.*, p. xxiv) notes that the Mandaean script bears a fairly close relation to the earliest form of Pahlavi, especially the so-called Chaldean-Pahlavi, but its conformity with the Nabataean inscriptions mentioned above seems to the present writer much more striking.

had they much appreciation for explanations of the world-process by pre-suppositions which purported to guarantee future salvation to all who acted in accordance with them, although this salvation itself and its mythological elements, the ideas of the gods and all their imaginative embroidery, were quite of a kind to make a powerful impression upon them. In reality it was into the hands of a class whose learning was confined to a little reading and writing that 'Gnostic' tractates fell, and these texts, written in a foreign language, and, therefore, to be read only with difficulty—documents coming from afar, dealing with things of a remote past, and unveiling the world of the gods—wrought upon them with the force of oracles, revelations from above, records of a superhuman wisdom. Accordingly, the priests adopted the tractates as their own, translating them, of course—at first orally, no doubt—into their own dialect. Conceivably, indeed, it was the desire of having these precious revelations in their own language that prompted them to draw up an alphabet of their own; and it is also possible that it was the translators themselves, and not their descendants in a later generation, who came to believe that the documents were from the first meant for them and their people, that the contents had been revealed to their forefathers, and that the 'Mandayê' addressed therein were none other than these ancestors and themselves.

22. *The rise of Mandaean theology.*—It seems beyond question that the earlier generations of Mandaeans who had a knowledge of writing (covering, we should estimate, a period of at least two hundred years) treated all the texts in their possession—as far as the contents comported in some measure with their own religious sentiment—as records of revealed wisdom; in their backward intellectual condition, moreover, they could not fail to be impressed with matter so unfamiliar. In the work of translation, however, as well as later in transcribing and renewing dilapidated texts, they themselves learned the art of literary composition. Thus, if they found that these strange documents made no mention of, e.g., 'the Jordan,' the bath of immersion, or anything else that they could have wished to discover in them, they added what was required, while fragments of defective MSS they either inserted into others or put into such order as they could devise. From translation they advanced to redaction, and from redaction to independent composition. Such, then, was the genesis of the Mandaean literature; it consists essentially of borrowed matter. The circumstance that very diverse cycles of conception had a place in this material stimulated the Mandaean scholars to attempt the task of combining one with another, and of mediating between the different views. This, again, explains the development of the Mandaean theology, and it also accounts for the confusion that prevails in it.

The Mandaeans never had an orthodox system of theology. Their authors basied themselves with the motley materials that had accumulated in their minds only with a view to reproducing the narrative of the creation of the world and of the human race in a fresh and improved form; and the one central thought that guides all their efforts is the necessity of explaining the harsh lot of the devout Mandaean in his earthly circumstances, and of giving him the strongest possible assurance that his soul will return again to the bright and joyful realm which is its true home.

23. *The religious beliefs of the Mandaean writers.*—Amid all the conceptions and the varied views with which the Mandaean writers became familiar, and notwithstanding all the reverent interest with which they received the new materials, they never

surrendered the traditional religious practice of their people, although their ideas of the benefits to be derived from the bath of immersion underwent a process of refinement in conformity with the development of their theology.

From the heterogeneous Gnostic trains of thought by which these theologians were influenced there arose, in course of time, a distinctively Mandaean religious belief, which can be traced without difficulty in most sections of the *Gnostic writings*. The main features of that belief are as follows. Far above, beyond the heaven of the planets, there is a world full of light and splendour, where dwell the Life (as the supreme deity) and other divine beings, or where, according to another phase of doctrine, the 'exalted king of light' surrounded by hosts of angels, sits enthroned. From that realm the soul of man derives its origin—the soul of Adam and the souls of his descendants in the Mandaean community. Far beneath, again, is the world of darkness with its black waters. Part of it has been 'thickened,' brought into a solid state; this is the earth inhabited by mankind. The earth has now the black water upon the south; upon the north it stretches over lofty mountains to the world of light; from that world the rivers descend by way of the mountains; and thus the Mandaeans, by bathing in the 'living' water of the rivers, maintain their connexion with the higher realm. The souls of the devout dwell upon this earth as in a foreign land. Here, meanwhile, evil spirits reign, akin to the powers of darkness now immersed—the deities of other peoples and other creeds—and it is they and their creatures or servants who make life a torment for the Mandaeans. Hence the believer waits with earnest longing for his salvation, i.e. his deliverance from this earthly existence.¹ At the hour of death a divine being descends from the world of light, and, as the 'liberator,' takes the soul from the body, and bears it upwards through the celestial spheres to the world of light and of the Great Life.

24. The Mandaean typology.—The soul of the Mandaean, until the hour of its deliverance, is sustained by the symbolism of the ritual elaborated by the priests. Confessors of the true faith are plants of the world of light or of Mandā d'hayyē (R 80 f., 230, 15 f., etc.), and they are summoned to their most important religious duty in the words *Par-dm gardas* (R 17, 20), 'Make the rivers sprout' or 'blossom' (MR, p. 20 f.; MS, p. 183, note). What is implied here is that the water streams from the world of eternal life and infuses life into those who bathe in it, so that they may be said to spring from the river like plants. They were also required, however, to mark their brow with the living water, and likewise drink of it (the draught is called 'gushing'), partake of a loaf (the loaf is termed *gāšā*, 'opening,' 'unlocking'), etc.; and those who take part in these ceremonies have a share in the benign fountains of the better world—in the great baptism in the heavenly Jordan, in the gushing of radiance, in that treasure of the Light which is to be opened. The liturgical recitations (*d-rāš*) were meant to represent the beams (*d-rāš*) of splendour which would flow from the house of the Life to meet the soul as it sped upwards from the earth (MS, p. 48), etc. The ultimate ground of trust, however, was always the ceremony of immersion; thus in R 12, 12 we read:

'Your token is the token of the living water, by which you stand to the place of the Light.'

At the ceremony of immersion—originally this itself was the sign—it was the practice, as early as the period of the *Gnostic*, to utter names, viz. those of the Great First Life (R 100, 8; or of the

¹ The Christian belief in a redemption from original evil, from the dominion of Satan and the power of sin, is quite foreign to Mandaean thought.

king of light, R 17 f.) and Mandā d'hayyē (MR, p. 104 f.).

To their own rite of immersion, whether performed, as was usually the case, by the individual himself, or, as on feast-days, with the co-operation of a priest, or administered to children, the Mandaeans applied the term *maḡdā* (ܡܓܕܐ, presumably for *maḡdā*; the odd pronunciation given by Sioaff, *maḡdā* (French), could be approximately correct only for the plural form of the noun), a word which certainly comes from the Sem. verb *ḡz* (the sound of *y* is lost in Mand.), which the Mandaeans use exclusively in connexion with the religious practice in question (cf. § 36). For Christian baptism, on the other hand, the writers of the *Gnostic* persistently employ the term used in the Syrian Church, *maḡdā* (ܡܓܕܐ) and the Aḡal forms of *ܡܓܕܐ*. They condemn and vilify the Christian ceremony because it is performed not in 'living,' but in (or with) 'out-off' water.

25. *Kuṭā*.—In the ethical and religious sections of the Mandaean literature much is said about *kuṭā*, 'straightness,' 'rectitude,' 'veracity.' In the ritual the ceremony of immersion included a gesture called 'putting forth *kuṭā*,' this being identical with what is described in several texts as a stretching out of the hand 'from the bath of immersion, or (after the performance of some other religious duty) 'before Mandā d'hayyē'. The gesture was made with the right hand, and it corresponds to the clasp of hands with which the soul would be welcomed by the Life and other great celestial beings when it reached the world of light. It was an outward manifestation of the upright mind and of loyal devotion. Further particulars regarding the religious ceremonies, which were constantly being increased and rendered more complex by the priests, will be found in § 33 below, and more fully in MR, pp. 96-120, 221-224.

26. Ceremonial purity.—In this period the idea of purity was recognized in the sense of a relation to the world of light so intimate that it carried with it exclusion from every object and condition antipathetic to it ('Hibi *stā*, pure Mānā'; L 116, 17, 'the Jordan of the Life, from which I have taken purity'). The laws already mentioned regarding food came to the Mandaeans through the medium of the ethical code in the doctrine of the king of light, as did also the injunction that husbands and wives should 'wash themselves with water' after cohabitation, and women after menstruation. It was only later that the commandment of ablation was extended to many other occasions of life (Sioaff, cited in MR, p. 96 f.).

27. Prayers.—Among the Mandaean prayer was known as 'compassion,' or 'petition and praise.' According to the ethical code just mentioned, believers must rise to pray thrice in the day-time, and twice during the night, but in other texts, apparently of Judeo-Christian origin, the only prayers enjoined are one in the morning, one at the seventh hour of the day, and one before sunset, while in one passage (R 200) prayer in the night-time is actually forbidden. We read also of a 'man' who (like the archangel Michael among the Jews) receives the prayers, and stores or preserves them in the treasure-house of the Life (R 221 f., 200). In the later redaction of a regulation in the ethical code the believer is commanded to ask a blessing upon flesh-food before eating (R 68; cf. MR, p. 94). The priests drew up short forms of prayer for these ordinances; but for protection against distress and danger they regarded prayer in the proper sense as less effective than a long series of recitations from the ancient books.

28. The *maḡdā*.—The ceremony termed *maḡdā*

mayd, 'mounting up,' 'ascent,' consists exclusively of such recitations, and is designed to help the souls of the departed if in their journey or flight to the better world they should be stopped by evil-disposed spirits or because of their own sins. The imagination of the Mandaeans gave itself with zest to descriptions of this ascension and of the stations through which the soul must pass. Each station is pictured as a place where the adherents of a false religion, or various classes of sinful men, are kept in ward and punished, the term applied to such a place being *mayrd*, or *mayrtd*, i.e. 'ward,' 'place of custody,' 'prison.' Some of the descriptions contain features taken from Paræ-Gnostic sources, as, e.g., the 'gates' of the planets situated one above the other (mentioned as Mithras in Origen, c. *Col.* vi. 23; cf. *MS.* p. xii), or the guardian spirits who come to meet the soul, and—in the latest *Genes* texts—the tree of life, the balance in which the soul is weighed, the judge of the dead, etc. (*MR.* p. 196 f.; so, in the *Vatikan Dēda*, boasts of prey lie in wait for the soul). The souls of the devout pass all the wards without molestation, because, according to the tractates of the *Genes* which describe the ascension (x. R and iv. L), they give the 'name and sign' that they have 'taken from the waves of the water,' i.e. because they profess the Mandaean faith and thus show that they belong to the world of light. In place of this name and sign, however, the hymns of the *Genes* (about 130 pieces), all of which find their themes in the destiny of the soul, its imprisonment in the body, its release, and its journey home to the world of light, insist rather upon the necessity of good works; with these was probably associated a devout spirit (cf., e.g., L 101. 3: 'I loved the Life, and Mandā d'hayyē dwelt in my heart'). It is but seldom, however, that we find in these hymns even a few words referring to the religious practice of the Mandaeans or to the 'Jordan.' The explanation of this curious fact we take to be as follows. The *mayrtd* for the dead is in reality a Mandaean imitation of a corresponding ceremony in the Paræ religion. According to Paræ doctrine, the soul, after leaving the body, is received by its own good thoughts, words, and works—which assume the form of a beautiful maiden—and by them is led across the narrow Chinwat bridge, or guarded against other objects of fear. Now the hymns in the *Genes* are simply *mayrtd* hymns, i.e., they were composed for use in the Mandaean ceremony. They are the work of Mandaean writers, as cannot be doubted in view of the matter incorporated in them, but in composing them the writers must have let their thoughts be guided by the example of the Paræ ceremony and the Paræ texts.

30. Mandaean poetry.—Although the majority of the Mandaean hymns can lay little claim to real poetic merit, they show at least that the Mandaeans did not deal with their religious knowledge on purely intellectual lines, but found in it a source of true emotion, and the spirit that inspires them seems to be one of sincere and genuine emotion. As a specimen of the *mayrtd* hymns we give here one of the most pleasing (L 86 f.); it should be premised that the use of the expression 'my conflict' rests upon the idea that the soul is entangled in the body and in its earthly conditions generally—an entanglement that is dissolved at death.

1. 'How I rejoice! How my heart doth rejoice! How I rejoice on the day when my conflict is dissolved, and I go to the place of the Life.

I fly and I go. At the word of Šmūd ('the sun') I arrived. I utter a call: "Who taketh me past the word of Šmūd?"

"Thy merit and thy works and thine alms and thy well-doing take thee past the word of Šmūd."

Strophes 2, 3, 4, and 5 are all more repetitions of the first, except that for Šmūd they substitute respectively the moon, the seven, and Rābā. The hymn then proceeds:

6. 'How I rejoice! How my heart doth rejoice! How I

rejoice on the day when my conflict is dissolved, and I go to the place of the Life.

I fly and I go. I arrived at the water-bricks. As I arrived at the water-bricks, the radiant beam (Šmūd) came forth to meet me. He took me by my right hand and led me through the water-bricks. They (the celestial beings appointed for the purpose) brought splendour and clothed me with it; they brought their light and wrapped me round with it. Life resulted upon life, and I found its own life; its own life it found.

Here follow a few sentences composed of ancient formulae; their construction and, in part, their sense are difficult to make out.

30. The Mandaeans under Sasanian rule.—The Mandaeans never played a part in the field of politics. As long as they were allowed to go about their daily tasks without interference, their frame of mind was one of entire content. They were in no sense a warlike people, and their whole history, as well as their literature, shows that they were able to offer only a weak resistance to persecution and attacks upon their religion.

Babylonia, in the period preceding its conquest by the Arabs, belonged to the empire of the Sasanians. We cannot say whether the Mandaean hatred of the Jews was kindled by documents embodying an anti-Jewish Gnosis; it may perhaps date from the first half-century of our era, when a number of rapacious Jewish satraps, as related by Josephus (*Ant.* XVIII. ix. 1 ff. [§ 310 ff., ed. Niese]), provoked the whole population to an outbreak against themselves and their compatriots.

The Sasanians persecuted the Manichaeans and the Christians who adhered to Rome, but they spared the Nestorian Church, which was subject to the State, and the peaceable Mandaeans. The latter, however, were sometimes ill-treated by Christian monks who went to them as missionaries. In the *Genes* (xvi. R) we find an account of the Roman Catholic clergy and worship, and (L and ii. R) we are told that the attempts to convert the Mandaeans were not always carried out 'with sweetness'—with discourse and promises—but were also supported by force. In that satrapy, doubtless, the Nestorian Church had at one time sufficient influence to have the soldiery employed on its behalf; and, accordingly, we read (R 21. 6):

'When he (the 'Saviour Jesus') caught you, say, "We are slaves," but in your hearts acknowledge him not, and deny not the word of your lord, the exalted King of light; for hidden things are not manifest to the lying Sasanians.'

31. In the period of the Arabian invasion; migration.—Then (c. A.D. 660) came the incursion of the Muslim Arabs, and the collapse of the Sasanian empire. Certain late portions of the *Genes* make reference to the gates and the demons of the planet Mars, 'Nirig [Nargal] who is called the Arab 'Abdāl.'

'The whole earth is made subject to his throne'; to his followers all things fall a prey; 'day after day they make war and shed blood, and are ever an oppression to the wife of the soul, and to the great family of the Life. . . and there are also many souls of the great family of the Life who go over to them, and deny the name of the Life. . . In their distress the devout Mandaeans comforted themselves with the thought that the wicked 'Abdāl had fallen into one of the infernal prisons, where his followers take him to task, asking why they ever suffer torment in the realm of darkness while the servants of the alim (i.e. Mandā d'hayyē), against whom we draw the sword, mount up to the world of light (*MR.* p. 101 f.).

It must have been about this period, in the 7th or 8th cent. A.D., that most of the Mandaeans, having reached the limits of endurance, gave way before the Muslim Arabs, and migrated from Babylonia to the adjacent districts of Persia. It is possible that the minority, as found later on the Euphrates and the Tigris, had for a time ostensibly adopted Islām, or that they concealed themselves among the adjoining marabans.

32. Restoration of the cultus.—Tractate xxvii. R may be interpreted as a summons to a meeting of the Mandaean communities either on the banks of the rivers of Khuzistān or (after peace had been restored) in their old home; it is a manifesto in which 'we, the Tarmīdā,' turn with prayer and

adjuration to the Mandaeans of both sexes to urge them to fulfil their religious duties. The people are to come on Sundays to the temple (lit. 'dwelling'; down to modern times it was nothing more than a small house with gabled roof), where, in becoming order, they are to stand praying behind the Tarmida, to take part in the communion, etc. This tractate is unmistakably one of the very latest compositions in the *Gesâ*, and is a documentary witness to the rise of an ecclesiastical organization among the Mandaeans. In earlier texts the term *tarmid* (for *trm*), like the corresponding word *parvay* in the NT, means simply 'believer'; but by this time it was the name which the priests applied to themselves. The institution of Sunday, as is shown by its designation as *ahmâdâ* (ܐܚܡܕܐ; cf.

Penkhta of Mt 20¹), was adopted by the Mandaeans from Syro-Christian usage, though, of course, through the medium of documents of whose origin they were ignorant. The manifesto urges the due observance of the day (*MR*, pp. 38, 80). The religious ceremonies enjoined are those of old: immersion, performed by the individual himself or applied by parents to children, the stretching forth of the right hand, and the partaking of communion-bread. Everything is as yet quite primitive, in harmony with the fact that the *tarmid*, 'priests,' are still hardly distinguishable from the *maifand*, 'teachers,' reverence for whom had been enjoined in the moral code (cf. § 13).

33. Introduction of new ceremonies by the priests.—In the period that immediately followed the priests formed themselves into an organized body and gradually amplified the religious ceremonial with rites requiring the co-operation of an official celebrant, or, at least, elaborated such rites from the traditional usages, and conjoined them with the simple ceremonies of earlier times. Even towards the close of the period of the *Gesâ* as attested in the latest sections of that work (cf. *MR*, p. 104), we find, besides the rite of marking the forehead with water from the river, a sign made with oil; a certain mixture was prescribed, and was to be prepared and applied by the priests. The draught of 'living' water was duplicated, being taken once from the individual's own hand and once from the priest's bowl (*qandâ*). The priesthood ventured even to institute, in addition to the ordinary communion-bread, a host of higher order, the 'superior *qandâ*,' which was reserved for themselves and the *Salmânâ* (see below). They also instituted a sacrament for the dying (cf. *MR*, p. 82), and, in addition to the *moqaddâ* of the dead, one for the living. The latter was an eight days' ceremony, and conferred upon the parson concerned the title of *ahmâdâ* (*dâd*, 'blessed perfect one,' as well as priestly rank; he was thenceforward regarded as dead to the world, and had to abstain from sexual intercourse. The ordinary immersions performed by the individual Mandaean as time and opportunity permitted—every day, morning and evening (*Le-Goua, Voyage et observations*, p. 301), or only on Sundays and feast days, and the days preceding them (*Siouffi, La Religion des Sabéens*, p. 23)—could still be regularly performed without priestly assistance. About this time, however, an annual festival was introduced at which all the members of a community assembled upon the bank of a river. This celebration, conducted by a priest, included, in its first part, all the ceremonies requiring to be performed in the river and with river water; but here the priest, using his right hand, submerged the layman three times; thrice, too, he made the sign upon the recipient's forehead, and thrice, with his own hand, gave him water to drink (*Qolastâ*, fol. 9. 22 R.). Further, the first immersion of children now assumed the form of a

baptism administered by a priest with one or two assistants (for texts and references bearing upon these baptisms cf. *MR*, pp. 221-224).

34. Ceremonies wrongly interpreted by Europeans.—The assertion that the Mandaeans worship the cross rests upon references in the *Narratio* of Ignatius a Jesu (p. 38), and is due to misapprehension. What actually takes place is that at great festivals a priest of higher rank sticks a few cane rods into the ground close together and cross-wise, and that he renders homage to this symbol. The structure is termed 'beams of splendour,' and may thus be regarded as symbolizing the world of light.

Reports dating from the 17th cent. agree in stating that it was the practice of the Mandaeans in Bagra to sacrifice a fowl once a year, and Jean Thévenot writes that he himself had witnessed 'la sacrifice de la poule' on the 2nd of November 1685. Since, however, the Mandaean religion does not permit animal sacrifices, such statements refer in all likelihood to the fowl whose blood was used in preparing the special host mentioned above. According to Siouffi, the 'superior *qandâ*' was made but once a year, and was in the form of baked wheaten cakes, each of which was sprinkled on both sides with four drops of sesame oil and four drops of the blood of a newly-killed pigeon. The dead bird was afterwards buried in the temple, presumably with a view to ratifying its slaughter as a sacred act. The act was thus in no sense a sacrifice, and it is so little in keeping with the fabric of the Mandaean cult that its institution can be characterized only as a gross blunder on the part of the priests.

35. The priestly hierarchy; an order of confession in the Persian settlement.—The priestly system included the following grades: pupils, who were in training from their fifth or seventh year; assistants employed in the sacred ceremonies; priests, who had to pass an examination and be ordained; and high priests, chosen by the ordinary priests from their own number. The name applied to an assistant (and perhaps also to a pupil) was *qandâ* or *shandâ* (cf. *MS*, p. 100), and to a priest, *tarmid*, while a high priest bore the Persian title of *qandâ*, 'treasurer.' Each priest had his own dishes and table, and partook of food and drink apart from the others; but his wife, by a special consecration, might sit with him at meals. There are numerous data which seem to indicate that the clericalizing of the Mandaean cult was carried furthest in the Persian settlement. Besides the title of the high priest, the names of several articles of priestly attire (*ruqdâ*) are Persian words—*âgâ*, *hamsâdâ*, *qandâmdâ*. The priest's seal ring (*Siouffi, 'le chaumiavar'*) bears the device, 'Name of Yâvar sîwâ'; had the inscription originated in Babylonia, it would have been 'Name of Mandâ d'hayyâ.' Again, while the *Narratio* of Ignatius (p. 23) shows distinctly that the Mandaeans of Bagra knew nothing of the practice of confessing to a priest, Siouffi's informant, who appears to have studied in Persia, tells of a form of confession according to which the sinner, upon making a penitent acknowledgment of his sins, three times receives absolution for the same sin, i.e., he is assured of the remission of future penalty; but after the third time further transgression can be expiated only by certain good works. The passage of the *Gesâ* to which appeal is made in support of this ordinance simply enjoins that the devout shall thrice 're-erect,' apostatize or transgress before casting them out of the community.

36. Final redaction of the *Gesâ* writings.—Persian loan-words are found even in the oldest Mandaean texts, but names like Yâvar ('friend,' 'helper'), Sâm, and Bahrâm (Verethraghna) could

hardly have come into vogue among the Mandaeans except on Persian soil. When, accordingly, in many tractates we find these names taking the place of the undoubtedly more ancient *Manda d'hayyā*, and when we observe that in others, in passages where the bearer of that epithet is mentioned, it is added that he is also called *Sām*, *Yāsar*, etc., it seems highly probable that most of the tractates in the *Gonad* underwent their final redaction, i.e. attained their present form, in the Persian provinces.

37. Religious decadence; obscurance of the language.—By the time when the 'Abbasid khalifs had established peace and order throughout their domains, the Mandaean religion had passed its zenith. The desire for knowledge and the spirit of enthusiasm were quenched; the theological activities that had been earnestly directed towards a solution of life's enigmas had spent themselves, and had given place—as in the writers of the *Draḡ d'mallā* and the *Sifr d'Yaldā*—to placid dialectics and fable-making. The soul which knew that it had come forth from a better world and would again behold its primal abode was no longer a well-spring of sacred lyric; the Mandaean had, in fact, become familiarized with his faith, and was now anxious simply to bring his store of ancient hymns into order, to keep it intact, and to use it properly. It was in this period that the Mandaeans gathered their writings into collections, and composed the liturgical directions or regulations comprised in the *Qolastā*, the *Marriage Formulary*, and the *Paris Dīdā*. Moreover, living, as they now did, in isolated groups among peoples of other faiths, they gradually lost the use of their ancestral dialect, and Arabic, which had made its way into these districts, became their vernacular, though Mandaean still maintained its place in religious worship. In the process of organizing the ritual every ceremony came to be introduced and concluded with recitations from the sacred books; in the *massefā*, indeed, the recitations constituted the main element, and, according to Sionce, this ceremonial, designed to succour the departed, lasted for seven days. Since, however, the teachings of the *Gonad* required all believers to engage in such recitations, the priests endeavoured, by instructing the young, to confer upon the laity the ability to read and, as far as possible, to understand the texts, although their own learning was doubtless almost wholly confined to a knowledge of the liturgy and a traditional understanding of their own language.

38. The Sabians of the Qur'an; Mughtasla and Mandaeans.—In the Qur'an we find three passages (ii. 80, v. 73; cf. xxii. 17) in which the Jews, the Nazarenes (Christians), and the Sabians are assured of religious toleration. The famous Muslim scholar al-Mas'ūdi, writing in the 10th cent., speaks of Chaldean or Babylonian Sabians 'whose remnants live to-day in villages among the swamps between Wasit and Bagra,' states that in their prayers they turn to the pole-star and Capricorn, and describes them as 'those who wear girdles' (B. de Sacy, *Notices of astrants*, viii. 1 [1810] 122 ff.). The Mandaean turned towards the north, and wore the girdle. Moreover, the *Kutāb al-Fīrist* (p. 240, l. 20) states that the Sabians of the marshes are the Mughtasla, a word meaning 'those who wash themselves,' and it also declares that they wash all their food—a practice which, so far at least as flesh-food is concerned, is also enjoined in the *Gonad*. To these Mughtasla, however, the same writer ascribes a doctrine of dualism—a thing quite unknown in the Mandaean documents; and he also states that many of them still worship the stars, while, on the other hand, the guarantee of toleration in the Qur'an assumes that

the Sabians believe in One God (and in the Last Judgment). To account for these references to the Mughtasla there seem to be two alternative hypotheses at our disposal: we may suppose either that the Sabians of the marshes were descendants of that group of originally heathen baptists of Babylonia which did not share the religious development of the Mandaeans, or that some of the Mandaeans had taken refuge from the Arabs in the swamps (ii. 31), and there, while adhering to their custom of bathing and washing, had adopted new and alien doctrines. For further particulars regarding the Mughtasla cf. art. *ELKHAISTAN*, vol. v. p. 202.

The passages in the Qur'an and the name 'Sabians' would apply most approximately to the Mandaeans. The Mandaeans, in speaking of their practice of immersion, always employ forms of the verbal root *ṣāḡ*, as, e.g., in R 266. 1: *ṣāḡ rāḡ ṣāḡ*, 'who immerse their sons and their daughters'; by their Arab neighbours they were termed *Ṣubā* down even to recent times, and in European accounts dating from the 17th cent. they were called 'Sabbī', 'Sabbel', 'Sabb', 'Sabbel'—the termination being that of the Ital. or Lat. plural. The name may formerly have covered the Mughtasla as well, and the latter possibly also came under the references of the Qur'an. As regards the Mandaeans, we have already seen that, as an outcome of the doctrine of the king of light, they had become monotheists, and that they believed in a future retribution.

39. Ostensible Christianity of the Mandaeans.—The toleration extended to the Sabians by no means secured for the Mandaeans a condition of life satisfactory in every respect. In course of time—perhaps more than once—circumstances arose in which they thought it better to be regarded as Christians. As, however, besides the name of 'Mandāyā', they had also adopted that by which the Christians were known, viz. 'Nasōrāyā'—in the *Gonad* the latter is actually used more frequently than the former—it would demand no great effort on their part to say that they were Christians. If, e.g., they no longer wished to be regarded as akin to the Sabians dwelling in the marshes, or if they hoped to evade a tax imposed specifically on the Sabians, they would probably assume the Christian name without misgiving. According to Ignatius a Jesu (*Narratio*, i., a chapter written by himself), the Mandaeans of Bagra believed that Mahammed had granted them a document guaranteeing their safety, but that his successors had not respected it. Ignatius also states that the Mandaeans were formerly united with the Chaldean Christians, but that, about one hundred and seventy years before his time, they had renounced the authority of the Babylonian patriarch and abandoned the name of 'Christians.' If we qualify this statement by saying that the Mandaean communities had at one time joined hands with the Church—though only for a while—it will be quite correct.

The Arabic writer, Haman Ishāqī (Nabung, like the two Arabian writers already cited, in the 10th cent.), affirms that the true Sabians, i.e. those whom the Qur'an has in view, were heretical Christians. 'Living between the desert and the swamps.' This opinion may have arisen from a fusion of vague reports about the Mandaeans and the Mughtasla, and it might possibly be taken as indirect evidence that as early as the 10th cent. the Mandaeans desired to be regarded as Christians. On the other hand, a Muslim might quite well think of all the Sabians, by reason of their baptismal practices, as belonging to the Christian body.

40. The Mandaeans as 'Christians of St. John.'—The Portuguese monks through whose reports the existence of the Mandaeans was first made known in Europe asserted that they were descended from the disciples of John the Baptist (cf. a letter from Pietro della Valle, dated June 1622), and

from that time, in treatises and text-books of Church History, they have been referred to and regarded (on the ground of Ao 18th 10th) as Christian S. Ioanna, 'Christians of St. John.' It was not without some support from their own side that this designation gained currency. A number of Mandaeans who had transferred their allegiance to the Roman Catholic Church visited Rome in the period between 1662 and 1680, and Abraham Eckellensis, who cultivated a most friendly intercourse with them in order to gain the fullest possible information regarding their characteristics and doctrine, was told by them that their people called themselves 'Nasaraana of Yahya'—though in Arabic only, the qualifying phrase perhaps meaning that they did not call themselves so in their own religious language, or among themselves, but that they adopted the name only in their intercourse with people of a different faith; at all events the phrase implies that they did not speak of themselves as *Christians* (R 55. 14, 202. 12).

John the Baptist is mentioned in a single tractate only (cf. § 11), which long lay almost unnoticed by the Mandaeans, but at length, when the final additions and a number of titles to the writings of the *Gonad* came to be formulated (R 57. 23, 108. 22, 213. 10, 212. 23), a period opened in which the Mandaeans turned to the figure of the Baptist with intense interest, and it is worthy of note that his old name Yohanna (which they pronounce Yihana) was now expanded to Yahya-Yohanna, or was sometimes simply superseded by Yahya. Yahya is the Arabic form of the name—the form by which the Baptist is mentioned and highly extolled in the *Qur'an* (Sū. 24, vi. 86, xix. 15-16). May we not, therefore, venture to suppose that the reason why the writers of this period bring John into such prominence and make him a hero of their people was that they had already begun to refer to him, in the presence of the Muslim authorities, as the prophet of their religion? Henceforth they could claim, whenever and wherever they thought fit, to rank as 'Nasaraana d'Yahya'—a name which, to all except themselves, could mean nothing else than 'Christians of John.'

Finally, they are said actually to have introduced the name of Yahya-Yohanna into their baptismal formula, and to have done so, in fact, by speaking of the rite itself as having been instituted by God, by Mandā d'hayyā, and by John (cf. *M.R.*, p. 238, on Sionni's authority). This innovation would seem to be best explained as a result of the lesson constantly impressed upon the Mandaeans by Roman Catholic missionaries during the 17th cent., viz. that their baptism was only the baptism of John mentioned in Ao 18th 10th, and as a counter-stroke to the attempts to bring them within the Roman Catholic fold.

41. In the period of the Portuguese ascendancy in the Persian Gulf.—In the 16th cent. the Portuguese dominated the Indian Ocean, establishing themselves securely at Goa on the Indian and at Muscat on the Arabian coast, and in the harbours of Ceylon. They forced their way into the Persian Gulf, and on the coast of Persia made the island of Hormuz the base of their military forces; and with the pasha of the district of Bagra they reached an agreement by which, in return for annual gifts, he permitted them to have a trading-station in Bagra, and promised to protect it. The Portuguese soldiers and traders were everywhere followed by the Jesuits, who founded missions, and secured the government of such settlements as 'Christian territories' according to the regulations of the Inquisition. Thus Portuguese monks came to Bagra, where they obtained a house and made one of its rooms into a church, their hope being to win

for the Roman faith more particularly the schismatic (Nestorian and Armenian) Christians living in the district. Their attention, however, would soon be attracted by the Mandaeans, for the number of the latter in Bagra and its neighbourhood in the 17th cent. was still estimated at 14,000-15,000, while in the city itself they are said to have formed the majority of the population (Le-Gouz). Decades may have elapsed, however, before the monks learned that the 'Babbi' held John the Baptist in honour and baptized their children, and so came to believe that this baptistic people were already semi-Christians, and needed only a little instruction in order to become good Catholics. The *Decursus* which Ignatius issued as a supplement to the *Narratio* provides the arguments to be employed in persuading the Mandaean priests; but the latter were not to be won over by such simple means. Thereupon the missionaries, bent upon gaining their end, induced the pasha to order the Babbi, under threat of fines or bodily penalties, to attend the Roman Catholic place of worship and observe Sunday according to the Christian practice of resting from servile work on that day. In this way the work of conversion was set on foot, supported, however, by doses of food and clothing to the children of the poorer Mandaeans.

About this time the Mandaean communities suffered a considerable loss from another cause. In the early years of the 17th cent. the Portuguese found that their commercial monopoly on the Persian coast was challenged, and by way of strengthening their powers of defence they resorted to the employment of mercenaries. To the Portuguese commentators the Mandaeans are said to have flocked in vast numbers from Bagra, and, no doubt, from Persia also—people who, of course, had there barely managed to live. In their new capacity they were instructed in the Christian faith and received Christian baptism (Le-Gouz, *della Valle*).

The fortified island of Hormuz, which commanded the entrance to the Persian Gulf, was invested by British merchantmen and the military forces of the 'Duke' of Shiraz in 1622, and surrendered on the 1st of May of that year. The prestige of the Portuguese was at an end; their missionaries withdrew from Bagra, and the Mandaeans once more enjoyed freedom in their religious services. Of the Christian converts some embraced Islam, while the rest reverted to their ancestral faith—'et ne s'on conserva pas quatre Chrétiens' (Le-Gouz).

42. In Bagra in the time of Ignatius a Jesu.—The place of the Portuguese Jesuits was taken by an Italian mission of Discalced Carmelites under the leadership of Ignatius a Jesu. Within a few years Ignatius came to realize that great or lasting results would never be secured among the Mandaeans while they lived in Persia, and he devised the plan of persuading them to emigrate to Christian territories. From the Portuguese viceroy in the Indian Ocean he obtained a guarantee that Mandaeans who so desired would receive grants of land in the colonies under the viceregal authority, on condition that they would give their allegiance to the Roman Catholic Church. The offer of settlements in Ceylon was accepted by many who were eventually rejected because they insisted upon being allowed to take their priests with them and to remain loyal to their faith; but, notwithstanding this, a number of Mandaeans were sent forth, such migrations having taken place, as has been ascertained by Assemani from documents of the *Congregatio de propaganda fide*, in the years 1622, 1623, 1646, and 1660. The whole affair, however, came to very little, and all that Ignatius himself says of it is that he had once sent to the

viceroy of Goa a number of men who were to act as the spokesmen of their people, and also to look for suitable residences in Ceylon, and that at length other fifty Mandaëans, some of them with their wives and children, had set out for Muscat. It may be remarked that between 1638 and 1656 the Portuguese were gradually expelled from Ceylon by the Dutch.

43. Numerical strength of the Mandaean communities in the 17th century.—Information regarding the numerical strength of the Mandaëans and their diffusion in the contiguous provinces of Turkey and Persia—as found, probably, in the first half of the 17th cent.—is provided by a map published in Paris by Melchisedech Thévenot in 1663. This map, which, unfortunately, bears no date, embraces the area throughout which the Mandaean communities were scattered, and gives on its lower margin a list of the townships in which they were located and the number of families in each community. We find an aggregate of 3279 families living in 31 settlements. By far the largest figure, exactly 2000, is conjoined with Huwaim, in Persia; next comes Tina with 600 families and Baḡra with 400, then one place with 50, two with 30, and others with numbers ranging from 2 to 20, while to four place-names a dotted line is attached, and to several others only a stroke. We shall thus hardly err in assuming a total of some 3400 families.

44. Reports of European travellers since 1690.—Ignatius a Jesu left Baḡra in 1650 or 1651, and the Christians no longer endeavoured to win the Mandaëans for the Church. It is true that the mission-house was not abandoned, and that the banner of the Cross continued to wave from its roof, while the pasha still received his annual gift; but, when Jean Thévenot lodged there in 1665, he found that it was tenanted only by a single Italian monk, and that the church stood open for prayer not only to Europeans, but to Nestorian and Armenian Christians. Shortly afterwards, when the station had once more been brought into working order, its director, the Carmelite Archangelus a S. Theresia, was obliged to expend a considerable sum of money to procure Mandaean MSS for Robert Huntington, who lived in Aleppo from 1671 to 1681. The vendors were a couple of Mandaëans, one of whom had to be assured upon oath that his co-religionists should never bear of the transaction, while the other had become a convert to Islam.

A long period then elapsed during which little or no information regarding the Mandaëans reached Europe. Paragraphs devoted to them (and often referred to in encyclopaedias) in J. Chardin, *Voyages*, etc. (Paris, 1686 ff.), and E. Kaempfer, *Amur-tatum*, etc., fasc. v. (Lemgo, 1712), simply repeat accounts previously published. In 1763 Carsten Niebohr visited Baḡra and found that only a few 'Sabians' lived there; he had their alphabet transcribed for him by a smith. Naval Lieutenant Ormsby, the friend of J. R. Wellesley, stayed at Hit for five days in 1833, and ascertained that the Mandaëans had a community with a priest in that city, though neither there nor elsewhere could he learn anything about them but the most meagre details.

The first European to gain really fresh information regarding the Mandaëans was the German Orientalist H. Petermann, who, in the spring of 1854, spent three months in Saḡ al-Siyakh on the Euphrates, learned the Mandaean language from the local high priest Yahya (Bilad), and in the latter's company was permitted to be present at a

number of ceremonies, including the five days' baptismal festival. At length, however, a much greater addition to our knowledge was contributed by the information with which a grandson of this Yahya gratified the curiosity of N. Siouffi, French vice-consul at Baghdad, in 1876. The fullness and accuracy of the communications are explained by the fact that the informant, before embracing Christianity when about twenty-five, had received an education qualifying him to become a Mandaean priest, but it is necessary to state that his account of the Mandaean doctrines and legends was wholly dependent upon a late version, from which every difficulty had been expunged (cf. *MR*, pp. 17-19), and that he could describe the methods and customs of his people only in their most recent phases of development.

45. The Mandaëans in the 19th century.—The books of Petermann and Siouffi contain observations from which we may learn how the Mandaëans had fared in the long interval from the 17th cent., and it would seem that in this period, too, the vicissitudes of their ordinary life were due to suffering and want. About the year 1800 30 families in Shushtar alone are said to have seceded to Islam, and 'many Mandaëans' are reported to have done so about 1825. The great pestilences which ravaged Persia and Mesopotamia in 1831 carried off the entire priesthood with the exception of two *špandās*, and at some unspecified date the Mandaëans forsook Baḡra owing to its deadly climate. In the vicinity of Huwaim only 25 families remained, all the rest having removed because the river (Kercha) had almost completely dried up. Saḡ al-Siyakh (which does not appear in the list subjoined to Thévenot's map), or rather the village of Šubbe on the other side of the river, had become one of the main domiciles of the Mandaëans (the 'Šubbe'), and was named after them. The district, however, was ruled by a Bedawin *Amīr*, who so afflicted the village with chicanery and extortion that about 200 of the 280 families composing the local Mandaean community abandoned it in 1853 and removed to Ammāra on the Tigris, where the second largest community (about 100 families) had enjoyed a more favourable lot under Turkish rule. Petermann also mentions Qurna, at the confluence of the Euphrates and the Tigris, with 40 families, and Muhammara, on the Shaḡ al-'Arab below Baḡra, with 4, as well as the Persian towns of Dizful with 80, and Shushtar with 24. He makes an aggregate of about 500 families, with 10 priests. Siouffi mentions other 11 settlements, 6 in Turkish and 5 in Persian territory, and his estimate of the total number of Mandaëans is 4000, of whom 1600 were males. These two enumerations bring us to the years 1854 and 1876 respectively. Whether any Mandaean communities still exist the present writer is not in a position to say.

1. On the Mandaëans, Houghton, and Mandaëans: D. Chyvolzohn, *Die Sabäer und der Sabäismus*, Petrograd, 1886; G. Prigut, *Neue sabbäische Lehre und ihre Schriften*, Leipzig, 1888, p. 128 ff.; W. Brandt, *Die Sabäer*, do. 1912, pp. 124-131 (gives information regarding the Arabic data, with translations, and discusses the question as to the origin of the Sab. practice of baptism).

2. On the Mandaëans in the 16th and 17th centuries: *Viaggi di Pietro della Valle in Persia, Le Persie, Roma, 1682*, pp. 412-414; P. F. Ignatius a Jesu and others, *Narratio Originis, Rituum, et Errorum Christianorum Sanaei Joannae. Cum adiutorio Discipulorum per medium Dialogi in quo confutator XXXIII Errorum christianorum Nationis, Roma, 1682* (the bulk of the text consists of an earlier account which, with the *Discours*, had probably been written during the time of the Portuguese mission, and afterwards amended and supplemented here and there by the Italian monks, to this Ignatius himself prefixed a new 'first chapter' in which he states his view of the Mandaëans—a view differing from that given in the original first chapter, now the second—and he also inserted his notes regarding the *Diada*); P. de la Beaulaye

¹ According to a statement of Pietro della Valle, dating from 1682, the Mandaëans in Persia lived principally in the district of Kamskawa, not far from Huwaim.

MANETHO.—This historian of Egypt was born at Sebennytos, the *Theb-Natopolis* of the hieroglyphic inscriptions, and lived during the reigns of Ptolemy Lagi and Ptolemy Philadelphus. His name is probably the Gr. form of *Ma-on-Tahuti*, 'Gift of Thoth'—equivalent to the Gr. *Epistaphos*. The following works have been attributed to him, some of them on doubtful authority: (1) *Aphrodisias*, (2) *Biblos Zetras*, (3) *Ieph Biblos*, (4) *Storiae Persarum*, (5) *Epist. Aegyptiae*, (6) *Epist. Aegyptiaca et obsequia*, (7) *Epist. Aegyptiaca regum*. His reputation rests upon the *Aphrodisias*, a history of Egypt which he compiled at the request of Ptolemy Philadelphus. The first part of his work dealt with the mythological era in the history of Egypt, and the first eleven of the thirty historical dynasties; the second began with the XIIth dynasty, and ended with the XIXth; the third comprised dynasties XX-XXX. The work was written in Greek, and has, unfortunately, perished, with the exception of the list of kings, which has been preserved in corrupt and incomplete forms by Julius Africanus, Eusebius, and George the Synkellos.

An examination of these king lists shows that in many particulars Julius Africanus and Eusebius do not agree in their rendering—a.s. in arrangement of the dynasties, in the lengths of the reigns, and in the total number of kings assigned to the various dynasties. According to Africanus, 861 kings reigned in about 5634 years, while, according to Eusebius, only about 361 kings reigned in 4480 or 4780 years. The version of Africanus is clearly the more accurate of the two, agreeing best with the monuments. It seems fairly certain that Africanus had access to the actual work of Manetho. The version of Eusebius was based on that of Africanus, and shows carelessness in the copying of both names and figures. It will thus be seen that the work of Manetho must be received with some caution, for his king lists have become very corrupt; and it is probable that the Christian writers who transmitted his system, being anxious to reconcile it with the accepted Biblical chronology, have curtailed his lists to some extent. Nevertheless Manetho's work remains the standard authority on Egyptian chronology, and upon it all attempts to restore that chronology must be based.

The chief original authorities with which his work may be compared are: (1) the Turin Royal Papyrus—lamentably mutilated, and badly restored; (2) the Tablet of Abydos, containing a list of 78 kings, dynasties I-XIX; (3) the Tablet of Saqqarah—67 royal names in practically the same order as (2); and (4) the Tablet of Karnak, containing a list of 61 kings—the cartouches are not

arranged chronologically. The lists of Manetho are much more complete than any of these, and it is to him that we owe the accepted distribution into dynasties.

Opinions differ widely as to the value of his historical work. A period in which he was regarded as a mere fabricator was succeeded by one in which his authority was considered practically unimpeachable. Thus Lanormant says:

'He is now the first of all authorities for the reconstruction of the ancient history of Egypt' (*Ann. Hist. of the East*, I, 301).

More modern authorities are sharply divided. Adverse opinion may be represented by Breasted's sweeping dictum:

'A late, careless and unworthy compilation, which can be proven wrong from the contemporary monuments in the vast majority of cases where such monuments have survived. Its dynastic totals are so absurdly high throughout that they are not worthy of a moment's credence, being often nearly or quite double the maximum drawn from contemporary monuments, and they will not stand the slightest criticism. Their accuracy is now maintained only by a small and constantly decreasing number of modern scholars' (*Hist. of Egypt*, p. 38).

This is so sweeping as to suggest bias at once; and, when it is remembered that an exactly opposite judgment is pronounced by authorities of such standing as Maspero and Flinders Petrie, its oracular tone becomes merely ridiculous. Maspero's verdict is as follows:

'The system of Manetho, in the state in which it has been handed down to us by epitomizers, has rendered, and continues to render, service to science. If it is not the actual history of Egypt, it is a sufficiently faithful substitute to warrant our not neglecting it when we wish to understand and reconstruct the sequence of events. His dynasties furnish the necessary framework for most of the events and revolutions, of which the monuments have preserved us a record' (*Deuxième de l'Égypte*, p. 308).

Still more emphatically favourable is Petrie's judgment:

'An authority of the highest order. . . The internal evidence is also strong for the care given to his work and its precision. . . Manetho has been often accused of double reckoning, by stating two contemporary dynasties or kings separately. Every instance in which this has been supposed has broken down when examined in detail. Not a single case of overlapping periods can be proved against him. On the contrary, there are two excellent proofs of his care to avoid such errors' (*Researches in Sinai*, p. 171).

Possibly the truth may lie somewhere between the two extreme opinions, and Manetho may be neither so careless as Breasted alleges nor so immaculate as Petrie affirms. In any case, even his detractors cannot afford to do without him; for every reconstruction of the history of Egypt is based, and will continue to be based, on the dynastic framework which he has provided.

What system of dating we are to derive from his dynastic scheme and other sources is another question. Here also there is fundamental disagreement. As far back as 1580 B.C. there is practically no difference between the various schemes of dating, and Egyptian chronology may be looked upon as settled with only a few years' margin of error up to that point. Beyond that lies chaos. The Berlin school, represented by Meyer and Breasted, dates the beginning of the 1st dyn. at 3400 B.C., and that of the XIIth, fixed by astronomical data, at 2000 B.C. Wallis Budge, still clinging to Brugsch's system, gives 4400 B.C. for the 1st dyn. and 2400 B.C. for the XIIth. Petrie gives 3510 B.C. for the 1st dyn., and, using the same astronomical data as the Berlin school, 3450 B.C. for the XIIth. Here it is most unlikely that the truth lies between the two extremes, and Brugsch's *vis media* seems to lead nowhere. The gigantic gap between Petrie's dates and those of Berlin is due to the fact that Petrie holds that the advocates of the shorter system have dropped a whole Sothis period of 1460 years out of their reckoning. If the astronomical foundation be sound, the truth must lie either with the shortest or with the longest system, and only further

promising hostility, which was adopted by the great majority of Christian theologians, naturally proved even less favourable to accurate comprehension.

The foreign origin of Manichæism is duly emphasised by Eusebius in the brief notice which he devotes to this 'Jewish heresy.' Alexander of Lycopolis, the author of a short treat against Manichæism,¹ was probably a contemporary of Eusebius. He deserves notice as being the only Western writer who treats the subject from a purely philosophical point of view; though he speaks of Christianity with a certain respect, it is doubtful whether he ever became a Christian. Of more importance is the testimony of a somewhat later controvertialist, Titus, bishop of Bostra in Syria, who died about A.D. 370. In a geographical sense, Titus must be reckoned among Oriental Christians, but his *Treatise against the Manichæans*² proves him to have been thoroughly Western in his education and habits of thought, deeply imbued with Greek philosophy, in particular with *Stoicism*, and full of contempt for 'barbarians.' He distinctly states that he derived his information from a Manichæan book,³ but he tells us nothing definite as to its authorship. His words, however, seem to imply that the book was not composed by the founder of Manichæism himself, for in quoting it he says, 'as is stated by the author who wrote down the doctrines of that maniac';⁴ and, again, 'these are the very words used by him or else by one of his followers.'⁵ He afterwards mentions a Manichæan work entitled *The Treasure*,⁶ but whether this is identical with the book cited previously cannot be determined. In any case it is interesting to observe that, according to Titus, the Manichæans made every effort to conceal from outsiders the writings of their founder, apparently in obedience to his express orders.⁷ Another fact, no less significant, is that Titus professes to have softened down the expressions which he found in his source; 'these are not the words used by him, but this is what he meant to say, translated into more decent language.'⁸ In estimating the evidence supplied by Titus this tendency must be constantly borne in mind.

A more popular but a much less respectable authority is the *Acta Archelai*, a work which professes to record a disputation between Manes and Archelaus, bishop of Carhar²⁰ in Mesopotamia.

9 Of the two, the one into which this work divided, only the first part, the beginning of the third book, has been printed in the original Gr. but all four are extant in a Syr. v. which must have been made very early, as it is contained in a Brit. Mus. MS written in A.D. 1171. The Gr. text was first published by J. Pagnini in 1795, the best edition is that of P. A. de Lagarde (Berlin, 1884), who also edited the Syr. version. It is to be noted that the Gr. text has a long insertion (printed as an Appendix by Lagarde, pp. 12-135) which is absent in the Syriac. In 1884 (vol. p. 478) August Bruckmann has endeavoured to prove that this piece is a fragment of a book against the Manichaeans by Serapion of Thmuis, a friend of Athanasius.

*advē hīfē dōrē & wāp advēs sīlētē (Oik. I § 27), dōt rē gīt vđ yāwep dē' vđ vđ wāp vđ pādōvō vāpōnōvō (Oik. I § 28). The punning use of words, parts, etc., in allusion to the same names, is extremely common.

* Sept 21 reply Adm's office letter to Dept's re the 2nd letters (th. 11. 44). Plaintiff states that the course used by them was the work of a certain Adm. He gave me a Maryland paper, dated 21 million word on Adm's correspondence (Pg 111 188).

7. *Ḥayy al-mawtā* (A. S. 9). This is probably the work called *Ḥayy al-mawtā* by Epiphanius, and *Ḥayy al-mawtā* in the Great Pseudo-Book of Elisha. Both al-Ḥayy and al-Mawtā mean to Mead a book known as *Ḥayy al-mawtā*, 'Discourse of Life-giving'. But it is to be noted that the list of Mead's writings in the *Ḥayy al-mawtā* (A. S. 9) does not include this title, although it mentions a *Ḥayy al-mawtā*, 'Book of Life-giving'.

ðhmanay, ðhmanay vutñvutñvutñvutñ vutñ ya vutñ ðhmanay (vutñ ðhmanay)

¹⁰ The name is doubtful. Possibly the author, or a later editor, may have confused the two places *Martha* and *Mathias*; the latter form agrees with that given by Eusebius in his version of the story.

Here for the first time we meet with the remarkable theory that Manichæism originated, not with its reputed founder, but with a certain Brythianus, from whom the system was passed on to Maes. These *Acts* are extant in a Latin translation, made from a Greek text of which we possess some long fragments.¹ According to Jerome,² the book was originally composed by Ardehlans himself in Syriac ('Byre armonen') and afterwards translated into Greek. But it has been clearly proved that Ardehlans is not the author, and that the narrative is to a large extent, if not entirely, fictitious. Nevertheless, some modern writers have endeavoured to show that, though Jerome was mistaken in ascribing the *Acts* to Ardehlans, he was right at least in believing them to have been composed in Syriac. The arguments which Kessler has advanced in support of this theory have been shown by T. Nöldeke to be worthless.³ The author of the *Acts*, whoever he was, evidently possessed no accurate information about the country in which he placed the scene of his story. For example, he represents the river Strangas as the Western boundary of the Persian Empire—a notion which is derived from the Greek *Βασίλειος of Alexander the Great* (pseudo-Callisthenes), as Nöldeke points out. A writer who was capable of falling into such mistakes can scarcely be supposed to have had any definite knowledge as to the early history of Manichæism. Nevertheless, it is not surprising that his statements were readily believed by Western Christians. With some variations, the story contained in the *Acts Ardehlani* reappears in Ephraïmus,⁴ Severian, Theodoret, and several later writers.

By far the most celebrated of the Western authorities on Manichæism is *Augustine*. At first sight it might seem that his testimony ought to outweigh all others that have been mentioned, for during nine years (from A. D. 373 to 383) he was a professed Manichæan. Among the works that he composed on the subject, after his conversion to Catholic Christianity, are the following: *Contra Epistolam Manichæi quam vocant Fundamenti*, *Contra Praxeam*, *Contra Fortunianum*, *Contra Adimantum*, *Contra Secundinum*, *De Actis cum Felice Manichæo*, *De Genesi contra Manichæos*, *De Natura Boni*, *De Duobus Annis*, *De Utilitate Credendi*, *De Moribus Romanorum Orthodoxorum et de Moribus Manichæorum*. Many passages relating to Manichæism are to be found in his other writings, particularly in the *Confessions*. But, on the whole, the amount of positive knowledge which can be gathered from Augustine is much less than might have been expected. In the great majority of cases he confines himself to vague generalities, and, when he descends to particulars, his statements seem mostly to rest on hearsay. It may be doubted whether even his Manichæan informants were at all accurately acquainted with the history and writings of their founder, Faustus, whom Augustine represents as one of the ablest and most influential among the Manichæans, was a native of N. Africa, and it is therefore unlikely that he could read the sacred books of his religion in the original Aramaic. Nor have we any reason to believe that the other Manichæans with whom Augustine came in contact were better instructed

One of the latest, but not the least important, of the Western sources is the Greek *Formula of Abjuration*,² which repentant heretics were required to pronounce before being admitted into the com-

munion of the Byzantine Church. In its present shape this document cannot be older than the 8th century. It consists of a series of anathemas, directed partly against doctrines and partly against persons, put together without any definite plan. Some of the doctrines are undoubtedly Manichæan, but some emanate from other sects, and some appear to be gross misrepresentations. Yet, in spite of the uncritical manner in which it is compiled, the *Formula of Abjuración* contains a certain number of interesting facts.

(4) *Muhammadian*.—Evidence from Muhammadan literature does not begin before the 9th cent. of our era. Nevertheless, the Muhammadan accounts are on the whole the most instructive of all, much fuller than those by Oriental Christians and less misleading than those by Western writers. For this several causes may be assigned. In the first place, the Muhammadan scholars to whom we owe these descriptions wrote from a historical rather than from a controversial point of view. Moreover, some of them at least had access to very ancient and trustworthy sources of information; for Babylon, the political centre of the Muhammadan Empire, was also the ecclesiastical centre of the Manichæan community, and, accordingly, in that country the text and the traditional interpretation of the Manichæan Scriptures were most likely to survive. It is true that after the Muhammadan conquest the Aramaic language gradually ceased to be spoken, but the knowledge of it never wholly died out, as we see in the case of the Christians and the Mandæans, who have retained their sacred books, in their respective Aramaic dialects, down to the present day.

Almost all Muhammadan historians who treat of pre-Muhammadan or early Muhammadan times take some notice of Manichæism, but the authors from whom we learn most on this subject are the following: (a) Ibn Wadīh, also called al-Ya'qūbī, who in A.D. 981 composed a *History of the World*; (b) Muhammad ibn Ishāq, who probably lived about the end of the 10th cent. of our era, and is known as the author of the *Fihrist*, i.e. a 'Catalogue,' a great storehouse of information respecting literary works of various kinds; (c) al-Bīrūnī, who died A.D. 1048, one of the most learned men that the East ever produced, the author of a book on *Chronology* and other important treatises; (d) al-Shahrastānī, who died A.D. 1153, the author of a work on religious and philosophical sects. All these authors wrote in Arabic, although the last two were of Persian nationality.

The story of Māni in the *Sāh-nām* of Ferdowsī, the well-known Persian epic poet, is almost entirely legendary, and the same may be said of nearly all the popular Muhammadan accounts, whether written in Persian or in Arabic.

3. The founder of Manichæism.—With regard to the history of the founder we are mainly dependent on Muhammadan writers, for the Western authorities either tell us nothing definite or else repeat, more or less faithfully, the legend contained in the *Acta Archædia*. The story there related is briefly as follows:

In the time of the Apostles there lived a man named Sathana, who is described as coming 'from Syria,' and also as being 'a Syrian by race' ('ex genere Syriacorum').

¹ ed. H. T. Montague, London, 1883.
² ed. G. Pögel, and published after his death by J. Bidinger and A. Müller, Leipzig, 1871-73. The section relating to Manichæism was published separately by Pögel, with a German text and copious notes, under the title *Mani, seine Lehre und seine Schriften*, Leipzig, 1892. The author of the *Fihrist* is sometimes called al-Nadīm, but it is doubtful whether this name, or rather nickname, belonged to him or to one of his ancestors.
³ ed. E. Sachau, Leipzig, 1879, and by him into Eng. *The Chronology of Ancient Nations*, London, 1870. Al-Bīrūnī in the Arab. form of the Pers. Bīrūnī.
⁴ ed. W. Cureton, London, 1846, and in Eng. form by E. Reischgüter, Halle, 1860-61.

He settled in Syria, where he became acquainted with 'the wisdom of the Syrians,' and invented the religious system which was afterwards known as Manichæism. Finally he emigrated to Persia, and, when he died, his writings passed into the hands of his disciples, a certain Terebinthus. The latter, being himself in Babylon, assumed the name of Buddha, and endeavored to promulgate his master's teaching. But he, like Sathana, gained only one disciple, who was an old woman. After a while he died, in consequence of a fall from the roof of a house, and the books which he had inherited from Sathana became the property of the old woman, who, on her death, bequeathed them to a young man named Corbān, who had been her slave. Corbān, afterwards, changed his name to Māni, studied the writings of Sathana, and began to teach the doctrine which they contained, with many additions of his own. He gained three disciples, named Thomas, Addas, and Korman. About this time the son of the Persian king Artaban, and Māni, undertook to cure him, the prince, however, died, whereupon Māni was thrown into prison. He succeeded in escaping, but eventually fell into the hands of the king, who ordered his execution, and his corpse was buried under a tree.

It is needless to say that this narrative, as it stands, has no claim to be considered historical. Some details, in particular the account of the execution of Māni, are confirmed by more trustworthy authorities, but as to the main point—the existence of Sathana and Terebinthus—no such confirmation is forthcoming. The assertion that Terebinthus took the name of Buddha seems to be a confused reminiscence of the fact that Māni represented the Indian Buddha as one of a series of prophets who had preceded him. But this, so far from tending to support the story as a whole, is rather an argument against it.

The accounts of the principal Muhammadan authorities may be briefly summarized thus:

Māni, the son of F-q, was born in Babylon about A.D. 216. His father was originally a heathen, and frequented a 'temple' at or near Ctesiphon, the Persian capital, as other people were wont to do. But shortly before the birth of Māni he abandoned his former religion, and joined the sect of the Magi, i.e. those who practice asceticism. Māni, as an ascetic, became acquainted with the sacred books of the Magi, and that he was chosen to preach a new faith.

¹ As to this name the authorities vary.

² This name also is uncertain.

³ So the name is written in Arab., and the syll. derived from it is usually without (formed according to the ordinary rule in Arab.), but sometimes without, manded, or mād. In Syr. the name Māni seems to have been pronounced as in Arab., although the Syr. spelling does not enable us to decide positively whether the first vowel was long or short. In the case of rare proper names the vowel-points added by later Syriac scribes have, of course, no authority. In Zoroastrian writings the name appears with a final syllable, *Mānā* (nd) *mānā*, and this syllable accounts for the form *Mānā* in the *Manichaean*, which Gr. and Lat. writers often use, not only as an etym., but also as the equivalent of *Mānā*, *Mānā*. The origin and meaning of the name Māni are unknown. But this very fact would seem that it is a real name, not an honorific title like Christ or Buddha.

⁴ This is the form given in the *Fihrist*. The vowels are uncertain, but the consonants agree with those of *Sathana*, who is expressly mentioned as the father of Māni in the Gr. *Formula of Abjuración*. It is well known that the Arabs have no sign for P, and use F or B instead. According to the *Fihrist*, F-q also has the name of *Mānā* (=Fev. *Fāpāh*), while al-Ya'qūbī calls him *Manādā*. The last name, which is purely Arabic, must be due to some mistake.

⁵ According to al-Bīrūnī, the birth place of Māni was a village called Mardān, on the upper part of the Euphrates, i.e. a little to the south of Baghdad.

⁶ The statement of al-Bīrūnī that Māni was born in the year 217 of the era of Alexander (i.e. the Seleucid era) agrees very nearly with what we are told in the *Fihrist* as to the age of Māni when he came forward as a public teacher.

⁷ G. T. Steiner, in *DCR*, A.D. 1880, states that Māni's father 'founded' this sect—an assertion for which there is no authority.

⁸ These details are given in the *Fihrist*, evidently from a Manichaean source. What was the precise form of Manichæism which Māni's father originally professed is not clear. The terms used in the *Fihrist* point to some local cult rather than to Zoroastrianism. The religion of the Magi seems to have been a kind of Jewish Christianity mingled with heathen elements. It was not identical with that of the Mandæans in later times, though the two sects had much in common.

⁹ The narrative in the *Fihrist* clearly implies that Māni did not derive his system from any human teacher. On the other hand, al-Bīrūnī describes Māni as a 'disciple of Pīthānā,' and a similar statement appears in the well-known historical work of al-Mas'ūdī, who lived about a century before al-Bīrūnī, except that the name is there written somewhat differently (see Mas'ūdī, *Les Princes d'or*, ed. G. Barbier de Meynard and Pavet

Before he was twenty-five years old he had privately gained a low reputation, but he began his public propaganda on the day when *Shang-ho* (= *Shang-ti*) the son of *Arctimane* was crowned king, C. March 30, A.D. 366.¹ He succeeded in securing the patronage of the king's brother *Pi-sha*, and through him obtained access to the king himself.² In the course of his journey he is said to have visited Central Asia, India, and China, but it does not appear that he ever penetrated into the Roman Empire. He composed numerous books and epistles to *Arctimane*, and at least one book to *Parman*, probably the work known as the *Shang-shan*, which, according to *Li-shih-tai*, was written by king *Shang-ho*.³ We learn from *Siphuram* *Byron* that *Shih* illustrated his writings with colored pictures,⁴ his fame as a painter arrived by many centuries in the East. He is also said to have invented the peculiar alphabet with which the *Manichæans* afterwards employed, it was a modification of the *Byzantine* character, as the recently discovered fragments prove. *Shih* was said to death by king *Shang-ho* (or, according to the other tradition, *Ward-shih*),⁵ who reigned from about A.D. 376 to 377.⁶ Whether he was buried alive, as at *Yen-chih* and some other authorities state, is doubtful. His corpse, or, according to others, his skin stuffed with straw, was hung up, by order of the king, at the gate of *Conist-Shang*, an important city which lay a little to the east of the ancient *Sun*. In after times that gate was always known as 'the *Manichæan*.' The tradition of *Shih* was evidently one so much to the surprise of the Chinese as to the results of the *Liberation* of *Shih*.⁷ At the same time the Chinese government *did not* allow *Manichæism*, but only freedom, attempts to undermine the adherents of the new religion.

3. The Manichaean system. — Manichæism, like other forms of gnosticism, professes to be at the same time a religion and a philosophy, inasmuch as it not only sets up an ideal of beliefs, but also undertakes to explain the constitution of the world. It is not, however, to be regarded as a philosophy in the ordinary European sense of the word. It attempts to arrive at philosophical truth by means of a method which, to us, appears wholly asphilosophical. Though the Manichæans confidently appealed to human reason and were always ready to defend their conclusions by argument, they did not pretend that those conclusions had been reached by abstract logic or by any kind of scientific induction; on the contrary, they claimed, no less than the primitive Christians, to be in possession of a direct revelation from God. Thus Mani himself says, in a passage which al-Bīrūnī quotes from the *Sābirasāda* (see above):

"Wonders and deeds" have always from time to time been brought to mankind by the messengers of God. He is one who they have been brought by the messenger called Ibrahim to India, by another by Zarathushtra, Zoroaster to Persia, by another by Jesus to the West. Therefore this revelation has come down, this prophecy in this last age, through me, **Mahdi**, the messenger of the God of truth to Babelonia.

Such was the claim put forward by Manti. We have now to consider the substance of his teaching.

The Manchukuo system is based upon the idea of the eternal and eternal contrast between good and evil, between light and darkness. But it is not enough to say, as Western writers have fre-

de Chateaufort, Paris, 1881-82, II, 107; also *Figuet, Saint*, p. 1413. Who Pöschgen was we are not told, it is therefore vain to inquire whether he really existed, and, if so, whether there had any connection with him. The assertion of Bartholomae that Mani was at one time a Christian, and even 'a presbyter,' rests upon no evidence whatever.

¹ See T. Nöldeke, *Geschichte der Perser und Araber zur Zeit der Sanniden*, Leyden, 1879, p. 422.

³ That King Dajin was ever converted to Christianity, as al-Ya'qubi states, is very improbable.

¹ The fullest list of Mañé's writings is to be found in the *Filices* (p. 106 ff.). Unfortunately many of the titles are doubtful, and even those which are certain addum give us any clue as to the nature of the contents.

 (U. S. Census). Here under Reuben is meant.

quently done, that Māni identified good with spirit, and evil with matter (20). Whether he ever attained to the conception of matter may be doubted;¹ as all events, it is clear that he represented evil, or darkness, as something capable of thought and volition;² in other words, his dualism was of the imaginative, or poetical, not of the philosophical kind. The following is an abstract of the account given in the *Yabrust*.

Originally the light and the darkness bordered on one another, but were unmingled, the light being truth above and the darkness truth below. The light is identical with God, who is called the King of the Paradise of Light. The result of light intruding into an atmosphere and on earth which are co-eternal with the darkness. However, these are various other beings called gods, who are subordinate to the King of the Paradise of Light. Out of the darkness came Satan, the Principal Man, who did not want to be created, but with the elements of which he is composed. At first he sought to lead the two worlds and then avoided the kingdom of light. When he saw the domain of light, he conceived a hatred for them, murdered, and rejoined his native elements. He made a second attack, and the King of the Paradise of Light, in order to repel him, produced a being called the Principal Man, who went forth armed with a sword, namely the cross, the wind, the light, the water and the fire. Satan, on the other hand, arrayed himself in the smoke, the consuming flame, the darkness, the scorching heat, and the storm. After a long battle Satan prevailed over the Principal Man. The heavenly Father, the Father of the Prince, then created the Principal Man, the one who is called the Son of God, to be mingled with the elements of darkness. Out of this came man from the heavenly powers inhabited the entire world which we inhabit. Not only all animals and vegetable organisms, but even objects which we regard as wholly inanimate, such as stones, contain portions of divine light. Hence the distinction which we are accustomed to make between natural and spiritual phenomena does not exist in Christianity, since it represents all the processes of nature as part of a spiritual content. The visible universe is, in fact, a vast and complicated machinery of spiritual forces. When the spiritual forces are removed, the entire world is left dark, as it is made in the form of a pure mind. The spiritual forces flow to the moon, to the sun, and thence to the higher regions. This process continues until at length the final separation is brought about by a conflagration, which will last 100 years. Thereafter the light will be secured for ever against the assaults of the darkness.

The most angular part of the Manichaean system is that which relates to the origins and history of mankind. Unfortunately, the statements of the scriptures on this subject are fragmentary and full of obscurities, which the other sources do not enable us to explain in an altogether satisfactory manner. But it is clear at least that the first human beings, whom Mani called Adam and Eve, were represented as the offspring of devils, the object of the devils in producing them being to imprison and so to keep in their own possession a portion of the elements of light. The heavenly power, in order to frustrate the purpose of the devils, sent Jesus (who is here regarded as a celestial being) to instruct Adam on the subject of 'the Paradise and the gods, Hell and the devils, the earth and the Heaven, the sun and the moon,' and in particular to warn him against sensuality. As to the history of Adam and Eve many details are given, some of which have been borrowed from the OT, some perhaps from sources unknown to us, while some appear to be wholly fantastic.

¹ Alexander of Lycopolis (cf. Rethmann, p. 8) observes that in the Manichaean system the term *dag* is not used in the Platonic or the Aristotelian sense, accordingly Alexander deems the Manichaean *dag* as "motion without order" (cf. *Deusweg*, *cit.*).

² According to al-Shahrastānī, some Manichaeans held that the mingling of the darkness with the light had taken place 'blindly and by accident, not as a result of willing. But this is obviously a later philosophical speculation.

² The nature of these gods is not clearly defined; they are regarded as the offspring of the Supreme God.

It is instructive to compare this narrative with the parallel passage in *Time of Death*, Vol. 1, p. 17. For 'the Federal level' the author writes: 'See'.

* Then, for instance, the rule is explained as due to the per-
meability of the shell (Time of Decay, 16, 1, 17).

⁶ The name, as it was and went, is compared to a basket which struts its ribs and contains itself (ib.).

² It is to be observed that Adam, 'the first man' (in Arabic *al-insan al-awwal*), is wholly distinct from 'the Primeval Man' (*al-insan al-awwal*).

into several grades and formed an elaborate hierarchy, at the head of which stood the representative of Mānī himself. But the position of the Elect differed essentially from that of the Christian clergy, inasmuch as the Elect exercised no sacerdotal functions properly so called. Whether Mānī instituted anything of the nature of a sacrament is doubtful; in any case, if there were Manichæan sacraments, they cannot have occupied an important place in the system, since the Oriental authorities make no mention of them, unless, indeed, we apply the term 'sacrament' to such practices as prayer and fasting.¹ Hence the main characteristic of the Elect was not that they had the exclusive right, or power, to perform certain acts, but rather that they possessed a fuller knowledge of religion and abstained from certain things which were lawful to the rest of the community. This duty of abstention was called by the Manichæans 'the three seals,'² which Augustine more definitely characterises as *signaculum oris, signaculum manuum, et signaculum cruris*.³ The first 'seal' imposed restrictions with respect to food and speech, the second with respect to outward acts, the third with respect to thoughts and desires. Thus the Manichæan asceticism implied no thought of expiation; the idea that self-inflicted suffering atones for sin—an idea which has exercised so disastrous an influence in some sections of the Christian Church—was quite foreign to the religion of Mānī. The prohibitions which he imposed are based upon the belief that certain acts, such as the destruction of life and the intercourse of the sexes, are essentially Satanic, and therefore retard the liberation of the soul. In matters of detail the Manichæan code naturally appears arbitrary to us; it is evident that in drawing the line between what is 'Satanic' and what is not Mānī was guided much more by his fancy and by various casual associations than by any abstract logical principle. Thus, for instance, all Manichæans were forbidden to kill animals, but it would seem that the Hearers were permitted to eat flesh. The Elect abstained from both flesh and wine; they were also forbidden to pluck fruit or vegetables, so that the food on which they subsisted had to be supplied by the Hearers. Similarly the Hearers were allowed to marry and to engage in worldly avocations, whereas the Elect might neither marry nor acquire property, 'except food for one day and clothing for one year.'⁴ It is remarkable that among the things most strictly prohibited were idolatry and magic.⁵ As in nearly all Oriental religions, fasting played an important part. Sunday was observed as a fast-day by ordinary Manichæans, Monday by the Elect; viz. Saddūq, 'the righteous,' which we may assume to have been the form employed by the Manichæans themselves (see C. W. Mitchell, op. cit. l. 20). A Manichæan who is called a Saddūq, p. 137 ff. These are the names of the party of Mānī, those whom they call Saddūqān. Neither Kessler nor any previous writer seems to have noticed that from the same Syr. word is derived another, so similar, 'sawda,' a term which was applied especially to the disciples of Mānī by the Fathers of the Roman period, and afterwards by Muhammadans. Various other interpretations of this word have been proposed, but none that is at all plausible. The substitution of *ad* for *id* is a phonetic change for which there are many examples. That a term which was originally used as a title of honour should afterwards have acquired an opprobrious sense is likewise quite natural, cf. the Greek *εὐνοία* from *εὖ* and *νόος*. The Persian terms for the 'Hearers' and the 'Elect' respectively are *Myshāgān* and *Vīshāgān*.

¹ According to Augustine (in *Portentum*, l. 1), the Elect were supposed to celebrate a kind of Eucharist in their secret meetings. But, as Augustine himself admits, he knew nothing definite on the subject, we cannot attach much importance to his testimony.

² *Phibet*, p. 328, line 5; *Phibet*, *Neel*, item III.

³ *De Moribus Manichæorum*, l. 16.

⁴ *De Moribus Manichæorum*, p. 328.

⁵ The prohibition of idolatry is the first of the ten commandments which, according to the *Phibet* (p. 328, line 10 ff.), all Manichæans were required to observe.

there were also monthly and annual feasts. Of the prayers, which were recited several times in the day, the following specimens are given by the author of the *Phibet* (p. 333, line 15 ff.):

(1) Blessed is our Guide, the Forerunner, the Anshamadr of Light, blessed are his glorious angels and blessed are his shining hosts.

(2) Adored art thou, O shining one, Mānī our Guide, source of brightness, branch of life, these great trees which are wholly medicine.

(3) I prostrate myself and adore, with a pure heart and a truth-speaking tongue, the great God, the Father of Light, the Emperor of Light, adored and blessed art Thou, all Thy majesty and Thy blessed words which Thou hast called. I adore Thee who adorest Thy hosts, Thy holy ones, Thy word, Thy majesty, and that which seemeth good to Thee, because Thou art the God who is all truth, life, and blessing.

(4) I adore and prostrate myself before all the gods, all the shining angels, all the lights, and all the hosts, who proceed from the great God.

(5) I prostrate myself and adore the great hosts and the shining gods who by their wisdom have planned, executed, and overcome the darkness.

(6) I prostrate myself and adore the Father of majesty, the Great, the Luminous. . . .

It will be noticed that these utterances contain not a single petition, no confession of sin, and no reference to the need of pardon. But we should not be justified in arguing that such conceptions were alien to the Manichæan system, for great stress seems to have been laid on repentance and the forgiveness of sin.⁶ Since, however, the Manichæans did not admit the idea of a propitiatory sacrifice, their theory as to the forgiveness of sin necessarily differed from that which was accepted by the great majority of Christians. Precisely what Mānī himself taught on this subject we cannot hope to determine; but the view which appears to have been current among the Manichæans, at least as early as the 4th cent., was that repentance naturally leads to forgiveness, 'since man is not punished for sinning, but for failing to grieve over sin.'⁷

With respect to Mānī's doctrine of the future life, we have somewhat fuller information. The division of mankind into three classes, the Elect, the Hearers, and the Wicked, is here specially emphasised. The Elect, immediately after death, ascend by means of 'the river of glory' to the moon, and thence are conveyed to paradise; the Hearers must pass through a long process of purification and of wandering to and fro, before they join the Elect; while the souls of the wicked roam about the world, in a condition of hopeless misery, until the final conflagration, and are then consigned for ever to the realm of darkness.⁸

The relation of Manichæism to other religions.—When we consider the complex nature of Mānī's teaching, it will not surprise us to find that very different opinions have been expressed as to its general character and its connexion with other religious systems. Until comparatively recent times it was the fashion to represent Manichæism, and Gnosticism generally, as a mere fantastic perversion of Christianity. When Zoroastrianism and Buddhism began to attract serious attention in Europe, the real or apparent resemblances between these religions and Manichæism naturally gave rise to the theory that Manichæism is a combination of Christian with Zoroastrian or

¹ For *hōp*, 'inhabitant,' we should so much read *hōp*, 'He,' as *hōp* has suggested.

² That is, apparently, 'called into existence'—the *Asah* verb *da* seems here to be a rendering of the Aram. *qdā*, on the use of which see H. Pognon, *Inscriptions manichéennes*, p. 126, note 1.

³ Here follows a short clause which is unimpaired.

⁴ See *Phibet*, p. 328, and the *Zoroastrian*, ed. A. van Leuque (J.E.S., 1911).

⁵ 'Non enim possunt quæ punitur et quæ de punitis esse debent' are the words of the Manichæan *Sacramentum*, cited by Augustine (a. *Sacramentum*).

⁶ *Phibet*, p. 328. In this passage we find nothing which directly contradicts the statement of Augustine that the souls of the Hearers and of the Wicked were believed to pass into plants and animals (a. *Phibet*, lib. v. 18, de *Her.* xvi.). At the same time the idea of metempsychosis is not definitely excluded.

Buddhist elements, but whether Christianity, Zoroastrianism, or Buddhism formed the basis of the system was a disputed point. During the last twenty years the prevalent tendency to explain everything in the ancient world as due to Babylonian influences has led to the belief that Manichæism and all other forms of Gnosticism are simply modifications of the old Babylonian religion.

But to those who impartially examine the sources none of these hypotheses will appear satisfactory. Whatever elements Mânî may have borrowed from older Oriental religions, it is clear that the fundamental principles of his system are neither Zoroastrian, Buddhist, nor Babylonian. The relation in which Manichæism stood to Christianity was undoubtedly closer, but to call Manichæism a Christian heresy would be misleading. The characteristics which Manichæism and other Gnostic systems share with primitive Christianity are not necessarily derived from any Christian source; they are, for the most part, products of a general movement which, as mankind outgrew the older religions, spread over the civilized world and assumed various forms according to the special circumstances of each case. The general movement in question has been well described by H. Oldenberg as a shifting of the centre of gravity in religious matters from without to within.

¹ The antique conception of religion, as a sort of offensive and defensive alliance between man and God, a mutual agreement whereby the worshipper secured for himself prosperity, success, and victory over his enemies, gradually faded away, or sometimes was violently shattered, and in its place there arose a new kind of belief, which held out the hope, not of earthly enjoyment through, and devotion to, but rather of renunciation (Baudouin, *Revue*, 1897, p. 6).

In the time of Mânî the old heathenism was by no means extinct in Babylonia, though Zoroastrianism had become the religion of the State.¹ Moreover, large Jewish colonies had long been established in the country. Of the early history of the Christian Church in those regions next to nothing is known, but there can be no doubt that before the beginning of the 3rd cent. Christianity had taken root among the Aramaic-speaking population which occupied the Western provinces of the Parthian Empire. It is also tolerably certain that the Christians of Babylonia were divided into various parties, and that their beliefs sometimes diverged widely from the ordinary orthodox type.² In particular the sect founded by the Syrian Christian Bar-daïsân (Bardaisan), who died in A.D. 222, seems to have had great influence. Ephraim Syrus goes so far as to call Bar-daïsân 'the teacher of Mânî';³ this is not meant to imply that Mânî was ever a Bardaisanist, but merely that he adopted certain Bardaisanist doctrines. In any case it is essential to realize that Manichæism arose in a country where several religions were contending with one another, and where, in consequence of this, various hybrid sects had been formed. Of such sects we have already had an example in the Mughtasila, the community to which Mânî's father attached himself.

The hostility of Mânî to popular paganism is sufficiently shown by his strict prohibition of idolatry. That he clearly distinguished between ordinary paganism and Zoroastrianism appears from his inclusion of Zoroaster among the messengers of God. He must, therefore, have regarded the Zoroastrianism of his own age as corrupt rather than as radically false; but how much he actually

¹ The theory that Zoroastrianism did not become the State religion till after the overthrow of the Parthian dynasty (about A.D. 224) rests on no trustworthy evidence.

² F. C. Burkitt's *Early Eastern Christianity* (London, 1904) relates chiefly to the Christianity of Syria and its immediate neighbourhood; but much of what he says probably applies also to Babylonia.

³ G. W. Mitchell, *op. cit.* p. 2.

borrowed from it is a very difficult question. To suppose that Mânî's dualism was due mainly to Zoroastrian influences would be an unwarranted assumption, for, though both systems are rigidly described as dualistic, they nevertheless differ profoundly. The aim of the Zoroastrian is to banish evil from the world; the aim of the Manichæan is to extract from the world that which is good. In this respect Manichæism has more in common with Buddhism than with Zoroastrianism; but from the fact that Mânî represented Buddha as the communicator of a divine revelation we must infer that Mânî's acquaintance with Buddhism was of a very vague kind. It is manifest, however, that in matters of detail he appropriated freely elements derived from very different quarters. Thus we can attach no great importance to his adoption of certain ancient Babylonian myths—e.g., such as relate to the nature and movements of the heavenly bodies.¹ In like manner he borrowed narratives, directly or indirectly, from the OT, although his general attitude towards Judaism was one of decided opposition. That he refused to recognize Moses as a prophet is abundantly proved,² hence in Christian writings directed against Manichæism the defence of the OT generally occupies a prominent place. It is probable that Mânî's aversion to Judaism was largely due to his horror of a practice which Judaism notoriously has in common with popular paganism, namely, the sacrificing of animals.³

Towards Christianity he was much more favourably disposed. Whence he derived his information on the subject is indeed uncertain, for, though it seems probable that the greater part of the NT had been translated into Syriac some time before Mânî was born, we cannot safely assume that he had access to it. Hence his peculiar teaching as to the person and history of Christ, to which allusion has been made above, may be due in some measure not to perversion of the gospel narrative on his own part, but to the beliefs of his Christian informants. In any case it is clear that some of the most essential features of primitive Christianity, in particular the ascetic view of the present world, were thoroughly congenial to Mânî. But he had one great advantage over the Christians, namely, that he provided a much more secure dogmatic basis for asceticism than any previous teacher. The Christian asceticism, in condemning natural feelings and appetites, was constantly hampered by their theory of God as the Creator of the universe in general and of man in particular; the distinction which they were obliged to make between human nature as such and human nature in its present corrupt state gave rise to endless difficulties. On the other hand, the Manichæan doctrine that humanity is of Satanic origin, however shocking it may be to modern sentiment, greatly simplified the problem. In this, as in some other points, Mânî displayed a boldness and originality of conception which entitle him to be regarded as a genius of the first order. To represent his system as a mere patchwork of older beliefs is therefore a total perversion of the facts.

5. History of the Manichæan community.—At the time of their founder's death the Manichæans were already a numerous and highly organized

¹ Astrological myths and speculations played a considerable part in some other Gnostic systems, notably in that of Bar-daïsân.

² See, for instance, the beginning of the account of Manichæism in al-Bahrûzî (l. 125). The statement in the *Philostratus* (p. 203, line 12) that Mânî rejected the prophets generally, is an exaggeration based mainly on his treatment of Moses.

³ In this respect, of course, Mânî did not differ from some of the early Christians. Thus the *Epistle to Diognetus*, which is usually regarded as a product of orthodox Christianity, speaks of animal sacrifice in terms of unqualified condemnation, and even in Rabbinical literature a tendency to disprove sacrifices occasionally shows itself.

sect, scattered over a great part of the Persian Empire and drawn from the ranks of various older religions. Some of them belonged to the Persian aristocracy; hence the bitterness with which the Zoroastrian priesthood opposed the new faith. Mānī's immediate successor, as head of the community, was a certain Šīr (Gr. *Zoroaster*). For many centuries Babylonia continued to be the headquarters of the Manichaean organization, in spite of repeated persecutions on the part of the Persian government. Now and then there was a king sufficiently powerful and intelligent to restrain the intolerance of the priests, but as a rule the Manichaeans were treated even worse than the Christians.¹ For this no political pretext could be alleged, since the Manichaeans were politically inoffensive, whereas the Christians not infrequently brought persecution upon themselves by an ostentatious display of their philo-Byzantine sentiments. The principal result of these attempts to suppress Manichaeism in Babylonia and Persia was that large numbers of Manichaeans took refuge in Central Asia, where they carried on a successful propaganda among the Turkish tribes.

The precise date at which Manichaeism began to spread in the Roman Empire is not certain, but it was undoubtedly well known there early in the 4th century. With respect to its prevalence in N. Africa, two or three generations later, Augustine furnishes ample evidence. The Christian emperors, as we might have expected, showed themselves no less intolerant towards Manichaeism than the kings of Persia. In the persecution of the Manichaeans Pope Leo I. played a specially prominent part. As to the later history of the Manichaeans in Europe very little can be discovered with certainty, on account of the vagueness with which the term 'Manichaean' is used by Catholic writers. Thus the charge of Manichaeism was brought against the Bogomils in the Byzantine Empire and the Albigenses (q.v.) in Provence, but how little these accusations prove may be gathered from the fact that even at the present day the religion of the Russian Molokany has been described as a modified form of Manichaeism.

On the overthrow of the Persian Empire by the Muhammadan Arabs, about the middle of the 7th cent., the followers of Mānī in the East enjoyed a period of comparative repose. Strictly speaking, they had no legal claim to toleration, for the Qur'ān, which expressly recognizes Jews, Christians, and Sabians² as capable of deserving the favour of God (ii. 50, v. 73), does not mention Manichaeism. Nevertheless, it would appear that in the early days of the Muhammadan Empire no penalties were inflicted upon the Manichaeans. The extreme simplicity of their cult, and in particular their abhorrence of idolatry, may for a while have served to protect them from molestation under Muhammadan rule. At length it began to be rumoured that some Muhammadans in high positions had secretly adopted Manichaeism. In many cases these reports were certainly false; thus, for instance, the Khalifa al-Walid II. (A.D. 742-744), whom Muhammadan historians depict as a monster of impiety, is accused of having said that Mānī was the only prophet whom God over-

saw into the world.³ If al-Walid really uttered these words, they would prove not that he was a Manichaean, but that he knew next to nothing of Manichaeism. It is, however, impossible to deny that secret conversions to Manichaeism actually took place among the literary classes. Apostasy from Islam is notoriously a capital offence according to Muhammadan law (see art. APOSTASY [Muhammadan]). Hence we cannot wonder that in the latter half of the 8th cent., when under the 'Abbasid dynasty the spirit of religious intolerance became dominant in the Muhammadan world, a systematic attempt should have been made to extirpate Manichaeism.⁴ The organizer of this persecution was the Khalifa al-Mahdi (A.D. 775-785), who instituted for the purpose a State Inquisitor, with the title of 'Inspector of the Zanādīqa.' The term *zanādīqa* (plural of *zanādiq*)⁵ was used primarily to denote the Manichaeans, though Muhammadan writers often employ it vaguely in the sense of 'heretics' or 'atheists'.⁶ That al-Mahdi did not make a very clear distinction between Manichaeism and some other heresies may be inferred from a passage in which he is represented as elaborately justifying his policy of persecution;⁷ the accusations here brought against the Manichaeans include, e.g., the practice of marriage with near relatives (*nikāḥ al-akhrād wa-l-banāt*), which was characteristic of the Zoroastrians (see art. MARRIAGE [Iranian]), but seems to have been altogether foreign to Manichaeism.

The religious policy of al-Mahdi was generally followed by his successors. The number of persons put to death on the charge of Manichaeism certainly amounted to many thousands, while Christians and Jews, though subject to various disabilities, were usually tolerated. But, in spite of all, the religion of Mānī long survived even in the heart of the Muhammadan Empire. Some two centuries after al-Mahdi, the author of the *Nūrist* tells us (p. 337, line 26 ff.) that he had been acquainted with about 300 Manichaeans in Baghdad alone. But the region in which they were most numerous was Central Asia. In the territory of the Turkish tribe Taghazghaz the majority of the population professed Manichaeism; a Muhammadan traveller who visited that country describes it as flourishing and civilized.⁸ When, in the reign of the Khalifa al-Muqtadir (A.D. 908-932), the Muhammadan governor of Samarqand condemned to death a large number of Manichaeans, they were saved, it is said, by the intervention of their co-religionist, the prince of the Taghazghaz.⁹ This is the only known case in which Manichaeism became the religion of a political community. We do not know how long this state of things continued, or when Manichaeism finally died out; but we may conjecture that it was swept away, like many other beliefs and institutions, by the great Mongol invasion of the 13th century.

That the Manichaean community in the course

¹ *Fiṣṣat al-Aghniyāt*, vi. 125, last line.

² See the very interesting paper by L. Goldschmidt, 'Mānī et les "Abd al-Kadhāb" ou les "Zanādīqa" au temps de la conquête du Califat de Mahdi,' in *Travaux de la Société d'Études de l'Orient ancien*, London, 1909, II. 104 ff. Goldschmidt is of opinion that the Manichaean propaganda under the early 'Abbasids was somehow connected with the anti-Arabian movement of the Persian nationalists (the so-called *Shu'abiyah*). Whether there is any truth in this view may be doubted, for Manichaeism had nothing to do with nationality. At the same time it is not surprising that Muhammadans should often have confused these wholly distinct tendencies.

³ See p. 337, note 1.

⁴ Thus from the statement in Ibn Qutaybah, *Fiṣṣat al-Mu'arraf* (ed. F. Wustenfeld, Göttingen, 1860, p. 337), it is very easy to conclude, with G. Jacob (*Les Arabes et les Manichéens*, Berlin, 1897, p. 107), that there were Manichaeans at Mecca in the time of Muhammad.

⁵ Al-Tahart, II. 303.

⁶ See Fagnat's *Geographical Dictionary*, ed. Wustenfeld, Leipzig, 1868-71, I. 540.

⁷ *Nūrist*, p. 337; *Fiṣṣat*, II. 105.

of its long history was not altogether free from internal dissensions might have been safely assumed. But the positive information which we possess on this subject is very scanty. We learn from the *Fihrist* (p. 234, line 4E) that at a date which is not specified, but in any case some time before the end of the 7th cent., a party among the Manichæans severed their connexion with the central authority established in Babylonia and set up an independent organisation; whether this schism was due to doctrinal differences or to other causes it is impossible to say. A second division took place about the beginning of the 8th cent., when a branch-sect was formed and became known as the *Miqlatiya*, after the name of their leader *Miqlat*. The majority of the Manichæans, who remained faithful to the head of the community, a certain *Mihri*, were thenceforth called the *Mihriya*. The points in dispute between these parties seem to have been matters of discipline rather than of religious belief.

LITERATURE.—In modern times, the first serious attempt to investigate the subject was made by the French Protestant theologian I. de Beausobre in his colossal work, *Histoire critique de Manichée et du manichéisme*, Amsterdam, 1734-1741. In dealing with the sources he shows considerable wisdom, but his book is ill-arranged and contains many irrelevant digressions. An admirable summary and examination of the evidence, so far as it was then available, will be found in the treatise of P. C. Baar, *Das manichäische Alogensystem nach den Quellen neu untersucht und entwickelt*, Tübingen, 1831. Perhaps the best general account is F. Spiegel's *Manichäische Religionsgeschichte*, Leipzig, 1871-73, II, 198-332. The works of K. Kessler, *Mani, Forschungen über die manichäische Religion*, I, Berlin, 1890, art. 'Mani, Manichæer,' in *JA* and *PRE* supply much valuable information, but they should be used with extreme caution; the author's speculations are often fantastic, and his philological knowledge is very superficial. A. Harnack, art. 'Manichæismus,' in *EB* (revised by F. O. Conybeare in *EB*), is largely based upon Harnack. The same may be said of the work of E. Rochat, *Manichæismus*, Basel, 1907. Very important contributions to the study of the subject are contained in a series of monographs by F. Cumont and A. Kugener, entitled *Recherches sur le Manichéisme*, Brussels, 1904-1912.

A. A. BEVAN.

MANIPURIS.—Officially the Manipuris are Vaishnavite Hindus. They cremate the dead, they receive the *mantras* from a recognised Hindu guru in many but not in all cases, they recognise Hindu festivals (but observe them a day late), they revere the cow, they are scrupulous in the matter of food, but, on the other hand, they do not practise child-marriage, they do not seclude their women, they permit divorce, they permit the remarriage of widows, they do not allow the supremacy of the Brahman, and none of the ordinary definitions of caste applies to their social order. Knowledge of the Vaishnavite doctrines is spreading with the spread of education, but they are still the most backward of all Hindu groups in Assam. With them Hinduism, adopted as the State religion by royal edict (c. A.D. 1705), is of social and political value in that it separates them from the ruder tribes inhabiting the hills and from the subordinate peoples of the valley. It provides the rites and ceremonise of everyday life. It is, so far as externals are concerned, the religion of the Meithei. It exists side by side with the earlier faith to which in the hour of trial and trouble, be they Raja or ryot, they turn unhesitatingly. The continued existence of this earlier faith in such vigour is a notable fact which enables the student of religious development in India to study at close quarters the process by which in Hinduism animism is tempered by metaphysics, and magic transformed by philosophy.

The historical records of Manipur, *Ningthasuroi*, are valid documents for at least five centuries. It is a settled State far removed from savagery. At the present time the population consists of two main divisions—the Meithei and the Loi. The Meitheis consist of seven clans, each divided into

numerous families, the principal clan being that known as the Ningthanja, or Royal, clan. The name Meithei now borne by all the clans is thought to have been the name of the Ningthanja clan before its hegemony was completely established. The Loi, or the conquered people, are not admitted into the Meithei confederacy, but are of similar stock to the Meithei, and the Meitheis worship the gods of these Loi villages as much as the Loi themselves. The Meithei confederacy is an endogamous group in theory, although in practice the issue of mixed marriages is admitted. The principal order of divine beings is the *amang lai*. There were originally, as recent research has shown, nine *amang lai*, or forest gods, with whom were associated seven *laimeas*, or goddesses. There are now 264 such deities. The gods married with mortals, and their issue were promoted to divine rank. The deities have different names in different places, and there are cases where Rajas have been deified after death. The creator deity is identified both with the chief of the gods and with the snake ancestor of the royal family. Other gods are identified with the clan deities of clans still existing. Yet others are members of a special group, whose function is to guard certain areas and who are therefore known either as *maibingthaps*, watchers over or guardians of direction, or *lamdai*, gods of definite areas. Here there is obviously a combination of ideas dating back to the time when definite areas were occupied by local groups each possessing a group deity. Then among the *amang lai* is the rain-god, and last is the god of the household (*Sana-mehi*), who is occasionally said to be the son of one of the seven goddesses. The function of the *maibingthaps* deities was to keep sickness from entering the State. Each family has a special deity, male or female, who is obviously in origin a deified ancestor, but the worship of some at least of these group deities is not now confined to members of the group. The seven goddesses bear titles describing their functions. From each of them is sprung one of the clans composing the Meithei confederacy. The earth, water, grass, rice, iron, fish, gold and silver, salt, cotton, fire, and the winds are sprung from these goddesses, either directly or from their daughters. Each of these deities has a *laiphom*, or god's place, specially sacred to him or her. Some reside on hill-tops, but for the convenience of their worshippers have abodes in more accessible spots. Such *laiphoms* abound, notably on the ridges and pases, and are marked by heaps of stones and leaves. In the sacred groves near the villages of their special worshippers are houses for the deities, and these groves are sanctuaries for bird and beast. The gods play the national game of polo, and a stick and ball are kept for their use. In some cases they are represented by images or material objects. They also reside in the chief official of the group, village, or family which forms their special chantale. The principal ceremony in the worship of the *amang lai* is called the *laikaraboh*, literally 'pleasing the god.' In every case the god has to be enticed from running water. The ceremony releases him from a state of quiescence into activity, as is shown by his entering into some selected worshipper. The god benefits directly by the rite, which gives him strength so that he becomes thereby more potent to aid his worshippers. The process of enticing the deity varies somewhat according to the deity, and is accompanied by numerous subsidiary rites, mainly in order to avert all evil influence. Special precautions have to be taken—e.g., clean fire must be manufactured by means of a bamboo and a cane in cross friction. Dancing is a necessary accompaniment of the rite, which often includes the use of foul abuse—a feature which gives the god great

pleasure. While the ceremony is in progress, social and sexual tabus, immediately paralleled by the customs of the hill-tribes, are strictly enforced, thus indicating that the purpose of the rite is to restore the solidarity of social life and to produce in the worshippers a sense of religious exaltation. The social divisions, resting on age and other lines of social cleavage, function separately on these interesting occasions. The offerings are in some cases such as render the active participation of professing Hindus a matter of some difficulty, but the difficulty is surmounted by substituting a *Lol*, a member, i.e., of the non-Hindu section of the community, for the Hindu believer for and by whom and on whose behalf the rite is performed. The Hindu may save his conscience by merely sniffing the savour of the sacrifice, unmindful of the fate of the *Pir Alla* of Bengal, who fell from orthodoxy by mischance in that manner. In general, the tendency would seem to be to substitute offerings of fruit and flowers for animal flesh. Human sacrifice was undoubtedly practised, probably at no very distant date.

The priests of the ancient order are designated *maibos* and *maibis*, and are recruited by the admission of those who become possessed by the deity at one of the high religious festivals. Inasmuch as sickness and disease are attributed to spiritual beings, the *maibis* is also the doctor of the community, but here there are specialists, and the practical knowledge of the *maibos* is far from despicable. The *whitapunt* (white) in *whitapunt* as a token and source of abnormal power and religious authority is beyond a doubt at the root of much that is important in Hindu doctrine. There is no evidence forthcoming as yet from Manipur to show that the priesthood is hereditary or that the members of the order, like *shakhs* and *yogis*, are regarded as *gossamaks* (g.v.), or that their funeral rites differ from those of ordinary people. On its practical side the religion ministers to the simple needs of an agricultural community dependent on the regularity, adequacy, and reasonableness of the rainfall for their subsistence. There are rites to secure rain and rites to stop excessive rain. Not the least interesting of the numerous rites to secure good fortune for the State is the annual selection of the *chakshaba*, the person who gives his name to the year. Various means of divination are employed for the purpose of securing for this office a person who shall bring the good luck that is dependent on his personality.

Beliefs in evil spirits, who accompany animals and fish, and are ever harmful to mankind, in beautiful sirens who lure young men and make them insane, in vampires, in witchcraft, in the power of trees and of tree spirits to cure as to cause sickness, and in the malevolent activity of the ghosts of those who die by violence or of women who die in childbirth are also notable features of their organized religious system. The rites which are performed for the purpose of protection and exorcism in these cases are full of interesting detail, but in general outline resemble the rites performed elsewhere on a similar level of culture for similar purposes.

LITERATURE.—W. McCulloch, 'Account of the Valley of Manipur,' *Selections from the Records of the Government of India* (Foreign Department), xxviii, Calcutta, 1860. T. C. Hodson, *The Mithila*, London, 1903. J. Shakespear, 'The Religion of Manipur,' in *PL* xiv. (1912) pp. 2.

T. C. HODSON.

MANITU.—*Manitu*, a word originally applied by the Eastern Algonquians to a spirit, is properly *ani*, 'spirit,' with the *du* in, meaning any spirit or genius in the shamanistic devil cult of the Indians, and also any *genius loci* without the implication of evil. In consequence of the teaching of the missionaries, the conception of one Great

Spirit became current among the Indians, and this was expressed by the word *Kit* or *Kit* prefixed to *ani*; thus *Kebt-ani*, or *Kitanit* (*Kitanit*), to which was again added the syllable *wit*, meaning a mode of existence; hence *Kittanitowit*, 'the existence (known as) the Great Anito,' the paraphrase of God as taught by the missionaries. That the Indians themselves had evolved no such conception is abundantly manifested by the absence in any American language of a word capable of expressing the idea of God, the words used in John Eliot's Bible (Cambridge, Mass., 1663) and employed by the Penobscot Indians, *Kiektan* and *Kittanitom*, being merely variants of this artificial compound. As such the conception was introduced in opposition to a spirit variously called *Hobomoseo*, the Evil Spirit, or *Malsum*, 'the Wolf.' Another form of the latter appears to have been evolved in antithesis to a contracted form of *Kiektanitom*, namely, *Tan'tum*, as opposed to *Squantum*, the Devil ('angry god'). *Manitu* is, then, a general word for any sort of a daemonium, good or bad, and it has reached a higher significance by purely artificial means.

Nevertheless, the missionaries did not invent the idea of a good spirit, or of an evil spirit, or of a spirit-creator. What they did was to seize upon ideas already current in another form, fuse them, and present to the Indians the fusion (really confusion) as the embodiment of one unitary conception. The Indians believed that a spirit might be a good or good-natured power, and that he might be an inimical power, and they also believed that a certain ancestral spirit had always been favourably disposed towards his children, but it was far from the thought of the Algonquians that there was an ever good and supreme Great Spirit, creator and benefactor, opposed to a Great Spirit of Evil. Wherever such ideas are found, they reflect the thought inherited from forefathers who had been under Christian influence. Thus the Mandans painted upon one side of the tent a figure representing the Good Spirit and on the other side a figure representing the Evil Spirit, that they might be under the protection of both these powerful spirits; but this is merely the degradation of teaching originally strange to them. They recognized certain spirits who aided and certain spirits who opposed them, but not as in any case Great Spirits. They believed rather that the 'medicine-men' could control all spirits. Similarly, when the 'epic' of Kuldekap describes this god of the Pamunquoddies as the son of a divine unknown mother and antithetical to a twin evil spirit, as the principle of goodness opposed to a sort of Ahri-man, it must be remembered that the Pamunquoddies have long been under higher religious guidance than that of their medicine-men. Even the 'vague faith in a Supreme Spirit' ascribed to them is derived from the same source. What is original is the conception of a superior being, who is father of the special tribe or race that revere him as leader and helper. In general it may be said that worship is not paid to any evil spirit as such, but also that worship is not paid to any good spirit as such.

The *manitu* is often confused with the *anima* of western tribes. But the latter is often less a spirit than a power, like the *mana* (g.v.) of the Polynesians, which lies inherent in certain objects as well as in certain men. Its possession gives power, not, to the Indian's thought, a supernatural power, but a perfectly natural, although unusual, power. Between the two conceptions lies that of the ordinary *esh*, which at bottom is one with *anima*, but is conceived as sometimes a spirit and sometimes a spiritual power. There is some corresponding word to be found in most of the languages of the American Indians, and every one of them con-

notes a power which may be called spiritual. Sometimes it is the purely shamanistic power contained in the medicine-bag, which is not really a medicine-bag at all, but a collection of objects of fetishistic nature, and sometimes it is a spirit, embodied or disembodied, such as the spirit of a waterfall, the spirit of thunder, the spirit of animals, etc. It is a mysterious force which may inhere in matter or may make itself felt as an expression of spirit. The powers of nature have it, generally winds, storms, productive earth, and animals all have it, though some in larger amount than others. Finally, men have it in certain cases. But there is no sharp distinction between this power and that found in spirits proper, where it becomes individualised. It is this very power that is the 'medicine' of the conjurer and nature-subduing priest. Whether it be called *manitu*, *oki* (*oki*), *wakan*, or even *As* (in Maya form), it is always the same thing under a shifting terminology, except that among certain tribes it is more apt to be conceived as impersonal and among others as personal. *Manitu* is generally personal, *wakan* is generally impersonal, but the alternate use of either is not unusual. *Wakan* has been defined by Brinton (*Myths of the New World*, p. 45) as 'supernatural in its etymological sense,' in that it means in the forms current among the Iroquois and Dakotas, namely, *oki* and *wakan* respectively, something 'above,' and Brinton interprets this as *super* in the sense of supernatural. But it is more probable that the word means *super* in the sense of superior. These Iroquois and Dakota forms are etymologically allied, and a possible connexion with Sioux *ophas* may be admitted, but it would be unprofitable to attempt, with Brinton, to connect these terms with the above-mentioned *As* of the Mayas. The 'Quaker' of the Powhatans is another form of the same word, the quaker gods being, however, not the higher but the lesser spirits. This word, like *Tan'tam* and *Squantam* above, is an adaptation from approximately corresponding Indian sounds (Quaker is *qui-oki*, 'small spirits') and contains the *oki* of the Iroquois and Algonquians, but it is not probable that it is one with the southern *Aucan*, *As*, etc. The Algonquin *oki* means a spirit of any sort—e.g., the spirit of a body of water, or the spirit of winter—and expresses also the idea of a distinctly demoniac power ruling the winds, but not in a devilish manner; for, especially among the Hurons, the *oki* gives good fortune and regulates the winds for the benefit of the good Indian. It also implies a ghost, and in this respect differs from the conception of *anisi* (*manitu*), though in other respects it is difficult to perceive any distinction between the *anisi* (*manitu*) and the *oki*; perhaps, as appears from the geographical distribution of the two words, the *anisi* was confined to the East, while the *oki* penetrated from the West to the Eastern tribes.

The *manitu* of greatest authority among the Algonquians was Michabo, and an analysis of this peculiar being shows that he was far from being a supreme spirit. Like many of the Indian spirits, he was a very superior animal, Michabo meaning 'great hare' (originally *monshabao*). This *manitu* was revered from the Northern line of the States to Virginia and from the East as far West as the Mississippi. He was represented as the originator of all the system of conjuring and exorcising which makes the real science of the medicine-man; he ruled the winds and guarded his people, but was as often tricked and deceived as he in turn tricked and deceived; he was for the most part a humorous buffoon, whose exploits amused the Indians, as those of Brer Rabbit amuse the Negroes. On the other hand, he is referred to as 'the hare that made the moon,' and he is even said to have created

the earth. But as creator he is not dignified, nor even serious. It is more natural to him to hunt, and, when autumn comes, to smoke his last pipe before turning in to sleep through the winter. It is the smoke of his last pipe that makes the haze in the air of autumn. That he originally came from the East, and, according to the earlier accounts, sends (not creates) the sun and moon out of the East, has led to the ingenious conjecture that Michabo has come from a confusion of *waboo*, 'hare,' with *wabi*, 'light' (Brinton, *Myths of the New World*, p. 106). There is the greatest confusion in the form of the name now known as Michabo, which appears as Missibizi and Meson as well as Nanihsho and Manibsho, apparently because the name was sometimes rendered *michi* ('great') and sometimes *manitu* ('spirit'), with *waboo*, 'hare.' That is, Michabo was thought of as the 'spirit-hare' or as the 'great hare,' and this 'hare,' according to Brinton, is a later Indian mistake for 'light.' Although the words are alike, and *wabi* means 'white' (*wapa* means the eastern light), yet nothing is more apt to lead one astray than reliance upon such etymological chances. We are, then, far from agreeing with Brinton when he says that 'beyond a doubt this is the compound in the names Michabo and Manibsho which therefore means the Great Light, the Spirit of Light, the Dawn' (ib. p. 106). Much as Brinton has done for American studies, he wrote under the dawn-myth influence of his day and probably laid more stress upon etymology than upon ethnology. The truth is that the 'great hare' is the interpretation best justified in accordance with Indian belief and tradition. Michabo was a demoniac animal of kindly disposition and endowed with a great magician's knowledge and cunning, which, however, could not keep him out of ludicrous difficulties. He was not a god, still less a god of goodness, but, as has been said of similar Indian spirits, a spirit of good nature. He is the son of the wind, one of four brothers born at a birth, but he took command of them. As they were born North, South, East, and West, it seems as if he represented one of the four winds. Yet the early missionaries declared that he and the four winds were the chief Algonquin gods. As expressed in the account of the year 1616, Michabo and the four winds were the only gods that the Algonquians had at that time. Further, it must be remembered that Michabo is sometimes portrayed (as among the New Jersey Indians) as a devil, while at others he is represented as the 'ancestor'—a term which has often led to the false conclusion that believers in an ancestor-spirit must necessarily believe in a creator-god. Other tribes also have ancestral or at least specially revered animals, such as the bear, deer, and wolf of the Mohicans. None of the Western or Southern American Indians had the conception of a Creator-God, but many of them derived their stock from certain animals. To this class of animal-gods Michabo, the greatest *manitu* of the East, appears to belong. The history of the brothers is told in various forms in various tribes, and has been interpreted as additional evidence that, when there is a good and a bad brother, we have a fundamental dualism, which, however, is unsubstantiated by any close analysis even of the tales as handed down. In the Iroquois version there are two brothers, the Beautiful Spirit and the Ugly Spirit or Good Mind and Bad Mind, as interpreted by the missionaries. But these are in reality the two brothers, 'White' and 'Dark,' Ioskeha and Tawiskara, who contend with one another till White Spirit conquers and rules from the East. Both are grandchildren of the moon, but Ioskeha becomes 'father of mankind'—an expression which means that he is the ancestor of

the Iroquois. He destroyed the frog, which had made earth a desert by swallowing all the water, and he learned the wisdom of the tortoise which supports the world, namely, how to make fire. Ioskoha gave this knowledge to man. Yet here the brother is not represented as an animal; it is a simple conflict of white and dark, or light and darkness, a culture-myth which the Algonquins kept in animal form, while the Iroquois preserved or invented it without basing the myth upon anything save the natural antithesis of light and darkness (cf. art. *DUALISM* (American)). It is this myth that caused the belief in American Indian dualism to receive wide acceptance, as it was thus originally interpreted by Brébeuf in 1638.

As the word *manitu* has been widely used by ethnologists, it has naturally lost somewhat its original signification and at the same time has gained a new connotation, so that it has come to mean special forms of spirit-power more or less unknown to the Algonquins. Thus it has come to denote the personal guardian-spirit of certain Western tribes which has occasionally arisen out of the personal guardian of an individual. The mythical ancestor of a village at a certain period in his life retires into solitude, and after fasting and prayer is rewarded with the vision of a certain animal, which then becomes his totem. This is adopted by his clan; and, when the clan becomes part of a larger tribal organization, it still remains as the guardian of the clan, though with a marked tendency to become simply a totem-crest. The tutelary guardian-*manitu* thus becomes a mere symbol. Sometimes such crests become merely the property of certain families. The ancestors who received the totem-*manitu* received with it the powers or privileges still retained by the *protégés* of the spirits, who continue to appear to the young men of the tribe, and the possession of these secrets forms the basis for the secret societies widely spread among the Indians of the North-West. This is the 'individual totem' acquired by every youth at puberty, which, when the organization of the clan is in a decayed state, is no longer identical with that of the ancestor and is no longer inherited. The youth at this period wanders from his father's lodge and, in a secluded spot fasts and cries to the spirits, inviting any one of them to become his spiritual patron (cf. art. *COMMUNION WITH DEITY* (American)). During this period, when he falls asleep, the first animal, bird, or reptile of which he dreams he considers to be the one designated by the Great Spirit of the tribe for his mysterious protector during life. He then returns home, kills such an animal as he has seen in his dream, and preserves its skin in his mystery-bag ('medicine-bag'). It is possible that the individual *manitu*, though in some cases a later development than the clan-totem, is in other cases, notably among the Eastern tribes, of independent origin and as antique as the totem-*manitu*. Even among the Eastern Algonquins the acquisition of a special *manitu*-spirit in animal form by the youth who fasts is not unknown.

LITTLEJOHN—G. Catlin, *The North American Indians*, London, 1845; D. G. Brinkman, *Myths of the New World*, New York, 1888; *The American River*, do 1891; A. M. Kossau, *Man, Past and Present*, Cambridge, 1899; *Relation de la nouvelle France pour l'an 1687* (and subsequent years); H. Webster, *Primitive Social Evolution*, New York, 1906. The earliest source of information is contained in the *Relations* of the early missionaries. Brinkman and Webster (sup. cit.) give full bibliographies. The *Annual Reports of the Bureau of American Ethnology* should be consulted for modern conditions.

E. WASHBURN HOPKINS.

MANJUSRI.—Like the majority of Buddhist 'gods,' Manjusrī is represented under various aspects: (1) in the Great Vehicle, or Mahāyāna (q.v.), properly so called, he is a *bodhisattva*, an entirely Buddhist personage in definition if not in

origin (his origin is obscure; cf. *AVALOKITEŚVARA*); (2) in the 'Tāntic Vehicle,' which is of very early date and is not always distinguished from the Great Vehicle proper, Manjusrī becomes one of the names, and often the principal 'exponent,' of the Supreme Being; (3) the cult of Manjusrī, originating in India, took a peculiar development in China: it probably spread from China into Nepal, where Manjusrī is the mythical giver of civilization.

1. As *bodhisattva*.—The most ancient of his numerous names is perhaps Mañjuśrī, 'pleasant voice.' His usual epithet is *śāntara*, or *śānta*, 'young man,' 'royal prince';¹ this title, whatever its origin, means technically a *bodhisattva* at the stage when, having received consecration (*sādhya*) as a prince, he is associated with the power of a Buddha and becomes his right arm (see *BODHISATTVA*, vol. ii. p. 745). He is named in the first rank of *bodhisattvas*, before Avalokiteśvara, at the beginning of the *Lotus of the True Law* (translated into Chinese A.D. 167-180), where he is represented (ch. xi.) as a great converter. The 'esoteric' *sūtras* and devotional works give him as a type of *bodhisattva*, relate his vow, attribute to him moral counsel for the conduct of true believers of the Great Vehicle, and celebrate his power.² Legend associates him with the revelation of the books of the *Pratyakṣasūtra*.³ Revealer of the *Pratyakṣa*, god of the Word, he is the patron of the Great Vehicle, of the 'second dispensation,' and becomes the god of wisdom, a personage of high importance. According to Pe-Hien (see J. Legge, *Pe-Hien, A Record of Buddhist Kingdoms*, Oxford, 1880, p. 46), the followers of the Mahāyāna worshipped the *Pratyakṣa*, Manjusrī, and Avalokiteśvara. We have many images of Manjusrī; the most ancient, with two arms, are those which make his characteristic mark the *Pratyakṣa* carried upon a lotus.

2. As Tāntic god.—It is in the Tāntic sections of the Tibetan scriptures (*Ṛgyud*, *Konjur* as well as *Tanjur*) that Manjusrī takes an extraordinary development.⁴ Half a dozen *Tantras* (*Konjur*) bear his name; among them is 'The List of the True Names of Manjusrī Jhāna-entia.'⁵ The last term, 'Essence-of-knowledge (Jhāna),' is opposed to the name *bodhi-sattva*, and is more dignified. We find it again in one of the numerous magic rituals devoted

¹ On this expression see H. Kern, in *SBZ* xvi. (1886) 4; cf. *Buddhism in the East*, ed. H. Kern and B. Nanjo, Pörsgrub, 1908 9, p. 67. 'A certain Buddha will live twelve eons again, not ceasing the time he is *śāntara*.'

² Various legends are told of his former human form, but they are not as developed as the legends relating to Mañjuśrī. See (1) E. Chavannes, 'Le Bāta de la parol existentielle de l'inspiration de Kio yong Kuan, in *Monographies de l'École de l'Extrême-Orient*, Leyden, 1898, p. 75 (this story is a *śāntara*, named in *Vairocana*, 'the Universal,' the Buddha to whom Manjusrī is sometimes attributed); (2) the *Mañjuśrī-sūtra* (translated into Chinese A.D. 500), where Manjusrī tells how he took his *bodhi-sattva* vow: 'I do not wish to become a Buddha quickly, because I wish to remain in the lot in this world to save its beings'; 'In all my outbursts I wish to follow the example of Aśoka and be a monk' (*Mañjuśrī-sūtra*, Pörsgrub, 1888, p. 135); (3) the *Mañjuśrī-sūtra* (translated into Chinese in 518), a book patronized by the Mahāyānist, giving the story of the conversion of a light woman by Manjusrī in the guise of a handsome young man, the only real life of the *bodhisattva* in the sin of hatred (*Mañjuśrī-sūtra*, p. 147). All these works are authentic, as is the *Mañjuśrī-sūtra*, an account by Manjusrī of the 'wings' (palms) of illumination. The devotion to Manjusrī, the virtue of his name, which protects against all female birth, and his glorification as the hero (*śānta*) are to be noted. Manjusrī is one of the various and patronized in the 'Stanzas of Good Practice' (*Śāntara-sūtra*), one of the classical texts used every day by the Buddhists of the Great Vehicle (*Śāntara-sūtra*, pp. 207, 208 *Buddhism in the East*).

³ *Mañjuśrī-sūtra* (translated into Chinese in 518), a book patronized by the Mahāyānist, giving the story of the conversion of a light woman by Manjusrī in the guise of a handsome young man, the only real life of the *bodhisattva* in the sin of hatred (*Mañjuśrī-sūtra*, p. 147). All these works are authentic, as is the *Mañjuśrī-sūtra*, an account by Manjusrī of the 'wings' (palms) of illumination. The devotion to Manjusrī, the virtue of his name, which protects against all female birth, and his glorification as the hero (*śānta*) are to be noted. Manjusrī is one of the various and patronized in the 'Stanzas of Good Practice' (*Śāntara-sūtra*), one of the classical texts used every day by the Buddhists of the Great Vehicle (*Śāntara-sūtra*, pp. 207, 208 *Buddhism in the East*).

⁴ *Mañjuśrī-sūtra* (translated into Chinese in 518), a book patronized by the Mahāyānist, giving the story of the conversion of a light woman by Manjusrī in the guise of a handsome young man, the only real life of the *bodhisattva* in the sin of hatred (*Mañjuśrī-sūtra*, p. 147). All these works are authentic, as is the *Mañjuśrī-sūtra*, an account by Manjusrī of the 'wings' (palms) of illumination. The devotion to Manjusrī, the virtue of his name, which protects against all female birth, and his glorification as the hero (*śānta*) are to be noted. Manjusrī is one of the various and patronized in the 'Stanzas of Good Practice' (*Śāntara-sūtra*), one of the classical texts used every day by the Buddhists of the Great Vehicle (*Śāntara-sūtra*, pp. 207, 208 *Buddhism in the East*).

⁵ *Mañjuśrī-sūtra* (translated into Chinese in 518), a book patronized by the Mahāyānist, giving the story of the conversion of a light woman by Manjusrī in the guise of a handsome young man, the only real life of the *bodhisattva* in the sin of hatred (*Mañjuśrī-sūtra*, p. 147). All these works are authentic, as is the *Mañjuśrī-sūtra*, an account by Manjusrī of the 'wings' (palms) of illumination. The devotion to Manjusrī, the virtue of his name, which protects against all female birth, and his glorification as the hero (*śānta*) are to be noted. Manjusrī is one of the various and patronized in the 'Stanzas of Good Practice' (*Śāntara-sūtra*), one of the classical texts used every day by the Buddhists of the Great Vehicle (*Śāntara-sūtra*, pp. 207, 208 *Buddhism in the East*).

⁶ *Mañjuśrī-sūtra* (translated into Chinese in 518), a book patronized by the Mahāyānist, giving the story of the conversion of a light woman by Manjusrī in the guise of a handsome young man, the only real life of the *bodhisattva* in the sin of hatred (*Mañjuśrī-sūtra*, p. 147). All these works are authentic, as is the *Mañjuśrī-sūtra*, an account by Manjusrī of the 'wings' (palms) of illumination. The devotion to Manjusrī, the virtue of his name, which protects against all female birth, and his glorification as the hero (*śānta*) are to be noted. Manjusrī is one of the various and patronized in the 'Stanzas of Good Practice' (*Śāntara-sūtra*), one of the classical texts used every day by the Buddhists of the Great Vehicle (*Śāntara-sūtra*, pp. 207, 208 *Buddhism in the East*).

⁷ *Mañjuśrī-sūtra* (translated into Chinese in 518), a book patronized by the Mahāyānist, giving the story of the conversion of a light woman by Manjusrī in the guise of a handsome young man, the only real life of the *bodhisattva* in the sin of hatred (*Mañjuśrī-sūtra*, p. 147). All these works are authentic, as is the *Mañjuśrī-sūtra*, an account by Manjusrī of the 'wings' (palms) of illumination. The devotion to Manjusrī, the virtue of his name, which protects against all female birth, and his glorification as the hero (*śānta*) are to be noted. Manjusrī is one of the various and patronized in the 'Stanzas of Good Practice' (*Śāntara-sūtra*), one of the classical texts used every day by the Buddhists of the Great Vehicle (*Śāntara-sūtra*, pp. 207, 208 *Buddhism in the East*).

⁸ *Mañjuśrī-sūtra* (translated into Chinese in 518), a book patronized by the Mahāyānist, giving the story of the conversion of a light woman by Manjusrī in the guise of a handsome young man, the only real life of the *bodhisattva* in the sin of hatred (*Mañjuśrī-sūtra*, p. 147). All these works are authentic, as is the *Mañjuśrī-sūtra*, an account by Manjusrī of the 'wings' (palms) of illumination. The devotion to Manjusrī, the virtue of his name, which protects against all female birth, and his glorification as the hero (*śānta*) are to be noted. Manjusrī is one of the various and patronized in the 'Stanzas of Good Practice' (*Śāntara-sūtra*), one of the classical texts used every day by the Buddhists of the Great Vehicle (*Śāntara-sūtra*, pp. 207, 208 *Buddhism in the East*).

⁹ *Mañjuśrī-sūtra* (translated into Chinese in 518), a book patronized by the Mahāyānist, giving the story of the conversion of a light woman by Manjusrī in the guise of a handsome young man, the only real life of the *bodhisattva* in the sin of hatred (*Mañjuśrī-sūtra*, p. 147). All these works are authentic, as is the *Mañjuśrī-sūtra*, an account by Manjusrī of the 'wings' (palms) of illumination. The devotion to Manjusrī, the virtue of his name, which protects against all female birth, and his glorification as the hero (*śānta*) are to be noted. Manjusrī is one of the various and patronized in the 'Stanzas of Good Practice' (*Śāntara-sūtra*), one of the classical texts used every day by the Buddhists of the Great Vehicle (*Śāntara-sūtra*, pp. 207, 208 *Buddhism in the East*).

¹⁰ *Mañjuśrī-sūtra* (translated into Chinese in 518), a book patronized by the Mahāyānist, giving the story of the conversion of a light woman by Manjusrī in the guise of a handsome young man, the only real life of the *bodhisattva* in the sin of hatred (*Mañjuśrī-sūtra*, p. 147). All these works are authentic, as is the *Mañjuśrī-sūtra*, an account by Manjusrī of the 'wings' (palms) of illumination. The devotion to Manjusrī, the virtue of his name, which protects against all female birth, and his glorification as the hero (*śānta*) are to be noted. Manjusrī is one of the various and patronized in the 'Stanzas of Good Practice' (*Śāntara-sūtra*), one of the classical texts used every day by the Buddhists of the Great Vehicle (*Śāntara-sūtra*, pp. 207, 208 *Buddhism in the East*).

¹¹ *Mañjuśrī-sūtra* (translated into Chinese in 518), a book patronized by the Mahāyānist, giving the story of the conversion of a light woman by Manjusrī in the guise of a handsome young man, the only real life of the *bodhisattva* in the sin of hatred (*Mañjuśrī-sūtra*, p. 147). by the *Tanjur* to *Mañjuñrī*: 'spell (*śādhana*) of the *Adibuddha*, the Essence-of-knowledge *Mañjuñrī*,'¹ which begins as follows:

'Homage to the Buddha of the beginning, the middle, and the end, free from every stain of sin, a body immaculate by nature, primordial Buddha.'

Śādhana (spells) are magical operations by means of which the worshipper brings a deity into his presence in order to identify himself with the deity—which is not difficult to accomplish, since every man is essentially nothing but deity, though particularized and stained. These operations include 'diagrams' (*maṇḍalas*), 'geometrical figures formed of squares and circles, more or less ornamented, and inscribed within each other, upon which is ranged an endless succession of deities' represented by magic syllables.² *Mañjuñrī* often occupies the centre of these *maṇḍalas*.

Tāntic gods have two aspects, a 'right hand' aspect and a 'left hand' (or erotic) aspect. Under the former *Mañjuñrī* is called 'Lord of speech of the ontological Universe' (*Dharmadhātavaśvārā*); under the latter he is 'Diamond-Love', 'Thunder-bolt-Love' (*Vajrasādhya*).³ His right-hand aspect is seen from the following:

'Qu'on s'identifie à Dharmadhātavaśvārā, qui a le corps tout blanc, quatre bras, huit bras les cinq Bouddhas (who represent the five kinds of knowledge of which *Mañjuñrī* is the synthesis) around as crowns of joyous... les deux mains (originales) font le geste de l'enseignement; les trois autres de droite tiennent le gāyā, le śāstra, le khaṇḍa; les trois autres de gauche, le livre de la Prajñā.'⁴

Here, Foucher goes on to say, the book, the four arms (the eight is simply a multiple), and especially the four faces, suggest representations of Brahmā. Grünwedel remarks that *Mañjuñrī* and Brahmā share the favour of a common *śakti* (divine energy, feminine aspect, of a god), *Śarasvatī*.⁵

It is noteworthy also that the *Nāmasaṃgiti* (viii. 10) gives Brahmā among the names of *Mañjuñrī*. As soon as the Buddhas and bodhisattvas became 'gods,' they inevitably became gods after Hindu fashion: Avalokita has more likeness to Śiva, and *Mañjuñrī* to Brahmā. *Mañjuñrī* always occupies an important, and often the chief, place in Buddhist polytheism.

3. As developed in China.—E. Huber was the first to observe that the canon of one of the Buddhist schools of the Little Vehicle, or Hīnayāna (g.v.), contained traditions foreign to India—e.g., the legend of a town of Khotan—and he wondered, therefore, whether 'this canon had not been considerably augmented and modified in Turkestan itself.'⁶ It is now certain that 'Serindia'⁷ and, later, China itself collaborated in the development of Buddhism. The story of *Mañjuñrī*, who, according to the Chinese pilgrim,⁸ now dwells in China, who is represented in the miniatures of the Nepālese MSS as a god worshipped in China,⁹ and who, according to the Nepālese tradition, came from China to Nepāl, is interesting from this point of view.¹⁰

MARA.—It seems that during the so-called late Vedic period, new gods, gods of a new style, were created. They wear, on the one hand, an aspect which is popular and mythological, and, on the other, one which is sacerdotal and esoteric; they are the expression of a pantheistic and pessimistic philosophy; but they, nevertheless, appeal to devotion and worship. Brahmā-brahman is the most eminent among them. Kāla, 'Time,' creator and destroyer, Kāma, 'Desire,' a cosmical entity, and many others may be embodied in the figures of the popular pantheon. Our Brāhmanic information on these gods is, as a rule, scanty, and, in many cases, we are largely indebted to Buddhist or epic

This is the case with Māra, who is not unknown in the Atharvaveda, that aristocratic compendium of demonology; he is an important figure in Buddhism, and the Upaniṣads show the elaboration of the ideas which constitute his frame in Buddhism.

The Atharvaveda joins together Yama, the old Aryan king of the dead, Mṛtyu, Death, Agha Māra, the evil slayer or hateful murderer, Nirṛāṇa, the destroyer, and Śarva, the prototype of Śiva (vi. xxi. 1). Elsewhere (xi. viii. 19) it mentions the 'deities called Misfortune, or Ill, or Evil' (*pāpmanas dāntāḥ*), and has deprecatory invocations (vi. xvi. 1-2, cxlii. 2, xvii. 1-2) to Misfortune (*pāpman*). Māra, or Mṛtyu, is Death personified, the god who kills, and he has already acquired his Buddhist qualification *pāpman*, 'the evil one' (Pali, *pāpiman*). With this dark figure may be identified Yama or Śarva, also a mythological god.

That is what we know of Māra from the oldest literature. He quickly acquired a metaphysical and moral significance. For the thinkers of the age of the Brāhmanas and of the Upaniṣads, who admit transmigration and are anxious to find the path to the other shore of transmigration, Māra, or Death, may be regarded as the sovereign of this subatomic universe: whoever obtains a passage beyond the sun reaches the realm of immortality. For the common people, the recurrence of birth and death is the rule; the sun is Death. The legend of Nachiketas in the *Kāṇḍaka Upaniṣad* is of importance for the history of Death: a young Brāhman descends to Hades, and, unmoved by all promises of transient pleasures, wrings from Yama, the god of death, the secret of that which lies beyond death and the means of liberation from death, this only means being the knowledge of Brahman which confers immortality. H. Oldenberg rightly compares this Nachiketas-Yama legend with the Buddha-Māra legend. Buddha also rejects the offers of Māra in order to obtain the *summa bonum*; but, whereas Yama is benevolent and himself reveals the liberating truth to Nachiketas with only the habitual jealous reluctance of a god, Māra is the evil one, the tempter.¹

In the Buddhist scriptures all these premises are fully developed. Māra actually assumes the rôle of the sovereign of the world, both of men and of gods; god of death, he is also the god of the living, who are only the food of death; he is the god of re-birth. Māra is Kāma, 'Desire,' since desire is the reason of birth and death; and, because

¹ Oldenberg, *Buddha*, tr. Heng, p. 24.

Buddha is the deliverer from death and birth, Māra is the personal enemy of Buddha and Buddhism, the evil one, the tempter of Buddha and Buddha's disciples.

The dogmatic position of Māra is clear in all our texts: Māra embodies desire, the universal fetterer, the sensual life both here and in the other world.

In scholasticism three Māras—*desaputra māra*, the deity Māra, *maraṇamāra*, Māra as death, and *āśā māra*, Māra as vice and passions—are distinguished. In ancient times these Māras were confused. Māra is not an allegory in the Pāli stories of temptations; he is a demon; he is spoken of as *Namuci*, a Vedic demon killed by Indra.

It follows that mythological features are not wanting, even in the oldest tales of the Pāli canon. They are not, however, predominant. We are actually confronted with the temptation of Buddha by Māra's daughters; but these daughters are Desire, Unrest, Pleasure (*Taṇhā*, *Arati*, and *Rati*). It has been said that these stories—the intervention of Māra in order to make the future Buddha abandon his asceticism (a common topic in the *Mahāvastu*; gods grow jealous of the power acquired by penitents, and dispatch fair damsels to trouble their meditation), or in order to make Buddha reach *nirvāṇa* prematurely—are only poetical descriptions of the *crises de conscience* of Śākyamuni. This view is by far too rationalistic. Such stories, it may be, were looked upon in this light by some philosophers or 'modernists,' but it is safer to admit that the Buddhists believed in a divine enemy of the eternal welfare of men, and embodied this enemy in the traditional god of death. Mythical and folk lore accretions, as well as scholastic concoctions, naturally follow from such a belief. Monks and nuns, especially when living in the 'hermitages,' knew that Māra could appear to them under any form, and ensure their intellectual discussions.

The Sanskrit sources, late when compared with the Pāli ones, but not insignificant even for the restitution of the passages which they have in common with Pāli, indulge in much more dramatic and would-be poetical descriptions of Māra's attacks upon Śākyamuni. Some episodes are entirely unknown in the *Tiṇṇakā*, viz. the battle for the *bodhi-tree*, the possession of which, for the compilers of the *Lalitavistara*, seems to be almost identified with the possession of the *bodhi*, the Enlightenment, itself.

It has been pointed out that even in the Pāli canon the Māra-stories show a gradual development, and that the inventions to be found in the more modern biographies of Śākyamuni, the *Lalitavistara* and the *Buddhacharita*, mark a further point in this development. There is truth in this statement—the multiplication of Māra's daughters and their counter-attacks, a large part of the *śāśana* of the *Lalitavistara*, are not archaic—but the course of the development is not necessarily a chronological one. Less or more mythological versions may be productions of the same age in different circles.

It appears that the Māra folklore has been more luxuriant than can be judged from the Pāli canon. Some bits of popular folklore which have found their way into the authorized literature may be regarded as fragments of a larger cycle. It is only by a mere chance that we know that Māra roams everywhere, 'in the visible shape of murky smoke-men,'¹ to catch the souls of the dying.

It is worth while mentioning that Māra, who is often associated with Brahmā ('the world of men and gods with Brahmā and Māra'), has no fixed

L. DE LA VALLÉE POUSSIN.

MARCIONISM.—L. the founder.—According to the earliest and most reliable accounts, Marcion was a shipmaster (*naviclerus*, or *securus*) of Pontus, and may have been a native of Sinope. The story which makes him the son of a Christian bishop in that region, and declares that he was excommunicated by his father for corrupting a virgin, is, on the whole, improbable, and may have been based on a misunderstanding of some phrase about his corrupting the doctrinal purity of the Church. It is possible that he was born and bred a pagan, and was converted to Christianity about the time of his journey to Rome. But the fact that his system of doctrine is based entirely on the Jewish and Christian Scriptures makes it, on the whole, more probable that he spent his youth in a Christian atmosphere.

Marcion arrived in Rome in or near A.D. 140—'after the death of Hyginus,' according to Hippolytus (see Epiph. *Her.* xlii.). Whether or not a recent convert, he at first became a zealous member of the Roman Church, to which, according to Tertullian (*de Præscr.* 30), he presented the sum of 300,000 aesteres. But before long trouble arose through his falling under the influence of the Syrian teacher Cerdo, who had a certain connexion with the Gnostics, and whose distinctive doctrine was that 'the God proclaimed by the law and the prophets was not the father of our Lord Jesus Christ. For the former was known, but the latter unknown; while the one also was righteous, but the other benevolent' (*Iren. Her.* I, xxvii. 1).

It is easy to see how Cerdo's teaching would lead Marcion into uncomfortable relations with the orthodox Church; and it is not surprising to learn that his gift of money was returned to him, and that he was placed outside the pale. This took place about the year 144, and from that date the Marcionite propaganda must have been active, since Justin Martyr tells us in his *First Apology* (c. 150) that Marcion

'by the help of devils has caused many of every nation to speak blasphemies, and to deny that God is the maker of this universe, and to assert that some other being greater than He has done greater works' (xxvi.).

Tertullian, who was writing his *adversus Marcionem* in 207 or 208, places the activity of Marcion in the reign of Antoninus Pius ('sub Pio impens'). Irenæus (*loc. cit.*) says that Cerdo came to Rome in the episcopate of Hyginus (c. 137-141), and that his successor Marcion flourished under Anicetus (154-166). In view of the different statements, we may conclude that Marcion became active as a teacher some years before 150, and that his activity ended before or about the time of the death of Anicetus. For Marcion's own death no date can be definitely assigned.

3. The doctrine.—The teaching of Marcion may be reviewed under five heads. (a) theology proper, or the doctrine of God, (b) Christology, (c) criticism

¹ This account, which was unknown to Tertullian, may be traced through Epiphanius to Hippolytus. The Armenian version is thus given by Emil (1848): 'This Marcion was a native of Pontus, the son of a bishop. And having corrupted a virgin, he went into exile on account of his father's having expelled him from the Church. And going to Rome at that time to seek salvation (lit. position) and not obtaining it, he was irritated against the Faith' (*Against the Jews*, ch. 17.).

and exegesis of the Scriptures, (d) the application of religion to practical life, and (e) the ritual of worship.

(a) *Theology*.—In theology Marcion's main assertion was that the just God of the law and of the OT generally was other than and inferior to the God revealed in Jesus Christ, the chief attribute of the latter being goodness or loving kindness. The idea of a dual godhead seems to have come from the Gnosticism through Cerdo, and this fact may be connected with the (otherwise doubtful) statement by Clement of Alexandria (*Strom.* VII. xvi. 107) that Marcion, 'being contemporary with Basilides and Valentinus, accompanied with them as an elder with younger men.' At all events, Marcion's theology differed from the Gnostic in excluding any doctrine of *mona*, and, indeed, any element which could not be derived from his interpretation of the Jewish and Christian Scriptures.¹ His teaching was not in any sense pagan. His lost work named the *Antitheses* contained the proofs of his theology, which were attained by placing antitheses by and concerning God in the OT side by side with opposed statements by Jesus and Paul about God in the NT.

He further differed from the Gnostics by abstaining from any attempt at a completed speculative system. The contrasts which he drew out were final, and he did not seek to harmonize them in a higher principle; for him the two *dyads* were and remained completely separate, in spite of the moral superiority of the God of the NT. The logical weakness of the position is well shown by Tertullian. On the one hand, the introduction of number or plurality was inconsistent with the essence of true godhead; and, on the other, the interposition of the good God—the Stranger—in a world which had been created by and belonged to another was an obvious stumbling-block.

(b) *Christology*.—The mode of self-revelation employed by the good God was, according to Marcion, that 'in the 15th year of the reign of Tiberius He (i.e. Jesus Christ) came down to the Galilean city of Capernaum'—to which Tertullian adds the explanation, 'of course meaning from the heaven of the Creator, to which He had previously descended from His own' (*adv. Marc.* iv. 7). The relation of Christ to the good God His Father does not seem to have been otherwise defined than by the idea of sonship. Of the human experience and suffering of Christ Marcion took a wholly Docetic view. Rejecting the Gospel accounts of a human birth, he represented the supposed sudden appearance of Christ in the year 29 as an entirely new phenomenon, without any root in the past history either of the people or of the human race. And, while he regarded the life of Christ on earth and His crucifixion as the means of salvation for men, he nevertheless believed that our Lord suffered only in appearance. On the other hand, he did accept the historical facts narrated in those portions of the Third Gospel (see below) which he believed to be genuine, and shared the belief of his time in other elements of the Christian creed; thus he laid great stress on our Lord's descent into Hades and His preaching to the men of former generations who were there confined.

Again, as he believed in two Gods, he also recognized two Christs. According to him, the Messianic prophecies of the OT were true predictions, referring, however, not to Jesus Christ but to another Messiah who was to appear later as the messenger of the just God of the OT. But his exposition of the work of this Messiah does not

¹ Marcion appears to have held the independent, though genuine, existence of *dyads* or matter. He certainly did not attribute to it the degree of activity which some of his followers did. In his view the Creator (i.e. the just God or God of the law) was the ruler of the whole material universe.

seem to have proceeded beyond applying to him the language of OT prophecy.

(c) *Criticism and exegesis of the Scriptures*.—In his dealing with the Scriptures Marcion combined a high estimate of the objective truth of the OT as a historical document with a startling and audacious subjective criticism of the NT. His mode of handling each was largely dictated by the necessities of his position. Convinced of the fundamental discrepancy between the theologies of the OT and of that which he regarded as the genuine kernel of the NT, he naturally laid stress on every narrative, discourse, or even verse in the Jewish Scriptures which seemed to him to set forth the Jewish as opposed to the Christian view. His treatment of the OT has at least one great merit—he rejected allegorical explanations such as were current among the Gnostics; he took the history literally, and laid full stress on its distinctive characteristics. In the NT, on the other hand, while he similarly preferred the literal to the allegorical explanation, he proceeded ruthlessly in the way of cutting out such books or portions of books as did not fit in with his view of the facts, and in re-editing the text to any extent on subjective grounds. As the Third Gospel seemed on the whole to suit best the requirements of his theology, he adopted this, though in a mutilated and much altered state, as the only reliable portion of the historical writings contained in the NT. To him Paul was the only true apostle of the Master, and he believed that the Third Gospel—which he did not call Luke's—had been written under Paul's supervision and expressed Paul's view of the life of Christ. The other Evangelists¹ he regarded as handing on a false Judaic tradition which had grown up among the Twelve, and he therefore rejected their works in toto. In the rest of the NT he accepted only ten Pauline Epistles, rejecting the Acts, the Pastoral Epistles of Paul, and the rest of the NT writings so far as known to him. And in the ten Epistles he used considerable freedom in rejecting or altering passages which conflicted with his views. An understanding of his detailed treatment of the NT can be best obtained by reading the fourth and fifth books of Tertullian's *adv. Marcionem*.

(d) *The application of religion to practical life*.—It is easy to see that, however arbitrary and subjective was Marcion's attitude in relation to the Christian tradition and its literature, his main interest in the matter was not speculative or theoretical, but religious and practical. This is shown by the fact that he attempted no higher synthesis, but allowed what seemed to him the irreconcilable opposition between the Creator and the NT God to continue until the end of time. To him the means of salvation was faith in Jesus Christ and in His Father. This faith was to issue in an ascetic life which despised and rejected the works of the Creator, so far as the conditions of human life allowed. Thus the celibate alone were admitted to baptism. A further consequence of this attitude was that Marcion denied the resurrection of the body; the salvation through Christ was for the soul and spirit only. The moral earnestness of the Marcionite community was proved both by the zeal of its propaganda and by the large number of its martyrs.

(e) *The ritual of worship*.—The aim of Marcion was to found not a school, but a church. Accordingly, in points of ritual he for the most part followed the usage of the orthodox Church, but admitted catechumens to the same privileges in Church worship as baptized persons, and forbade the use of wine in the eucharistic service. Some

¹ There is no definite evidence as to whether Marcion knew the Fourth Gospel.

of the peculiarities of usage in the Eastern branch of the Marcionite church may be gathered from the statements of Eranik (bk. iv.):

'He allows not one baptism only but three after (successive) transgressions, and in place of catechumens who have died he baptizes them to be baptized. And he has the boldness to direct women to administer baptism—which no one from the other sects has taken upon himself to do—but not to administer a second or a third baptism, nor (from his custom) to admit women to be priests, etc.

Marcion's followers seem to have elevated him (at least virtually) to the rank of bishop, and the constitution of the sect was probably episcopal, though on this point we have not much information.

3. Later developments.—Among the followers of Marcion some, like Pottius and Basilides, followed their master in recognising two principles or divine beings; but some, like Apelles, held only one ultimate principle, the God of the NT, while others accepted three independent principles—the Good, the Evil, and the Evil. Of these different teachers Apelles is the most interesting. Starting from the Marcionite opposition between the Creator and the NT God, he seems to have regarded the former as 'an opposing spirit' who owed his existence to the supreme God. The material world, in the view of Apelles as of Marcion, was created by this 'opposing spirit' and so Apelles also taught an ascetic view of life. On the other hand, he rejected Marcion's Docetism, and held that Christ really felt and suffered in His earthly experience, although He did not possess a truly human nature in the orthodox sense. But he maintained that in the Crucifixion lay the hope of man's salvation.

The doctrines of Marcion were for a time widely spread both in the West—Rome and Italy—and in the East—Arabia, Syria, Armenia, Cyprus, Egypt, and perhaps even Persia. After sharing in the persecutions inflicted on the Church, particularly under Diocletian, the Marcionites seem to have enjoyed a short period of toleration early in the 4th cent., to judge from an inscription of A.D. 318-319 discovered a few miles south of Damascus, which records the existence of a village community of Marcionites. But their worship was soon prohibited by Constantine. In the West they seem early to have succumbed to the more powerful propaganda of Manichaeism (q.v.), but in the East they may be judged to have exerted a stronger and more enduring influence. We infer from the attention given to them in the controversial works of Ephraim, and from the careful account of their doctrines left us by Eranik, an Armenian writer of the 5th cent., that they counted for much in Eastern Christendom. So late as the 10th cent. they are mentioned in Arabic by the *Fihrist*.

As the best illustration of the nature of Eastern Marcionism, we subjoin a literal translation of Eranik's Armenian account:

'Marcion wrongly introduces a strange element (lit. strangeness) in opposition to the God of the Law, putting with him also Hyle, by way of essence, and three heavens. In the one (they say) dwells the Stranger and in the second the God of the Law, and in the third his armistice; and in the earth Hyle, and they call her the Power of the Earth.

And he so orders the world and the creature, as the law says. But he adds that in union with Hyle he made all that he made, and Hyle was as though a woman and a working wife. And after making the world, he went up together with his armistice into heaven; and Hyle and her sons remained in the earth, and they each held authority—Hyle in the earth, and all that of the Law in heaven.

And the God of the Law, seeing that the world is beautiful, thought to make in it a man. And going down to Hyle in the earth, he said, "Give me of thy clay, and from myself I give spirit, and let us make a man according to our likeness." On Hyle giving him of her earth, he moulded it and breathed into it a spirit, and Adam became a living soul, and therefore was called Adam because he was made from clay. And moulding him and his wife, and putting them in the garden (so the law says), they continued giving him commands, and rejoined in him as in a common aim.

And (he says) the God of the Law, who was lord of the world, seeing that Adam is foolish and worthy of administration, punished

how he could steal him from Hyle and appropriate him to himself. Taking him aside, he said, "Adam, I am God, and there is no other, and besides me thou shalt have no other god. But if thou hast any other god beside me, know that thou shalt surely die." And when he said this to him and mentioned the name of death, Adam, struck with fear, began by degrees to separate himself from Hyle.

And Hyle, coming to give him commands according to custom, saw that Adam was not obeying her, but was purposely hiding about and not coming near her. Then Hyle, suspecting in her mind, knew that the Lord of Creation had deceived her. She said, "From the source of the fountain its water is defiled. How is this? Before Adam is increased with offspring, he has stolen him by the name of his godhead from me. Since he has stolen me, and has not kept with me the covenant, I will make many gods, and will fill with them the whole world, that he may despair who is God and not find out."

And she made (they say) many idols and named them gods and filled the world with them. And the name of God, that of the Lord of Creation, was lost among the names of the many gods, and was not found anywhere. And his offspring was left astray by them and was not serving him, for Hyle claimed them all for herself, and did not suffer one of them to serve him. Then (they say) the Lord of Creation was enraged because they served him and obeyed Hyle, and one after another who were departing from their father, he was coming in anger into Hell. And Adam he cast into Hell because of the tree, and so went on coming all into Hell, up to twenty nine generations.

And (they say) the good and strange God, who was sitting in the third heaven, seeing that so many peoples perished and were tortured between the two deities, the Lord of Creation and Hyle, was grieved for those hidden into the fire and tortured. He sent his son to go and save them, and to take the likeness of a servant and assume the form of a man among the sons of the God of the Law. "Hail," he said, "thy fathers, and raise their dead to life, and open the eyes of their blind, and do among them great cures without price, until the Lord of Creation sees thee, and he will justify, and crucify thee. And then when thou diest, thou shalt go down into Hades, and bring them from thence, for Hades is not worthy to admit life within it. And therefore thou shalt go up on the cross, that thou mayest become like the dead, and Hades may open its mouth to admit thee, and thou mayest enter into the midst of it and empty it."

And when he crucified him (they say), he went down into Hades and emptied it. And taking the souls in his within of it, he led them into the third heaven to his Father. And the Lord of Creation, being enraged, in anger tore his garment and the wall of his temple, and defecated his son and clothed his world in blackness, and sat in grievous mourning.

Then Jesus, going down a second time in the flesh of his godhead to the Lord of Creation, was entering into judgment with him about his death. And the Lord of the World seeing the godhead of Jesus, knew that there is another God besides himself. And Jesus said to him, "I have a suit with thee, and let me be judge between us but thine own law which thou dost write." And when they preferred the law Jesus said to him, "Dost not thou write in thy law that whoso killeth shall die, and whoso sheddeth the blood of a righteous man, they shall shed his blood?" And he said, "I do so write." And Jesus said to him, "Now give thyself into my hands, that I may kill thee and shed thy blood, as thou dost kill me and shed my blood, for I am indeed purer than thou, and have wrought many benefits in thy creation." And he began to reckon up the benefits which he had wrought in his creation.

And when the Lord of Creation saw that he had conquered him, and knew not what to say because out of his own law he was condemned, and was finding no answer because he deserved death in return for his death, then falling to prayer he was beseeching him, "Because I have sinned and killed thee in ignorance, because I knew not that thou art a God, but reckoned thee a man, it is given thee as satisfaction for that to carry off where thou wilt all them who shall be willing to believe in thee." Then Jesus having him laid hold of Paul and revealed to him the purchase and sent him to preach that "We are bought with a price, and every one who believes in Jesus has been sold by the Just to the Good."

This is the beginning of the heresy of Marcion, besides many other worthless things. And this all do not know, but a few of them. And they hand on the teaching to one another orally. The Stranger (they say) has bought us with a price from the Lord of Creation, but how or with what the purchase has been made, that not all of them know.

LITERATURE.—A full list of authorities is supplied by A. Harnack, *Umschichte der christlichen Literatur bis Konstantin*, Leipzig, 1893-1904, I. 191-200, and a shorter list by G. Krüger, in *FESt* 20. 303 f. The main ancient sources are Irenaeus, Tertullian (esp. *adv. Marcionem* and *de Præceptis*), Clement of Alexandria, Origen, pseudo-Tertullian (*Contra Marcionem*), Adamentina, Ephraim, Hippolytus, Theodoret, and Eranik. An exhaustive account of Marcion's dealings with the NT will be found in T. Zahn, *Umschichte des NT Kanons*, Erlangen, 1890-92, I. 268-718.

N. McLEAN.

MARCUS AURELIUS ANTONINUS.—

1. Early influences.—By birth and training, alike on his father's and his mother's side, Marcus, son of Annus Verna, belonged to the official aristocracy of Rome. From boyhood he was inured to the

round of absorbing and ceremonious etiquette which, under the régime of Hadrian, made up the official life of the capital. Through his uncle Antoninus, whom Hadrian appointed *Quæstor vir* for the administration of Italy, he was brought from childhood into personal touch with the Emperor himself, and the playful 'Verissimus' accorded to him by Hadrian re-appears even in the formal address of the Christian apologist.

Another influence, which he himself attributes to his mother's fostering care, sank deep into the fibre of his being. In the antique life of Rome, religion, dependence upon God, pervaded every turn and act; and from the simpler life of the home and farm the ancient pieties and rituals had never died away. Under Augustus the historic festivals and shrines, the ancient brotherhoods and colleges and guilds, of Italian priests, of Arval Brothers, of Vestal Virgins, and others were revived, and a profusion of new cults was introduced. Priesthoods became the dress of leadership and rank, and patriotism found articulate expression in the worship of the Emperor and in countless forms of mystery worship. To this religious complex Marcus was acclimated from youth. At eight years old he was enrolled among the *Salli*, the most primitive of all the priestly colleges at Rome, and 'got all the forms and liturgies by heart.' At sixteen, as *Præfectus feriarum Latinarum*, he solemnized the *Fea* upon the Alban Mount; and besides the formal dignity of *Pont. Max.*, *XV vir Sacr. Fec.*, and *VII vir Epul.*, he wore the cowl of Master among the Arval Brotherhood. The prayer of the college is still extant which brought blessing for him and L. Verus in their conflict with the Marcomanni. At the outset of his great campaigns he purified the people with the solemn ritual of the *Lustrationem*; at Athens he was himself initiated in the Eleusinian mysteries; on the Danube he approved the casting of bones into the stream at the bidding of the Eastern magi. His Stoic monotheism lent itself to sympathy with cults of every kind, as witnesses to the divine power.

a. Life.—His boyhood was given to wholesome and staid discipline. At Rome he fenced, played ball, and enjoyed the mischievous excitements of the circus and the amphitheatre; at Loricum he rode, hunted, walked, and shared the glories of rural industries and festivals. The correspondence with Fronto, his master in rhetoric, shows rare docility of type. Boyish experiments in philosophy ended in complete conversion under the personal of Aristotle, the influence of Rantius, and the charm of Epictetus.

His life falls into three sections: A.D. 131-136, boyhood, ending with his adoption in 136; 136-161, apprenticeship to rule, as Cæsar and lieutenant to his adoptive father, Antoninus; 161-180, imperial rule, shared nominally in 161-169 with L. Verus, and from 177 with his son, Commodus.

Till 167, when the Danubian campaigns begin, the years are filled with unremitting administrative activities. The *Edictum perpetuum* of Salvius Julianus furnished the basis of the Pandects of Justinian; Gaius and Papinian immortalize the era, as master-builders among those who reared the great fabric of Roman law. Under the direction of Stoic principles the rigours of the *patria potestas*, the slave-owner, and the creditor were brought within control; protection was accorded to women, children, wards, minors, freedmen, slaves; educational and charitable endowments were multiplied; professorships were established at Universities; and medical service was organized for communities. Commerce, industries, and communications were liberally fostered by pro-

¹ Capit. 4.

vision of roads, aqueducts, bridges, and havens, while in special crises, as of earthquake, fire, famine, or inundation, State aid was ungrudgingly extended. The collection and distribution of taxation were vigilantly supervised, and vast extensions given to the forms and activities of local and municipal government. Wealth lavished its resources upon the provision of temples, baths, gardens, colonnades, and other embellishments of city life, while among all classes of the community guilds, colleges, and clubs, though kept under strict surveillance, multiplied to an almost incredible extent.

In his dealings with the Christians, Marcus followed the practice of his predecessors. First by Nero, then by the Flavian Emperors, especially Domitian, Christianity had been treated as a form of magic (as *drôma, dôtory*) and treason, that lay outside the province or protection of law and entailed the penalty of death. Like rebellion or brigandage, it fell under the summary jurisdiction of the Emperor or his representative. Trajan, setting his face against professional or anonymous delation, and Hadrian, going still further in discouragement of malicious information or assault, did much to arrest active persecution; but Christianity continued to be a capital offence, and the forms of the Imperial cult furnished a standing test of complicity or disclaimer. Enforcement of the penalty rested with the Emperor's delegate, and was rarely exercised. But outbreaks of personal hostility, of local prejudice, or of racial or religious jealousies might at any moment bring it into play. The progress of Imperial consolidation, and the rapid social developments of Christianity, both tended to enhance the seeming disaffection of Christians to Imperial unity. In Pliny the acts of condescension and compassion softened contempt for the *perversa superstition*, which seemed to invite and almost compel persecution; in Marcus the accent of irritation becomes prominent; to him Christian defiance seemed like the melodramatic pose which induced Proteus Peregrius, in the story of Lucian, to cast himself on the pyre as the finale of the Olympian festival. On the main merits of the case he shared, no doubt, the judgment of his contemporaries, the leading Hellenists of the time, and among them his own intimate associates. The perusal of Lucian and the malignant disdain of Celsus do not stand alone; Fronto still credits the Christians with nameless crimes and immorality; Aelius Aristides entreats their *mesa* and mischievous self-seeking; Galen quotes them as the type of impenetrable bigotry. The Emperor's political philosophy led him the same way. The Græco-Roman unity of Empire was the World-Cosmos finding realization in the communities of men; the highest and best hopes of the world were centring in that consummation of the civic bond about the person of the Emperor; and the self-willed isolation of the Christian was essential atheism, in its estrangement from the divine impulse immanent in man.

But, as a statesman, Marcus holds to the prescriptions of Imperial policy. The rescript, cited by Eusebius, is plainly unauthentic, and belongs, if to any period, to that of Antoninus. Melito himself discredits the persecuting edicts to which he refers, and bears witness to the clemency and philosophy of the Emperor in checking tumultuary acts of violence against the Christians. The decrees, or rather rescript, uttered against 'demoralizing superstitions' may have been partly aimed at Christians; but the terms were general, and it was retained upon the statute-book under later Christian Emperors. Possibly under its terms Christians were sent to the mines of Sardinia, but

² Hist. iv. 12.

³ In Sen. Hist. iv. 22, 23.

in point of fact the penal provisions—deportation for those of higher rank, and death for humbler offenders—would mitigate, not enhance, the penalty to which all avowed Christians stood liable. In their social organization the Christians remained as free as other sects. In Rome itself Church-membership and jurisdiction, episcopal authority, and literary activity advanced apace. Apologists, such as Justin, Melito, Athenagoras, one after another addressed their pleas to the Emperor in person; Tatian and Hermas retort scorn and invective on their antagonists. Christians served in the Imperial households and, as the story of the Thundering Legion proves, were numerous among the legionaries.

None the less, illogical as was the situation, the profession of Christianity remained under the Imperial ban, and Christians as such were judicially liable to death. In two of the most famous instances when the penalty was enforced, responsibility devolves directly on the Emperor. The first concerns Justin, apologist and martyr, who with six associates was brought before the bar of Rusticus, prefect of the city, on the charge of 'atheism and sacrilege'; each in succession adhered to the Christian confession, and, on refusing to abjure or to offer sacrifices, was ordered to execution. Marcus was at the time resident in Rome, and, no doubt, endorsed the sentences passed by the Stoic prefect, his close friend and ex-preceptor. Still more famous is the persecution recorded in that masterpiece of Christian martyrologies, the letter of the Christians of Lyons and Vienna to the sister churches in Asia and Phrygia.¹ The outbreak, rooted in racial, even more than religious, antipathies, was fanned to fever heat by the frenzies of the amphitheatre, where the Christians were subjected by the mob to hideous and revolting tortures and indignities. When order was restored, and the martyrs, rescued from the fury of the mob, were remanded to prison, their sentences was referred to the Emperor himself, whose ruling was that, if they still persisted in recalcitrance, the law must take its course. The incident was fresh in his mind when he wrote down his reflexion on Christian pervasivity and bravado.² In Asia too, and in Africa, sporadic acts of persecution took place, and martyrdom was judicially inflicted, though for the most part Christians were scorned under the Imperial eye from outbreaks of popular fanaticism or dislike. Of systematized persecution there was none, and to the Church historians and apologists of the next generation the era of the Antonines was an age of peace and toleration.

Marcus's latter years were clouded with calamities, public and personal. In 166 Italy was desolated by plague, from which it never recovered; in its track came famine, earthquakes, and inundations of unusual severity; then the yet more terrific inroad of barbarians, streaming across the Alps, and knocking at the gates of Aquileia. From that date onwards the legions of the West were locked in a life-and-death struggle with Marcomanni, Quadi, Jazyges, and other trans-Danubian hordes, sustained and carried to a triumphant conclusion only by the dogged and intrepid leadership of Marcus himself.

3. The 'Thoughts'.—From these ordeals the *Thoughts* emerge. They are not the exposition of a system, but a criticism of life; reflexions confided 'To Himself' in the hours of loneliness and interludes of strain; a retrospect and record of experiences; a manual of duty and endurance. In them a soul communes with itself, examines motives, probes illusions, corrects or re-affirms conclusions, emits the sigh of weariness or the

ejaculation of disgust, but perpetually renounces resolve, unalterably clinging to the noblest hypothesis with which it was familiar. Beginning in almost random reminiscences, composition gave relief from strain, and became a substitute for company, and a pleasure for its own sake; and for Marcus Stoic principles so interpenetrated the whole fabric of conduct and creed that these self-communings shed clearer light upon the actualities of Roman Stoicism than the homilies of Seneca or the *Memorabilia* of Epictetus.

(1) *Logic*.—In his theory of knowledge and sensation he adheres closely to the terms of Epictetus. The *phantasia* are in part sense-impressions proper, derived from things, in part impressions of aims, qualities, or attributes, moral or aesthetic, belonging to things, and conveyed to the reason. It is for reason to sit in judgment on them, determine their true content and value, and firmly maintain its own prerogative. In the one passage in which he formally discusses the doctrine of assent (*συγκατάθεσις*, v. 10) he drops the Stoic claim to final certitude—*εὐσυνέτην ἀποδέχασθαι*. But there remains a tenacity of moral assurance which suffices for conduct of life. Reason as part of the divine immanence attains a coherence, a consistency, and strength which give the indefensible assurance of truth.

(2) *Theory of being*.—In Stoic monism matter, form, and force are an inseparable unity. The life-power, self-determined from within, is embodied in the various forms of phenomenal and spiritual being. The variety of being is explained physically by the doctrine of *écœne*, that is, of 'tension within the life-producing force,' present in ever-varying gradum in all forms of existence, material or spiritual. In the successive grades of inorganic, vegetable, animal, and human life each variation represents a different degree or kind of tension in the informing *écœne*, or life-power. Cohesion, life, and reason are resultant phases of embodied spirit, varying in the same way as inorganic substances are seen to vary under processes of rarefaction or condensation. 'Écœne,' 'hold,' or 'cohesion,' is the characteristic property of being in its inorganic forms, *φύσις*, 'growth-power,' of vegetable life (vi. 14), *ψυχὴ* of 'soul' realized in the animal phase (ix. 8, x. 23), while the higher grade of 'reason'—*λόγος*, co-extensive, it will be noted, with the faculty of speech—appears only at the stage attained by man. The higher tension always includes the properties of the lower, so that the higher order shares the attributes of the lower, but with its own *differentia* superadded. Thus man shares with the inferior orders *écœne*, *φύσις*, and *ψυχὴ*, but 'reason' is all his own.

Each type finds its guarantee of individuality and perpetuity in the seminal or generative principle, the *σπέρματικὸς λόγος*, which defines and reproduces the type. This survives immutably, until its final re-absorption into the 'seminal principle' of the universe, the primal reservoir of life (iv. 14, xi. 34). That of the universe at large contains and is likewise immanent in the countless individualized *σπέρματικοι λόγοι*, which determine, conserve, and reproduce life in all the several orders of being through their 'productive capacities of realization, change, and phenomenal succession' (iv. 14, ix. 1).

(3) *Soul*.—Man, the microcosm, within his individual range, is the counterpart of the macrocosm, in which he dwells, and with which he reciprocates currents of sensation (*αἰσθησις*), impulse (*ἡρώς*), emotion (*πάθος*), and reason (*λόγος*, *ῥαϋόν*). All these are activities and reactions of the soul, the counterpart and product of that cosmic soul which permeates and moves the universe. Soul is self-moved, within the range of those seminal principles

¹ *Epist.* 115 v. 1.

² xi. 2.

from which it originated. As, in the individual, soul actualizes itself in physical energies, such as life, growth, sensation, and all bodily functions and appetites, in moral, such as impulse (*ἡμῆς*), inclination (*ἡμῆς*), aversion (*ἡμῆς*), will (*ἡμῆς*), or in intellectual, such as perception (*ἡμῆς*), judgment (*ἡμῆς*, *ἡμῆς*, *ἡμῆς*), mind (*ἡμῆς*), or reason (*ἡμῆς*), so, too, the world-soul operates in energies no less diverse in operation, now as the natural forces that actuate all inorganic or organic life, e.g. heat, moisture, breath, contraction, expansion, or the like, now as the moral forces which we know as fate, destiny, necessity, the 'laws' of nature or of God, and now, again, as those purposive or reasoning powers which, as design, providence, *Zōna*, God, direct the plastic movement of the whole.

For Marcus these conclusions are the key which unlocks all problems of life and thought. No Stoic thinker applies this key more resolutely and consistently to the whole field of ethics, personal and social. Every action, every relation, is referred to the cosmic test; by it he construes all the accepted formulas of the school, and resolves their ambiguities.

(4) *Cosmic unity*.—Cosmic unity stands at the centre of his thought, the pole to which his moral compass continually turns. In its contemporary phase of microcosmic self-expression the unity of the cosmos was realized and reflected in that world-Empire of Rome whose vital activities centred in and radiated from Marcus himself. The Emperor was the indwelling god of the State, as earth was of the universe.

Unity is written large upon the face and in the heart of things. The idea that the world-order can result from chance, from the confused clash and welter of atoms, is impatiently dismissed. It would imply permanent confusion, moral and intellectual—a universe as unintelligible as intolerable. Beyond all possibility of mistake, materially and spiritually, the cosmos is a perfectly co-ordinated unity, 'one order made of all things, one God through all, one being, one law, one reason common to all things intelligent and live' (vii. 9), as is shown by the ramifying bond of ubiquitous design (*ἡμῆς*, iv. 45) and that unerring rapport between the constituent parts (*ἡμῆς*, v. 20, ix. 9) which results from perfect interpenetration (*ἡμῆς* & *ἡμῆς*), and makes the whole inseparably one.

Design is everywhere apparent, in small and great—in all the processes of nature, in the adjustment of means to ends, in the social life of animals, in economy of materials, in the entire 'constatation of the web.' Nature is a vast laboratory, in which there is no destruction and no waste, but processes of cyclic transmutation and repair. Divination, oracles, dreams, add their corroborative testimony to the providential plan that runs through all.

Without reserve Marcus embraces the Stoic explanation of reason immanent within the world, accounting for its unity, its order, and its constitution. The most general term employed for this pervading and directive reason is the unifying *Logos*, which the Stoic school derived from *Heraclitus*, 'the reason and the ordinance of the city and commonwealth most high' (ii. 16), the all-pervading, all-directing, all-perfecting principle and power which animates and operates in all that is. Less frequently it is called nature, or 'the nature of the whole' (vi. 9, x. 6, 7). But the preference is for terms which associate it with those analogies in human consciousness on which the whole conception is based. Marcus speaks not only of the world-mind and thought (*ἡμῆς*, *ἡμῆς*), world-soul and moral sense (*ἡμῆς*, *ἡμῆς*),

but also of world-impulse and world-sensation. The world, as a live whole and being (*ἡμῆς*, iv. 60, x. 1), throbs to one master purpose as truly as all the energies of man respond to the direction of the unitary sovereign self.

(5) *Unity of things*.—The unifying power, a common gravitation revealing itself in man as truth, beauty, and love, combines, constrains, and co-ordinates all to a common end (xii. 30). It finds its type or organ in the central sun.

'I am the eye with which the Universe
Beholds itself and knows itself divine'
(Shelley, *Hymn of Apollo*, vi. 11.)

But the splendid harmony invests common things and processes with an appeal and beauty of their own; they contribute to the advantage of the universe; they are notes, or discords, which swell the great accord. Not only the heavenly bodies in their orbits, sun and stars, rain and air, the living bees and nesting birds, the lustre of the emerald, and the bending of the corn, but even things unprepossessing in themselves—the cracks and crevices in bread-crust, the foam that flecks the wild boar's mouth—appeal to him who is in unison with nature, and touch hidden springs of answering admiration and desire.

'Earth is in love with rain, and holy ether loves—Yes, the world-order is in love with including what is to be. To the world-order I profess Thy love is mine' (x. 11).

(6) *World-soul*.—The unity of the indwelling mind corresponding to personality in the individual man is commensurate with the scale of the universe, beneficent and rational in aim. Degrees of goodness and of value are part of the great scheme, but everywhere 'things lower are for the sake of things higher' (v. 16, 30, vii. 56, xi. 10, 12, etc.), and all is for the best.

(7) *Evil*.—The oneness of the cosmos is utilized to explain the mystery of evil. Seeming evil is good misapprehended or disguised. The course of nature is all good. 'It contains no evil, does no evil, and inflicts no hurt on anything.' Analyse the facts, suppress the hasty, ill-formed inference, and the evil ceases to exist, or changes its complexion (vi. 36, vii. 26). It is the discord that prepares and shapes the harmony; the coarse jest (as *Chrysippus* said) that gives the comedy its point (vi. 2). 'Nothing is hurtful to the part which helps the whole' (x. 6).

(8) *Providence*.—The mind of the universe is social, 'civil' (*ἡμῆς*) in all its aims. Fate, destiny, necessity (*ἡμῆς*, *ἡμῆς*, *ἡμῆς*), overrule all things for good; man's freedom is accord with the movements of the universal Providence, the object of his reverence, trust, regard.

(9) *The round of being*.—Everywhere there is the recurrent transformation of elements, pursuing their continuous round. Change is nature's joy (ix. 26, iv. 26), the life of individuals, of nations, and of the universe at large. The 'passage up and down' repeats itself in history, upon the small scale and the great; always 'the same dramas, the self-same scenes reproduced; the court of Hadrian, the court of Antoninus, the court of Philip, Alexander, Cressus; the same stock rôles, only with change of actors' (x. 27; cf. vi. 46). This is the depressing side of the Emperor's philosophy, the resignation from which he would not deign to extricate himself by self-deception.

(10) *Man a part of cosmos*.—Man is by nature an inherent part, a living and organic member—*μέλος*, not *μέρος* merely—of the whole. He draws from its organic life as vitally as the branch draws sap from the parent tree. His 'nature' is the nature of the universe; self-realization of that nature is an instinct and a call as primary as that of self-preservation, attained by deliberate co-operation with its designs and ends, by loyal following

of law and reason, by active citizenship in the world-commonwealth.

(11) *Virtue*.—Moral obligation is fulfilment of function, active acknowledgment of reciprocal relation to the whole. And this alone is able to minister interior content, 'life with the gods,' 'citizenship in heaven.' The soul—a particle of Zeus (v. 27), the good genius or the God within (iii. 4, 6, 16), the lord and law-giver (iv. 1, 12), the pilot reason (vii. 84), the fellow-citizen, the priest and minister of God—is the power within which makes for righteousness. The indwelling presence becomes almost that of the Holy Spirit in the Christian believer. Prayer is not merely communion with the inner self, but a true intercourse with God; the self-communications which the sage has left us are but part and sample of his habitual practice of the presence of God.

(12) *Littleness of man*.—Man is indeed part of the universe, but how immeasurably small a part—a morsel in the mighty sum, a moment between two infinities. Fame is as transient as it is brittle and precarious—a short-lived rattle of tongues, a bubble that bursts and vanishes (ii. 7, iii. 10, iv. 2, 10, viii. 30, etc.); gratitude is precarious and belated; virtue is its own and sole reward; it consists in mastery of the will, ability to uphold and satisfy the instincts of reason in fellowship with nature and God. If ever that is forbidden or debarred, then indeed God sounds the signal for retreat. Unmurmuring and undisturbed, we quit the rank. The exodus is quick and easy—a 'bare bodkin' is enough. The play is ended (xii. 36); ring the curtain down. Death is the natural end of man's ephemeral endeavour. Whatever be its physical analysis, extinction, dispersion, or transmutation (xi. 8)—alternatives which are dispassionately considered—the dissolution of the material elements ends the present resultant; they take their place in other compounds, while the 'seminal principles,' or life-seeds, will either integrate new forms and activities of being or themselves be resumed into the central reservoir of the world-life.

(13) *Ethics*.—In ethics the eye is fixed upon the inner self, upon the duties, disciplines, and obligations proper to his own experience. But the Imperial position assumed gives breadth and elevation of view, and the fixed sincerity of the writer stones for lack of form, or method, or variety. The commonplace or the paradoxes of Stoicism—the inseparableness of virtue, or the indefectibility of the wise—are not dismissed at large. The more developed cosmistry of later Stoicism, with its scheme of conditional duties (*officia*, or *kathekonta*), its recognition of preferential moral choices (in *proposita* and *deontologia*), its admission of relative moral values (*aequidistantia*), its belief in 'proficiency' (*epiache*), or progressive growth in philosophic grace, is everywhere assumed, though seldom in scholastic phraseology. The philosopher is on the throne, and passion is outlawed. Duties of inferiors, sins of the flesh, all vulgar vices of the tyrant or the profligate, even the licence and the luxuries of city life, are not in view. The whole attitude is one of strained, insistent obligation, wrought out in patience inexhaustible; men are the recipients, himself the dispenser, of benefits; in realization of the social tie, duties to equals and duties to inferiors monopolize the field. Against ingratitude nature has provided forbearance as an antidote. Of the four cardinal virtues courage seldom receives mention; truth is not protest or resolve, but that singleness of word and act, that quiet undeviating 'pursuit of the straight course,' which power and place make doubly difficult; justice comes urging, not the rights of the oppressed, but the obligations of the strong; as regards wisdom or self-control, it

may be said that the whole book is an enlargement upon that theme. The moral perturbations which he dreads are those which beset power and place and privilege, such as impatience, discourtesy, distrust, officiousness, or such more delicate delinquencies as self-absorption in the press of current duties, the want of moral nerve or fixity of aim, or the indolence which, rushing to hasty conclusions, admits unwarranted impressions or desires. And beside the solid virtues and charities incumbent on the ruler are set the social graces which adorn the official and the gentleman—consideration, candour, modesty, attentive and intelligent perception, courtesy, tact, address in conversation; and the compass of morality is extended to such refinements as cheerfulness in leadership, belief in friends' affection, wise husbandry and just apportionment of powers, careful selection among competing claims, reserve of opportunities for self-examination and recreation of the inner life. Leisure as well as labour, thought as well as action, deportment as well as motive, are scrupulously moralized.

'Blame none,' 'Do not find fault,' 'To expect no one to do wrong is madness' (xi. 18), are maxims for the ruler rather than prescriptions of the teacher. 'Can the world go on without shameless people? Certainly not. Then do not ask for the impossible' (ix. 42). The supremacy of the *tyrannos*—in Marcus the favourite and characteristic term for man's highest governing self—accrues to man self-mastery and personal equilibrium in an unstable world; within his own circumference he becomes 'a sphere self-orbed,' proof against all assaults of circumstances, all enticements and decays of sense, and all dominion of impulse, appetite, or feeling. To that extent he can identify himself, his will, with the sweep of the great cosmic current, and, at one with nature, reason, God, be wrapped in calm. To such an one all outer things become 'indifferent,' for 'no man can rob us of our will' (xi. 36). Man is a citadel, 'a promontory against which the billows dash continually; but it stands fast, till at its base the boiling breakers are lulled to rest' (iv. 60). This attitude of set endurance gradually moulds his moral as well as his physical lineaments to that resolved serenity which is engraved upon the stones of the Imperial arch, and abatement rather than action, isolation rather than corporate fellowship, becomes the keynote of morality. Towards this the influences all conspire—the austere renunciations of his creed; the mood of sombre, almost wilful, resignation; the solitude and destitution of the close. Before his eyes Latin literature breathed its last. The great equestrian statue, the memorial column, the reliefs of his triumphal arch, the apotheosis of Faustina, are the last triumphs of expiring art. Human fecundity was stricken with a strange paralysis of reproductive power; the very Campagna was changing to a depopulated waste. Religion, politics, literature, and Rome herself were dying. In unmistakable letters the handwriting was blazoned upon the wall, and he himself was *degerens res pueri*. With his death decline and fall set in, not on the Danube only, but throughout the whole Empire of the West. His end was like his life, a slow tenacious struggle with the inevitable. No longer able to eat or drink, he lay upon his couch, still exercising the habits of duty and authority; spoke passionately of the vanity of life; and with the words, 'Hæc luctuosi belli opera sunt,' turned to his rest.

MARKET.—1. Definition.—The term 'market' may be defined as a periodic gathering of persons at an appointed place for the purpose of trading by way of exchange or purchase and sale, subject to the special regulations which law or custom may impose. The term 'fair' is frequently used in conjunction with the term 'market,' and has been defined as 'a greater species of market recurring at more distant intervals.' In either case, the essential element is the same—recurrence, namely, at a fixed time and at a fixed place.¹

Provided that this element is present, any circumstances which bring men together can produce a market or a fair.² The occasion may be a religious festival,³ a popular assembly,⁴ the formation of a camp,⁵ the temporary sojourn of a court at a royal residence,⁶ the stay of a caravan at one of its customary halting-places,⁷ the concourse at a saint's tomb,⁸ the celebration of funeral games at the burial-place of a hero,⁹ or the temporary cessation of hostilities between besieger and besieged.¹⁰

¹⁰ See authorities in P. J. Hamilton-Grierson, *The Silver Trade*, Edinburgh, 1908, p. 60 f. See also § 4 below.

2. Geographical distribution of the market.—The institution of the market is not universal; in many parts of the world it is either altogether unknown or known only in its most rudimentary forms.¹ It has been pointed out that certain geographical conditions and certain racial characteristics are more favourable than others to its establishment and development. Thus, the markets of insular regions, especially those which are situated on the coast, are, in general, of little importance, perhaps because the necessity for an exchange of articles of diet hardly arises among populations whose economic status is the same, and whose daily needs are supplied by the bounty of nature seconded by their own exertions. In such regions the occasion for a market arises only where different economic conditions come into touch—where, e.g., a tribe of fishermen have a tribe of agriculturists for neighbours.²

According to J. G. F. Bland,³ there are no market-places in Oromia; and, while we hear of the market in Java,⁴ Sumatra,⁵ and Borneo,⁶ we are reminded by a high authority⁷ that, in many of the islands inhabited by Malay peoples, the institution does not exist, or, if it does exist, is to be regarded as imported rather than as indigenous.

In New Guinea, markets are to be found in the German⁸ as well as in the British portion of the island.⁹ W. Ellis¹⁰ supplies an account of those in Madagascar; and we have a few notions of Polynesian and Melanesian markets.¹¹

The market thrives best where, in addition to favourable geographical conditions, the natural bent of the population is towards commercial pursuits, as in the case of the Negro and Bantu races.¹²

In N. America we find only few and scattered indications of the existence of the market,¹³ and to the hunting tribes of S. America it is practically unknown; while among many of the peoples of Central America,¹⁴ and especially in the old

¹ As to native markets in Australia see art. Gums (Primitive and Savage), § 6 (3).

¹⁰ *History of Madagascar*, London, 1898, I, 282 ff.

¹¹ We hear of the markets on the river Walruke in Newell (W. Ellis, *Polynesian Researches*, London, 1823-24, IV, 385), at Boua-Boua in the Fiji Group (C. Wilkes, *Narrative of the United States Exploring Expedition during the Years 1839-40*, London and Philadelphia, 1845, III, 200 f.), in the Bismarck Archipelago (R. Thurnwald, 'Im Bismarckarchipel und auf den Salomonen,' *SB. ZfA*, [1910] 119; G. Brown, *Melanesians and Polynesians*, London, 1910, p. 287; Hagen, p. 117 f.), and in New Caledonia (J. J. Aithien, 'The Melanes of New Caledonia,' *FL. ZfV*, [1905] 245; J. Monod, 'Rapports ethniques par ailleurs pour les Néo-Calédoniens,' *BSA.P.* II, ix. [1906] 274).

¹² Leach, p. 702. The Boloki are a Bantu people, yet they have no markets (J. H. Wood, *Among Congo Cannibals*, London, 1912, p. 114).

¹³ The principal market resorted to by the tribes on the coast near the Stikine river was held three or four times a year at a village about 60 miles from Lake Doseo (G. Simpson, *Narrative of a Journey round the World during the Years 1841 and 1842*, London, 1847, I, 210). Markets are held by the Eskimo of Point Barrow and those of Detachment Point (J. Simpson, 'Observations on the Western Esquimaux and the Country they inhabit,' in *Further Papers relating to the Arctic Expeditions*, presented to both Houses of Parliament, 1864, London, 1866, p. 299; see H. A. E. Nordenskiöld, *The Peopling of the Fennoscandia and Siberia*, tr. A. Leal, do. 1881, II, 115 and note). Markets were also held at the Falls of the Columbia (H. Lewis and W. Clark, *Travels to the Source of the Missouri River*, . . . in the Years 1804-06, new ed., London, 1815, II, 427), and at Puget Sound (J. Carrer, *Travels through the Interior Parts of North America in the Years 1790-93*, London, 1778, p. 28).

¹⁴ Among the Toltecs (F. de A. Ixtlixochitl, *Relaciones Históricas*, in A. Agüero, *Antigüedades de México*, London, 1820-22, II, 280) and the Chichimecs (J. de Acosta, *Compendio Metórico del descubrimiento . . . de la Nueva Granada*, Paris, 1642, p. 307), and in Yucatan (G. F. de Ordoñez y Valde, *Historia general y*

from the silent trade seems to Leach to be wholly unwarranted. His second objection rests on the nature of the goods brought to market, which are, he says, for the most part perishable. They are produced constantly and they are in constant demand. Accordingly, market must follow market at a short interval, the times being fixed to suit the convenience of the traders. But the existence of such arrangements presupposes an exchange of views between those interested; and such an exchange involves a complete breach with the principles of the silent trade. The best way of dealing with arguments such as these is to turn to what evidence we have regarding the market in its beginnings. We shall find that it is attended by men only, and that, in some instances, it exhibits features which recall to us those of the silent trade.

For example, *Leach* describes a market on the Senegal in which a river tribe resorted for the purpose of exchanging fish and grain for the skins and game brought in by a tribe of bushmen. The former left a canoe in each canoe to hold it in readiness in case of a quarrel. Only men were present, and each man stood, weapons in hand, in front of his merchandise. On an alarm the bushmen sprang into the jungle, and the river-men took to their canoes. Insults were hurled, and arrows began to fly; and, in the end, after a few men had been killed on either side, each party returned home, satisfied with the day's work. Another example is supplied by Ellis's account of the fair or market held in the island of Hawaii on the banks of the Waikuku river. The inhabitants of the different divisions of the island were quarrelsome, and, although frequently at enmity, frequented the meeting place for the purpose of exchanging the produce of their respective districts. These consisted of such commodities as dried fish, kava, and tobacco. 'Every man to whom the traders resorted to exchange and arranged the preliminaries of their bargain. From thence the articles were taken down to a large square or a small stand in the middle of the stream. Here they were examined by the parties immediately concerned in the presence of the king's subjects, who stood on each side of the river and were the general arbiters in the event of any dispute arising. To them also was committed the preservation of good order during the fair; and they, of course, received a suitable remuneration from the different parties.' Again, we are told that at the same time in the P. group, the market is held on a certain island where each deposit in a large heap what goods and wares he has to barter. Any one may then go and select from what he wishes and carry it away to his own house. The other then has the privilege of going to the heap of the former and selecting what he considers to be an equivalent. This is all well and good, but it is not a silent trade. It is an open market, and the fact that there is a king's subject to arbitrate is not a new discovery. The fact that the fish and the kava are not bartered, but that in their intercourse with those of the mountainous part, they seem to be very wary, as if they constantly keep in mind that they are the weaker party and in the country of strangers. They describe themselves as taking up a position opposite the place of barter on a small island to which they can retreat on any alarm, and cautiously advance from it making signs of friendship. They say that great distrust was formerly manifested on both sides by the way in which goods were watched and consumed when a bargain was made, but in later years more women go, and they have dancing and amusements, though they never remain long enough to sleep there.

A very curious instance, in which women were the traders, and in which the method employed recalls that example of the silent trade mentioned by H. and J. Leach, is recorded by Torquemada in his account of the Mexican markets. He tells us that the Indian women made exchange without a word being spoken. One held out the article of which she wished to dispose to another, who herself had something to barter. The latter took what was offered in her hand, and indicated by signs that it was worth very little in comparison with the value of her own article, and that something must be given in addition before she could consent to the exchange. If the addition required was made, the bargain was complete; if not, each retained her own property.

In these instances we have the mutual distrust, and, in some of them, traces of the strange methods, which marked the silent trade. Further, the evidence shows that, so long as the market may at any moment become a battle-field, it is, even where its business is confined to the exchange

of provisions, entirely in the hands of men. So soon, however, as women can visit it in security, they assume the entire conduct of its traffic in articles of food, and the men attend only as guardians of its peace, or confine themselves to dealing in the objects of their special concern, such as cattle and slaves.

Two further observations may be made in reference to Leach's arguments. In the first place, there are many instances in which perishable articles, such as fresh fruit and fresh meat, are exchanged by the methods of the silent trade. In the second place, many cases can be cited in which the places where the silent trade is to be found in operation are matters of common knowledge.

4. Situation of the market.—The primitive market was held, just as the silent trade was practised, at spots so situated as to secure the safety of the trader.

Thus, a river separated those who resorted to the market on the Waikuku, the articles to be bartered being laid upon a flat rock in mid-stream. In many instances the market is held within a border-land, as in the Baluba country, in Somaliland, and in British New Guinea. We have already mentioned the border markets of Greece and Rome, and we are told that the frontiers of the Roman world formed a vast zone of markets. In Umbria and in some districts in British New Guinea the markets are held on the borders of different districts, and the Baluba markets in the virgin forest and those of Angola are generally equidistant from the nearest villages. Among the Abikru the site chosen for the market is an open space where the inhabitants of several districts can conveniently stand, while in the Congo countries the market-places are often situated in an open country. In both cases a hill-top is a favourite situation. Among the Galla of the Western Abyssinian country markets are usually held on the top of a small hill, near some big tree. In the Galla Peninsula, as elsewhere, about an hour's journey from the coast, and among the Lappa, sometimes in open fields, and sometimes on the hill. On the Lushai, as

⁷ *id.* 22.

Mogile,¹ at Andehira,² and among the Kabyles³ markets are situated in uninhabited places, while in Senin the two great markets were held in large clearings, with only small villages adjacent.⁴ At Malak, which consists of two villages, the market lies between them,⁵ and a somewhat similar account is given of that at Abu-Ober.⁶ In one of the districts of Bornu the market is generally held at some distance from the town,⁷ and a like practice is frequently to be found elsewhere.⁸ In some countries it is held near a principal town, as in Madagascar,⁹ or in an open space near a village, as in German New Guinea,¹⁰ or outside a town, as among the Western Mandingoes,¹¹ or between the town-wall and a river, as at the chief town of the Wymar country.¹² Markets are not infrequently held on islands. Thus, on the Grander Islands an exchange takes place between natives of N. America and N. Asia;¹³ and a fair, attended by the Chukchee and other nomad tribes, takes place annually on an island on the Amur River.¹⁴ Markets are held on river-banks on the Niger¹⁵ and on the Senegal,¹⁶ at points equidistant from the neighbouring villages, as on the Congo,¹⁷ or at cross-roads, as on the Congo¹⁸ and in Dahomey,¹⁹ at spots many of whom by visitors from several districts, as in Senegal,²⁰ on the sea shore, as in New Caledonia²¹ and among the ancient Northmen,²² on the banks of great lakes, such as the Victoria Nyansa,²³ and, as at Gumbela, on a plain between mountains.²⁴

Many of these situations point to a time when the fear of attack was prevalent; and Schurtz²⁵ suggests that the arrangement in the Mahee²⁶ country by which the weekly markets were held outside the walls, so that strangers might not enter the town, while the daily markets attended by the inhabitants were held within it, is a survival of the old state of things.

Where an established order exists, however, the market is generally held within the town.

Thus, at Kocife and Zaria the market-place is within the walls;²⁷ and at Kand is situated on a neck of land stretching

across a marsh, which nearly intersects the city.²⁸ The same is at Hang-Chou²⁹ and in the city of Mexico³⁰ were held in great squares within the town. Timbuctu may be cited as an instance of a town which had its beginnings in a temporary market.³¹ In Java the markets are held under large trees on spots dedicated to the purpose from time immemorial.³² In Bifanding the market-places are generally at the foot of the hills, and are marked by old fig-trees.³³ In the Sherebo and the Hinterland the markets are always held under large trees;³⁴ and those on the upper Lualaba frequently take place on grassy mounds under the shade of great spreading trees.³⁵ In the chief town of Uganda,³⁶ at Loungo,³⁷ at Pawa and Saka in the Mahee country,³⁸ among the Kabyles,³⁹ and in the Mahee district of British New Guinea⁴⁰ the markets are held under the shelter of large trees; and a somewhat similar account is given of markets on the Congo.⁴¹

5. Day of the market.—In the Shan States and in Korea the market is held on every fifth day in all the chief villages.⁴² This practice prevails throughout western Yun-nan,⁴³ and is found in Java⁴⁴ and Abeokuta,⁴⁵ at Igbebe and Onitsha,⁴⁶ at Kong, and at Bobo,⁴⁷ in the Mekeo district of British New Guinea,⁴⁸ in ancient Mexico,⁴⁹ and in many other places.⁵⁰ At Ikorodu, on the lower Ogun, the market between the townsfolk and the bushfolk takes place every eight days,⁵¹ and in the Banyang country markets are generally held with an eight days' interval.⁵² In regard to the markets on the caravan routes between Matadi and Leopoldville, a distinction must be kept in view between those held daily by the neighbouring villages for the caravans' supply and the weekly markets. The Fioti week is one of four days; but frequently the market is held every eighth day. In order to mark the week when there is no market, it is called *ondulo*, 'little,' 'insignificant.' On the Lower Congo each market bears the name of one of the days of the Fioti week, followed by the name of the village where it is held.⁵³ The Khâsis of Assam,⁵⁴ the Battak of Sumatra,⁵⁵ the tribes of the Lower Niger,⁵⁶ and the Akikrya⁵⁷ hold a market every four days. On the Lualaba the

²⁶ Ducas, I. 180. 'Where a town or city has two walls, the public market is held within the outer walls. This market is often attended by strangers from a great distance. The private market is invariably held within the walls' (G. H. 101).

²⁷ See Alexander's observations regarding the Bornu markets quoted above. A similar practice prevails in some of the towns of Adammann (Fagnard, p. 85).

²⁸ A. W. P. Verkerk, *Financie*, in his *Studien over de inlandische huishouding in de Padangische Bovenlanden*, Zalt-Bommel, 1871, p. 18, observes that the market-place, situated on a large open space in the middle of the village, is called *perdammann*, or place of peace.

²⁹ But, when circumstances permit, the site chosen for the market is outside the village; and some markets are held on spots quite uninhabited.

³⁰ Clapperton, pp. 126, 128.

market is held every fourth day, other markets being frequented in the interval.¹ At Amba Bay the market takes place every third day.² There are daily markets at Loango,³ at Kanó,⁴ and at Mogelo.⁵ The Bini have now eight days in their week; but formerly they had only five. On each day there is a market in or near Benin city.⁶ Three markets a week are held at Kasa-Kanó;⁷ and two a week at Marrakesh,⁸ at Koolfu,⁹ and at Banjaribuan.¹⁰ Weekly markets are held in Morocco,¹¹ at Popalahun in the Sherbro,¹² in Lega-land,¹³ among the Oromó,¹⁴ among the Kabyles,¹⁵ and at Passumah in the southern part of Sumatra.¹⁶ In the Kuantan districts of Central Sumatra each market has its own special day of the week allotted to it.¹⁷ In Silindong there is a daily market, but the place at which it is held varies from day to day.¹⁸ In this last instance, and in many other cases,¹⁹ the market takes place here to-day, there to-morrow, and in a different locality on each of the days following, until the round is completed. The order is fixed, and so the inhabitants of each district know where the market is to be held each day.

6. Hour of the market.—In Kikawa, Masafia, Kanó, Sokoto, and Timbuctu, the market is held in the hottest hours of the day.²⁰ According to Clapperton,²¹ the market at Kanó is crowded from sunrise to sunset. The Yo (Bornu) market begins about 9 a.m. and ends about 3 p.m.;²² and the Congo markets commence towards 10 or 11 a.m. and cease at 3 or 4 p.m.²³ In some places in the neighbourhood of Harar the markets begin about noon;²⁴ and at Gire in Adamawa they are in full activity by that hour.²⁵ At Saris the busiest time of the market is from 2.30 p.m. to 5.30 p.m.,²⁶ and at Kulka in Bornu about 3 p.m.²⁷ In Tahambé the market is held in the late afternoon,²⁸ and at Cocosoo in Yoruba in the evening. It takes place at Aden two hours after sunset,²⁹ and at Bida and Ilorin³⁰ and in some parts of Malacca³¹ in the night. On the upper Ubangi it is held from 8 to 10 in the morning.³² On the Livingstone it is deserted after noon.³³ In the Padang district of Sumatra it

is little frequented in the early morning, but by 10 o'clock it is full.³⁴ Markets in the early morning are less frequent, for the obvious reason that they interrupt the day's work of those who resort to them more than do markets held towards the close of the day, and also because those at a distance cannot attend them.³⁵

7. Frequenter of the market; market-women.

—H. H. Johnston³⁶ observes that both men and women make long journeys to sell their goods, the men always travelling furthest.

Among the Bondel, if the market be near, the woman goes and her husband supplies the goods. If it be at a distance, the husband generally goes alone.³⁷ At Whydah on the Gold Coast,³⁸ and among the Bakula of Senegambia,³⁹ traffic in slaves was confined to the men. Among the Bakula the men bring goats and palm-wine to market,⁴⁰ and in the Mandingoes markets they trade in cloth.⁴¹ At Woodie the women sell milk and honey, fowls and herbs, while the men sell oxen, sheep, and slaves.⁴² At the Harar markets the frequenter are grouped by sexes, &c. according to the articles which they sell.⁴³

In many instances the business of the market is entirely in the hands of women.

Thus, in the districts near Kikmanjaro, 'the women do all the trading, have regular markets, and will, on no account, allow a man to enter the market-place.'⁴⁴ At Koolfu, the principal town of Nupe, nine out of ten of those who resort to the daily market are women;⁴⁵ and the Foulahs or Fulas leave the market in their hands.⁴⁶ A similar state of things is reported from many quarters.⁴⁷ It is of interest to observe in this connection that, in the Congo area, when a thief is caught, his punishment—that of being stoned to death—is inflicted by the women.⁴⁸ In Niagarua no male above puberty might enter the market-place of his own village to buy or sell. He might not even look at it from a distance. But men and women from other friendly or allied villages might go to it.⁴⁹ The women selling at the market of Brunel in Bornu are generally old slaves.⁵⁰ At Kuba in Bornu the principal slaves are generally the traders, while their masters loiter about, spear in hand.⁵¹ The Oromó market people form a caste by themselves; they attend all the larger markets in person, and send their servants to the smaller ones.⁵²

8. Religion and the market; the market peace.

—The market peace is sacred; and this quality may be due to one cause or to a concurrence of

⁴⁹ Paulitschke, p. 312.

several causes. It may be due to the nature of the relation between traders which the act of exchange creates, to the sacredness of the place where the trading takes place, to the consecration of the market at the time of its foundation,¹ or to the fact that the market is under the protection of a god,² or is associated with a religious festival.³

Large fairs, held at different points on the Niger, are professedly regarded as sacred ground, whatever wars there may be in the land, and, although this neutrality is not infrequently violated, still the traders return with remarkable pertinacity.⁴ The Shilluk criticised the Kharitun traders to their camp by a display of attractive merchandise, and then butchered them for their arms and ivory.⁵ At the close of a Bulala market the chief allowed his bodyguard to plunder the market-women;⁶ and Livingstone speaks of a massacre of Manyema market-women by Arab traders.⁷ But, he observes, 'they have great tenacity and hopefulness. An old established custom has great charms for them, and the market will again be attended, if no fresh outrage is committed.'⁸

Sometimes such violence kills the market.⁹ 'To "revive" a "dead" market, there must be an assemblage of the local magnates; a pig or pigs must be furnished by the town to which the market

¹ It is said that, at Stanley Pool, the establishment of a market was the condition for the sacrifice of a slave (Couterrain, 'Le District de Stanley Pool,' *Bulletin de la société d'études coloniales*, 1892, p. 22), and it seems not improbable that the object of this sacrifice was to convert the soul of the victim into a protecting demon (P.O. London 1892, 1. 18, 2. 10, p. 11, 3. 10, 4. 10, 5. 10, 6. 10, 7. 10, 8. 10, 9. 10, 10. 10, 11. 10, 12. 10, 13. 10, 14. 10, 15. 10, 16. 10, 17. 10, 18. 10, 19. 10, 20. 10, 21. 10, 22. 10, 23. 10, 24. stones, he came to be regarded as the god of boundaries. In many cases the border-land consisted of tracts of neutral territory whither merchants repaired to exchange their wares; and thus the god of boundaries became the god of traders.¹ Now we are told that the ancient Germans used to raise poles at their public meetings, which were dedicated to the god of the public assembly.² These poles were, in all probability, erected upon a stone;³ and it has been suggested that this 'truncus super lapidem,' replaced in later days by a stone column, is the prototype of which Irminsulen, Rolandstulen, perrons,⁴ and many of the market-crosses of Scotland⁵ are later forms. In view of the facts, it is tempting to conjecture that the stone which formed the base of the column, and which seems to have served as a seat of justice, was, in many cases at all events, a boundary-stone.⁶

In the Middle Ages the market-cross was not always fixed, but was raised at the commencement of the fair. It became fixed only when the temporary market became a permanent market, when the temporary peace became a permanent peace.⁷

In China an official notified the beginning and end of the market peace by hoisting and lowering a flag.⁸ In British New Guinea a drum is beaten at the opening and closing of the market.⁹ The trade between the people of the Red and the Spanish garrisons whom they were besieging ceased on the ringing of a bell.¹⁰

Many instances might be cited of trading during a truce, followed by a resumption of hostilities as soon as the trading was over.¹¹

¹ See also Schenker, *Lang-Mat. Forsch.*, pp. 97-100; Hamilton-Grierson, p. 20, 61.

² Götter d'Alviola, *The Migration of Symbols*, Westminster, 1894, p. 124. This god was probably Thingaz, the Germanic equivalent of Zeus Agoraios (see note below); see, however, Meier's art. Götter (Treston), vol. vi, p. 306. According to Caesar (*de Bell. Gall.* vi. 17), the Gauls worshipped a deity whom he identified with Mercury.

³ D'Alviola, p. 117.

⁴ D'Alviola (*Les Pervens de la Vallée de la Saône*), *Revue de la France*, Brussels, 1914, pp. 27, 42, *The Migration of Symbols*, p. 109 ff.) indicates his agreement with the view of E. Housman (*Supplementum Mittern de l'Indépendance belge*, 2nd May 1901). He observes that, before the diffusion of Christianity, the poles, to which we have referred, were at once the symbol of the god of assemblies (Thingaz, the equivalent of Zeus Agoraios) and of the autonomy of those assemblies. It is not improbable that, for the purpose of ornament, a representation of the god in the likeness of an armed man was attached to them or carved upon them; and that, when the meaning of these representations came to be forgotten, the popular imagination gave to them the name of the Polein most popular at the time, and the Irminsulen became Rolandstulen. When the Church established herself among the barbarous peoples, the old columns continued in many places to serve as the rallying points of collective life. Sometimes they bore the emblem of Christianity, sometimes they were altered or transformed so as to symbolise something new or additional, and sometimes they were replaced by the crosses planted by the Church in sign of possession.

⁵ The resemblance which many of the market-crosses of Scotland bear to the porren has been pointed out by W. G. Black (*Glasgow Cross, with a Suggestion as to the Origin of Scottish Market-Crosses*, Glasgow and Edinburgh, 1915), and his suggestion as to their origin has been approved by d'Alviola in the issue of his two works cited above. At p. 20 of this work d'Alviola figures certain of the Scottish crosses, and it is curious to observe how close is the similarity of some of them with the image of Hermes figured by him on p. 104 of *The Migration of Symbols*.

g. The law of the market and its enforcement. — We have already seen that acts of violence perpetrated upon the frequenters of a market may and probably will 'kill' it—for a time, at all events. The recognition of this fact appears to produce two results. In the first place, offences committed within the market are punished with exceptional severity, as imperilling its peace. In the second place, since offences committed outside of the market are not regarded as a danger to its peace, those who have committed them are in consequence not subjected to punishment so long as they are within it.

On the lower Congo every breach of the regulations of the market renders the culprit liable to death. He is 'either buried to his neck in a hole, in the centre of the market place, and his skull crushed by a heavy stone, or he is hanged to death with sticks, and his body is subsequently hauled to a pole, which is erected alongside a native path.'¹

Bentley² tells us that in some of the Congo markets 'a man who brought a gun with him would be promptly buried alive, and the muzzle of his gun would be left protruding' as a warning to the rowdy elements in the fair. 'Sometimes a pile of firewood is ready to burn the culprit alive. On some markets no stick or knife may appear, a heavy fine being imposed in case of infraction.'³

Among the Kabyles every offence committed in the market is punishable with death without trial. The crowd takes the offender and stings him without mercy. It is the stranger who attempts the law. The tribesmen try to avoid these executions as they discredit the market.⁴ At Barbery any one from the interior or the coast who by his conduct does serious injury to trade must pay the death penalty. Still, as such an execution occasions reprisals, it is avoided as far as possible.⁵

The fairs of ancient Ireland were regulated by strict rules, any breach of which was punished with death.⁶

In ancient Greece,⁷ in ancient Norway⁸ and Danish law,⁹ and in the France and Germany of the Middle Ages¹⁰ a breach of the special peace of the market was dealt with more severely than was a breach of the common law.

In Mexico he who stole in the market was punished with death,¹¹ and he who was suspected of selling stolen goods, if he could not tell from whom he had received them, was condemned to death.¹²

As we have already indicated, there is evidence to show that, in many instances, those who had committed deeds of violence or contracted debt before coming to the market were safe from pursuit or arrest so long as it lasted and they remained within it.

Thus, among the Kabyles the avenger of blood who kills a man in the market suffers the same penalty as a common criminal;¹³ and the same rule seems to have been observed at Barbery.¹⁴ There, too, the trader who brought stolen goods to the market could not be proceeded against.¹⁵ Those who resorted to the fairs of the Middle Ages were safe from prosecution or arrest for crimes committed or debts incurred beyond their bounds,¹⁶ and enjoyed privileges, and were allowed relaxations

of the common law which attracted not only the merchant but also the peasant in search of pleasure.¹

30. Administration and execution of the law of the market.—It has been observed² that, where the market lies within the territory of a tribe, its law is administered and executed in part by those who resort to it and in part by officials appointed by the tribe of the district. Where, however, it is held within the territory of a king, chief, or feudal lord,³ it is his officers that act as police, and, in some instances, as judges.

In the Kalyte markets, e.g., an official—the chief of the market, who belongs to the leading family of the tribe which owns it—sees to the preservation of the peace, arrests those who bear arms on the road, summarily settles the quarrels, and sees that those who create disturbances⁴ are punished only with offences which affect the public, while civil and commercial disputes are referred to a tribunal of the tribe.⁵ At the same time, it is the stranger in the market that enforces the law by punishing the delinquent.⁶ Again, in the Eastern market, there is no supreme authority to whom the enforcement of the law is entrusted. Its execution is in the hands of the market chiefs. An assembly of those belonging to the district is sole judge in disputes, but the disputes need not abide by its decision. If they ignore it, they must leave the market.⁷

But where the market lies within the territory of a king, his or his officer sees to the maintenance of order.

Thus, at a fair on the Lohalla, within the country of the Kachak, the chief kept watch in his garden with half a dozen guards, in order that no dispute might disturb the peace. His companions were all well known by the brand on which they carried on their shoulders.⁸ Among the Baganda a chief appointed by the king performs similar duties,⁹ and there are discharged at Waluku by the king's collector,¹⁰ and among the Galla by the local headman.¹¹

At Malindi—*the largest market of Somaliland*—there is a market king who settles disputes between buyers and sellers, and the women choose a market queen for their protection, through whom they transmit all their business.¹²

This last instance shows that, while, in some cases, the duties of the officers of the market are confined to the preservation of the peace,¹³ they are, in many others, of a much more varied character.

Among the Wasambala the superintendent of the markets collects the dues and attends to matters of police.¹⁴ At Waluku the king's collector are the general arbiters of disputes,¹⁵ and throughout the country of the Galla, on the western Abyssinian plateau, the market is held under the superintendence of the local headman, who decides all questions arising out of broken contracts.¹⁶ At Whydah the chief constable of the market attends to its discipline,¹⁷ and a high officer named Oungoungou has under him a string of heads which serve as money and a record of the proper number. Those which are destroyed by the king's bounty and for his own.¹⁸ Among the Galla the duties of direction of the market are exercised by an important official who is entrusted with the conduct of foreign trade and the supervision of the exchange.¹⁹ In the Congo basin there is, in most cases, a chief of the market, perhaps an old bush-man, who regulates all disputes, and sees that the litigants so heavily that all are weary of invoking his sentence.²⁰ At Kani the judge of the market sits all day to try disputes

arising in the course of trade;²¹ and in the Loango markets an official is charged with seeing that no deceptions are practised in the trade between natives and Europeans.²²

The quality of articles brought to the market is, in general, a matter of consideration only when disputes arise.

The milk brought to the market of Jahob, however, is daily subjected to examination,²³ and in Morocco an officer is appointed to inspect the provisions offered for sale.²⁴ He must constantly attend the markets and see that purchasers are not overcharged, and, in view of the plenty or scarcity of the goods exposed, he must fix the prices.²⁵ At Kani the chief of the market fixes the prices,²⁶ and among the Bagalla the price is fixed by the chief with reference to a standard.²⁷ At Mecca and Jidda a public officer fixes a maximum price to all retailing traders.²⁸ In some of the markets in Hawaii the chiefs regulated the prices,²⁹ and in ancient Mexico they were fixed by the superintendents of the market.³⁰ In China the officer placed over the market was charged not only with the maintenance of order, but with the supervision of weights and measures, and with the administration of justice in more important cases.³¹ The Greek *symmachos* appear to have exercised similar functions in regard to the preservation of the peace and the use of weights and measures. They also fixed the hours of the market, and regulated its conduct generally.³² The Roman *medullae* preserved order by means of his officers, and imposed fines upon the peace-breakers. He effected their protection to the traders, and saw to the accuracy of weights and measures. To ensure the bona fide of transactions within the markets was his special care, both by expelling frauds and by rejecting articles which were unfit for sale.³³ In the market of Yunnan ten or twelve judges sat in a house on the market-place to deal with cases as they arose and to see to the punishment of delinquents. There were also officers who went among the people, saw what was bought and sold, and broke any false measure which they found in use.³⁴ It was the duty of these officers to fix the prices and to prevent frauds.³⁵

31. Market dues and their collection.—In some markets—e.g., at Silindong—dues are not exacted.³⁶ Among the Hausa, while dues are levied, entrance into the town is free to the market people.³⁷ At Etoho men can enter the market and trade without charge, but every woman must pay ten cowries to the government.³⁸

When trade took place in the temple of the sun, the priest collected dues on behalf of the divinity.³⁹

At a fair on the Lohalla, in Kachama's country, each trader whose representatives were present must make a gift to the priest. Kachama, who performed a series of dances in the market, after each dance received their contributions from the market-women, who danced as they paid.⁴⁰ In the Hausa markets the king grants his protection and collects the dues.⁴¹ and in the horn-market of Fex,⁴² and at the market of Rahai,⁴³ an officer levies a small percentage on behalf of the government. At Adnam,⁴⁴ and in Hawat,⁴⁵ king's collectors are present in the markets, and in those of Usambare the superintendent (ngulu) takes a double handful of the market-women's pro-

videns for the king, and levies a contribution for himself.¹ Among the Baganda a chief appointed by the king collects a tax upon every sale,² and at Quanaquim the people pay a tax on every article of food exported for sale.³ In the Loango markets the chief of police sees to the payment of the dues,⁴ and at Kono the stall of the market has out the stalls at so much a month, the rest forming a part of the governor's revenue.⁵ In China there are special market-dues, which are collected by a special officer.⁶ In ancient Greece the *hypodion* collected dues, which were applied to the first instance to the needs of the market,⁷ and in the markets of imperial Rome, and especially in those of the Middle Ages, a fully developed system of taxation obtained.⁸ In the Mexican markets a fixed tribute was paid to the emperor, in return for which he granted his protection against thieves.⁹

In ancient India the king was entitled to market dues, which varied, according to circumstances, from a twentieth to a tenth of the value of the goods.¹⁰ The frequency of the Indian market at Kabeer must pay three cowries to the chief, whatever the value of his goods may be,¹¹ and in the limited market every person who brought articles for sale had to hand over one of each kind.¹² In the Aravali district the dues amount to one-twentieth of the value of the goods brought to market,¹³ at Bangalore to a tenth or a sixth.¹⁴ Those who expose goods in the Phayak market pay very heavy dues to the king of Dahomey,¹⁵ while in the Hawaiian markets two-thirds of the proceeds of whatever the natives sold was demanded by the chief.¹⁶

12. The arrangements of the market-place.—Among the Lega Gallas the markets are held only if the weather permits; for the climate is variable, and the market-places are wholly without shelter.¹⁷ In the markets of Madagascar there are neither shops nor booths, the articles for sale being set out upon mats.¹⁸ The markets on the Lualaba are held at uninhabited places, except at Nyangwa, where there are houses for traders and huts for slaves and porters.¹⁹ When the caravans arrive at Berbera from the interior, booths and dwellings are erected; and, within a week, on what was previously a desert spot several hundred huts are ready for the strangers coming thither over sea.²⁰ At Sennar the traders transact their business protected by temporary erections of boughs and mats;²¹ and at Gussala the wares are exposed in tents and shelters of boughs, where stranger merchants are entertained and housed,²² while in some of the Sumatran markets huts are provided, where stranger merchants can display their merchandise, and pass the night for a mere trifle.²³

At Madagascar, the largest market in Berbera, lines of sheds and stalls cover an extensive area.²⁴ Similar erections are found in the markets at Tadmor and Kinnasa,²⁵ and Fumaga,²⁶ says of the markets in Aden that they contain numerous fine-roofed huts, which form a long street.

At Simey (Hong-Chow) the markets were held in great squares surrounded by shops, where all kinds of crafts were carried on and goods sold.²⁷—a description which recalls to us the accounts of the markets of ancient Mexico.²⁸

In many markets the position assigned to the different traders depends on the nature of their wares,²⁹ the result being that, where those wares are traded in by one only of the sexes, a specific portion of the market is allotted to each sex.³⁰

¹ Lang, p. 303 l. Similarly, at the market of Boto Dismah, a man carrying a gyo-gyo staff, accompanied by a drummer and a crowd of urhins, sets down his staff before each merchant ceremoniously, and, unopposed, helps himself, by means of a small calabash holding about a litre, from the merchant's supplies (Dinger, l. 571).

In the markets of ancient Mexico each class of merchandise had its appointed place,¹ the more common kinds being stored in the neighbouring streets, or in huts on the main.² In those of the Middle Ages the determined trader's position was not only the character of his goods, but his nationality; and, in some cases, the latter was the sole determinant.³

13. Modes of bargaining in the market.—One of the most characteristic practices of the primitive trader is that of transacting business by means of a third person. Dall⁴ tells us that the Aleuts never trade with one another directly; and we have suggested that some light is thrown upon the origin of this method by the instance of the exercise of the silent trade reported by Lander.⁵ It is said that, among the natives of Australia, children are made *agya-agya* in order that they may act as the agents of their respective tribes in the business of barter;⁶ and many cases may be cited in which the man who takes a stranger under his protection not only acts as his host, but assists him in buying and selling, and is generally responsible for his conduct.⁷

At Berbera each stranger must choose a protector (*abba*). He dare not trade without him, and must pay him one per cent on the value of every article which he brings into the market. The *abba* is his broker; he protects him against the extortion of the natives, and settles all disputes in which he may have become involved.⁸ A similar custom is given of the part played by the *ham* at Djibouti.⁹ In Nigeria, whenever an article changes hands, the seller pays a commission to a third party, who is supposed to have facilitated the purchase.¹⁰

In the markets of many Asiatic countries a curious practice prevails by which traders, when bargaining in the presence of others from whom they wish to conceal their business, drive and conclude their bargain by touching the points of each other's fingers under a shawl without a word being spoken. It has been found in use at Mecca,¹¹ at Calicut,¹² among the Somali,¹³ at Jidda,¹⁴ at Pegu,¹⁵ in Malacca,¹⁶ in Mongolia,¹⁷ and elsewhere.¹⁸

Turquomada¹⁹ notes a curious practice which prevailed among the Indian women in the markets of ancient Mexico. They exchanged their wares without a word being spoken. The one party held out the article of which she wished to dispose, and the other, taking it in her hand, made signs that it was not a fair equivalent for what she proposed to give in exchange. If the first party refused to add anything, she ran the risk of losing her customer, if she added what was demanded, the bargain was concluded.

14. Methods of securing attendance at the market; its place in public and social life.—In some of the Congo countries it is penal for a woman to go to her farm on a market day.²⁰ To the desire to induce the stranger to come to market Houran²¹ ascribes certain Lydian and Babylonian regulations.

human society there are definite rules regulating whom the members of the community may and may not marry. These rules are of many different kinds, but they all fall under one or other of two main forms: regulation by kinship or genealogical relationship; and regulation by some form of social mechanism, consisting of clans or similar social groups. The rules may also be distinguished according as they prohibit or enjoin certain unions.

Among all those peoples who have the family as their main form of social grouping marriage is regulated solely by kinship, and the rules regulating marriage consist exclusively of prohibitions, forming the 'table of prohibited kindred and affinities.' Peoples whose social system is founded mainly on the clan or other similar mode of grouping do not, however, regulate their marriages solely by this mechanism, but this kind of regulation, in all cases of which we have any exact knowledge, is combined with the regulation of marriage by kinship, the two modes of regulation co-existing, and supplementing one another. Further, this double mode of regulation does not consist entirely of prohibitions, but, side by side with rules of prohibition, there are often definite rules which enjoin marriage with certain relatives.

The regulation of marriage associated with modes of social grouping assumes certain definite forms for which there are well-established terms, such as exogamy, endogamy, and hypergamy.

2. *Exogamy and endogamy.*—Much confusion has been produced in the use of these terms through the mistaken idea that the processes which they denote are opposed to one another, this being chiefly due to an error on the part of McLennan, who was the first to draw attention to the practice of exogamy. According to this writer, exogamy is a custom in which a person has to marry outside his tribe. There are a few cases on record, though even about these we need far more exact information than we possess, in which it seems that people have to marry outside their tribe or other similar social group, but in the vast majority of the cases for which the term 'exogamy' is used the exogamous social group is not the tribe, but that subdivision of the tribe for which the term 'clan' is generally employed. When we say that a community possesses the clan-organization, we mean that it is divided into a number of groups, the members of each of which must marry outside their own group. If they must marry into some other group of their own community, we have to do with the practice of endogamy, the community as a whole being exogamous, while the clan within the community is exogamous. From this it will follow that exogamy and endogamy are not antithetical processes, but, where both exist, supplement one another.

Endogamy in this sense is a relatively infrequent practice, being most fully developed in the caste system of India, in which the caste is the endogamous group and the *gotra* (q.v.) or other corresponding sub-group the exogamous unit (see art. CASTE). The social system of the Todas is another pure case of the division of endogamous social groups into exogamous clans. In other parts of the world obligatory endogamy is rare. There are many people who are isolated from their neighbors, either by physical or, still more frequently, by social conditions, such as constant warfare, who habitually marry within their own community, but their case differs fundamentally from that of the Hindu or Toda in that there is no definite prohibition of marriage within the community, and, if the opportunity arises, such marriages meet with no opposition. Even in Europe there are cases in which marriage within the village or other social group is so habitual and departure

from this custom meets with such social reprobation that we come very near to true endogamy. It would seem that this tendency to endogamy is especially pronounced where the people of the village follow one occupation, and this association of endogamy with occupation is not only characteristic of the caste system of India, but is also found in one of the exceptional examples of obligatory endogamy, which occurs in Africa in the case of the smiths, who often form a social group kept separate, by having to marry within their own body, from the rest of the community to which they belong. It is noteworthy also that there is a definite tendency towards the association of endogamy and occupation in the cases of priesthood and royalty, and in some cases marriage within these classes is so strictly enjoined that it amounts to a form of endogamy.

The practice of exogamy occurs in many forms according to the nature of the social system of which it forms part. If the community is totemic, the exogamous social group will be the totemic clan. If the community is organized on a social or territorial base, the exogamous unit will be the village, the hamlet, or the quarter of a town. If the grouping rests on a belief in common descent, the exogamous group may take its name from the ancestor, this mode of organization differing from regulation by kinship in that the common ancestor is remote, and in some cases mythical or fictitious. In one frequent form of exogamy the whole community consists of two moieties, the men of one moiety marrying women of the other. The rule that two people with the same family name may not marry, which is found in China, may be regarded as another variety of exogamy. In Australia this mode of organization is modified so as to produce a complicated system consisting of social groups known as matrimonial clans.

3. *Australian matrimonial clans.*—These form a special variety of exogamous system in which a person has not only to marry outside his own clan, but has to marry into another specified group. In one form, known as the four-class system, each moiety is composed of two sections, the marriages of members of one section of one moiety being limited to one section of the other. This system is associated with a peculiar mode of descent in which a child does not belong to the class of either father or mother, but to the other section of the moiety of one or other. In another form, known as the eight-class system, each of the four classes is composed of two sections, in which descent follows the same kind of rules as in the four-class system, but of a more complicated kind. This form of social organization has until recently been supposed to be unique, but A. R. Brown has shown¹ that it is nothing more than a systematization of the regulation of marriage by kinship which is generally associated with exogamous systems. In Melanesia there are probably similar groupings, though of a less definite kind than in Australia.

4. *Hypergamy.*—This name has been given to a peculiar form of the regulation of marriage, only known to occur in India, in which a woman must marry a man of a caste or sub-caste higher than her own. Where this custom is found, men and women of the same caste or sub-caste are sometimes also allowed to marry, but there is the strictest prohibition of the marriage of a woman with a man of a caste lower than her own.

5. *Regulation of marriage by kinship.*—Among peoples whose social system is based specially on the family and the nature of whose system of relationship shows that this mode of social organization has been of long duration, marriage is

¹ *JRAS* 1911, [1912] 148 ff.

regulated exclusively by genealogical relationship. Marriages with certain classes of relatives are forbidden and those with other classes allowed, while other marriages may not be strictly prohibited, though looked upon with more or less disfavour by the community, the chief example of this difference of attitude occurring in the case of first cousins. We do not know, however, of any such people among whom marriages with certain relatives are obligatory, or even so habitual as to stamp their presence on the nomenclature of relationship.

The regulation of marriage solely by relationship is not limited to peoples whose system of relationship is based on the family, but occurs also among many people who follow the classificatory system of relationship. It is found in many parts of Africa and America; it is characteristic of Polynesia, and occurs in some parts of Melanesia; while, as already mentioned, the matrimonial classes of Australia are only a specialized form of this mode of regulation. Among all these peoples, however, the results of this type of regulation differ widely from those already considered in that the restrictions apply to the very wide circle of relatives involved in the use of the classificatory system. Among such peoples we have not to do with the prohibition of marriage merely between brother and sister or between first cousins, but also between those whom we should call second and third cousins, or even more remote relatives. Sometimes the rule forbids marriage with a person with whom any kind of genealogical connexion, apart from relation by marriage, can be traced. More frequently the prohibition does not take this extreme form, but there are rules limiting the prohibition to certain classes of genealogical relationship, a frequent form of such limitation being the exclusion from the prohibition of those cases in which cousins are descended from persons of different sexes. Thus, among many peoples the marriage of the children of two brothers or of two sisters is strictly prohibited, but not only is the marriage of cousins who are the children of a brother and sister allowed, but, as will appear shortly, these relatives may be the natural consorts of one another. The people who thus regulate marriage exclusively by relationship have lost the clan-organization which their use of the classificatory system shows them to have once possessed. Even those who still possess this form of social organization do not rely solely upon it for the regulation of marriage, but marriages with many relatives are prohibited outside the circle of the exogamous group. Sometimes this prohibition takes the form that a man must not only seek a wife out of his own clan, but must avoid the clans of both father and mother, and perhaps the clans of all the grandparents. More often, however, the prohibitions rest more directly upon kinship, and do not involve all the members of the clans with which the man is related. Many gradations exist between people who regulate marriage solely by kinship and others among whom marriage is chiefly regulated by the clan-mechanism, but we know no people who have been carefully investigated and have been found to be wholly devoid of the mode of regulation by kinship.

6. *Marriage with relatives.*—Among many peoples, and especially among those who use the classificatory system of relationship, the regulation of marriage by kinship is not confined to prohibitions, but there are often definite regulations which make marriage with certain relatives the orthodox unions, and even in those cases in which such marriages occur but are not especially frequent the influence which they have had upon the nomenclature of relationship shows that they must once have been habitual. The influence upon

systems of relationship is so definite that it is possible to infer from their nature the existence of forms of marriage in the past which are no longer in vogue, thus affording evidence which makes it possible to trace the past history of marriage.

(a) *Parent and child.*—We know of no people who allow marriage between mother and son. In many places, especially in Africa, a man may marry one of his father's wives, but in these cases his own mother is definitely excluded. Marriage between father and daughter is said to occur occasionally, though it is probable that in such cases the marriage is not that of a man with his own daughter, but with one whom he calls daughter in the classificatory sense. The marriage of a man with his brother's daughter would be a union of this kind, and such marriages certainly take place in some parts of Melanesia and in Australia.

(b) *Brother and sister.*—The case in which we have the most definite evidence for this form of marriage is that of royal families. Examples of the marriage of brother and sister are known from history in the royal families of Egypt and Persia, and occurred also among the Incas of Peru. In recent times the marriage of brother and sister is, or has been, the custom in Siam, Burma, Ceylon, Uganda, and the Hawaiian Islands. In the last case the highest kind of chief was one whose father and mother were own brother and sister, who were themselves the offspring of a similar union. In this case certainly, and probably in the others, this form of marriage is definitely forbidden to those of other than royal or chiefly rank, and the practice is due to the belief in the virtue of royal blood and the desire to keep this blood as pure as possible.

Marriage between brother and sister has occasionally been recorded as the general custom of a people. There are well-established cases where marriage is allowed between half-brother and half-sister, usually where they are the children of one father by different mothers, more rarely by one mother and different fathers. No other cases are well authenticated, and some records of the marriage of brother and sister, such as the case of the Veddas, are now known to be mistaken. In general, not only is this form of marriage prohibited, but its prohibition forms the central and most definite feature of the moral code; and this applies to the marriage not merely of own brother and sister, but of those relatives in the widest classificatory sense.

It has been supposed by Morgan and others that the marriage of brother and sister was once general among mankind, and that it formed a stage in the history of the institution of marriage, but this opinion is chiefly based on misinterpretation of the evidence. Thus, avoidance between brother and sister (see XIX, KINSHIP, III. 2) has been held to show the former presence of sexual relations between these relatives. This is probably correct; but in Melanesia, from which region some of our best examples of this form of avoidance come, the custom is almost certainly a relatively recent practice due to external influences.¹ In all cases where marriage or sexual relations are allowed between brother and sister, they are probably of late occurrence, due either to relaxation of morality, or to the working of special ideas, such as that of the virtue inherent in royal blood.

(c) *Cousins.*—It is necessary to distinguish here between the marriage of cousins in general and the marriage of those cousins, usually known as cross-cousins, who are descended from persons of different sex. The marriage of cousins in general is sometimes allowed and sometimes prohibited, this prohibition being a necessary consequence of the

¹ Rivers, *History of Melanesian Society*, Cambridge, 1914, II. 102.

classing of all or some cousins with brothers and sisters in different forms of the classificatory system.

The marriage of cousins is frequent among Muhammadans, usually with the daughter of the father's brother, and here, as in other cases in which this form of marriage occurs sporadically, the motive is the desire to keep property within the family.

The most frequent form of marriage of cousins is that which takes place between cross-cousins, namely, cousins who are the children of brother and sister. In many places this marriage is not merely allowed, but is the orthodox union, and is so habitual that it determines the form of the system of relationship and gives a special character to the whole social system. All the peoples who are known to practice this form of marriage use the classificatory system of relationship; but usually the marriage is not between cross-cousins in the wide classificatory sense, but between the children of own brother and sister. In some communities these relatives are regarded as husband and wife without the need of any ceremony or other social arrangement, and still more frequently they apply to one another the terms used between husband and wife, even when they are not actually married to one another.

In the most frequent form of this union a man marries the daughter either of his mother's brother or of his father's sister, but occasionally his choice is limited to one or other of these relatives, the case which occurs the more frequently being that he may marry the daughter of his mother's brother but not of his father's sister. This form of marriage occurs among a few peoples of Australia, in several parts of Melanesia, including Fiji, and in India, especially in the south of the peninsula, though it was probably once more widely distributed.¹ It is also found among the Haida and a few other peoples of N. America, but has not yet been recorded from S. America. In Africa it has recently been found by Mrs. R. F. A. Hoernle among the Hottentots.

This type of marriage has usually been regarded as a secondary consequence of the dual organization of society, and has probably arisen in most, if not in all, cases out of this form of social organization. In Melanesia it has probably had as its immediate antecedent marriage with the father's sister or with the wife of the mother's brother, but elsewhere it seems to be actuated by the desire to keep property within the family.² In some parts of Australia the form taken by the matrimonial classes involves the marriage of second cousins, but we do not know how far such marriages occur between true second cousins or between more distant relatives. In some parts of the New Hebrides it is the custom to marry certain relatives whom we should class as first cousins once removed. Thus, a man may marry the daughter of his father's sister's son or daughter, the daughter of his mother's brother's daughter, or the daughter of his mother's mother's brother. One of these forms of marriage is especially frequent, viz. that with the daughter's daughter of the father's sister.

(d) *Uncle and niece*.—In general, marriage between these relatives is prohibited, but occasionally a man is allowed to marry his brother's daughter, and this marriage would seem to have sometimes been so habitual as to have influenced the system of relationship. This marriage occurs in northern Australia and in some parts of Melanesia. It has also been recorded elsewhere, and is allowed in some parts of Europe. Several peoples of S.

India permit a man to marry his sister's daughter. In some cases it is only the daughter of an older sister who may be married.

Another marriage which may be included under this heading is one occurring in Melanesia, in which a man marries the wife of his sister's son, or in which he and his sister's son have their wives in common.

(e) *Aunt and nephew*.—Marriage with the father's sister occurs sporadically in certain parts of Melanesia, and is a regular practice among some of the Déné peoples of N. America, and marriage with the mother's sister is said to occur among the Omotes of the Caucasus. Marriage with the wife or widow of the mother's brother is still practised in many parts of Melanesia, and is shown by the nomenclature of relationship to have once been a common practice. This form of marriage also occurs among some of the Bantu peoples of Africa, and many systems of relationship of N. America have features which would be its natural result.

(f) *Grandparent and grandchild*.—In Pentecost Island in the New Hebrides it is, or has been, the custom to marry the daughter's daughter of the brother; and this marriage with one who, through the classificatory system, has the status of a granddaughter has imprinted itself so deeply on the nomenclature of relationship that it must once have been the habitual custom of the people. This form of marriage has also been recorded among the Dieri of Central Australia.

A form of marriage similar to that just described, in that a man marries a woman two generations below his own, occurs in Ambim, adjacent to Pentecost Island. In this island a man marries the daughter of his sister's son. Still more widely distributed is marriage with the wife or widow of the father's father. The occurrence of this form of marriage was first inferred from the nature of the terminology of relationship in Fiji and in Bougainville Island in the Solomons, but the present writer has since found it in vogue in several islands of the New Hebrides, not only with some wife of the father's father, but with the actual grandmother.

We do not at present know of marriage between grandparents and grandchildren outside of Australasia, but there are features of some African systems of relationship which suggest its occurrence at present or in the past.

7. *Polygamy*.—The forms of marriage so far described are characterized by the social status of the partners to the union. The varieties now to be considered arise out of the number of the persons who enter into union. The term at the head of this section is most conveniently used as a generic term to include all such cases other than monogamy. Its different forms are polygyny, in which one man marries more than one woman; polyandry, in which one woman marries more than one man; and communal marriage, in which more than one man marries more than one woman.

8. *Polygyny*.—Though this form of marriage exists, or has existed, in every part of the world, it is very rarely, if ever, practised by all members of the community, but is the special privilege of the powerful and wealthy. Polygyny can be universal only among a people which obtains women by capture or some other means from outside its own community. Sometimes the practice is limited to chiefs, sometimes, where large payments for a wife are in vogue, it is only the wealthy who can marry more than one wife. Sometimes polygyny is the privilege of those who have shown their superiority to the rest of their community in some way, as in Eddystone Island in the Solomons, where a second wife is allowed to men who have taken ten heads in warfare.

¹ J.R.A.S. 1897, p. 81.

² Cf. Hux-Town, *British North America*, London, 1907, p. 145; F. J. Richards, *Man*, n.r. (1914) p. 124.

Polygynous unions differ considerably in the degree of social differentiation accompanying the union. The different wives may live together in one household, or each may have her own establishment. Sometimes one wife is superior to the rest, and her children differ from those of other wives in social status—a condition which passes insensibly into the distinction between marriage and concubinage (see below, § 11). Sometimes there are definite rules regulating the behaviour of the husband to the different wives.

The continent in which polygyny has reached its highest degree of development is Africa, in many parts of which the practice is so frequent and has so impressed itself upon the social organization that it has influenced the nomenclature of relationship, and special terms are used to distinguish from one another the children by the different wives of a polygynous marriage. Other regions where polygyny is well established are Australia and parts of Melanesia, where the polygyny forms part of an organized system of monopoly of the young women by the old men of the community.

It is sometimes the custom in polygyny that the wives shall be sisters, a man who marries a woman having the right to take her sisters also as they reach marriageable age.

9. Polyandry.—This custom is far less frequent than polygyny. At the present time its chief home is in India and its neighbourhood, and it also occurs in a definite form in the Marquesas Islands and among the Bahima and Basiba, Bantu peoples of Africa. In ancient times it has been recorded among the Arabs, Britons, Picts, and Guanches, but our information about these and many of the recently-recorded cases is not sufficient to show whether the condition was one of true polyandry or a variety of sexual communism. Even in India there is a distinct tendency for polyandry to be associated with polygyny, thus producing one form of communal marriage. Two varieties of polyandry are generally recognized, in one of which husbands are brothers, while in the other they are not necessarily related to one another. Following McLennan, these two forms are often called Tibetan and Nair (Nayar) respectively, but are better distinguished as fraternal and non-fraternal.

Both among the Todas and in Tibet and neighbouring regions, where polyandry exists in its purest form, it is of the fraternal variety. Usually the eldest son of a family marries, and, as his brothers grow up, they share his wife with him. Even if one of the younger brothers takes a wife among the Todas, she becomes also the wife of the other brothers. It is doubtful whether the recorded cases of non-fraternal polyandry should be regarded as polyandry at all. Among the Nayars, who furnished McLennan with his pattern of this form of polyandry, a girl goes through a form of marriage with a man, but then or later consorts with a number of men who need not be related to one another. It is a question, however, whether these men should not be regarded as cistsibs rather than husbands—a point difficult to decide, since the purely matrilineal institutions of the people make the fact of fatherhood of little social importance.

A variety of polyandry which may be distinguished is one which occurs among several peoples of India, in which a young boy marries a wife who consorts with the boy's father or maternal uncle or some other man. The wife's offspring are counted as the children of the boy-husband, and, when the boy reaches adult age, he will consort with the wife either of one of these children or of some other boy. The motive of the custom is said

to be that the boy shall have a son to take him out of *Put* (hell). A similar practice has been recorded elsewhere, as among the Ostiaks and Omsets. In Melanesia a man and his sister's son might share a wife or wives in common, but this was almost certainly part of a system of communal marriage, and it is probable that this is also the true nature of some or all of the other cases of this variety of polyandry. The polyandry of the Marquesas is peculiar in that the husbands are of different social status, one husband belonging to a more influential section of the community than the other.

We know very little of the social mechanism by means of which the status of the children is determined in cases of polyandry. In several cases it has been recorded that the children are assigned to the different husbands in order of age, but it is certainly not true of the Todas, who were once credited with this practice. Among this people there is no need for any special ascription of the children to the different husbands when these are brothers, owing to their common habitation and their common possession of property. It is only when the husbands are not brothers that the necessity arises, and then fatherhood is determined by means of a ceremony at the seventh month of pregnancy, the man who performs this ceremony becoming the father of the child for all social purposes.

We know little or nothing of the causes which have led to polyandry. Among the Todas and in the Marquesas Islands, and possibly elsewhere, polyandry is associated with female infanticide, and it has been supposed that the polyandry is a result of the scarcity of women so produced. It has also been supposed that polyandry has been the result of inequality in the proportion of the sexes, due to scarcity of the food-supply, this either producing a small proportion of female births owing to physiological causes or leading to the practice of infanticide.

It is noteworthy that the only definite example of polyandry recorded in Africa should occur among a pastoral people whose culture possesses several features closely resembling that of the Todas.

10. Communal group-marriage.—The question whether this form of marriage exists has been the subject of a lively controversy between different schools of sociologists for many years. If we define this type of marriage as a union of more than one man with more than one woman, no one doubts that cases occur which conform to the definition. This form of union is found among the Todas, for instance, but there it seems to have arisen as a combination of polygyny with polyandry. It is when we pass from such cases to those in which large groups of men are held to be the husbands of large groups of women that doubt arises.

The solution of the problem turns largely on the sense in which we use the term 'marriage.' If this word be employed for relations between the sexes, there is no question that group-marriage does not merely exist, but is a widely distributed practice. If, on the other hand, marriage is regarded essentially as an institution by which the social status of children is determined, we are met by our very imperfect knowledge of the exact nature of the recorded cases from this point of view; and another difficulty is that of drawing the line between wife and concubine, between husband and cistsib.

The recorded case which seems most to deserve the name of group-marriage is that of the Ngarrabana (Urubana) of Central Australia. It is stated that, among this people, no man has exclusive rights over any woman, and that we have

not to do with a confusion between wife and concubine appears from comparison with an adjoining people, the Dieri. The Dieri have a definite form for individual marriage, viz. *tippa-makku*; this exists side by side with the *pirrawu* relationship, which is certainly one in which a group of men and a group of women have the right to sexual relations with one another. The Ngarabana have consorts called *pirrawara*, who evidently correspond with the *pirrawu* of the Dieri, and the relations between the Ngarabana men and women who call one another *wapa* would, therefore, seem to correspond with the *tippa-makku* union of the Dieri, except that they are group-relationships, while the *tippa-makku* union occurs between individuals. The *tippa-makku* marriage, however, is associated with the custom of lending a wife, while men other than the husband have marital rights as part of the marriage ceremony. If the *tippa-makku* union is regarded as true marriage, it is difficult to withhold this name from the union between *wapa* which seems to correspond with it among the Ngarabana. In order to reach a positive decision on the matter, however, we should like to be more fully informed about the exact social relations which exist between children and the male partners in the different kinds of union.

In some parts of Melanesia there is an association of definite individual marriage with the occurrence of sexual relations between the group of men formed by the husband's brothers and the group of women formed by the wife's sisters. Since these groups consist of brothers and sisters in the classificatory sense, they may be of considerable size. This case is, now at any rate, confined to relations between the sexes, and it seems, therefore, better not to regard this as a form of group-marriage, but to speak of sexual communism associated with individual marriage.

Those cases may be similarly regarded in which all the members of a conventional brotherhood possess marital rights over the wives of other fellows. The most definite case of this kind of which we know is that recorded by C. G. Seligmann¹ among the Massim of New Guinea, in which all the members of a brotherhood who called one another *arima* have marital rights over the wives of the *arima*.

11. Concubinage and *cicisbeism*.—Reference has already been made to the difficulty of distinguishing these conditions from marriage. The most convenient use of the word 'concubine' would be to denote a woman with whom sexual relations are permitted, although the union does not involve fatherhood if there should be offspring. Similarly, the term *cicisbeo* would be most conveniently used of the male partner in a similar union. If the terms were used in this sense, the *pirrawu* and *pirrawara* of the Dieri and Ngarabana would be concubines or *cicisbeo*. The distinction would be especially applicable in such a case as that of the Todas, whose *mokkathoduvai* would be distinguished as *cicisbeo* from the husbands proper, there being the important difference between the two that the *mokkathoduvai* partnership is not subject to the law of endogamy which regulates the polyandrous marriage. The *mokkathoduvai* also never obtains the status of father to his partner's children except in those rare cases in which, being of the same endogamous group as an expectant mother whose husband is dead or missing, he is called upon to perform the ceremony which determines fatherhood.

The difficulty in using the term 'concubine' in the sense thus proposed is that in some of the cases,

such as those of the OT, in which the use of the term is fixed, concubinage carries with it the social relation of fatherhood, sometimes even with full rights of inheritance and succession (cf. art. CONCUBINAGE [Introductory]).

12. Marriage and sexual relations.—In this article marriage has been considered chiefly as a social institution by means of which the relations between parents and children become part of an organized social system. People among whom marriage is a social institution of the most definite kind may vary greatly in their attitude towards the sexual relations of married persons. All gradations can be found between peoples who regard any sexual relations other than those between husband and wife as a heinous offence and those who allow very great freedom in this respect. Of all the cases of which we have any knowledge, however, the extra-marital relations of married persons are subject to definite restrictions, the clue to the nature of these restrictions resting upon the conception of a wife as the personal property of her husband. Thus many peoples who will kill or make war upon the offender, if a wife is found to have transgressed, will nevertheless freely allow others access to their wives if their consent is asked, or will offer no objection if relations with other men form part of the *satur-nalis* or other occasions when relaxation of the ordinary moral rules is allowed.

The chief modes of departure from marital chastity are exchange of wives, which is especially a feature of Australian society, and lending wives to guests, which occurs in many parts of the world. Allowing the use of a wife in return for money or other kind of compensation is more rare, and is often only a feature of the relaxation of morality which follows contact with external influences.

13. Sexual relations before marriage.—Peoples differ greatly in their attitude towards sexual relations before marriage. In general, pre-nuptial freedom is allowed to men, but great divergences are found in the views held about female chastity before marriage. Among many people the pre-marital chastity of the wife is so highly valued that it may lead to such a practice as infibulation (cf. ERE li. 600*, 600*), and the testing of chastity may form an important part of the marriage ceremony, the failure of this test leading to annulment of the marriage or depriving the relatives of the woman of the bride-price or other benefits which they would otherwise obtain from the marriage.

Among other peoples freedom of sexual relations before marriage is regarded as a normal occurrence, and there may even be an organized system of payments for such relations, or prostitution in some form may be regarded as a regular preliminary to marriage, and those who have been successful in this career may be especially sought as brides. In other cases sexual relations before marriage may take place more or less freely, though they are not openly condoned. Among many peoples such sexual relations are allowed so long as they do not result in offspring, and often, as in many parts of Europe, the occurrence of pregnancy forms the usual preliminary to, and occasion for, marriage.

In addition to the forms of marriage dependent upon the social status of husband and wife and the numbers of partners who enter into union, other varieties can be distinguished according to the place of residence of the married persons, and the age at which the union takes place.

14. Patrilineal and matrilineal marriage.—These are terms respectively for cases in which the wife goes to live with her husband, and the husband goes to live at the home of his wife, the usual consequence being that in the one case the children

¹ *Melanesians of British New Guinea*, Cambridge, 1910, p. 478.

will belong to the locality of the father, and in the other to that of the mother. These two varieties of marriage have often been distinguished, especially by writers on Indian sociology, by means of the Sishalese words *dege* and *teena*, but the above terms, first proposed by N. W. Thomas, are now coming into general use. Intermediate cases between the patrilineal and matrilineal forms occur in which the man goes to live at his wife's home for a time, the case being closely related to that mode of obtaining a wife in which a man has, for a period of months or years, to serve the parents of the woman he hopes to obtain as a wife (cf. § 19).

Sometimes, as in the island of Tikopia, the visit to the wife's home is of so short a duration that it is probably only a survival in ceremony of a former condition of matrilineal marriage. Still another condition is that which occurs among the Arabs of the Anglo-Egyptian Sudan, in which the wife returns to the home of her parents in order to give birth to her children.

15. *Infant marriage*.—It is necessary to distinguish between infant marriage and infant betrothal, though the line between the two is often indefinite. Children are often promised as husbands or wives when very young or even before they are born, but it is only when ceremonies are performed or transactions carried through which are of the same nature as those accompanying the marriage of adults that we ought to speak of infant marriage.

Even in this limited sense, infant marriage is a very widely distributed practice. It is especially prominent in India, where its combination with the prohibition of re-marriage of widows makes it a very important feature of social life. Infant marriage occurs as an established practice in Australia and Melanesia, but here, as in other parts of the world, the process is often one of betrothal rather than of marriage. Sometimes a girl married in infancy goes at once to live with her husband's people; in other cases she continues to live with her own parents until she is of age for the marriage to be consummated.

Infant marriage has probably had two chief causes. It is a means of promoting the chastity of the young, adopted by peoples who attach importance to chastity before marriage, and this is especially the case when the girl goes to live with her husband's parents, who are thus able to watch over their son's wife. It may also be the result of any social condition which makes it difficult to obtain a wife, such as scarcity of women due to infanticide or natural causes, or monopoly of women by one section of the community. A lowering of the age of marriage for these reasons only accentuates the difficulty in obtaining a wife, and the lowering of age thus tends to be progressive, producing, in course of time, the marriages in extreme infancy which are found among some peoples (cf. art. CHILD MARRIAGE [in India]).

16. *Arrangement of marriage*.—In the very rare cases in which the choice of a consort is absolutely free the arrangement of marriage is a simple matter, and the same is true of the condition which seems to occupy the other end of the scale, in which the marriage of a person is pre-determined by the social rules of the community, as in those cases in which a man has to marry a certain relative. Even, however, in cases in which the choice is largely free, it is often the custom to make use of an intermediary, or the transactions connected with the marriage are arranged by the relatives or friends of the partners in the proposed union.

An important difference in the nature of the process of courtship turns upon whether the initiative comes from man or woman. Among many

peoples proposals of marriage should come from the women.

The part played by other persons in the arrangement of marriage largely turns upon the extent to which relatives and friends take part in the pecuniary transactions which so often accompany marriage; but in many communities the consent of certain relatives is necessary, quite apart from this. Among those peoples whose social system is based on the family it is the consent of the parents that is chiefly needed. Among other peoples the place of the parents in this respect may be taken by some other relative, such as the mother's brother or the father's sister. In some parts of Melanesia the consent of the father's sister is essential. She usually chooses a wife for her nephew, and has the power of vetoing his marriage if he should choose for himself.

17. *Marriage by purchase*.—In most parts of the world marriage is accompanied by pecuniary transactions. In some cases payments are made by the husband or his relatives to the relatives of the woman, this payment being usually known as the bride-price. In other cases payments are made by the relatives of the bride, these being usually known as a dowry. In other cases again there are complicated transactions in which payments pass between the two parties, but often these are chiefly of a ceremonial nature, either existing alone or, more frequently, accompanying the transference of the bride-price or dowry.

Sometimes the payments made for a wife or husband may be so large as to form a definite impediment to marriage. They tend to raise the age of marriage, or may even prevent some members of the community from marrying at all. In some cases, however, in which the payments seem to be very large the common ownership of property distributes the payments over a large circle, making them more practicable than would be the case if they had to be given by an individual person. Sometimes the payments are made in different stages which may correspond with betrothal and marriage, and sometimes they do not cease at marriage, but continue for some time afterwards, the birth of each child of the union being an occasion for them.

Among peoples who follow the custom of marrying certain relatives it sometimes happens that the payment for a wife is made only in those cases in which a man marries some other woman.

The most frequent mode of marriage by purchase takes the form of the bride-price; but in India, and in some parts of Europe, the dowry or payment to the husband is the more usual custom.

18. *Marriage by exchange*.—The most definite case of this mode of contracting marriage is that in which a man gives his sister to the brother of his bride, and, since this custom usually occurs among peoples who use the classificatory system of relationship, it may lead to the exchange of women between groups of considerable size. The motive usually assigned for this form of marriage by those who practice it is that it does away with the necessity of paying for a wife; but there is some reason to suppose that in some cases the practice may have arisen out of, or be otherwise associated with, the cross-cousin marriage.

19. *Marriage by service*.—Thinking of marriage, which has become well known through its occurrence in the OT, is probably not very common, and, as already mentioned (§ 14), passes insensibly into the matrilineal form of marriage.

20. *Marriage by elopement*.—Among many peoples elopement is so frequent and is so little objected to by the community that it may be regarded as a regular mode of contracting marriage. In some cases it would appear to be the result of

restrictions upon marriage which have developed to such an extent as to have become irksome to the community. In the absence of any social mechanism for the abrogation of these restrictions it has become the custom to connive at their infraction by taking a lenient view of elopement. In Australia and some parts of Melanesia where elopement is frequent it may be the secondary consequence of the monopoly of women by the old men. In other cases it may be a means of escape from the obstacles to marriage due to the bride-price.

21. *Marriage by capture.*—This form of marriage has aroused great interest in consequence of the idea of McLennan that, at one period of the history of human society, it was the normal mode of obtaining a wife. The capture of wives is known to occur, and the marriage ceremonial of many parts of the world includes either a definite conflict for the possession of the bride or features which may be interpreted as survivals of this process. It is very doubtful, however, whether any people habitually obtain wives from without their tribe, though the Khonds of India are said to do so, and it is probable that the conflicts of wedding ceremonial are derived from other social processes, such as the custom of marrying relatives, which gave certain persons a vested interest in the women of their own community. The vogue of the cross-cousin marriage in southern India makes it probable that a conflict which takes place between the husband and his wife's cousin in some parts of Malabar is a survival of that form of marriage in which the cousin had a prescriptive right to the bride.

It is probable that many of the other customs which have been regarded as survivals of the capture of women from hostile tribes are rather the results of a social condition in which it was the custom that women should become the wives of certain members of their own community.

22. *Trial marriage.*—Unions to which this term has been applied have been recorded among many peoples, but many, if not most, of these cases should be regarded as trials before marriage rather than as examples of marriage in the sense in which the term is used in this article. Temporary unions are especially frequent where marriage is contracted with little or no ceremonial, and these cases shade off insensibly into trials before marriage on the one hand and into ease and frequency of divorce on the other. A union should be called a trial marriage only if there is a definite contract or ceremony entered upon with the condition that the union shall be annulled if it is unfruitful or if the parties to it wish to separate after a certain period.

23. *Social functions of relatives by marriage.*—Marriage brings the partners to it into definite social relations with large groups of persons in whom they had previously no special interest. Among some peoples, and especially among those who use the classificatory system of relationship, these social functions may take very definite and well-established forms. Prominent among these is the custom of avoidance (see KIN, KINSHIP, III. 9) between a married person and his or her parents-in-law. The restrictions on conduct are usually most pronounced in the case of a man and his wife's mother, and the avoidance in this case may be so strict that the two are not allowed to see one another or to be in the same house or even in the same village. A more frequent form of avoidance is that a man may not speak to his mother-in-law or may not speak to her familiarly, and still more frequent is the custom that he may not use her personal name, but must address her by the appropriate term of relationship. A similar

mode of conduct often accompanies the relationship of a man to his wife's father, but usually the avoidance is less strict, and the avoidance between a woman and her husband's parents is also, in general, less rigid than that between her husband and her parents. In some places certainly, and probably everywhere, these customs of avoidance are definitely associated with the idea of the likelihood of sexual relations between those who avoid one another, but the occurrence of similar customs of avoidance between persons of the same sex shows that this is not the only explanation.

Similar customs of avoidance also occur between brothers and sisters-in-law, using these terms in the classificatory sense; but they are usually less strict, and often limited to prohibition of the use of the personal name or of familiar conversation. Often these customs are combined with certain duties on the part of these relatives towards one another—duties which may be summed up as those of mutual helpfulness. This is especially the case with the relationship of brother-in-law. Sometimes the duty of helping one another goes so far that a man may use any of the property of his brother-in-law. Sometimes the men must defend one another in case of danger, while the presence of the relatives on different sides may put an end to a fight. Still another duty sometimes assigned to these relatives is that one must dig the grave or take the leading part in the funeral ceremonies of the other.

This combination of customs of avoidance with the obligation of mutual helpfulness may possibly be explained as having grown out of the relations which arise when marriages habitually take place between hostile peoples, or they may be the result of the marriages which form part of the process of fusion of two peoples.

24. *Marriage ceremonial.*—The rites accompanying marriage vary greatly in duration and complexity among different peoples. Sometimes they are so fragmentary that they can hardly be said to exist, while in other cases the ceremonial may consist of rites of the most diverse and elaborate kinds, prolonged over weeks or months. In the lower forms of culture the ceremonial of marriage is, in general, scanty, especially where it is the custom to marry relatives. Its greatest complexity, on the other hand, is reached in India, south-eastern Asia, and the Malay Archipelago, the elaboration in the last region being almost certainly the result of Hindu influence. It is possible to distinguish certain main varieties of ceremonial. Putting on one side feasting and adornment as the expression of æsthetic motives natural to any important event in social life, we find a number of ceremonies which are connected with the economic side of marriage. Such is the transmission of objects from the friends of one partner to those of the other which form the bride-price or dowry. In some parts of the world, as in Melanesia, the transactions of this kind are numerous and complicated and form nearly the whole of the ceremonial. Sometimes, however, these transactions have aspects which suggest a religious character, especially in the customs of exchange which are so prominent in the ceremonies of Polynesia, Melanesia, and some N. American peoples.

Another group of ceremonies which may have a motive chiefly æsthetic is the conflicts and other features which are probably indications of interference with vested interests affected by the marriage.

A large group of ceremonies consists of acts symbolic of features of marriage. Such are the joining of hands and the tying together of garments. Allied to these are the acts which seem

to show the superior status of one or other partner to the union. Thus the superiority of the bridegroom may be symbolised by presenting him with a whip or by his boxing the bride's ears, and possibly tying the *tali* in India and the use of the wedding ring of our own ceremony may have had a similar meaning. Elsewhere, as in Morocco, the bride may perform various acts, such as riding a pack-saddle, which are designed to give her power over her husband.

Similar to these are the many forms of rite in which bride and bridegroom eat together or march round a fire. Other rites, such as that of pouring rice or wheat on the head of the bride, probably have as their motive the desire to promote the fertility of the union, or to ensure an abundance of food for the household.

Another large group of rites seems to be connected with the idea that some danger is attendant upon entrance into the marriage state. It may be that rites of this kind at marriage form part of a general custom of performing ceremonies at any transition from one period of life to another—the 'rites de passage' of A. van Gennep.¹ Another motive may be the idea of the danger accompanying carnal intercourse to which so great an effort has been ascribed by Crawley.²

Among features dependent on ideas of this kind may be mentioned the prolonged period which often has to elapse before consummation of the marriage is allowed, and the frequent customs according to which husband and wife are not allowed to see one another before a certain stage in the ceremonial. The many rites of purification, the assumption of new garments, and such disguises as dressing in the clothes of the opposite sex may also be of this order. It is probable that some rites of marriage are designed to impart to others the spiritual sanctity which is supposed to attach to newly-married persons.

Many of the motives for ceremonial so far considered are of the kind usually supposed to underlie magic. Other features are definitely religious in that they involve specific appeal to some higher power. Such are definite rites of sacrifice and prayer, while the practice of divination to discover whether the higher powers are propitious also falls under this head.

Among most people of rude culture no part is taken by any person who can be regarded as a priest, but, as definite religious motives come to saturate the ritual, its performance tends to pass more and more into the hands of a class of persons especially set aside for the performance of this and other religious functions.

25. Marriage to inanimate objects.—In several parts of India it is the custom, under certain circumstances, that persons shall go through ceremonial marriages with such objects as a tree, a bunch of flowers, a dagger, a sword, or an arrow. One occasion for this kind of marriage is the entrance of a dancing-girl upon her career, the motive being apparently that, though the future occupation of the girl will render a husband superfluous, she shall, nevertheless, be married.

Another motive for this form of marriage is the belief in the unlikeness of certain numbers. Thus, to counteract the belief that a second marriage is unlucky, a widower may marry an inanimate object in order that his succeeding union with a woman shall be his third marriage. It is probable, also, that marriage to a tree may, in some cases, especially where this forms a part of the ordinary marriage ceremonial, depend upon a belief in the influence of the tree upon the offspring, possibly in the future reincarnation of an

ancestor represented by, or whose representative is present in, the tree.

26. Marriage after death.—In some parts of India the body of a girl who dies unmarried is the subject of marriage rites, while the marriage of dead bachelors seems to have been a feature of ancient Aryan culture (*ERE* II. 22). The Aryan practice seems to have been connected with the custom of killing the wife on the death of her husband, and to have had as its motive the desire to provide the man with a wife in the life after death. We do not know the motive for the modern Indian practice.

27. Widowhood.—In some parts of the world the re-marriage of widows is absolutely prohibited, and in others widows normally become the wives of certain relatives, while intermediate cases occur in which their marriage is allowed, but is not subject to any special rules. Among many peoples, especially in the case of chiefs and more influential members of the community, wives are killed as part of the funeral ceremonies of their husbands, and there is reason to suppose that there is a connexion between this practice and the total prohibition of re-marriage, particularly as the latter practice is often found in the neighbourhood of places where the killing of wives on the death of the husband is or has been practised. Two places where the association occurs are India and the Solomon Islands, and the connexion of the two practices is supported in the latter locality by the fact that widows undergo a period of seclusion after death, with features suggesting that the seclusion is intended to represent a ceremonial death. It would seem that the prohibition of re-marriage is adopted when the more extreme measure has been given up.

Several cases in which a widow normally marries certain relatives have already been mentioned. Sometimes, especially in Africa, a son takes his father's widow, excluding his own mother. Elsewhere a widow may be married by the sister's son, or the son's son, of the deceased husband; but the most widely distributed form of union of this kind is that known as the levirate, in which a wife is taken by the brother of the deceased husband.

28. The levirate.—The best known example of this practice is that recorded in the OT, in which the custom is limited to the case in which the dead husband has no children, the motive of the marriage being to raise up seed for the dead brother. The term is now used for any case in which a man marries his deceased brother's wife, and in most cases the Biblical limitation and motives are not present. The practice may be based on the idea that a wife is property to be taken by the brother with other goods, or it may form part of the duty of guardianship over the children of the brother and be designed to prevent the management of the children's property passing into the hands of a stranger whom the widow might otherwise marry.

In India, and in some parts of Melanesia, the practice of the levirate is subject to the limitation that the widow of a man may be married only by his younger brother, a man having no right over his younger brother's wife. It is not easy to see how this limitation can arise out of the motives for the practice already mentioned. It was supposed by McLennan that the levirate is a survival of polyandry, and it is possible that in these Indian and Melanesian cases the practice is derived from either polyandry or communal marriage, the limitation being connected with some social functions of the relationship between elder and younger brother of which at present we have no knowledge.

Though the OT motive does not wholly account for the custom of the levirate, it shows itself in

¹ *Rites de passage*, Paris, 1909.

² *The Mystic Sex*, London, 1902.

of life and death which the *paterfamilias* had over his wife as well as his children (vi. 19).

2. **Ancient Britain and Ireland.**—Among the ancient Britons the position of woman was quite different. The women were the common possession of ten or twelve husbands, especially of brothers, or of fathers and their sons; but the children born from these unions belonged to the man who had married the woman first (Caesar, *de Bell. Gall.* v. 14). Women were common property also in Caledonia (*Dio Cass.* lxxvi. 12; cf. lxi. 6). In Ireland, it is stated, it was quite a natural thing for men to have intercourse with the wives of other men, with their mothers, or their sisters (Strabo, iv. v. 4; cf. Jerome, in *Joan.* ii. 7), but we find a much more advanced social state among the Irish and Britons described in the ancient epics and the collections of laws and customs.

3. **Medieval Ireland.**—In Ireland, although the wife might bring all her own personal belongings (*sinad*) with her, it was the husband first of all who provided a dowry (*sinneva*) for his wife. This dowry consisted of metals (gold, silver, copper, brass), clothing, or cattle; sometimes it consisted in some condition to be fulfilled by the future husband. In fact, marriage was generally a sort of sale, for the laws stipulate that the wife's father has a right to the whole dowry for the first year, to two-thirds the second year, half the third year, and so on, his share decreasing until the twenty-first year, when the debt is cancelled; during all this time the wife has control of what remains of her dowry each year. As a rule, marriages were celebrated by preference on the first days of August, at the time of the Fair of Tailteann, or in the month of November. Polygamy seems to have been practised, perhaps as an exception, a little before the Christian era. In any case, if it was very uncommon to have several wives of the free class, a king often had one or more concubines of a servile class in addition to his lawful wife (*offmuisir*, 'first wife'). Kinship ties were not always an obstacle to marriage: Lagsaid, king of Ireland, married his mother; and a king of Leinster had his two sisters as wives.

The rights of the woman after marriage depended largely on her personal status in the community. In cases of separation for serious offence or by mutual consent, the wife received either the part of her dowry that was left her or what she brought on her marriage-day; in dividing the property, all that she had acquired by work and manufactured articles was taken into account, and the very smallest details were controlled by law.

4. **Medieval Wales and Brittany.**—The laws of Wales show in their archaic parts a similar social state. The woman brought with her a dowry (*agweddy*) equal to half of what her brother would have (*gweddol*), and articles for her own use (*arwyfren*); she received from her husband a present proportionate to her position and payable on the morning after the consummation of the marriage (*ceuyll*). The conditions of separation depended on how long the union had lasted. If it had continued for a period of seven years all but three days, the belongings were divided equally between the couple; but, if the wife left her husband before this time, and without good reason, she had no right to anything beyond her *ceuyll*. Polygamy was forbidden. Postage seems to have been less widespread than in Ireland.

The Britons who emigrated from Great Britain to Armorica in the 5th cent. called the dowry given by the husband to the wife *snepuert*, 'face-price.' It was often property in land. Cf. also art. **CHILDREN (Celtic)**, **ETHICS AND MORALITY (Celtic)**, **POSTERAGE**, II. 5-7.

MARRIAGE (Christian).—2. **The Christian Ideal.**—The NT does not profess to set forth any new law or theory of marriage. Our Lord's answer to the Pharisees who questioned Him on the subject of divorce (Mt 19, Mk 10) implies that the perfect ideal of marriage is sufficiently declared in the passage in Genesis which professes to record the original institution of the holy estate of matrimony (Gen 2nd). The teaching and legislation of the Christian Church on this subject may, therefore, from one point of view, be regarded as a series of attempts to define more clearly and fully what is implied in the words of the original institution, and to enforce in practice the careful observance of the principles therein involved.

It is, accordingly, not strange that the subject of marriage occupies a comparatively small space in the teachings of the NT, and is for the most part confined to general rules as to the behaviour of married people such as might very well have found a place in the teaching of any heathen philosopher.

In the Gospels we have no direct reference to marriage, with the exception of our Lord's deliverances on the subject of divorce, which probably represent sayings uttered on different occasions, but which are, at any rate, all to the same purport: divorce is in itself sinful and inconsistent with the original divine institution of marriage. In the Epistles we have a number of practical exhortations in which the duties of married persons are clearly declared. The supremacy of the husband as the head of the wife is recognised, and the duty of wifely obedience declared. Mutual love and consideration are urged with considerable insight, while the perfect unity of husband and wife as 'one flesh' is duly emphasised.¹

The NT, in fact, deals with marriage as an established social institution as it deals with other established institutions, laying down broad general principles of conduct, and demanding faithfulness and uprightness in the discharge of all recognised duties.

It was not necessary for the first Christian teachers to condemn polygamy, for in both the Greco-Roman and the Jewish world in their time monogamy was the universal rule. Polygamy is not expressly forbidden in the OT, nor was it uncommon in ancient Israel; but the Jewish teachers of the post-Exilic period had come to recognise that it was not consistent with the spirit of the original institution, which plainly demands the union of one man and one woman in marriage. Extra-matrimonial connexions might not be seriously condemned in the Gentile world, but, for the begetting of legitimate children, it was the rule that there should be only one wife to one husband. While it is safe to say, however, that monogamy is assumed throughout the NT, there is perhaps only one passage which a lover of proof texts could quote as distinctly forbidding polygamy, viz. 1 Co 7th: 'Let each man have his own wife, and let each woman have her own husband.'

Yet, although the NT does not profess to put forth any new laws on the subject, it is most true that the religion of the gospel has done inestimable service, not only in restoring and preserving pre-

¹ The passages of the NT dealing directly with marriage are Mt 19:1-12, Mk 10:2-12, Lk 16:18, Mt 22:26-27, Mk 12:28-31, Lk 12:42, Ro 7:2-4, 1 Co 6:20-21, 7:1-5, Eph 5:22-33, Col 3:18, 1 Ti 2:11-12, 2 Ti 2:13-14, 1 Pe 3:1-7.

ous principles which were being forgotten in an age of luxury and grievous moral laxity, but also in changing profoundly men's ideas of the marriage-relation and of its duties and responsibilities. This result is the direct outcome of the teaching of the NT.

(1) The spirit and teaching of the NT tend to put the mutual love of husband and wife in the foremost place. Marriage has been described as a provision for the propagation of the race and the proper bringing up of children. The NT recognises the importance of the Christian household and the rightful education of Christian children, but does not describe this as the main object of marriage. Again, marriage has been regarded as a provision for the satisfaction of a natural desire and a restraint upon unbridled indulgence. St. Paul acknowledges that marriage serves this purpose, but does not give it any great prominence (1 Co 7²⁵). According to the book of Genesis, marriage was instituted, in the first instance, to satisfy the need of man's social nature. Because it was 'not good that the man should be alone,' because companionship with his fellows was necessary for the perfect development of his nature, marriage was instituted to provide him with the closest and most intimate form of companionship. Thus the words, 'The twain shall become one flesh,' imply much more than a merely carnal relationship—a thought which is instructively developed by St. Paul in Eph 5²².

(2) It is not too much to say that our whole conception of the marriage-relation has been changed, and changed for the better, by the high and honourable position accorded to women in the NT, and the general improvement in the status of woman which has been brought about under Christian influence, and which has not yet, perhaps, reached its final goal. A system in which 'there can be no male and female' (Gal 3²⁸) so far as all blessings, privileges, and responsibilities are concerned, under which husband and wife are taught to remember that they are 'joint-heirs of the grace of life' (1 P 3⁷), must of necessity tend to elevate, and, if it may be so expressed, to equalise, the marriage-relation.

When St. Paul compares the marriage-bond to the union between Christ and the Church, he is, no doubt, making use of a very familiar idea frequently expressed by the OT prophets, and applying it to the Christian community. It is easy to see, however, that the substitution of Christ—our brother—for the awful Jahweh of the OT makes all the difference in the world, the essential difference, in fact, between the old world conception and that of the Christian Church. The ancient Romans had a high ideal of the sanctity of married life—an ideal which, as the very bitterness of the satirists proves, was not wholly lost in the terrible immorality of the times when Christianity made its appearance. Nevertheless, among Jews and Romans alike, as also, to a considerable extent, among the Greeks, the relation of the wife to the husband was, to all intents and purposes, that of a slave to her master. Under the gospel the superiority of the husband is more that of the parent to the child or, rather, of a protecting brother to a sister. It is sometimes asserted that the terms in which the supremacy of the husband and the duties of obedience and reverence on the wife's part are put forth in the NT are too strong to be in harmony with our ideas to-day, and that we have, in fact, passed beyond the point of view of the NT. If so, this very advance is the natural and necessary outcome of the gospel just as truly as the abolition of slavery—another social institution which is nowhere directly condemned in the NT. It may be argued on rational grounds that

the natural characteristics of the sexes must involve a certain superiority and controlling power on the man's side in the nuptial relation; but such questions cannot be decided by the mere appeal to isolated texts of the Bible.

(3) The union of the sexes has been purified, and the happiness of the married relation secured, by the absolute prohibition of every kind of extra-matrimonial connexion. Such connexions were regarded with absolute indifference by the Greeks, and, in consequence, the temporary connexion with the *hetæra*, or courtesan, came to be much more highly valued than the legitimate marriage, to the manifest injury of the home life and the status of the lawful wife. By the Romans, it may be said, such connexions, though not so lightly regarded as among the Greeks, were, on the whole, regarded with contemptuous indifference. Although the case was different, so far as the Jewish law was concerned, we cannot doubt that the Jews would be much influenced by the prevailing tone of thought in the Gentile world and would imbibe something of the very lax principles of morality current in their day. All such connexions are emphatically condemned in the NT, and it is expressly taught that the physical connexion of itself involves the obligation of the marriage-bond (see 1 Co 6¹⁸).

(4) The gospel emphatically condemned divorce as essentially sinful. In ancient Rome divorce was regarded as in some sense dishonourable, and therefore undesirable. For five hundred and twenty years it was boasted that divorce was unknown in Rome (Val. Max. ii. 1), and the very bitterness with which the satirists denounce the laxity of their time in this matter shows that the old idea has not yet been wholly lost. Nevertheless, it is only too evident that, in the time of luxury and advanced civilisation in which the gospel was first preached, divorce was coming to be looked upon with the utmost indifference as a commonplace fact in ordinary social life.

The Jews had no doubt as to the lawfulness of divorce (cf. art. 'Divorce' in JE iv. [1903] 694-623), and it is probable that Mt 19⁹ most truly represents the form of their question to our Lord. They desired to have His opinion, not on the question of the lawfulness of divorce, but as to the causes for which divorce might be legitimately instituted. Our Lord's answer declares the essential sinfulness of divorce as inconsistent with the original institution of marriage.

(5) The teaching of St. Paul about marriage as the symbol or analogue of the mystical union of Christ with His Church (Eph 5²²⁻³²) has had a profound effect on Christian thought, elevating and purifying the conception of marriage. Marriage for the Christian is something more than the ordinary social institution; it is, above everything else, 'a holy estate.' Man and wife are no longer twain, but one flesh. This, as has already been pointed out, implies more than a merely physical union. How much more? It may be said that it implies a perfect union of love and affection, and entire community of aims and interests, as also of worldly possessions, and a perfect mutual understanding. This positivist explanation may perhaps seem sufficient to the modern mind; but it is easy to see that the comparison with the spiritual union between Christ and the Church might, to Hellenic readers, very naturally suggest something more, something in the nature of a metaphysical basis for the union of aims, affections, and interests. This basis may be conceived as a sort of mystic, or, possibly, psycho-physical bond, uniting the two spirits so as to form a kind of single personality. It is quite conceivable—we may even say that it is probable—that some such idea was in the

mind of the Apostles. The idea may not seem altogether absurd to a modern metaphysician; but, if it should seem inconceivable, we are not bound to defend the infallibility of St. Paul's metaphysics, and may be quite satisfied with the simple, positive, and practical view of the union.

It is, however, necessary to bear in mind that this idea of a mystic or psycho-physical bond formed in matrimony is, essentially, that sacramental view of marriage which was authoritatively defined in the Middle Ages, which is still the accepted doctrine of the Roman and Eastern churches, and which has had important practical consequences for Christian thought and Christian life.¹

3. **Marriage rites and ceremonies.**—The history of the rites and ceremonies accompanying marriage belongs properly to the sphere of the Christian antiquarian; but, inasmuch as those rites and ceremonies have been the subject of mystical interpretation on the part of Christian theologians, and have thus acquired a certain religious significance, a brief notice of them may well find a place in the present article.

Marriage-celebrations in all times and in all countries have been either essentially religious functions or, at all events, accompanied by religious rites and ceremonies. The solemnization of marriage by a religious ceremony is, therefore, no new thing peculiar to the Christian Church. In fact, there is not a single feature in the marriage-services of the Christian communities that cannot be traced back to the *sponsalia*, or to the nuptial ceremonies, of the Roman Empire. On the other hand, the form of our Christian services, the ministerial benediction, and the clear expression of Christian doctrine in prayers and exhortations have helped to preserve a living sense of the peculiar sanctity of marriage as taught in the NT.

Marrriage is, in the first place, an affair of the family. In the earliest period the Christian congregation regarded itself as a spiritual family, and the life and concerns of every member of the congregation were of intimate interest to the whole body. No member of the congregation ought to enter upon so important a step as the contract of matrimony without the advice and approval of the whole congregation. This is implied in the words of Ignatius:

[illegible]

It is inconceivable, therefore, that the celebration of marriage should not have been accompanied from the very first with suitable acts of Christian worship, or that the accustomed marriage-rites should not have been celebrated as a solemn religious function. With the expansion of the Church and the consequent weakening of the close bond of social union between members of the same congregation, the necessity for ecclesiastical sanction for marriage would be less strongly felt, and marriages might be contracted without any formal benediction.

The testimony of the Fathers, from the middle of the 2d cent. onwards, shows that what we should now describe as evil marriages were not unknown, perhaps were not uncommon, but at the same time were strongly discountenanced by the Church. It is evident that the general feeling in the Church was very much the same as it is to-day. While a religious ceremony was not required as a condition of Christian communion, it was felt that the right and proper course was for all Christians

¹ Whenever the sacramental idea is referred to in this article, it may be taken that the idea herein explained is meant.

† J. B. Lightfoot graduate researcher.

people marrying honourably to seek the benediction of the Church upon their union.¹

From the 6th cent. onwards there can be little doubt that the celebration of marriage with ecclesiastical benediction was the almost universal custom. The inference which has sometimes been drawn from the fact that about A.D. 802 Charlemagne prohibited marriage without benediction (*Capit. vii. 363*); and that so late as A.D. 900 Leo the Philosopher issued a similar edict (*Novel. 89*), that purely civil marriages were very common up to the end of the 8th or 9th cent., is not borne out by anything that we know of those ages.

Nevertheless, marriage without benediction, though thus condemned by the civil law, was, if otherwise unobjectionable, regarded as valid in the Church up to the time of the Council of Trent. That Council (A.D. 1563, *sess. xxiv.*) decreed that henceforth no marriage should be considered valid unless celebrated by a priest in the presence of at least two other witnesses. The decree, indeed, clearly expresses the principle that the ceremony is not of the essence of the sacrament, the matter of which remains; as before, the consent of the parties; but it claims the right on the part of the Church to regulate the conditions under which a valid marriage can be celebrated. The decree holds good only in those countries in which the decrees of the Council have been published.

In the Eastern Churches the Confession of Peter Mogilas of Kioff (A.D. 1640), in which the priestly benediction, the accustomed formularies, and the invocation of the Holy Spirit are declared to be essentials of marriage, is regarded as authoritative.

The marriage-ceremonies in use all over the Christian world for hundreds of years past contain elements derived from two sources, viz. the *sponsalia*, the ancient ceremony of betrothal, and the *nuptiae*, or marriage-ceremony proper. The solemn troth-plight, the joining of hands, and the giving and receiving of a ring or rings with certain gifts of money—the *arras*, pledge of the dowry—were the principal features of the betrothal ceremony. The veiling of the bride, the crowning of the bride and bridegroom, the formal handing over of the bride by her parent or guardian to the care of the bridegroom, the solemn declaration of the completion of the contract, and the bringing home of the bride in triumphal procession to her future home were the accustomed nuptial ceremonies. The priestly benediction may perhaps be considered as the distinctively Christian addition to the ancient ceremonies, yet even this may have been simply a special sanctification of the ancient congratulations of the family; it is even possible that in the Christian service there was some attempt to recall the ancient *confarreatio*, which had by Christian times become practically obsolete, but which, with its accompaniment of sacrifice and solemn benedictions, was the only form recognized by Roman law for the celebration of an absolutely indissoluble marriage. The references to the demand for ten witnesses in St. Ambrose¹ would naturally suggest the *confarreatio*. Old customs are often preserved in an imperfect fashion even when they have become obsolete (see MARRIAGE [ROMAN]).

¹ The following passages may be referred to as bearing on the view here presented: Chas. Alex. Fard. III. Sermon 79, 80. Turf and Cover II. 9, de Poëtie. 6 (this passage is worth quoting in full "Ides pennis nam, scintille quæque consurgunt, et non prius præcipiti protuberant, quam si visum fuerit, ut sit ignis, qui se hauriat, et non accendat") See also comment on biblical criminal element? Ambrose, Ep. lix. 7, condemning mixed marriage with unbelievers, which the Church concurred, but could not wholly prevent in the earlier centuries. Symeon, bishop of Dolomieu, Ep. ccc. Basil. Ep. xviii. canon 52, etc.

1. Nam si inter decem tantis confectis speciebus, septem consummatas, quævis femina viro conjunctione mortali non esse magno periculo perperat adulterium' (de *Lepus virginis consummata*, v.). The passage may, of course, simply refer to the old Roman custom by way of example.

There is no express evidence that the veiling of the bride formed part of the Roman ceremonies of betrothal; it seems rather to have been confined to the nuptials proper. In Tertullian's time, however, it was a betrothal ceremony amongst Christians, the bride continuing to wear the betrothal veil from the time of the betrothal to the wedding-day (Tert. *de Virg. velandis*, xi.).

A passage in Tertullian would seem to imply that the giving of a ring, though a harmless heathen custom, was not practised by Christians in his day (*de Idolol.* xvi.). This may have been the case with some of the stricter or more old-fashioned Christians, but the universal custom of the Church from the 4th cent. onwards would seem to show that the giving of the ring had always been generally practised.

The crowning of the bride and bridegroom was condemned by Tertullian as implying acknowledgment of heathen deities. Yet it continued to be commonly practised in the Western Church long after his day. In the Eastern Church it prevails to the present day, and is regarded as the most important part of the marriage-ceremony, marriage in the East being often described as 'the crowning'.

That *sponsalia* and actual nuptials were still regarded as distinct ceremonies, between which an interval of time might elapse, up to the middle of the 9th cent., is evident from the letter of Pope Nicholas I. to the Bulgarians (A.D. 866 [P.L. exix. 980]), in which he treats of the marriage customs of the Western Church. It is, however, most probable that from much earlier times the two ceremonies had been generally combined in practice. Formal *sponsalia* were not required by Roman law, and were frequently omitted. In such cases it would be natural that the giving of the ring, the troth-plight, and other *sponsal* ceremonies would take place at the actual marriage. The Anglican custom of celebrating the first part of the marriage-service in the body of the Church, while the concluding prayers and benediction are said at the altar, is a vestige of the ancient distinction between *sponsals* and marriages.

3. Asceticism and marriage.—The idea that there is something necessarily impure and degrading in the union of the sexes in marriage, or that, at all events, marriage must be regarded as a somewhat grudging concession to human weakness, finds no place in the teaching of the NT. Notwithstanding the strict incalculable of the general principle of self-denial, there is nothing to suggest that the celibate or virgin state is in any way higher or holier than the state of marriage. There is just one passage, in the Apocalypse of John (19th), which, however interpreted, seems to imply a preference for the virgin state; otherwise the NT gives no support to the doctrine. If St. Paul prefers the unmarried state, it is on purely utilitarian grounds, because of the greater freedom from worldly cares enjoyed by the unmarried. If we may accept the Pastoral Epistles as his, or as expressing his mind, the Apostle thought it most desirable that younger widows should contract a second marriage. Yet, inasmuch as what we may call ascetic ideas were widely prevalent, not only among the Essenes (q.v.) in Judaism, but in certain circles in the heathen world, it is very likely that such ideas were to some extent prevalent in the Church from the very first. The awful prevalence of vice and immorality, the consequent demand for a resolute fight against those 'fleshly lusts which war against the soul,' and a sense of the strength of animal desires and impulses would naturally create a feeling of repulsion against all forms of indulgence, even the most innocent, in those newly aroused to a desire for a new and higher life. It is not surprising, therefore, that from the middle of

the 3rd cent. the ascetic view should have taken a firm hold on the Christian Church and should have speedily become the predominant and, in fact, universally accepted view. The rise of monasticism and the admiration aroused by the devotion of the monastics and also, from the middle of the 4th cent., the intensified worldliness of the new fashionable Church would naturally foster the growth of the ascetic ideal. The command, 'Love not the world' (1 Jn 2nd), had to find some new interpretation when the world was no longer a professedly heathen world, but a community of nominal Christians. The doctrine of the earlier Gnostics, Basilidians, Saturnians, Encratites, etc., and of the Manichaeans, of the essential sinfulness of conjugal union was, of course, formally condemned, but in the extravagant laudations of virginity in the writings of St. Jerome, and even the more moderate utterances of St. Augustine, the disparagement of the married state sometimes approaches very closely to the views of those heretics. Throughout the Middle Ages the doctrine of the superiority of the virgin state firmly held its ground, and led to many extravagances. But the teaching of the NT and the constant witness of the Church served at all events as a safeguard against the worst results of the disparagement of marriage.

It was not until the Reformation of the 16th cent. that any serious attempt was made to vindicate the claims of healthy home life and happy marriage to a position of equality with the virgin state. In Luther's eyes all monastic vows were essentially sinful (*de Votis monasticis*, 1521), and, in general, the Reformers maintained a similar position. The question of the superiority of virginity became an essential point of controversy between the Roman Catholics and their opponents, and the Council of Trent (sess. 24, can. x.) condemned with anathema the doctrine of the equality of the married state with, or its superiority over, the state of celibacy.¹

The objection to second marriages, which were discouraged by the Church and absolutely forbidden by the Montanists, was one result of the ascetic spirit. This we should now regard as a more harmless eccentricity of no serious importance in the history of Christian thought; but it is far otherwise with another result of the ascetic movement—the enforcement of the celibacy of the clergy.

It is significant that it was in the course of the 3rd cent. that the question of the propriety of clerical marriage seems first to have become prominent. Hitherto the clergy, like other Christian men, might be married or not, according to their discretion. Those who held the essential superiority of the celibate life would naturally consider that the clergy, as especially belonging to the class of holy persons, should be unmarried. At all events, in the 3rd cent. it came to be recognized that, as each man should 'abide in that calling wherein he was called' (1 Co 7th), the clergy should not contract marriage after their ordination. Decisions to this effect are found in the canons of some local synods, though the Council of Ancyra (A.D. 314) made an exception in the case of deacons, who, before ordination, should inform the bishop if they intend to marry. From this position it was a natural step to the view that after ordination clerics should cease to maintain conjugal relations with their wives—a view which could scarcely have been put forth except by a council of celibates. The Council of Elvira (Iliberis; A.D. 306) laid down this rule under penalty of deprivation. The oecumenical Council

¹ In some of his Homilies—e.g. *Homil.* xxi. 4, in *Scriptura*, serm. 1—Chrysostom strongly asserts the equal blessedness of the married state. *Jerolama*, the opponent of St. Jerome, was a warm advocate of the same view, but the general consensus of Christian opinion was on the other side.

of Niema (A.D. 385) was restrained from passing a similar ordinance only by the emphatic protest of the Martyr Confessor Paphnutius, who pleaded earnestly in favour of the perfect sanctity of married life. From the close of the 4th cent. the principle that the clergy ought to be celibates was universally adopted in theory in the Western Church. Pope Siricius (A.D. 385) in his *Epistle to Himerius* (PL xiii. 1132 ff.), described by H. H. Milman as 'the first authentic Decretal, the first letter of the Bishop of Rome, which became a law to the Western Church,' absolutely interdicted the marriage of the clergy. Nevertheless, all through the Middle Ages, despite the zealous efforts of men like Boniface I., St. Gregory the Great, St. Anselm, and St. Dunstan, despite papal edicts and decrees of councils, the marriage of the clergy continued to exist in every part of Europe. It was regarded in general with indifference, sometimes with approval, by the laity, and was zealously contended for as a right by the secular clergy. Even after the vigorous crusade of Hildebrand (1050-55), the 'scandal,' as it was considered, of 'clerical concubinage' maintained its existence here and there, though it was probably never after Hildebrand's time regarded with the same indifference as before.

In the Eastern Church the rule of celibacy has never been imposed on the inferior clergy. By the 6th Council of Constantinople (its Trullo; A.D. 680) the marriage of clerics after ordination was forbidden, but for those married before ordination, with the exception of the bishops, the continuance of conjugal relations was permitted; the wife of a bishop was compelled either to become a deaconess or to retire into a convent. For all practical purposes this remains the rule of the Eastern Churches to the present day, except that marriage is not merely permissible but compulsory for the parish priest, who must, however, be married before ordination. The bishops are chosen from the ranks of the monastics, so that no parish priest can look forward to promotion to the highest position in his Church.

4. Ecclesiastical law and Church discipline.—The Christian Church from the very beginning was constituted as an organized society or, at all events, as a closely connected congeries of societies claiming as a right and duty to exercise moral supervision and discipline over individual members. Church law and ecclesiastical jurisdiction are, then, no late outgrowth or corruption of primitive Christianity, but trace their origin to the earliest time, and even to the days of the Apostles. It was inevitable that in the Apostolic Age such questions connected with marriage should arise as would be considered suitable for the judgment of the community. In 1 Co 7 we have an interesting example of such questions and of the apostolic method of dealing with them. The saying of Ignatius as to the necessity of submitting a proposed marriage-contract for the approval of the bishop has already been quoted.

Nor is it at all surprising that matters connected with marriage should have, from the Apostolic Age until now, occupied an important place in ecclesiastical legislation. From the civil side, marriage is regarded as a legal contract which must be regulated for practical purposes by the State. From the Christian point of view, marriage is a holy estate which the Church may claim to regulate in the highest interests of religion and morality. Experience shows that there must ever be a possibility of conflict between the two juris-

dictions, and that, consequently, difficulties in practice may often result.

¹ *Alia sunt leges Cæsarum, alia Christi*; cited Paphnutius allud Paulus noster precepit (Jerome, *Ep.* lxxvii. 5).

But, while in theory it is very simple to say that the Christian must at all events give the 'logos Christi' the first place in his obedience, in practice he may often find himself confronted with the question whether a law or supposed law of the Church must really be received as a divine ordinance. So long as the Church was a small and unimportant body in the heathen world, it did not much matter whether its regulations for the discipline of its members came into conflict with generally received opinions or not, and, as a general rule, in the earlier centuries Christians were content to abide by the rulings of their ecclesiastical authorities, though even then we have reason to believe that Church censures were sometimes defied or evaded when Christians wished to avail themselves of some legal right in opposition to the rule of the community. The case of mixed marriages with Jews or pagans, which often took place despite the ecclesiastical prohibitions, is an example in point.

In the Middle Ages the matter was settled by allowing marriage, for Christians at all events, to become entirely an affair of the Church. Much laxity of observance might prevail, and the lawless men of the mediæval period might often flout the wholesome restraints of the law; the princes of the Frankish, Teutonic, and other new nations might decline to abandon their ancient right to have a plurality of wives; but, none the less, it was fully recognized that the Church's jurisdiction in such matters ought to be respected as supreme. It is in the modern period, since the Reformation, that the question of the two jurisdictions and the proper relations of the one to the other has come into prominence and has given occasion to many practical difficulties arising from the conflict of two different ideals. The Reformers vindicated the claims of the State and of the civil magistrate as against the extravagant claims of the mediæval Church, holding that the laws of the Christian State must be regarded as Christian laws and must be obeyed, and that no law-abiding citizen should be subjected to Church censure or other social inconveniences for neglecting some ecclesiastical ordinance, so long as he did nothing illegal or dishonourable. It was, of course, understood that no law contrary to the teaching of the gospel should be obeyed. The Roman Catholic party, on the other hand, while in general admitting the duty of obedience to the law of the State, held that it was the province of the Church to define what should or should not be considered lawful in the matter of marriage. Both parties would agree that the object of all marriage laws should be to safeguard purity and morality, and would probably admit that the Church had no right to impose anything in opposition to the law of the State, unless it were in some sort necessary for that object; but the Reformers would by no means concede to their opponents that it was for the Church to impose any regulations which it pleased, whether in conformity with the laws of the State or not. The two questions which in modern times have given occasion to most difficulty have been the question of divorce and the question of the conditions of valid matrimony.

(a) Divorce.—Divorce, in the strict and proper acceptance of the term, means the complete rupture of the marriage-bond, the persons divorced being left free to marry again. Canonists and theologians, however, frequently apply the term to what is more properly called 'separation' or, when sanctioned by legal process, 'judicial separa-

¹ *Hist. of Latin Christianity*, London, 1871, i. 97. see also A. P. Stanley, *Lectures on the Hist. of the Eastern Church*, 2d. edn., lect. i. and v.; H. G. Bonenhoff, *Rites and Customs of the Greek-Byzantine Church*, 2d. edn., 1888; Photius, *Homœologues*, Paris, 1816.

tion, in which the *vinculum* is not supposed to be broken and re-marriage is, therefore, not permissible. The latter is described as *discretum a monas et thoro*, in contradistinction to the more complete *discretum a vinculo matrimonii*.

It has been universally admitted that adultery and, perhaps, some other grave offences justify the separation of man and wife. Such separation is, indeed, contrary to the high Christian ideal of marriage; but under the new dispensation, as under the old, it is necessary for the hardness of men's hearts in this imperfect world to make provision for occasional failures to attain the perfect ideal. But, while this is the case with regard to separation, there has been considerable difference of opinion on the more difficult question of divorce in the proper sense of the word. The broad general principle is that divorce is something which ought not to be, that it ought not even to be thought of as a possibility by Christian people. But in the broad general principle to be regarded as a law binding universally and unconditionally? If any exceptions are to be allowed, in what cases do they apply? Should man and woman stand on the same footing as regards the right to claim divorce? Should any difference be made between cases where both partners are professing Christians and those in which one is an unbeliever or a heretic? These and similar questions have from century to century occupied the attention of Christian teachers and legislators.

The teaching of our Lord on this subject, as it has come down to us, is found in four passages in the Synoptic Gospels, viz. Mt 5³¹⁻³², Mk 10¹⁰⁻¹², and Lk 16¹⁶. In Mark and Luke the prohibition of divorce and re-marriage is absolute and unqualified; in Matthew the qualifications 'saving for the cause of fornication,' 'except for fornication,'¹ are added. Roman Catholic divines and those Anglicans who adopt the stricter view maintain that, as each Gospel must be taken in and by itself as authoritative, the passage in Mark must be accepted as the decisive rule for Christians, while the qualified statement in Matthew must be understood as merely giving sanction to separation 'a monas et thoro' in case of adultery.

On the other hand, it is contended that the ordinary rules of exegesis require us to interpret the unqualified statements in Mark and Luke by the fuller and more balanced statement in Matthew, so that we must not take each Gospel as an independent entity, but must compare one with another to ascertain what Christ really taught. Moreover, it is contended that, when He spoke about divorce, our Lord must have had in mind the complete severance of the marriage-bond, since that was the only meaning His hearers could possibly attach to the word. It is pointed out that the sayings in Mark and Luke are simply ordinary examples of the method of the great Prophet, who was accustomed to set forth broad principles in an absolute and sometimes an extreme form, leaving it to His people to apply His teachings with all the necessary qualifications in the manner of legislation to their individual cases and needs. That this principle has always been recognized in the interpretation of the Sermon on the Mount without in the least detracting from the supreme value of that great utterance cannot well be denied. Our Lord as teacher was a prophet rather than a legislator. Hence it is maintained that the passage in Matthew may be taken as a fuller expression of the Lord's mind than the briefer passages in the other Gospels, that we have His express sanction for divorce in case of adultery, with consequent permission to marry again in the case of the innocent partner. It is not, of course,

denied that, if the bond is broken, it is broken alike for both partners, but, as the guilty partner is, or has been, living in notorious sin, and can give no evidence of repentance except by abstaining altogether from marriage, such guilty partner must necessarily be refused the Church's benediction in the case of re-marriage. The latter principle has been invariably and universally accepted.

Although it is evident that adultery affects the marriage relation more closely than any other offence, yet it may fairly be said that there are other things which may make married life so intolerable, and the perfect ideal union so impossible, that, if divorce or separation be allowed at all, the grounds for such separation ought not in reason to be confined to the one offence of adultery. This difficulty was met by many of the Fathers by showing, on good Scriptural authority, that idolatry, covetousness, unnatural offences, etc., might rightly be classed under the heading of spiritual adultery. There is probably no more than a formal difference between this and the argument which appeals most forcibly to modern minds—that there are offences which make married life so intolerable that there can be no restoration of affection, that, where the tie of affection has been absolutely destroyed, the real *vinculum* has been ruptured, and that, therefore, such offences may rightly be put in the same category as conjugal infidelity in the strict sense of the word.²

The passages in the Synoptic Gospels have been treated as they stand in the NT without any reference to the results of modern criticism; it will be generally admitted that such treatment is justified in dealing with ethical or doctrinal questions. It must, however, be acknowledged that the recent higher criticism of the Synoptic Gospels has thrown a new light upon the matter and, to a certain extent, strengthened the case of those who condemn divorce absolutely. A large and increasing number of competent critics are of opinion that the qualification, 'except for the cause of fornication,' formed no part of our Lord's teaching (e.g., A. R. Bruce, E. Weiss, E. E. Wessely, F. W. Strassmüller, R. W. B. Lewis, C. O. Montague), and that He forbade divorce simply and absolutely. The last passage as reduced to text. The passage Lk 16¹⁶, probably derived from the source Q, may be regarded as the original and genuine form which has been edited by the first Evangelist in Mt 5³¹⁻³². It is quite evident that Mt 19⁹⁻¹² and Mk 10¹⁰⁻¹² are but slightly different versions of the same conversation, while everything goes to show that the form in Mark is the original (see W. G. Allen, ICC, 'St. Matthew,'³ Edinburgh, 1912, ad loc.).

If the modern critical view is generally accepted, it will, no doubt, be admitted that the case of those who absolutely condemn divorce will be somewhat strengthened, but it is not likely that the existing state of opinion on the whole will be very much affected. The acceptance of the critical view will simply bring into greater prominence the fact that questions of this kind have never really been decided on grounds either of exegesis or of authority pure and simple, but that our interpretation of our Lord's teaching has always been guided by moral and theological considerations. The saving clauses, *εἰς τὴν αἰτίαν τῆς πορνείας* and *ἢ ἡ τοῦ σώματος*, may be admitted to be early notes of interpretation added by the Church—a reminiscence, perhaps, of instruction actually received from the Lord—but those

¹ Augustine frequently expressed the view of the wider interpretation of 'fornication.' 'In infidelitate fornicatio est, et idolatriæ infidelitas, et omnis idolatriæ, non est dubitandum quæritur fornicationem esse' (de Serm. Domini, l. xvi. c. 1). See also several passages to the same effect in the *de Consensu adulterii*. In the *Retractiones* Augustine expresses doubt as to the legitimacy of this *εἰς τὴν αἰτίαν* (l. 15). Passages from Jerome and Origen in which the idea is expressed are also cited (cf. Bingham, *Antiq.* xiii. c. 2).

² W. G. Allen, though holding the critical view, yet protests, in letters to *The Guardian* (15th [1910] 620, 621, 622; 1st [1910] 1780), against making use of critical results to destroy dogmatic systems, and justifies the use of the NT as received by the Church.

³ E. E. Wessely, in his pamphlet, 'An argument for not proceeding immediately to revise the New Testament on the ground of the critical view' (Oxford, 1887), attempted to defend the stricter view on the ground that the passages in Matthew were meant only for the Jews of Christ's own time, and were not to apply to Christians, for whom the absolute prohibitions were intended. This view does not seem to have met with much approval, and is not now advanced.

¹ *εἰς τὴν αἰτίαν τῆς πορνείας* (19⁹); *ἢ ἡ τοῦ σώματος* (19¹²).

who plead for the right of divorce will still maintain that the interpretation was fully justified and quite on a level with many of our other interpretations of the Sermon on the Mount.

The only other passage in the NT where the subject of divorce is directly treated is 1 Co 7, where St. Paul appeals to our Lord's authority, repeating the general prohibition of divorce. There is nothing, however, to indicate that, when he speaks of a separation between wife and husband, he has the special case of conjugal infidelity before his mind. The presumption is rather the other way, and it would seem as if he were merely thinking of the case of separation for what we should describe as incompatibility of temper. The chief interest of this chapter centres in the rules and regulations laid down by the Apostle with reference to matters about which he could not appeal to any direct utterances of the Lord Jesus.

In the first place, he recognizes the possibility of separation 'a mens et thoro' (v. 11); if husband and wife are separated for any reason, they are to remain single or become reconciled to each other. Even though he were not actually considering the case of separation for conjugal infidelity, we may feel sure that, if he had done so, the Apostle would have approved of the counsel given in the *Shepherd of Hermas*.

THE JEWISH husband who divorced his wife was forbidden by the law to take her back, but it is characteristic of the gospel to give prominence to the possibility of repentance, and so Herem charges the husband who has put away his unfaithful wife to remain unmarried (*hæc vix perdetur*) so that the sinner might have an opportunity for repentance with consequent restoration (*Matth. ix. 13*).

In the second place, St. Paul deals with the case of a marriage between a Christian and an unbeliever—Jew or heathen. If it is desired that the union should continue, well and good; if not (v. 12), a brother or sister is not under bondage in such a case, and, if the unbeliever dissolves the connexion, the Christian is free. This must be taken to mean free to marry again (cf. Ro 7th for the use of the terms 'freedom' and 'bondage'). This passage was expressly cited in later times as the authority for the canon law of the Roman Church, which permits divorce by mutual consent in cases of mixed marriages between Christians and unbelievers (see Innocent III., *Decretales Gregorij*, iv. 13, 'de Divortio', ch. 7).

The canon law of the Roman Catholic Church unqualifiedly forbids divorce 'a vinculo matrimonii,' if both parties at the time of marriage had been baptized Christians. In the Eastern Churches, on the contrary, divorce is permitted, not only for adultery, but also for other serious causes, as, e.g., high treason, desecration by either party on the life of the other, insanity, leprosy, etc.; but no one is permitted to obtain a divorce more than once. In East and West alike, in the earlier period, and more especially after the ascetic movement became popular—i.e. after the middle of the 3rd cent.—the Fathers were strong in their denunciations of re-marriage, even in the case of an innocent partner. In some cases such unions were made the subject of ecclesiastical censure and at least temporary excommunication. Yet, while the civil laws permitted re-marriage, it is evident that all the eloquence of the Fathers could not entirely prevent it, and it is probable that the average lay opinion did not generally approve of the excessive rigidity of what we may call the ecclesiastical view. The Eastern Church, however, has, from the time of the removal of the seat of empire to Constantinople, been at all times more dependent on the civil power, and, as a natural consequence, more subject to the influence of lay opinion, than the Church of the West, where the power of the ecclesiastical authorities was more unfettered.

In the matter in hand this difference is very well illustrated in the 5th cent. by the moderation of the views of St. Basil, who refused to condemn re-marriage absolutely, though he could not approve of it, and of Lactantius, as compared with the Western teachers of the same period. Yet even up to the 15th cent., when the present canon law of the Roman Church was finally formulated, it is evident, from a careful study of the various decrees of synods and councils, that it was not possible in practice to enforce strictly the principle of the absolute indissolubility of marriage.

Re-marriage in certain cases is permitted implicitly or explicitly by the following Councils: Elvira (Illibera, c. 305), Vannes (465), Agde (500), Orleans (528), Compiègne (780), and Bourges (1031); to these we may add the testimony of the *Pastoral of Theodore of Canterbury*, drawn up for the guidance of the churches under his control, which in some respects perhaps goes to an extreme in making allowances for the weakness of human nature, but in which very considerable liberty is allowed in the matter of re-marriage.

Civil legislation from the time of Constantine to Justinian bears witness, indeed, to the growth of Christian influence in the attempts made to limit the grounds for divorce and, in general, to make divorce more difficult. Nevertheless, the law permitting divorce by mutual consent remained in force until the time of Justinian, while the grounds on which it might be obtained were numerous enough. Under the legislation of Theodosius the Second and Valentinian a wife might divorce her husband for (1) treason, (2) adultery, (3) homicide, (4) poisoning, (5) violating sepulchres, (6) forgery, (7) stealing from a church, (8) robbery, (9) cattle-stealing, (10) attempts on her life, (11) introducing immoral women into the house, and (12) common assault. A husband might divorce his wife for any of the above causes, and also for (13) dining with men not relatives without her husband's permission, (14) going from home at night without permission or reasonable cause, and (15) frequenting taverns or theatres without permission; to which Justinian added (16) procuring abortion, and (17) mixed bathing.

It was very natural that the Reformers in the 16th cent. should call in question the rigid medieval views on the subject of divorce, regarding them as an outcome of the claims of the ecclesiastical authorities to supreme jurisdiction, and as inspired by the spirit of asceticism. The Protestant and Reformed divines held that divorce with the permission of re-marriage was justified in the case of adultery and, generally speaking, of cruelty or prolonged desertion. In the 16th and 17th centuries the same view was generally expressed by Anglican teachers, even by those who, like J. Cotes and H. Hammond, are generally considered as belonging to the High school in theology.

The Reformers rejected the sacramental theory of marriage, and held that the words 'the twain shall become one flesh' signified no more than a very comprehensible union based on common interests and mutual affections. The doctrine that marriage could be dissolved only by death, since husband and wife could no more cease to be husband and wife than brother and sister to be brother and sister, seemed to them to be the natural outcome of the sacramental doctrine. This is not, indeed, wholly true; for it is quite possible to hold the sacramental view, or something very like the sacramental view, and yet to believe that grievous sin may rupture the mystic bond as really and completely as death itself. Still it is evident that rejection of the sacramental theory makes it easier to reject the strict doctrine of indissolubility.

In the next place, the Reformers maintained

that, since separation 'a mensa et thoro' was permitted, it was more conducive to morality and more in accordance with the teaching of 1 Co 7th that an innocent partner should be allowed the right of re-marriage than that temptations to a life of sin should be multiplied. Further, they pointed out that the strict enforcement of the canon law forbidding divorce had not succeeded in putting an end to the evil; that in the later period the multiplication of grounds on which marriage might be declared null and void *ab initio*, implying the consequent dissolution of perfectly honourable unions, had really made divorce easier and more common than before, and had become a grave scandal and the source of much immorality. Finally, with their profound reverence for the Scriptures of the OT, it was natural that the Reformers should urge that divorce could not in every case be morally wrong, since, if it were, it could never have been allowed by God under any circumstances. This last argument was put forward by John Milton with much power and eloquence in his *Doctrine and Discipline of Divorce* (1643). Probably no Christian writer has ever gone so far as Milton in advocating the utmost liberty for Christian men—he does not concede the liberty to women—in this matter. He is, indeed, willing to admit that 'what God has joined together man may not put asunder,' but he will by no means allow that a more marriage contract of ceremony, though entered upon freely by mutual consent and duly consummated, must necessarily constitute such a joining together. Marriage is indissoluble only when there is complete and perfect unity of heart and soul between the partners. It may be safely said that the absurdities to which Milton's doctrines would lead if pushed to their logical conclusions are a sufficient refutation, nor does this work of his seem to have had much effect on English thought in his own or any succeeding ages.

In most Roman Catholic countries civil legislation has conformed to the ecclesiastical ruling of the Council of Trent, and divorce has been forbidden. In Austria, however, it is permitted to those who are not members of the Roman Catholic Church. France is an exception. The *Code Napoléon* (1804-10) restricted the unlimited licence which had been permitted in the earlier years of the Revolution, but allowed divorce on various grounds, including 'mutual consent.' With the restoration of the monarchy (1816), the older law was again adopted and divorce was forbidden. It was not until 1804 that the provisions of the *Code Napoléon* were revived, with certain modifications, serious injuries or cruelty being admitted as sufficient causes, but divorce by mutual consent being forbidden.

In America the laws vary from one State to another. In S. Carolina and Maryland, originally Roman Catholic States, divorce is not permitted; in New York it is granted only on the ground of adultery; while in Maine and Dakota it may be granted on almost any pretext.

If the Report of the Commission appointed by Edward VI. (*Reformatio legum ecclesiasticarum*) had resulted in legislation, it is probable that the opinions of Cranmer, Bucer, and Peter Martyr in favour of divorce would have become part of the law both of the English Church and of the English State. With the king's death, however, the prospect of any alteration of the old law passed away. The Commission appointed to report on the case of the Marquis of Northampton, who, having obtained a separation under the ecclesiastical courts, desired to marry again, allowed the second marriage; but, as the marriage had already taken place while the Commission was sitting, its decision cannot be

considered as absolutely unbiased. The Marquis, however, was advised to have his second marriage legalised by special Act of Parliament, and an Act to that effect was passed in 1548, but was repealed when Queen Mary came to the throne. This case is important, as it may be said to have ruled English practice until the passing of the Divorce Act of 1857. The canons of 1604 (can. 107) confirmed the authority of the ecclesiastical court to grant judicial separation, but only on condition that a definite pledge was given by the parties not to contract a second marriage. Divorce proper with privilege of re-marriage could be obtained only by special Act of Parliament. Between the time of the Reformation and the passing of the Divorce Act 317 cases had been dealt with by Act of Parliament in England and 146 in Scotland.

The Act of 1857 abolished the jurisdiction of the ecclesiastical courts in matrimonial cases, and established a civil court for the purpose. In England and Scotland divorce can now be obtained through the court without special legislation, but the law does not apply to Ireland, where an Act of Parliament is still necessary. In Scotland a wife may obtain a divorce on the ground of adultery alone, but in England cruelty or other serious offences on the husband's part must be proved in addition. In both countries a wife may be divorced on the ground of adultery alone.

In 1909 a Royal Commission was appointed to consider the whole question of the laws relating to divorce and separation. The Commission, after very careful investigations, extending over two years, published their report in Nov. 1912. No attempt has as yet been made, however—up to the middle of 1915—to give effect to their recommendations by way of legislation. On two points the commissioners were unanimous: if divorce is to be allowed, the method of procedure should be cheapened by the institution of special courts, so that the divorce should be made, not easy for any class, but as easy for the poor as for the rich; secondly, men and women should be placed on an equal footing, a wife being allowed to divorce her husband on the ground of adultery alone. The majority of the commissioners were in favour of extending the grounds on which divorce might be granted as to cover cases of wilful desertion for at least three years, cruelty, incurable insanity after five years' confinement, and imprisonment under nominated death sentences; but a strong minority protested against this proposal, and claimed that divorce should be granted only in case of adultery.

The resolutions of the Lambeth Conference of 1893, in which this difficult practical question was fully discussed, may fairly be taken as representing the authoritative ruling of the Anglican Church as a whole at the present time.

(1) Inasmuch as Our Lord's words expressly forbid divorce except in the case of fornication or adultery, the Christian Church cannot recognise divorce in any other than the excepted case, or give any sanction to the marriage of any person who has been divorced contrary to this law during the life of the other party.

(2) That in no case, during the lifetime of the innocent party in the case of a divorce for fornication or adultery, should the guilty party be regarded as a fit recipient of the blessing of the Church on marriage.

(3) That, recognising the fact that there has always been a difference of opinion in the Church on the question whether Our Lord meant to forbid marriage to the innocent party in a divorce for adultery, the Conference recommends that the clergy should not be instructed to refuse the sacraments and other privileges of the Church to those who under civil sanction are thus married. These resolutions were reaffirmed by the Conference of 1908, with an addition to the effect that 'when an innocent person has by means of a court of law divorced a spouse for adultery, and desires to enter into another contract of marriage, it is undesirable that such a contract should receive the blessing of the Church.'

The increase of wealth and luxury, and the growth of a spirit of self-indulgence so characteristic of the present age, together with the widely spread

intellectual unrest, tend to encourage the demands for a wider extension of the facilities for divorce. Impatience of old-fashioned restraints and a certain loosening of old-established bonds are the natural characteristics of an age like ours. The deepened sense of the supreme importance of the spiritual union and companionship in marriage which Christianity has fostered makes the bond more irksome than ever where such union is supposed not to be ideal. Those who realise how much the stability and serenity of home life depend on the unbroken firmness of the marriage-tie, and who recognise that the frequency of divorce must have a degrading effect upon individual character as well as on society in general, naturally regard with some anxiety the tendency in the present day to make divorce easier and more common. It is undoubtedly necessary for the Christian Church to make resolute protest against this tendency. It is, however, certain that the effects of nineteenth centuries of Christian influence can never be wholly shaken off. We shall never again be able to regard divorce with the same easy indifference with which it was commonly regarded in the 1st cent. of our era. Christian influence will make itself felt on behalf of the Christian view of marriage, not in the modern world in the way of conciliar decrees and authoritative edicts, but by the weight of Christian public opinion guided by the principles of the NT.

(b) *Conditions of valid marriage.*—(1) *Equality of rank or condition* between the contracting parties, though required by Roman law, has never been regarded as essential in the Christian Church, however desirable in itself.

In Imperial times connexions were sometimes formed between slaves and free women, such connexions, though officially described as concubinage, being regarded as perfectly honourable and moral. It is not improbable that in the Christian Church, with the close relations of brotherhood prevailing between all classes and the excess of the number of free-born women over that of free-born men, such connexions would be by no means uncommon—the fact that they were socially recognized as creditable would, of course, have considerable weight. Some references which have come down to us seem to show that this was the case, and that such connexions were regarded by the Church as essentially marriages.

‘N quis habens uxorem fidem concubinum habent, non conjugium habet, a conjugioque non repellitur licetum ut concubinae non astra et conjugium, ut et pharisaei, ab incestuosos continent’ (1st Council of Toledo (c. 450), can. 17). ‘Christians non fides pharisaei et non fides simul habere licetum est, uti enim licetum est uxorem aut certe hoc astra et concubinae concubinae’ (Ambrose, *op. Gratian, Dist. 4*, quoted by Natalis Alexander, *St. Basil, Leon, 1734*, i. 39).

(2) The question of mixed marriages between Christians and non-Christians was, as might have been expected, one of the earliest practical problems with which the Church was called upon to deal. It formed the subject of one of the queries proposed to St. Paul by his Corinthian converts. The Apostle's reply is clear enough so far as marriages contracted before conversion are concerned. A Christian ought to continue such a union so long as the unbelieving partner is willing that it should be so. The children born of such a marriage were holy, i.e. rightful subjects for Christian baptism. If the unbeliever decided to dissolve the union, ‘the brother or the sister is not under bondage in such cases’—which must mean that the Christian would be at liberty to contract another marriage (see, for St. Paul's use of terms ‘bondage’ and ‘freedom,’ Ro 7¹²). In 1 Co 7²⁰ the Apostle declares that a Christian is at liberty to contract marriage ‘only in the Lord.’ The general principles laid down in this chapter have always been regarded as the primary authority on this matter, though

there has been much controversy as to the practical application, and even as to the exact meaning, of his teaching. Do the words ‘only in the Lord’ mean that any marriage contracted between one already a Christian and an unbeliever is unlawful? Does ‘in the Lord’ mean only with a fellow-Christian, and, if so, must the words of St. Paul be taken as a positive command or merely as a counsel of prudence? On these questions St. Augustine expresses himself with some doubt and hesitation, but his opinion on the whole may be taken as expressing the general view of the Church in the preceding centuries. Mixed marriages with unbelievers were discouraged, and even declared, though with some hesitation, to be unlawful for Christians; yet such marriages could not be wholly prevented, nor was any penalty attached to them in the first three centuries, so far as appears. The Council of Elvira affords the earliest example of a specific penalty (five years' penance) being attached to such unions. From the beginning of the 6th cent. the decrees of councils are more numerous and more distinct, while the penalties are in general much more severe.

The civil law supported the ecclesiastical judgments, the Theodosian Code making such wedlock a capital offence. In the Middle Ages the question of the exact interpretation of the Apostle's permission to convert to separate from unbelievers was the subject of much controversy, the chief question being whether the separation should be the deliberate act of the unbeliever, or whether any circumstances making it impossible for the believer to remain ‘sine contumelia creatoris’ might not justify the separation. The question was decided, on the whole, in the broader sense, by Innocent III. (*de Divortio*, 1193).

In early times marriage with heretics and schismatics was generally brought under the same condemnation as marriage with Jews or pagans. It is now, however, generally recognized both in the Eastern and in Roman Catholic communions that all marriages duly celebrated between baptized persons are valid and indissoluble, though in the case where one of the parties is a heretic or schismatic the other may be subjected to censure or penalty. Where the decrees of the Council of Trent have been published, however, this ruling does not free those contracting mixed marriages from considerable inconveniences, inasmuch as ‘due celebration’ is defined to be celebration in the presence of a priest in a Roman Catholic place of worship, the man being further obliged to guarantee that children born of the marriage shall be brought up in the Roman Catholic faith. Marriage otherwise celebrated is declared to be null and void. The publication of these decrees, for all practical purposes, in those countries by Pope Pius X in the well-known ‘*Ne tamere*’ decrees (1907) has given rise to much controversy. Roman Catholic divines defend the decrees on the ground that the Church has a right to make any regulations she pleases as to the conditions on which she shall recognize marriages, and that it is desirable to prevent mixed marriages as far as possible, and is, further, the duty of the Church to take care that the children of marriages blessed by her shall be brought up in the faith. Their opponents argue that it is inevitable that mixed marriages will sometimes occur in a large mixed community; that, when this is so, and a marriage is lawfully performed, the Church has no right to cast a slur on respectable persons who have, admittedly, been guilty of no immoral conduct; that to insist on a religious ceremony to which one party may object is to put undue pressure upon consciences, while to demand a pledge for the education in a particular way of children to be born is to override the law of the land and the

natural rights of parents, and that such interference is unjustifiable.¹

(3) *Kindred and affinity*.—It was a common complaint with the Reformers and those who sympathised with them that the multiplication of grounds of prohibition of marriage, the custom of papal dispensations in doubtful cases or cases of illegality, and the facility with which decrees of nullity of marriage could be obtained had created much uncertainty in the matter of marriage-relations and had been the source of grave scandals. This is forcibly expressed in the statute of Henry VIII. for the regulation of marriages (1533-34):

'Many persons, after long continuance together in matrimony without any allegation of either of the parties or any other as their marriage why the same matrimony should not be good, had been divorced contrary to God's law on the pretext of precontract or by reason of other prohibitions that God's law permiteth. Marriages have been brought into such uncertainty thereby that no marriage could be as surely kept or defended but it should be in either of the parties power to prove a precontract, a kindred and alliance, or a moral knowledge to defeat the same.'

In the Roman Catholic Church three kinds of relationship are laid down as impediments to valid marriage, viz. blood-relationship or consanguinity, affinity or connexion by marriage, and spiritual affinity, as, e.g., the connexion between godparent and godchild, or between two persons who are godparents to the same child. In the Eastern Church the system is even more elaborate, and the grounds of prohibition more numerous than in the Western, while at the same time the custom of dispensation commonly practised in the West since the 8th cent. is unknown in the Eastern Church. In the East two brothers are not allowed to marry two sisters, and, in general, marriage between the members of two families debar the members of either from marriage with members of the other within the prescribed limits.

A different method of describing relationships prevails in the two branches of the Church. In the East uncle and nephew are related in the third degree, first cousins in the fourth, and so on; marriage is forbidden within the seventh degree of kindred or affinity, natural or spiritual. In the West first cousins are related in the second degree, second cousins in the fourth, and so on, marriage being forbidden—since the Lateran Council (1215)—within the fourth degree. This is in practice almost the same as the Eastern rule. The Lateran Council, however, abolished all prohibitions on the score of affinity within the second degree according to the Western reckoning. No trace of these somewhat burdensome restrictions is to be found before the 8th century. In the earlier centuries Christians would be familiar both with the Levitical Law of Holiness (=Lv 18) and with the ordinary Roman law, which were, to all intents and purposes, to the same effect—marriage being forbidden within the second degree according to the Western reckoning. It goes without saying that their marriages would be regulated according to the provisions of these codes.

The only question in connexion with this subject of prohibited degrees which excites interest or gives occasion to serious controversy at the present time is the much vexed question of marriage with a deceased wife's sister. Such marriages have long been legal and customary in America, in the British colonies, and in several European countries. In England they were not unknown prior to 1635, though condemned by the canon law of the English Church. Such marriages were held by the civil courts to be perfectly valid and unim-

peachable in law, unless voided by special legal process undertaken during the lifetime of the parties; but Lord Lyndhurst's Act in 1835 declared all such marriages within the prohibited degrees absolutely illegal. After many futile attempts, and in face of very strong opposition, an Act legalising marriage with a deceased wife's sister in the United Kingdom was passed in 1906. A saving clause permits clergymen who have a conscientious objection to refuse to celebrate such marriages, but in the case of *Bannister v. Thompson*, in which proceedings were taken against a clergyman for refusing the Holy Communion to persons so married, it was decided that the clergy may not refuse the sacraments to persons legally married though within the prohibited degrees. Meanwhile the table of affinities in the Anglican Prayer-Book remains the law of the Church, and, in strictness, it would seem that the clergy are prohibited from celebrating a marriage between a widower and his deceased wife's sister, even if they do not feel themselves bound by the famous canons of 1004 to hold that such marriages are 'incestuous and unlawful and altogether null and void' (can. 90). The logical course might seem to be to revise the table of kindred and affinity, but to this a very influential body in the Anglican Church is strongly opposed. Those who object to these marriages do not now, as a general rule, claim that they are expressly prohibited in Lv 18, though attempts more or less ingenious have been made to prove that they are. It is held, however, that the general principle that near affinity is a bar to marriage is laid down in the Law of Holiness, that a greater number of cases of affinity than of consanguinity are cited in Lv 18, and that the case of the deceased wife's sister is so exactly parallel to that of marriage with a husband's brother that the same principle may be held to stand good. Further, it is said that the reference to the sin of the Canaanites (Lv 18²⁴) shows that the prohibitions are regarded as matters of universal moral obligation and not national enactments applicable only to the Israelites. Again, it is maintained that the healthy moral sentiment which makes us regard with loathing and repulsion such unions as those between brother and sister and uncle and niece should also prevail between those who are brought into such close relations of affection as brothers and sisters by marriage. The same sentiment ought to prevail, and anything which may tend to destroy it must be regarded as morally injurious and degrading. Those who hold the sacramental view of a mystic spiritual bond formed in marriage urge that this bond creates as close a relationship between a man and the members of his wife's family as exists between blood-relations. Finally, it is pointed out that marriage with a deceased wife's sister has been expressly forbidden by the Church, at all events since the 4th century. It is most inadvisable, therefore, it is said, to tamper with so long established a custom or, indeed, with any well-established custom in connexion with so delicate a subject as the marriage-relation. Such are the main arguments by which marriage with a deceased wife's sister may be opposed. It is now worth while to consider the arguments which have been brought forward on the other side.

It is very doubtful, it is urged, whether the Levitical law relating to a different state of civilisation and specially intended for the people of Israel can be regarded as a moral law binding on Christians; but, even if it be accepted as such, not only is there no express prohibition of marriage with a deceased wife's sister, but, on the contrary, it is implied that such marriage is perfectly lawful (v. 16). The Jews have never regarded such

¹ On the subject of mixed marriage in general see *Decretum of Councils*: Ilberke (306), Arles (214), Laodicea (a. 341), Agde (395), Orleans (497). See also *Ord. Pœd.* vi., c. 1. *Decretum of Gratian*, c. 1-17, C. xxviii. q. 1 (a.n. 1130-35); Innocent III., *de Verbis quæstionibus*, a. 1300; Augustinus, *de Fide et operibus*, xii.

unions as forbidden, nor were they forbidden by the ancient Roman law. The very fact that an apostolic canon (date probably late in the 3rd cent.) forbids such marriages to the clergy shows that they were not generally regarded at that time as unlawful *per se*.

No injury has resulted, it is held, either to married life or to the general tone of social morality from the permission of such marriages in America and in the British colonies. It is evident from experience that such marriages are in very many cases desired, and in large centres of population among the poorer classes it is absolutely necessary as a safeguard to morality that they should be permitted. It is denied that any feeling of repulsion similar to that inspired by incestuous connexions exists, or ought to exist, in the case of one's wife's near relations. Affinity ought, in certain cases, to be a bar to marriage, but the true ground of prohibition in this case is what is known as *respectus parentela*. The marriage of a man with his step-daughter or with his nephew's widow is shocking to the moral sense because of the more or less paternal relationship involved in the connexion. According to old Eastern ideas, this relationship would also prevail between a woman and her deceased husband's brother, now become the head of the house. That marriage with a deceased husband's brother was not regarded with moral repulsion, in itself, is shown by the fact that it was commanded in the case of a man dying without children. There is no reason, therefore, for thinking that any other principle than that of the *respectus parentela* governs the prohibitions of marriage within certain degrees of affinity in Leviticus, while, in the evident total absence of any sense of repulsion against such unions among the majority of modern civilized people, no reason can be given why they should be forbidden. It is further urged that, even if the sacramental theory of marriage be accepted, since the mystic bond is dissolved by death, it may be fairly held that the connexions formed are no longer binding. That a great distinction is made between marriage with a deceased wife's sister and marriage with those closely connected by blood is evident from the fact that the Roman Church freely and frequently grants dispensations for the former, notwithstanding her high sacramental belief.

Some Anglicans, while not prepared to condemn marriage with a deceased wife's sister as absolutely wrong or immoral, yet consider it so undesirable that at least it should not receive the blessing of the Church by a marriage ceremony. Such an attitude has in most periods been taken up with regard to objectionable, but not absolutely forbidden, marriages. As pointed out above, it is the position taken by the Lambeth Conference with reference to the re-marriage of the innocent partner in a divorce case. It has, however, been said that such an attitude is not logical, and is at the same time unjust to Christian people. The majority of Christians have come to regard the nuptial benediction as almost, if not altogether, an essential of marriage and the right of every Christian. If members of the Church are committing no moral offence, they may reasonably claim the blessing of the Church upon their union; if they are entitled to receive the sacraments, it is held that it is unjust to cast such a slur upon them as is implied in a refusal to hallow their union.

5. Conclusion.—Poets and story-tellers have made the love and courtship which lead up to marriage a matter of such all-absorbing interest that married life itself may well seem, by comparison, to be utterly dull, prosaic, and uninteresting. At the same time, divines and canonists

have generally directed attention to the sterner aspect of the matter, dwelling exclusively on restraints and prohibitions, and scanning with watchful suspicion every form of natural indulgence. Nevertheless, the Scriptural ideal of marriage has maintained its hold in the Christian world and has been a mighty influence for the sanctification of family life and the development of character.

From one point of view, marriage is a restraint—a healthy restriction imposed on unbridled licence and excessive indulgence; it brings with it duties and responsibilities which must tax our powers and energies to the utmost and call for the continued exercise of patience and self-denial. It is well that, in a matter of so much importance, so intimately connected with our social and moral welfare, the restraints and responsibilities should be clearly defined and earnestly enforced. But there is another point of view which is, after all, the higher and truer. In this, perhaps more clearly than in any other connexion, we are taught by the gospel that restraints are imposed and self-denial demanded, not for their own sakes, but as a means to truer and more abiding happiness. Holy matrimony has been divinely instituted for man's good, and to be a source of blessing. In happy married life man is to find his truest and most lasting happiness, and to reach the fullest perfection of which his nature is capable.

W. M. FOLK.

MARRIAGE (Egyptian).—Amid the abundance of documents from ancient Egypt there is singularly little to enlighten us on this subject. No representation of the ceremonial or festivities of marriage has been recognised among tomb or temple scenes; the scenes of the divine marriage of Ammon with the queen mother at Luxor and Deir el-Bahri can hardly be quoted for illustrating the human rite. Written contracts of marriage are first found in the XXVIII dyn. (c. 600 B.C.), and first became common in the Ptolemaic period; and, notwithstanding the multitudes of relatives recorded in tombs and on stelae, it is difficult to ascertain what degree of consanguinity and how many wives were permitted or usual.

To secure hereditary rights in a community with matriarchal tendencies and where women held property, close endogamy might often be convenient. This would especially be the case with the Pharaohs, who claimed the distinction of divine descent, and to them would be permitted acts which could hardly be allowed to their sub-

as in Bengal at the present day a wife normally feeds on the remnants of her husband's meal.

Naturally enough, there were different views as to the character of women. A wife completes a husband and is half of his self, we are told (*Brhadāraṇyaka Upaniṣad*, I. iv. 17; *Saṁkhyasādhana*, v. ii. 1. 10), and her good qualities are frequently mentioned. On the other hand, the *Māndūkya Sūtra* (I. 2. 11, III. vi. 2) describes woman as untruth and as committed with misfortune, and classifies her with dice and drink as the three chief evils. Elsewhere (*Taittiriya Sāhita*, VI. v. 8. 2) a good woman is ranked below even a bad man, and the *Kāṭhaka Sāhita* (xxi. 1) alludes sarcastically to her ability to obtain things from her husband by cajolery at night.

The most important function of a wife was doubtless that of bringing into the world a son in order to perform the necessary funeral rites to his father and to continue the race. Adoption, indeed, was known as early as the *Rigveda*, but it was not popular (cf. art. ADOPTION (Hindu)), and lack of a son (*akṛat*) was regarded as the greatest of evils. On the other hand, the birth of a daughter was regarded as a misfortune; the *Aitareya Brhadāraṇyaka* (vii. 18) contrasts a daughter as misery (*ārya*) with a son as a light in the highest heaven. But the view once widely held, that the Vedic Indians practised infanticide in the case of girls, has been disproved by O. von Hottling.¹

In political life women took no part; men alone went to the assembly. But, while the position of the wife in the sacrificial ritual was narrowed by the priests, there is evidence that women took part in the speculative activity which manifested itself in the 6th cent. B.C. in the *Upaniṣads*. We learn there not only of several women teachers, who may or may not have been married, but also of one of the two wives of the great sage Yājñavalkya, who shared her husband's intellectual activities.

In the *Gṛhyasūtras* and *Dharmasūtras*, which mark the end of the Vedic period proper, and which may be held to represent the views of the period from the 6th cent. B.C. onwards, in the epics (c. 500 B.C.-A.D. 500), in the *Arthashastra*, and in the *Kāmasūtra* we find in full force the tendencies which reveal themselves in the later classical literature, and can be observed in their development at the present day. Different types of marriage are now recognised and classified, being assigned to the different classes of the population. Marriages between people of full age are still allowed; thus the warrior class is permitted to marry by capture or to form love matches, while the *Kāmasūtra* permits love matches generally. Against these special cases must be set the general rule, which first appears as a counsel of perfection in the *Mānava* (I. vii. 8) and *Gobhila Gṛhyasūtra* (III. iv. 6), but which by the time of the later *Sūtras*—i.e., not later probably than the beginning of the Christian era—has won full acceptance, viz. that it was sinful on the part of a father² to allow his daughter to attain puberty without being married, and the girl herself fell to the condition of a *śūdra* (*vyavāh*), marriage with whom involved degradation on the part of a husband. The date of marriage is placed earlier and earlier as the authority is later in date. Thus the *Sūtra* of Manu (IX. 94) fixes the ages of husband and wife at 30 and 18 or 24 and 8 respectively; the later work of Bṛhaspati (*EDMO* xlv. [1802] 416 f.) and the didactic portion of the *Matsyasastra* (XIII. xlv. 18) give the wife's age in these cases as 10 and 7 respectively, while yet later texts give 4 to 6 as the lower and 8 as the upper limit. There is

abundant evidence that these dates were not merely theoretical: the old marriage-ceremonial, which included as its essential part the taking of the bride to her new home, whence the name of marriage (*vyavāha*) was derived, was divided into two parts; the actual ceremony took place shortly after the betrothal (*utgāṇa*), but the taking of the bride to her husband's home was delayed until after puberty. The unmarried daughter (*śuśrūṭ*) living at home was distinguished from the married daughter (*śuśrūṭ* or *śuśrūṭ*), whose connexion with her parents was still recognized to the extent that, contrary to the rule that no mourning was observed for a married daughter, a brief period of mourning was prescribed in the event of her death before her departure from her old home. The early prevalence of the custom is also vouched for by the Greek authorities,³ and was noted by al-Bīrūnī in the 11th cent. A.D.⁴ At the present time, despite the efforts of reformers, it is still the prevailing practice among all Hindus who stand under the influence of the Brāhmins to marry their daughters before puberty, and the practice has spread even among Muhammadans.

The better side of such marriages is put before us in the *Śrīrām Smṛiti* (III. 3). The wife is to devote her whole thought to her house and her husband, to prepare his food, eat what is left over by her husband and sons, wash the steamed, strew cow-dung on the floor, make the domestic offerings, embrace her husband's feet before going to rest, in the hot season fan him, support his head when he is weary, and so forth. On the other hand, to her falls the place of honour in the household, and she is undisputed mistress of her daughters and any other women living under her husband's roof. The description in the *Smṛiti* is confirmed by the literature and by the practices of the present day. On the other hand, it must be noted that the intellectual achievements of women in India since the rule of early marriage became effective have not been in accord with the normal development which might have been expected from the state of society depicted in the *Upaniṣads*, and the heroines of the epic and the classical poetry are chosen, as a rule, from those women who, for some reason or other, have not fallen under the operation of the ordinary practice. There is also much evidence in the proverbial literature of the domestic which were attributed to women in general and wives in particular.

2. Forms of marriage.—In the Vedic period the normal form of marriage appears to have been one in which much was left to the choice of the two persons concerned. It is, at any rate, not proved that the father could control the marriage of either son or daughter of mature age, though doubtless parents often arranged marriages for their children. Of the practice of giving a bride-price there is clear evidence from the later *Sāhitas*, but there is also clear evidence of the practice of a father and, in his absence, a brother giving a dowry to enable a daughter or sister to obtain a husband; or a daughter might be given to a priest in return for his assistance at some rite. There is also a trace of marriage by capture in the *Rigveda*, where we hear (I. cxii. 19, cxvii. 20, x. xxxix. 7, lxxv. 12) of the carrying off by Vinada of the daughter of Puramitra, apparently with the good will of the maiden but against her father's desire. The normal marriage was duly celebrated at the house of the father of the bride, and its ceremonial, which is fully described in the *Gṛhyasūtras*, is marked by many features which have been found in the marriage-ritual of other Indo-European and non-Indo-European peoples. Of these practices the most

¹ *EDMO* xlv. [1802] 416-418.

² In his default a brother, grandfather, maternal uncle, or mother, or an agnate or cognate, should act (*Matsya*, xii. 20-22).

³ *Hesiodus*, *JAOH* xiii. [1897] 248.

⁴ *India*, Dr. E. Sachse, London, 1899, p. 126.

important and wide-spread were the solemn handing over of the maiden by her father (*hanyadāna*), the joining of the right hands of the bride and bridegroom (*pādigrāhṇa*), the recitation of Vedic formulae, including a speech by the bridegroom to the bride asserting their unity, the offering of libations in the fire and the threefold circumambulation of the fire, the seven steps taken together by the wedded pair, and, finally, the taking away of the bride to her new home by the bridegroom. There is evidence in the later literature that these customs formed the kernel of the normal marriage-ceremonial throughout the Middle Ages, and much of the ritual is still observed at the present day.¹

In the *Smṛiti* literature eight forms of marriage are recognized and described, but with many differences in detail. In the case of Brāhmanas *Manu* (iii. 26) recognizes as approved four forms: the *brāhma*, *daiva*, *arsha*, and *prajñaptya*. The characteristics of these forms are that in the first the father spontaneously offers his daughter to a suitable husband, in the second he gives her to a priest engaged in performing a rite for him, in the third the suitor gives a pair of oxen, and in the fourth the initiative in proposing the marriage comes from the bridegroom. The first and fourth forms, therefore, practically represent marriages by mutual consent and parental arrangement, while the second and third have traces of marriage by purchase, though the texts are careful to explain that the pair of oxen was not intended as a price (*śulka*), but was to be given to the daughter by her father as a mark of honour. It is perfectly clear, however, that the original sense of the custom was a purchase, and this fact is borne out by references in the older *Grāhyasūtras* of Pārāśara (i. viii. 18) and Bāṅkhāyana (i. xiv. 16) to the practice of giving the father-in-law a hundred oxen with a waggon, and by the recognition in the *Grāhyasūtras* of the Kāthaka and the Mānava schools (i. vii. 11) of a usage by which the bride-price was paid in money to the father.

Marriage by purchase was recognized among the warrior class; in the *Matsyāsūtra* (i. cxiii. 9 f.) we are told that Pāṇḍu paid the Madra king in gold, jewels, horses, elephants, ornaments, etc., for the hand of his sister, and that the purchase of women was the family practice of the king. Still more was the custom prevalent among the lower classes of the people. *Manu* admits (iii. 26) that some allowed the Vaidyas and the Śūdras the *Manu* marriage, which was an open, out-and-out sale, though he condemns the practice *in toto*. But facts have prevailed over the objections of the Brāhmanas to the sale of children, and even at the present day marriage by purchase is common enough in Bombay, Madras, and the Panjab, and is the normal form in Assam. In Bengal it is restricted to the lower classes of the population, but there the practice of the purchase of bridegrooms prevails instead, the practice of child-marriage having placed a high price on eligible husbands.

In addition to the *daiva* form, the warrior class was allowed the *rakṣasa*, the *gāndhārva*, and the *pitṛśāka* forms, though the last is condemned by *Manu* along with the *daiva* as altogether improper. The former type of marriage was marriage by capture in its simplest form, and its performance is related of many of the heroes of the epic, though the rape of women of high rank is elsewhere regarded as a capital offence. But, outside the epic, we hear little of this remarkable privilege of the warrior class, and this practice has left no survivals in modern India, though it is found among some primitive hill tribes, where it is of independent origin. Some, indeed, of the details

of the marriage-ritual given in the *Grāhyasūtras* have been interpreted in this sense, but the interpretation is neither necessary nor probable. The *gāndhārva* rite, which some authorities recognize as applicable to all classes, and which the *Kāmasūtra* enigmatically as the best form of all, is described as a mutual union by desire, the classical example of which is that of King Duryānta and Śakuntalā. The *Kāmasūtra* recommends that its performance should be accompanied by the usual offerings in the fire and the circumambulation of the fire by the wedded pair, on the ground that the observance of these formalities would compel the parents of the bride to recognize the validity of the marriage. The *pitṛśāka*, which is variously described, was marriage with a girl when drunk or insane, and is not recognized as a legitimate form by some authorities, like Āpastamba and Vasiṣṭha.

For the Vaidya and Śūdra the forms of marriage recognized were the *gāndhārva* and the *daiva* with, according to some authorities, the *pitṛśāka*. In modern times the forms of marriage recognized are, even for Vaidyas and Śūdras, either the *daiva* or the *brāhma*, under which term is understood a form of marriage containing the essentials of the first four forms of the *Smṛiti*.

The *Smṛiti* do not recognize a form of marriage which plays a great part in the epic—the *svayamvara*, or self-choice, a ceremony at which a princess chooses for herself a suitor at a great assembly held for the purpose. The act of choice might be preceded by a trial of strength on the part of the suitors, the victor being rewarded with the hand of the maiden, and, even when this formality was omitted, it is probable enough that the choice was only nominally free, and that the princess was guided by the will of her father or brothers. The only *svayamvara* which the *Smṛiti* mention is the right of a daughter in any class, if her father does not find her a husband, to seek one for herself; in this case the daughter ceases to have any right to any ornaments received from her own family, while the husband need not pay any bride-price, and is permitted to steal her away.

Only the first four forms of marriage are at all religious in character; the marriage hymn of the *Rigveda* (x. 85), which serves to provide verses for the normal form of marriage, deals with marriage in general and the prototype of all marriage in the form of the wedding of Soma, the moon, with Sūrya, the daughter of the sun. This legend is certainly recondite in character, and it is legitimate to deduce from this fact, and from the fact that the *Smṛiti* do not deal with the forms of marriage, that the religious ceremonial was not the essential or primitive part even of the higher forms of marriage.

3. Restrictions on marriage.—It is uncertain how far the modern rule of marriage, which permits alliances between members of the same caste only, was in vogue in the early Vedic period, when the distinction of castes (*jāti*) was only in process of evolution from the system of classes (*varṇa*). It is clear from the *Brāhmanas* that parity of descent was an important qualification for Brāhmaniship, but onces are recorded (e.g., *Āitareya Brāhmana*, ii. 19) which show that the son of a Brāhman and a Śūdra wife might yet be a Brāhman, and that Brāhmanas could marry the daughters of members of the warrior class. With this accords the evidence of the *Grāhyasūtras* and *Dharmasūtras*, which recognize with a good deal of agreement the right of each class to marry women of the classes below them in the established order, Brāhman, Kṣatriya, and Vaidya, and which differ seriously only on the validity of marriages with the Śūdra woman. Arrian, probably on the authority of Megasthenes, records (*Indica*, xii. 8)

¹ See H. Winternitz, *Das altindische Eheheerrecht*, Vienna, 1890; A. Weber and E. Haeckel, *Indische Studien*, v. 177-211.

that marriages were not allowed between *pitṛ*—probably a reference to the castes which were certainly in existence by 300 B.C. The Buddhist texts¹ yield the same result, but they recognize that the king might marry where he would and make his son by any wife his heir-apparent. Manu still recognizes mixed marriages subject to the rule of hypergamy, but the later *Smṛtis* tend to rule them out as objectionable. The modern rule is strict against mixed marriages, confining the possibility of marriage to the modern castes; but the date when this practice finally prevailed is unknown, as even late texts repeat the permission for such marriages sanctioned by the older authorities, and the Kulin Brāhmins of Bengal still avail themselves of this now peculiarly very valuable privilege.

Simultaneously with the growth of the prohibition of marriage within the caste were developed restrictions on marriage within the family. In one hymn in the *Rigveda* (x. 10) the marriage of brother and sister is expressly treated as improper, and there is no reason to suppose that this was an innovation, as suggested by Weber.² No other restriction is alluded to, and the *Satapatha Brāhmaṇa* expressly refers (i. viii. 2. 8) to marriage as permitted in the third or fourth generation, the former being the rule, according to the commentator, among the *Kāvyas*, the latter among the *Śaśṛṣṭras*, while the *Dakṣiṇāyana*, or people of the south, permitted marriage with the son of the father's sister or daughter of the mother's brother, but not, apparently, with the son of the father's brother or the daughter of the mother's sister. The *Grāhyaśūtras* and the *Dharmasūtras* in effect agree in prescribing that marriage should not take place between a man and a woman of the same *gotra* (q.v.) as his father, or a *śiṣya* of his mother, and these terms extended at least to all relatives within five degrees on the mother's and seven on the father's side. Later texts add to the restrictions by extending the prohibitions in the case of the mother, and by forbidding unions with the daughter of a spiritual teacher or pupil. At the same time, concessions are made to local customs, and the practice of marriage of cousins in S. India is recognized by *Baudhāyana* (i. ii. 3). But the practice of marrying outside the *gotra*, a term of wide extension and indefinite sense, but covering all those of the same family name, is recorded by al-Bīrūnī,³ and is the general rule at the present day throughout India—at any rate, among all the higher castes. The chief exceptions are found in S. India, where some tribes practice the opposite rule of endogamy.

In Rājputāna, among the Rājputs who claim to be descendants of the old warrior class, exogamy is closely connected in their history with the practice of marriage by capture; but there is no sufficient evidence for the view⁴ that the development of the custom generally was connected with marriage by capture.

Of much less importance are the restrictions arising from the feeling that the eldest son and the eldest daughter should be married before the younger sons and daughters, a breach of this rule being merely a ground for a penance, and not a fatal bar to the validity of the marriage. The rule is, however, very old, being found in the *Yajurveda* (*Maitrāyaṇī Samhitā*, iv. i. 9), and recognized throughout the later literature. In the south members of Brāhman castes adopt the practice of a mock marriage of the elder brother with a

branch of a tree in order to avoid the evil result of a breach of this rule by a younger brother.

The bride should be a virgin, and the importance of this rule lies in the fact that it renders the re-marriage of widows difficult. In the *Rigveda* (vi. xlix. 8) there is some indication⁵ that a woman might re-marry if her husband had disappeared and could not be found or heard of, and in the *Atharvaveda* (ix. v. 27 f.) mention is made of a spell to secure that a woman married twice may be united in the next world with her second, not her first, husband. The reference here may be to re-marriage in the case of an absent husband or one who had lost caste. The doctrine of Manu is that a woman should never be re-married, and that the marriage formulae are intended only for maidens, but he admits one exception in the case of a woman whose husband dies before the completion of the marriage. Other authorities permit re-marriage in the case where a husband has disappeared, is dead, has entered a monastic order, is impotent, or has been expelled from his caste; but the authorities differ widely as to the length and condition of absence which entitle a woman to re-marriage. The son of a widow who has re-married (*punarbhāva*) is ranked by Manu and other authorities only among the second six of the twelve kinds of son admitted by Hindu law. But the dislike of re-marriage was one which developed gradually; the actual repudiation of such a son first occurs in *Bṛhaspati* (xv. 41), and the forbidding of the re-marriage of a widow occurs only in the *Ādhpurāṇa* and later works. The objections to such marriages in modern India are very strong among those castes which lay most stress on child-marriage, and, despite the legalizing of them by Act XV of 1856, and efforts of social reformers, they are still disapproved by the higher castes.

In the case of a man, while impotence was recognized as a ground on which the wife might contract a new marriage, the marriage was not in itself null, and even mental derangement was not regarded as justifying re-marriage on the part of the wife.

4. Polygamy.—The practice of polygamy among the Vedic Indians is abundantly proved by direct references in the *Rigveda* and other texts, though in the main monogamy is recognized as normal. In the case of the king four wives are expressly mentioned—the *maṇḍā*, the first wedded, the *pariyatā*, or discarded (apparently one who bore no son), the *ubhātā*, or favourite, and the *padigatā*, who is explained as the daughter of one of the court officials. The *maṇḍā* seems to have been the wife proper, though the others were evidently not mere concubines. In the *Arthashastra*, the *Smṛtis*, and the epic the rule is laid down that a man may have wives from his own caste and each of those below him, either including or excluding the Śūdra, and in each case the wife of the same caste was the wife *par excellence* (*dharma-patnī*), with whom the husband performed his religious duties. The heroes and Brāhmins of the epic are frequently represented as having several wives, but one of them always ranks first, and, similarly, later in inscriptions one wife only is often mentioned with her husband. The rule of precedence among wives according to caste and, within the caste, to date of marriage might, however, be overridden by the husband, who could degrade a wife from her position as chief wife; in that case he was required to make her a present equivalent to that made to the new wife whom he was marrying. The modern rule permits the husband to contract as many marriages as he wishes without any need for justification or consent on the part of his existing wives.

³ Tr. Sachau, ii. 126.

⁴ See Jolly, *Indien und die Welt*, p. 68.

⁵ H. H. H. and E. F. Geldner, *Vedische Studien*, Stuttgart, 1892-1904, i. 37.

In addition to wives proper, the *Smṛtis* recognize the existence of concubines (*dāsi*, *dhanyā*), who were distinguished from wives by not being married in due form, and who could not in any case become their husband's heirs. They were, however, entitled to maintenance by his brothers as his heirs on his death, and intercourse with one of them was regarded as adultery. Similarly, at the present day the keeping of concubines by wealthy Hindus is a recognized usage.

The *Smṛtis* show some preferences throughout for monogamy. *Āpastamba* (II. xi. 12) expressly disapproves the re-marriage of a man who has a wife living, and other authorities restrict the right to become the heir of a husband to the chief wife, who is the surviving half of her husband. In all religious observances the husband is to act with his chief wife only, and marriage is treated by *Mānu* (IX. 101) as a pledge of mutual fidelity between husband and wife.

5. Polyandry.—While polyandry is recognized in the Vedic period, though chiefly among kings and important Brāhmanas, there is no clear trace of polyandry, all the passages adduced from the *Rigveda* (X. lxxv. 37 f.) and the *Atharvaveda* (XIV. I. 44, 52, 51, II. 14, 17) admitting of more probable explanations. On the other hand, the heroes of the epic, the five Pāṇḍavas, are represented as marrying Draupadī and having her as wife in common—a fact which is elaborately explained and defended in the epic. This form of polyandry is recognized by *Bṛhaspati* (xxvii. 20) as practised in the south, and by *Āpastamba* (II. xxvii. 2) as an antiquated use. At the present day polyandry is still found among Brāhmanas, Rājputs, and Śāstras alike in Kāson, where children are shared by the brothers as by the Pāṇḍavas, and among hill tribes in the Panjāb, where the children are divided among the brothers. The reasons given for the practice are poverty and the desire to avoid division of property. Among the Jāts of the Panjāb the wife of the eldest brother has to serve often as the wife of the younger brothers also, and the practice is common in the case of the Himalayan tribes. The custom also prevails in the south among the Nairs of the Kanara country and the Todas of the Nilgiris. The modern evidence comes mainly from Tibetan and Dravidian tribes, and there is no indication that the practice was ever widely spread among tribes of Aryan culture.

6. Divorce.—The characteristic quality of a Hindu marriage was that it was a union for life; in striking contrast to the Dravidian and Tibeto-Burman usages, marriages among Hindus were seldom broken by divorce. In the *Smṛti* literature,¹ however, cases are recognized in which divorce in the form of the contracting of a new marriage by the wife during her husband's lifetime is allowed, and the occasions for divorce (*tyāga*), i.e. abandoning a wife and leaving her without maintenance on the part of the husband, are set out. The abandonment of a faithful wife counts as a serious crime, which must be expiated by a severe penance, and which may involve expulsion from caste. Adultery affords a ground for divorce, and might in certain cases be punished with death, but, according to other authorities, it could be expiated by severe penance. Any serious offence against a husband might, according to Yājñavalkya (I. 75), be a ground of divorce, and Nārada (xii. 92, 93) gives as offences justifying such treatment attempts to murder, wasting property, or the procuring of abortion. In modern Hindu law divorce depends on local custom and, where allowed, is permitted only for adultery, but divorces

are very common among all Dravidian tribes, which also allow freely re-marriage of wives in the case of the disappearance, long-continued absence, impotence, or loss of caste of their husbands.

7. Position of widows.—In the funeral rites of the *Rigveda* the wife of the dead man is represented (X. xviii. 7 f.) as lying beside him on the pyre and as being summoned to leave the dead in order to be united with his brother, apparently as a bride. The passage clearly shows that the wife was not to be burned with the dead, but it unmistakably suggests the existence of an older custom to this effect, and the *Atharvaveda* (XVIII. iii. 1) refers to this as an old practice.² It was evidently not approved by the Brāhmanas of the Vedic age, for it is not mentioned in the *śāstras*, and appears first in the late Vedic *Grāhyasūtra* (vii. 2) and in interpolated passages of the *Viṣṇu Smṛti* (xxv. 14, xx. 30). The later *Smṛtis* approve it, but not without occasional dissent. In the epic it plays little part,³ though one of Pāṇḍu's wives insisted on being burned with her husband (*Mahābhārata*, I. cxxv. 31); but in the later romances and historical works it is often mentioned, and as early as A.D. 500–510 an inscription is found to celebrate a *sati*. Forbidden in British India in 1829, it was observed in 1830 in the Panjāb at the death of Kanjit Singh, and in 1877 at that of the Maharaja of Nepal. The primitive character of the rite is shown by the fact that often other attendants perished with the queen or queens when the dead man was a prince. Normally the wife was burned with the dead man; if he died away from home, she might be burned alone (*anumaraṇa*), but the burning of a pregnant widow or one with a young child was forbidden, and the practice was normally more or less voluntary, except in the case of royal families, where reasons of policy doubtless reinforced considerations of religion in favour of burning.

In many cases death was doubtless regarded as preferable to the fate of a widow, whom the *Smṛtis* and modern usage, despite the efforts of reformers, condemn to a life of fasting, devotions to her dead husband, pilgrimages, and abstinence from any form of luxury, such as the use of a bed, ornaments, etc. If she had grown-up sons, she fell under their control; if not, under that of her husband's kin, who were bound to maintain her so long as she remained faithful to her late husband. The later texts also recognize her right to be heir to her husband, but only on condition that she remained unmarried—a disability which is not altered by Act XV. of 1855. The harshness of the rule is better realized when it is remembered that the practice of child-marriages enormously increases the number of widows.

In the *Rigveda* it seems to have been the practice for the wife of the dead man to be taken in marriage by his brother, whether or not the latter had a wife already. This, the natural interpretation of the funeral hymn (X. xviii. 8; cf. also xl. 2), is borne out by the fact that the modern usage in the Panjāb,⁴ which has preserved much of ancient practice, is for a man to marry his brother's widow, with the result that many men have two wives. In the *śāstras*, however, this practice is whittled down to the permission given to the brother of the dead or, if there is no brother, a near kinsman to beget a son with the widow in order to continue the race of the dead man. Such a son, when of age, would inherit his father's property, which, until then, would be managed by his mother or by his real father, to

¹ The *Kaṭhīya Arthashastra* (possibly 6th cent. B.C.) goes far in allowing divorce (III. II. 52, III. 53).

² A. Hillebrandt, *SDHQ* xl. (1888) 730, explains these passages quite differently, but his view can hardly be carried.

³ H. Jacobi, *Das Mahābhārata*, Bonn, 1885, p. 197 f.

⁴ Cf. *Bṛhaspati*, xxvii. 20, II. 51; *Arthashastra*, III. II. 52.

whose estate also he might in certain cases succeed. By an extension of the principle the texts allow an impotent or ill man to appoint another during his life to beget a son for him, and in the epic the right to act in these cases is frequently recognized as specially appropriate for Brāhmana. But the general tendency of the later *Smṛti* is more and more against the practice, which was subjected to increasing restrictions or absolutely forbidden, and in modern times the practice of appointment (*viyoga*) has been replaced by the more primitive form of actual marriage with a brother's widow.¹

3. Marriage and morality.—Though fidelity on the part of both parties to a marriage was doubtless an ideal, there is abundant evidence throughout the literature that infidelity on the part of the husband was neither rare nor considered worthy of moral censure. In the case of the wife there is no doubt that in the *Smṛti* literature and in modern usage adultery is regarded as a serious offence which may in certain cases be punished by death. Some of the Vedic passages (*Taittiriya Saṁhitā*, v. vi. 8; *Maitrīyaṇi Saṁhitā*, III. iv. 7) cited as showing tolerance of adultery are susceptible of other interpretations, but there remains the fact that a special ritual at the *Vasupagṛhas* is clearly intended to remove the ill-effects of adultery (*Maitrīyaṇi Saṁhitā*, I. x. 11; *Satapatha Brāhmaṇa*, II. v. 2. 30), that the *Bṛhadāraṇyaka Upaniṣad* (VI. iv. 11) contains a spell to expiate adultery with the wife of a Brāhmana, and that the *Bhāradvāja Grhyasūtra* (II. 28) advises a husband how to proceed in the case of going on a journey if he desires his wife to have lovers in his absence. The romances and fable literature frequently allude to cases of infidelity, and the *Arthashastra* and the *Smṛti* recognize as one kind of son the *gṛhasthanna*, or secretly born, an illegitimate son who can, nevertheless, succeed to the property of his mother's lawful husband. Baudhāyana (II. iii. 34) and Āpastamba (II. xiii. 7) preserve a saying of a sage to the mythical king Janaka, referring to a time when the virtue of married women was lightly estimated, and the *Mahābhārata* refers (I. cxviii. 4 ff.) to a time when wives were used in common, a practice terminated by Vyataketu. The lack of chastity of the women of this last is recorded by Bṛhaspati (II. 30). Too much stress must not, however, be laid on these notions; the references to the Eastern women may be an allusion to the loose marital relations in Tibet, and the references to the lax morality of previous times are made for the purpose of proving that the recognition of illegitimate sons then accorded was antiquated at the time of the texts.

4. Marriage and property.—The widow of the dead man, according to the *Narada* (III. 4) and Baudhāyana (II. iii. 44-46), was denied the power of becoming an heir. Gautama (xxviii. 21 f.) mentions her in the list of heirs, but points out the alternative of the adoption of the practice of *viyoga* for providing the son in whose absence alone could the mother be heir. In Viṣṇu (xvii. 4) and Yājñavalkya (II. 135) is first found the express mention of the widow as the next heir in the absence of male issue. But the extent of the right thus obtained is expressly limited by the texts: the widow could not give away, or mortgage, or sell the property thus inherited; she held it for her enjoyment for life, subject to continued chastity and to her not contracting a second marriage, but she held it under the control of her husband's kindred and with the limitation that it should return to them on her death.² If there were several widows, the chief wife seems to have

been entitled alone to succeed as heir, but on her fall the duty of maintaining the other wives—a rule which is not recognized in modern Hindu law, where all the wives have an equal right of succession.

Distinct from the property obtained by inheritance was the *striddhana* of the wife, which is mentioned by Gautama, but first described in detail in the *Arthashastra* (III. ii. 50) and by Viṣṇu (xvii. 18). It included any presents from parents, sons, brothers, or kinsmen, the marriage gifts, the bride-price when given by her father to her, and the fine paid by her husband in the case where she was degraded from her position as chief wife in favour of another. This property fell on her death to her daughters, if she had any; if not, apparently to her sons, who, according to some authorities, shared it with their sisters in any event; and, in the case of failure of all issue, to her husband only if she had been married according to one of the four superior forms of marriage; otherwise it went to her father. In some cases the unmarried daughter was preferred to the married in heirship to her mother. In the later *Kātyāyana Smṛti* (xx. 30 ff.) are found elaborate rules as to the power of a woman over her *striddhana*. She was at liberty to dispose in any way of presents from living relatives, even if consisting of immovables; her husband could not use them without her consent. She was also entitled to receive from her sons any property promised by their father and not paid to her, while gifts to wives were encouraged, if not exceeding 3000 *paṇas* or consisting of immovables. On her death her property went back, in so far as it consisted of gifts from relatives, to those relatives; the rest went to any unmarried daughter, or, failing such, to her sons and married daughters, while, if she left no children, her property passed to her parents if she were married in one of the lower forms of marriage, and any landed property went to her brothers. The later texts and the commentators develop in much detail the doctrine of *striddhana*, and the *Middhārṇava* (a commentary on Yājñavalkya) argues that all property which women receive in any way falls under that head, and must obey the special laws of devolution of *striddhana* proper. This is contrary to the earlier evidence, which expressly differentiates between *striddhana* in the narrow sense and property inherited from a husband, earned by a woman's own exertions, or given by strangers, over which she can exercise power of disposal only with her husband's consent.

5. *Levira*.—In addition to many notions maintained throughout the literature, the Hindu marriage of the end of the Vedic period and in the classical period is dealt with in the *Dharmasūtras* and in the *Smṛti* with their commentaries, and in comprehensive treatises based on the *Smṛti*. Of the older texts, those of Āpastamba, Gautama, Vasudhara, and Baudhāyana have been translated by G. Bühler (*SSS* II. 9 [1897] and xiv. [1898]). The *Smṛti* of Manu has also been translated by Bühler (*Q. xv* [1890]), and those of Viṣṇu, Nārada, and Bṛhaspati by J. Jolly (*vi* [1900] and xxxiii. [1900]). Yājñavalkya has been translated by A. Senier, Berlin, 1866. Of these Manu is the oldest, Yājñavalkya may be dated in the 4th cent. A.D., Nārada about A.D. 500, and Bṛhaspati about 600. Somewhat earlier than Bṛhaspati is Kātyāyana. Of the later texts the *Middhārṇava* (c. A.D. 1300) is the most important, as having become authoritative throughout India except in Bengal. Of modern works, for the Vedic period the most important are: A. Weber, *Indische Studien*, Berlin and Leipzig, 1869-74, v. and x.; B. Delbrück, 'Die indogermanischen Verwandtschaftsverhältnisse,' in *ASO* xiv. (1890) 383-420; H. Zimmer, *Altindisches Leben*, Berlin, 1879; and A. A. Macdonell and A. B. Keith, *Vedic Index*, London, 1912. For the epic a full account is contained in E. W. Hopkins, art. in *JOS* xiii. (1890), and much material is also given by R. Schudt, *Störps our Ind. Schrift*, Leipzig, 1872. The rules of the law-books and the modern law are dealt with in E. West and G. Bühler, *Digest of Hindu Law*, Bombay, 1891, and in J. D. Mayne, *Hindu Law and Customs*, Madras, 1892, and a summary of the whole subject with full citations and references to the literature is given by J. Jolly, in *Recht und Ethik*, Strassburg, 1906 (= *GIA* I. 2).

² Kātyāyana, xiv. 25 ff.; Bṛhaspati, xiv. 46 ff.

MARRIAGE (Iranian).—1. Zoroastrian.—According to the sacred texts of Zoroastrianism, marriage is divinely favoured (*Vendidad*, iv. 47; cf. art. *ASCHTOSCH* [Persian], *FAMILY* [Persian]). The second happiest place in the world is that in which a righteous man sets up his household (*Vend.* iii. 2). In the *Gāthās* the pair who wed are urged to strive to live a life of righteousness and to help one another in good deeds (*Ys.* lili. 5).

Since marriage is regarded as almost a religious duty, Zoroastrians hold it a meritorious act to help their co-religionists to enter the wedded state, and such assistance may even serve to atone for sin (*Vend.* iv. 46, xiv. 15). It is by no means unusual, therefore, for Parsis to enjoin by will or by a trust that a certain amount of their wealth be expended in aiding poor brides to marry, and certain institutions, as the *Parsi Panchayat* of Bombay, provide special funds for this purpose.

The Parsi community in India has passed through so many vicissitudes that it is difficult to determine which of the various marriage customs of the Parsis were originally Zoroastrian, although it appears to be practically certain that the strictly religious portion comes under this category. At the very beginning of the *Afrōdād*, or blessing known as the *Pand-admah*, which is recited at the wedding ceremony, the officiating priest declares that the ceremony is 'according to the law and custom of the Mazdaean religion.'

According to the *Avesta*, both manhood and womanhood were attained at the age of 15 (*Ys.* ix. 5; *Ys.* viii. 13 f., xiv. 17; *Vend.* xiv. 15; *Bundahishn*, iii. 19). Since in the *Avesta* we find maidens praying for suitable husbands (*Ys.* ix. 23; *Ys.* v. 37), it would appear that child-marriage was not practised. The ritual recited at the marriage ceremony, bidding the pair to express their consent after 'truthful consideration,' points in the same direction. The present Parsi Marriage Act enjoins the age of 21 for males and 15 for females; if the contracting pair are below that age, the marriage certificate must be signed by their parents.

The marriage ceremony is preceded by several other rites. When the match is arranged, an auspicious day is fixed for the betrothal, such as the day of new moon, or the first (*Hormad*) or twentieth (*Bāhrām*) day of the Parsi month. At times, especially in *Mofussil* (provincial) towns, the parties consult Hindu astrologers, who name one or more auspicious days for the betrothal, marriage, etc. The match is usually arranged by the parents, with the consent of their children; but often, at the present time, the contracting parties make their own choice with the approval of their parents. Mutual friends of the two families generally carry messages and bring about the match—a course recommended by the *Pand-admah-t-Ašrōpāt-Māraspandan* (xiii.) and attested in the *Sāh-admah* (tr. A. G. and E. Warner, London, 1905 *z.*, i. 177 *z.*, ii. 126, 26-28) by the marriage of the three sons of *Varidūn* with the daughters of the king of *Yemen*, of *Bustam* with *Tahmīspād*, and of *Kāde* with *Sodabab*. Until recently professional match-makers were not unknown, and they still exercise a certain amount of activity.

On the day of betrothal¹ the women of the groom's family visit the house of the bride and present silver coins to her, and the groom receives a similar present from the women of the bride's family. The older term for this ceremony, now called *adīrōvān*, was *adām pādōvān*, 'to name' (from *Pars.* *adāmān* *adōvān*), since after the

¹ *Gāyō*, *Qutub*, p. 341, says in this passage an allusion to the custom of setting the hand of the bride from her parents or guardian (cf. also *Vend.* xv. 5).

² A considerable time might elapse between betrothal and marriage (*Vend.* xv. 9; cf. *Gāyō*, p. 342).

betrothal the bride receives in religious recitals of prayers for her the name of the groom, even though, by some mishap, marriage does not take place. An unbetrothed girl was said to be 'unnamed' (as *haradān* *adām*). Betrothal is regarded as a solemn part of the marriage ceremony, the *madīr* *adīr*-man, or 'pledge of the magnitude of a man' (*Vend.* iv. 2, 4, 9, 15), being considered by the *Rīdspād* to mean a promise of marriage. At the present time the priests do not take an active part in the betrothal, except in *Mofussil* towns, where two priests—one for each family—formally ask the parents that the bride and groom respectively be given in marriage to each other. The priests took part in the *adāmān* (betrothal) at *Surat* in the middle of the 18th cent. (*Anquetil du Perron*, *Zend-Avesta*, Paris, 1771, ii. 537 f.), when the two families met, and the groom's family priest, after prayer, placed the hand of one of the contracting parties in that of the other.

The betrothal is followed by the *Dīv*, when a lamp (*dīv*) is lit early in the morning, and the women of the two families interchange visits and gifts. This day is regarded as more important than the betrothal proper, because on it the dresses and wedding rings are usually presented. The *Dīv* is followed by the *Adām*, when the dowry given by the bride's father is presented to the groom's family.² Presents are exchanged, chiefly from the bride's family, on several other days between betrothal and marriage.

An auspicious day, such as the day of new or full moon, is fixed for the marriage as for the betrothal. Tuesday and Wednesday are inauspicious.

In some families the astrologer's services are engaged before the marriage also. When matches are being arranged by mutual friends, the horoscopes of the intended bride and groom are submitted to him, to find whether the stars predict harmony between the pair. If this is not to be the case, the projected match is broken off.

In the morning or afternoon of the marriage day the bride and groom take a gilded bath—a custom which is mentioned in the *Sāh-admah* (ed. T. Macan, Calcutta, 1839, p. 1579), where *Bāhrām Gīr* takes his Indian wife to the fire temple for that purpose. The religious portion of the wedding is usually performed shortly after sunset, perhaps to symbolize that, just as day and night unite and blend, so the wedded pair should be united in weal and woe.

The marriage is generally celebrated with much pomp, as was the case in ancient *Irān*, as recorded in the *Dīnabart* (ed. P. B. Sanjanna, Bombay, 1874 *z.*, ii. 97). The groom, wearing a white ceremonial robe and holding a shawl in his hand, sits among friends and relatives of his own sex in the compound. Around his neck he has a garland of flowers, and on his forehead is a vertical line of red pigment (*āshkūn*). In colour this is held by some to represent in India an earlier custom of the sacrificer of animal life, and in shape to symbolize the brilliant, fructifying sun, whereas the round *āshkūn* of the bride is supposed to be a symbol of the moon, which shears the rays of the sun.

A short time before the marriage, a procession, headed by the officiating priests, and often by a band of music, goes to the house of the bride, where the ceremony generally takes place. The men eat themselves in the compound, and the women in the house. At the door, the side posts of which—like those of the groom's house—are

³ In early times it was apparently more customary for the groom to give presents. The sum of 2000 silver dirhams and 3 gold dinars, mentioned in the *Afrōdād*, seems to have been the average sum which a groom of moderate means was expected to provide for his bride. On the *Afrōdād*, with *Publ.*, *Pānān*, and *Sh.* text and *z.*, see *Shapurji Kavaji Modirra*, *Zoroastrianism and his Contemporary in the Rigveda*, Bombay, 1912, pp. 77-78.

marked with turmeric (whose yellow colour is held to symbolize the sun, and hence abundance and fertility), the groom is welcomed by his future mother-in-law, a fresh mark of *hushma* is made on his forehead, and rice is made to adhere to it, and is also thrown over his head.

During the marriage ceremony the officiating priest again sprinkles rice over the bride and groom, and before the recital of the marriage blessing the pair throw a handful of rice on each other, some instances making the couple eat a few grains of rice thus thrown.

An egg, a coco-nut, and a little tray of water are now passed three times round the groom's head and cast away, and in the course of the evening the women of the bride's family make the groom dip his hand in a water-jar, in which he leaves for them a silver coin. Formerly it was also the custom for the feet of the bride and groom to be washed after the marriage ceremony, but the adoption of English foot-gear has ceased this to survive only in washing the tip of the boots.

After the groom has been thus welcomed at the door, he is made to cross the threshold without touching it, and with his right foot first, these precautions being observed also by the bride when she first enters her husband's house. Having entered the house, the groom awaits the bride, who sits on his left, the chairs being placed in the centre of the apartment. On stands beside the chairs are trays of rice to be thrown over the pair, and lighted candles, while beside the bride is a small vessel of *ghî* and molasses (typifying gentleness and sweetness); a servant stands before the pair, holding a burning censor in one hand and a little frankincense in the other. Beside each of the contracting parties stands a witness, usually the nearest kin, and generally married persons.

The following requisites are necessary for a regular marriage: (1) the marriage must be celebrated before an assembly of at least five persons who have been summoned for this special occasion; (2) the contracting parties are asked by the officiating priest whether they consent to be united in wedlock; (3) the hands of bride and groom are joined (*Adhvār*, 'hand-fastening') and a symbolic knot also plays a prominent part in the ceremony; (4) the actual marriage ceremony is followed by a benediction accompanied by sprinkling with rice, etc.

Before being seated side by side, the bride and groom are made to sit opposite each other, separated by a piece of cloth as a curtain. The senior officiating priest now joins the right hands of the pair, and, with the recital of the *Yashd adhvār*, a piece of cloth is passed round the chairs of both so as to form a circle, the ends of the cloth being tied together. With a repetition of the *Yashd adhvār* the *Adhvār* is then performed by fastening the right hands with twists of raw yarn, which is passed round the hands seven times, then seven times round the bridal pair, and, finally, an equal number of times round the knot in the encircling cloth. The fee for this ceremony is the perquisite of the family priests, even though the rite may be performed by other priests. The attendant next puts frankincense on the fire, and the curtain between the pair is dropped, while the bride and groom throw over each other a few grains of rice which they have held in their left hands. The one who first throws the rice is said to 'win,' and during the recital of the benedictions the priests also throw rice over the pair. They are now seated side by side.

The more strictly religious portion of the ceremony follows. Two priests stand before the pair, the elder of whom blesses them, praying that Ahura Mazda may grant them 'progeny of sons and grandsons, abundant means, strong friendship, bodily strength, long life, and an

existence of 100 years.' He then asks the witness who stands beside the groom whether, on behalf of the bridegroom's family, he consents to the marriage 'in accordance with the rites and rules of the Madaayanians, promising to pay her (the bride) 2000 dirhams of pure white silver and 2 dinars of real gold of Nishapur coinage.' A similar question is asked of the witness for the bride's family, and then of the contracting parties, the questions being repeated thrice. Next follows the recital, by both the officiating priests, of the *Pāwand-nāmah* or *Adhvār* (tr. F. Spiegel, *Asiatica orientalis*, Leipzig, 1852-63, iii. 223-234, and, in great part, by the present writer, in *Donaabadi* Framji Karaka, *Hist. of the Parsis*, i. 182 ff.). The admonitions in the *Adhvār* are followed by a series of benedictions, in which Ahura Mazda is besought to grant to the wedded pair the moral and social virtues characterizing the *yasatas* (angels) who give their names to the thirty days of the month. Prayer is also made for other blessings, and that the bride and groom may be granted the virtues and qualities of the great heroes of ancient Iran, that they may live long, and have many children, etc. A portion of this address is repeated in Sanskrit—probably a reminiscence of the times of the earliest Parsi emigration to India, when it was desired to make the address intelligible to their Indian hosts.

The *Adhvār* is followed by another group of benedictions in Pārsi, this group being called the *Tan darušt* (ed. E. K. Antia, *Pārsi Texts*, Bombay, 1906, p. 160 f., tr. Spiegel, *op. cit.* iii.).

The marriage ritual is repeated at midnight. From Anquetil du Perron (i. pt. i. 319, ii. 584, n. 8) this appears to be a reminiscence of the earlier Persian custom when, in Kirmān, the marriage ceremony was performed at midnight. This custom is not, however, universal.

A number of minor usages, not regarded in any way as part of the solemn ritual, are also observed, especially by women, in the Mofammi towns. The first of these, which, like the others of this class, is now observed more as a joke, is *chāddā chādī*, in which the nearest friends or relatives tie the skirt of the *jūmā*, or flowing dress, of the groom to that of the *adī* of the bride; thus united, the pair go to the bridegroom's house. This is followed by foot-washing (cf. above), after which comes the *dādi būmrō*, or making the newly-wedded pair partake of food consisting of *dapi* (curd) and rice from the same dish, each giving the other to eat. Another custom, now almost obsolete, is making the bride and groom play *chī bākī* ('odd or even'). Each takes several rapeseeds in the right hand and asks the other whether the number is odd (*chī*) or even (*bākī*); if the opposite party guesses the number rightly, he or she is said to win. The underlying principle is probably similar to that of the rivalry of bride and groom to be the first to eat rice on the other, as already noted.

Marriage songs are sung frequently through the nuptial ceremony; and the whole concludes with a banquet, at which courses of *āsh* (a symbol of good omen) and sweets are essential, but meat is forbidden, either out of deference to Hindu scruples or from motives of economy.

JIVANJĪ JAMSHĪDJI MODI.

2. *Next-of-kin marriage.*—A problem of peculiar delicacy in connexion with Iranian marriage is the question of the *sandūdādhā* (Pahlavi *sandūdādhā*), usually translated 'next-of-kin marriage.' The modern Parsis maintain that this is a marriage

¹ The etymology of the word is apparently *sandūd*, 'belonging to (comp. the community or sib)'—compare with *lāh*, *comp.* and *sandūdādhā*, 'marriage' (C. Bartholomew, *Altiran. Wörterb.*, Strasbourg, 1894, col. 1860). For a less plausible etymology, based on native tradition (Conder, *ib. cit.*, n. West, *ib. cit.* 1894, 600), see Darmstadter, *Sandūdādhā*, i. 125 n.

between first cousins, and such is certainly its present connotation. The Greek and Latin writers, on the other hand, regarded *avastandāda* as referring to marriages of parents with children and of uterine brothers and sisters; and in this view they are followed by the great majority of non-Parsi scholars of the present day.

The Avesta itself offers no data for the solution of the problem, and mentions *avastandāda* only in five passages—all late.

The Manichaean religion commands *avastandāda* (Ys. xii. 9); in certain religious ceremonies a young man is to be chosen who has contracted it (Ys. iii. 8, cf. Gdā iv. 8). Corporeality may be purified, not only with the urine of cattle, but also with the mingled urine of a man and woman who have performed *avastandāda* (Ys. viii. 18, no other human beings can produce this vehicle of purification), and Vistasp is the protector, among others, of the youth who fulfils the requirements of *avastandāda* (Ys. xxi. 17). Bartholomae's claim (vol. 1985) that Vistasp's wife Hōstam was also his sister, on the basis of Ys. xv. 26 f., can scarcely be deemed correct (see Heston, *Early Zoroastrianism*, p. 204 f.). In spite of the correction of the late Pahlavi *Yāgher-i-Sarvin*, 48. The Pahlavi commentator on Ys. xiv. 4 clearly uses an allusion to *avastandāda* between father and daughter, but the text does not contain his argument.¹

The evidence of the Greek and Latin writers is unambiguous as regards the nature of *avastandāda*. That the royal houses should practice the marriage of parents and children, or of brothers and sisters, is not inexplicable. It probably rests, at least in historic times, upon a desire to keep the royal blood absolutely pure, and finds a conspicuous illustration in the history of Egyptian dynasties.² Thus Cambyses married his sister, and, though Herodotus says (iii. 81) that before this ruler's time 'the Persians were not wont to cohabit with their sisters', we are told that the notorious Parysatis urged her son Artaxerxes Longimanus to wed his sister Atossa (Plut. *Artax.* 23; cf. Euseb. *Prep. Evang.* vi. 278 C; for a less certain instance see Ctesias, *Perse.* 2), to whom her own brother Darius later offered marriage (Plut. *Artax.* 26). The Bactrian satrap Symmachus married his mother (Quintus Curtius, viii. ii. 10), and Turituchmes his sister (Ctesias, *Perse.* 84). The only case alleged in the Sasanian period was the marriage of Kavāt with his daughter Sambyke (Agnathina, ii. 23). The custom is reported, however, not only of the royal family, but also of the Persians generally. Marital relations with mother, daughter, or sister are ascribed to them by Diogenes Laertius (*Proem.* 7, ix. 83), Strabo (p. 738), Plutarch (*de Fort. Alex.* i. 5), Antiochus (quoted by Athenaeus, v. 63), Jerome (in *Jovin.* ii. 7), Clemens Alexandrinus (*Prod.* i. 7), and Minucius Felix (*Octav.* 31). Philo states (*de Spec. Leg.* p. 778 B) that children from union of mother and son were deemed particularly well-born, and Catullus says (lxxxiii. 8 f.) that 'magus ex matre ut gnato signatur oportet'.

This last quotation is of considerable significance in determining the real origin of a custom which excited horror among the classical authors. Xanthus Lydus, as cited by Clemens Alexandrinus (*Strom.* iii. 2, ed. *fr.*), had, centuries before, recorded such marriages as peculiarly Magian, and Strabo (p. 1088) declared them to be an ancient usage (cf. also Heston, cited by Diog. Laert. *Proem.* 7). In the Sasanian period the Christian martyr Mihrāmgushasp had, before his conversion, married his sister (G. Hoffmann, *Auswege aus syr. Ahten pers. Märtyrer*, Leipzig, 1880, p. 96); and, some

¹ See L. H. Mills, *Gedāda*, Oxford, 1895-1913, p. 224 f.; West, *SSS* xviii. 302 f. The latter scholar dates the final revision of the Pahlavi version in the 6th century. For another possible, though uncertain, reference to the *avastandāda* of Abura Masde and Spenta Armaiti, see *Dinkh.* ii. ix. 5-6. There is no unmistakable allusion to it in *Dinkh.* vi. lxxvii. Commentator, *Sand-Avesta*, i. 244, n. 12, misunderstands the Pahlavi commentary on Ys. iii. 8 as containing a possible reference to *avastandāda*, for the correct rendering see Mills, p. 270 f.

² For many other instances see P. Jast, *GP* ii. [1904] 487; R. Wasthmann, *Hist. of Persian Marriage*, London, 1884, pp. 280-285. Cf. also 'Egyptian' custom above.

two centuries later, the reformer of Magianism, Bah Afrit, forbade his followers to marry their mothers, sisters, daughters, or nieces (al-Biruni, *Chronology of Anc. Nations*, tr. E. Sachau, London, 1879, p. 194; al-Shahrastāni, *Religionenparthien und Philosophenschulen*, tr. T. Haasbrücker, Halle, 1850-51, i. 284; cf. also above, p. 401¹). Yet there was a tradition, reported by Mas'udi (*Præfatus d'or*, ed. and tr. Barbier de Meynard and Pavet de Courteille, Paris, 1861-77, ii. 145), that Faridūn (the Thraetacene of the Avesta) begot a daughter by his granddaughter, another by his great-granddaughter, and so to the seventh generation (cf. also Justi, *Iran. Namenbuch*, Marburg, 1896, p. 192).

In the Pahlavi texts allusions to *avastandāda* are common. Observance of it is one of the surest signs of piety in the coming days of evil, i.e. the Arab conquest (*Bahman Yt* ii. 67, 81); it expiates mortal sin and forms the one insuperable barrier to the attacks of Ahrim, the incarnation of Fury (*Sāyast īr-Sāyast*, viii. 10, xviii. 21); it is especially obnoxious to demons, whose power it impairs (*Dinkh.* iii. 98); it is the second of the seven good works of religion, and its neglect the fourth of the thirty heinous sins, and it is the ninth of the thirty-three ways of gaining heaven (*Dind-i Mānd-i Xraf.* iv. 4, xxvii. 7, xxxvii. 12). It is even said to have been prescribed by Zarathustra as the eighth of his ten admonitions to mankind (*Dinkh.* iii. 106; cf. *Selections of Zā Sparam*, xxiii. 15), and to arrange it is a work of merit (*Dāstān-i Dinkh.* lxxviii. 19). In a word, from it is to arise 'complete progress in the world . . . even unto the time of the renovation of the universe' (ib. lxxvii. 8 f.).

These Pahlavi texts, however, cast no light on the precise connotation of the term. Yet there are references in this literature which are the reverse of ambiguous. The Pahlavi synopsis of the 18th *fargard* of the lost Avesta *Yarastmdnear Naak* clearly refers to the *avastandāda* of brother and sister (*Dinkh.* ix. xii. 27),² and that of the 21st *fargard* of the lost *Bab Naak* to the wedlock of father and daughter (ib. lxxvii. 7, 9).³ The most explicit statement is found in the account of a controversy between a Zoroastrian theologian and a Jewish objector, recorded in *Dinkh.* iii. 98 (tr. West, pp. 390-410):

'The consummation of the mutual embrace of man to his wife . . . that union . . . is . . . that with one himself, and, among men himself, that with those next of kin; and the mutual connection of the three kinds of nearest kin—which are father and daughter, son and the wife here him, and brother and sister—is the most complete that I have considered.'

These three forms are illustrated, respectively, by the union between Abura Masde and his daughter Spenta Armaiti (cf. on Ys. xiv. 4, above; and on its probable origin as a cosmogonic myth of the *lohe yānes* of Heaven and Earth, cf. L. H. Gray, *AEW* vii. [1904] 367), from which sprang the primeval being Gayōmar; by the return of some of the seed of the dying Gayōmar to Spenta Armaiti (cf. also *Bundahish.* xv. 1; *Dāstān-i Dinkh.* lxxv. 6; al-Biruni, p. 107), resulting in the birth of the first human pair, Mašyā and Mašyād; and by their pre-lit union (cf. also *Dinkh.* vii. i. 10, *Dāstān-i Dinkh.* xxxvii. 82, lxxv. lxxvii. 4 f.).⁴

In the 8th chapter of a Pahlavi *Nirōyān*, probably

¹ The statement that Aršt-i-Vistā 'had seven sisters, and all these seven sisters were as wives of Vistā' (*Aršt-i-Vistā* *Nānak*, ii. 1-8, 7-10; scarcely earlier than the 6th cent. A.D.) may be compared, but is not absolutely certain in meaning (West, p. 367 f.).

² So West, p. 397; later (*SSS* xxvii. [1892] 392) he retrains the passage as that *avastandāda* is not necessarily implied.

³ Another such argument for brother-and-sister marriage was found in the legend of the union of the primeval twins Yima and his sister (Pahlavi Yim and Yimāh, see *Dind.* xlii. 1, and West, *SSS* xviii. 418 f.), which is not mentioned in the earliest Avesta, though it obviously dates from the Indo-Iranian period, since it forms the theme of Rigveda ii. 10.

written between the Arab conquest of Persia and the 10th cent., found preceding the *Dāstān-i Dīnār* in many MSS, there is a lengthy polemic in favour of *avādhādas*, there written *avādhādas* (ed. Bamanji Nasarvanji Dhakar, *Pahlavi Rivdyat* accompanying the *Dāstān-i Dīnār*, Bombay, 1912, pp. 9-21, tr. in extracts West, *SBZ* xviii. 415-423). Defending it by the old examples of Ahura Mazda and Spenta Armaiti and of Mazyā and Mazyāoi, it declares that, when contracted with mother, daughter, or sister, *avādhādas* is superior in religious merit even to the ceremonial worship of Ahura Mazda, the replenishing of the sacred fire, or showing becoming reverence to a priest, and that it saves the most heinous sinner from hell.

When the millennium is about to dawn, 'all mankind will perform *Avādhādas*, and every land will perish through its merits and power of *Avādhādas*.' The first time that a man practices it, a thousand demons will die, and two thousand storms and storms . . . and when he goes near to it four times, it is known that the man and woman become perfect.

Whereas *Avādhādas* is a marriage of *Avādhādas* between just as though one-third of all this world . . . had been given by him . . . once a righteous man . . . And when he keeps his place in his marriage, and his (financial) ritual is performed, it is known that his soul thereby goes into the supreme heaven (*garbhman*); and when the ritual is not performed, it goes thereby to the ordinary heaven (*vaishnā*). The good deeds of those who observe *avādhādas* are a hundred times more efficacious than the same deeds performed by other good men; and the penalty for descending from it is hell.

From certain passages in the same chapter it is very evident that *avādhādas* in the narrow sense here advocated was by no means pleasing to the Parsi community.

Then, when Ahura Mazda and Spentarmaiti held colloquy, 'Zarathustra spoke thus: "Which duty and good work shall I do first?" Ahura Mazda spoke thus: "Avādhādas." . . . Zarathustra spoke unto Ahura Mazda thus: "In my eyes it is an evil (vād) which is performed." . . . Ahura Mazda spoke thus: "In my eyes, also, it is just as to this; but—"—then nothing is so perfect that there is no evil mixed with it—"It should not seem so?" (West, p. 423).

As early as the date of composition of *Dīnār*, iii. 92, however, there are indications that *avādhādas* had come to bear its present meaning of marriage of first cousins, and this is the teaching of more modern Parsi *Rivdyats* (West, pp. 404, 423 f.) and the practice of Zoroastrians at the present day.

The Parsi theory of the origin of *avādhādas* is fairly clear. The *Dīnār* holds (iii. 92) that its basis was a desire to preserve purity of race, to increase the compatibility of husband and wife, and to increase the affection for children, which would be felt in redoubled measure for offspring so wholly of the same family. Another reason—doubtless well founded, especially after the Arab conquest—was that marriage outside the family might tend to religious laxity and even to perversion to another faith (*Rivdyat* viii. tr. West, p. 416 f.). As a matter of fact, however, these arguments are inadequate to explain the real origin, and the suggestion of Justi (*GrP* ii. 426) that the source is to be found in Egypt (cf. 'Egyptian' section, above) is equally improbable.

There is no evidence that incestuous *avādhādas* was known in the Avesta,¹ and it is not until Pahlavi writings of the 6th-9th centuries that it is unmistakably advocated (West, p. 427 f.). At the same time, the testimony of the Greek and Latin writers cannot be ignored; and, while we may grant, for the sake of argument, that in the later Sassanian period there was vital religious reason for incestuous *avādhādas*, as set forth by the *Dīnār* and the *Rivdyat*, no such reason can be alleged for the Achaemenian and succeeding periods. It is clear, moreover, that incestuous *avādhādas* was then not restricted to noble and royal families.

¹ It is true that the Pahlavi summaries of last Avesta texts often in them the presence of this type of *avādhādas* (see above, p. 427 f.), but the basileus reading of *avādhādas* into *va* xiv. 4 by the Pahlavi commentator (above, p. 427 f.) hints that we cannot repose implicit confidence in the accuracy of these summaries.

but that it was also practised widely among the common people. On the other hand, the present writer knows at present of no cases in the historic (as distinguished from the legendary) period of Zoroastrianism, except the Sassanian royal instances mentioned above, and the marriage of Mithran-gushasp.

We must also note that incest was abhorrent to the Indian branch of the Indo-Iranian family (for the strong exogamy of India see J. Jolly, *Recht und Sitt* [= *GrP* ii. 3], Strassburg, 1908, p. 62 f.).¹ Among the other Indo-European peoples the Greeks permitted marriage between uncles and nieces, nephews and aunts, and half-brothers and half-sisters on the paternal side (see 'Greek' section, above, § 2); the ancient Frumians and Lithuanians are said to have allowed marriage with any kin-woman except one's own mother (O. Schrader, *Realien der Indogerman. Altertumskunde*, Strassburg, 1901, p. 600 f.); and equal licence is ascribed to the ancient Irish (cf. 'Celtic' section, above).

There remain, then, two hypotheses on the origin of incestuous *avādhādas*. (a) It may be derived from a non-Indo-European people. This is the theory maintained by Moulton (pp. 204-206), who holds that the custom was Magian, and so neither Indo-European nor Semitic (cf. *ib.* ch. vi-vii, and art. MAGI)—not Iranian at all. (b) Without denying or even criticising Moulton's very plausible, even probable, theory, it may be suggested that the practice was genuinely Persian: in view of the extremely primitive character of the Balto-Slavic peoples, who have, not without reason, been claimed as those who have retained most truly the original type of Indo-European civilisation (S. Feist, *Kultur . . . der Indogermanen*, Berlin, 1912, p. 478; O. Schrader, *Sprachvergleichung und Urgesch.*, Jena, 1907, ii. 120 f.; and art. ARYAN RELIGION, *passim*), the occurrence among them—as among the almost equally primitive ancient Irish—of what is practically identical with incestuous *avādhādas* is certainly significant. On this hypothesis, Zarathustra's reformation did away with *avādhādas*, as with so much else of the older Iranian which his loftier teaching rejected; but, when the more ancient folk religion returned, it restored *avādhādas*, together with many other things that had been discarded. In the present state of our knowledge the writer does not attempt to decide between these hypotheses; he merely presents his own for what it may be worth.

Whatever the origin of incestuous *avādhādas*—which is perhaps nothing but endogamy carried to its extreme—so much is clear: pure Zoroastrianism never knew it; it was practised by non-Zoroastrian Persians; it was advocated at least during the Sassanian and early Arab periods by a Magianised priesthood; it appears to have then been a theoretical ideal, prompted by the religious and political situation of the period, rather than an actual practice; it was constantly resisted (even as an ideal) by a large—and, doubtless, ever increasing—body of the faithful; it has disappeared. It had a certain justification during the days of Arab persecution, and Parsis should recognize this. It has been one of the cheap taunts of the type flung against every religion by the ignorant or malevolent outsider, and no Parsi can be reproached for sensitiveness on the subject. Yet it was at worst

¹ The instance of Yama and Yami, already mentioned, does not militate against this; for in the hymn *Rigveda* x. 10 (on which see especially L. von Schröder, *Hypermithras und Yama im Rigveda*, Leipzig, 1898, p. 273 f.) Yama questions extreme reluctance to the union. The problem involved was the origin of the human race from a primordial pair of twins. The same remarks apply to the myth of Brahma's union with his daughter, a cosmogonic myth comparable with the *apam* *apam* of Ahura Mazda and Spenta Armaiti, noted above (cf. *Rigveda*, i. 129. 6, v. 121. 12, x. 121. 6 f., and especially H. H. O. Schröder, *Realien*, 1907, 107-116, tr. [1912] 45-47).

merely a temporary exorcism, never a real tenet; and it was repudiated, no doubt, as intensely by Zarathushtra as by his modern followers.

3. Old Persian.—Concerning the specifically Old Persian marriage rites we possess only meagre information. Strabo tells us (p. 733) that marriages were performed at the beginning of the vernal equinox, and that before the bridegroom went to the nuptial couch he ate an apple or camel marrow, but nothing else during the whole day. We also learn from Arrian (*Anab.* VII. iv. 7) that a seat of honour (*ephebe*) was provided for the groom, and that his prospective bride came 'after the cups had gone round' (*meta rōn sēra*), being welcomed by her husband with the giving of the right hand and a kiss. Naturally a banquet formed part of the wedding (*Kat. 2nd*; *Joa. Ant.* II. vi. 2).

To the Scythians (q.v.), at least some of whom were Iranians, the Greeks ascribed the practice of each man having free access to the wives of his fellow-tribesmen, although Herodotus (I. 216, iv. 104) restricts this to the Massagetae and Agathyroi. The latter were possibly Iranian (E. H. Minns, *Scythians and Greeks*, Cambridge, 1913, p. 103; cf. W. Tomaschek, in Pauly-Wissowa, i. 764 f.); the former are considered Iranian—their name is certainly so—by J. Marquart (*Untersuchungen über Gessä. von Eren*, Göttingen and Leipzig, 1906-1908, II. 71 L., 260, *Erdsch.* Berlin, 1901, p. 156), though this is doubted by Minns (p. 111), who, probably rightly, regards them as 'a mixed collection of tribes without an ethnic unity.' In any event, as he says (p. 98), this form of marriage (for other Indo-European instances of which see H. Hirt, *Indogermanen*, Strassburg, 1906-07, p. 708; Schrader, *Reallex.* p. 634) is probably non-Aryan.

LOUIS H. GRAY.

MARRIAGE (Japanese and Korean).—I. JAPAN.—From ancient times marriage and marriage regulations have been considered important by the Japanese people. Both ideas and legal regulations concerning marriage, however, seem to have passed through three distinct stages: (1) that of the age of the Taiho-ryo (A.D. 701-1192), much influenced by Chinese morals and laws; (2) that of feudalism (from the end of the 12th cent. to the Meiji era), moulded by bushido, Japanese knightly morality, to a much higher development; and (3) that of the period since the Restoration, characterized by Christian influences.

1. Consent of parties.—The chief point of difference between Japanese and Western marriage laws may be found in the family system. From the earliest times the Japanese people have been grouped in families as social units, to one of which every individual belongs, and in each family there is a head, who governs the rest. The authority of the head (*patria potestas*) has varied from age to age, but in general may be said to have been strong in ancient times and to have weakened in recent years. The family in the time of the

Taiho-ryo was often very large, including over one hundred persons, but the numbers gradually decreased, until at present a family usually consists of only five or six individuals. Marriage under such a system not only brings changes in the status of the contracting parties, but also means the removal of a member of one group to another. In other words, marriage is an act between a man and a woman and also between two families. Therefore, when a marriage is to take place, not only the free consent of the parties is required, but also the consent of the heads of the two families.

From the time of the Taiho-ryo to that of the Meiji era, a marriage engagement was first made between the parents of the parties, and often the consent of the parties was not required, for filial obedience was considered one of the highest and noblest virtues. Later, with the development of the idea of freedom, the point of view has somewhat changed; according to the regulations of the present civil code, it is necessary to have the free consent of the parties in addition to the consent of the parents. Moreover, when a man reaches the age of thirty and a woman that of twenty-five, the law no longer requires the consent of the parents for the sanction of marriage.

2. Casts.—While casts in the strict sense of the term never existed in Japan, by the Taiho-ryo a humble class, which was not allowed to intermarry with others, was recognized, and the child of such a marriage belonged to the humble class. During the feudal age the people were divided into lords, knights, and commoners including farmers, artisans, and merchants; and intermarriage required special permission. A marriage between members of the lordly class required sanction from the central government until 1871. According to the Taiho-ryo, Buddhist priestesses were not allowed to marry; and one who transgressed was sent to a far island or put to death; but this ban was abolished in 1872.

3. Age of consent.—At the time of the Taiho-ryo a male was allowed to marry at the age of 15 and a female at 13; but the present civil code requires the age of 17 for the male and 15 for the female. There has been no prohibition of marriage on account of old age.

4. Monogamy.—Old laws and customs in Japan forbade multiple marriages, but not concubinage. According to the Taiho-ryo, concubines occupied the position of relatives in the second degree, and no limitation was made as to their number. The child by a concubine held an inheritance right. The custom of concubinage was prevalent among the noble and rich, and society did not condemn it. Moreover, in the opinion of some, concubinage was considered necessary, with the existing family-system, in order to preserve the family line from possible extinction. In the Meiji era, however, through the influence of Christianity, the idea of monogamy became strong; and in 1868 concubinage ceased to be recognized by law, though the long-established custom still lingers to some extent.

5. Second marriage.—When a marriage contract has been dissolved by divorce or the death of one of the parties, a second marriage is permitted. In ancient times, however, the proverb 'A chaste woman never sees two men' had great force; and for a woman to refrain from re-marriage was regarded as a beautiful virtue. There were not a few women who cut off their hair, or became priestesses, or committed suicide, on hearing of the death of their husbands in battle. Such forms of devotion gradually declined; and the civil code does not forbid a woman to re-marry, merely requiring six months to elapse between the dissolution of the first marriage and the consummation of the second.

6. **Marriage of adulterers.**—A man and woman, either of whom has been divorced or sentenced to be divorced on account of adultery with the other, may not marry—a prohibition which has existed since the time of the Taiko-ryo. Social disapproval of such union is very severe; and, even when the husband or wife forgives and consents, the prohibition is binding and cannot be evaded, so that those found thus married are separated by law.

7. **Marriage of relatives.**—Marriage between near relatives in direct and collateral lines is forbidden for the sake of health and protection from degeneracy. The marriage of cousins, or of a widow or widower with a brother or sister of the deceased, is not prohibited; and such marriages are still rare.

8. **Relation of husband and wife.**—In olden times the rights of a husband were very far-reaching, and a wife who obeyed her husband absolutely was considered virtuous. Men were held in high regard, while women were not. Lately the position of woman has improved, but even yet, when a wife makes a contract, she has to get her husband's consent in many cases, and the wife's property is always under the supervision of her husband while they are married. In Japan a woman's private property is very limited; and those who possess property in addition to their dresses and ornaments are very few; for, according to the law of succession, all property is inherited by the eldest son, and only in the case of disinheritation or of there being no son by marriage or adoption can the woman inherit in regular succession. Thus, as a rule, the wife has no property, but is dependent upon her husband for support. Some change, therefore, must be made in the law of succession if the position of women is to be materially raised.

9. **Engagement and ceremony of marriage.**—The customs as well as the laws of marriage in Japan have passed through a series of changes. In ancient times marriage by sale and marriage by capture were common; but from the time of the Taiko-ryo customs gradually became more refined. There is in Japan, however, no custom of direct personal engagement or of previous personal acquaintance. Such things would be regarded as disgraceful by all Japanese above the middle class, for a formal marriage is always arranged by a match-maker who renders service to the parties and parents. When consent is given and the engagement made, gifts are exchanged, and a marriage-contract is considered to have taken place. Then, upon an auspicious day, the wedding ceremony is performed, usually at the home of the bridegroom at night. The marriage intermediary, escorting the bride in her best attire, takes his seat at an appointed place, and the bride and bridegroom drink wine, exchanging cups nine times. This constitutes the entire ceremony, after which the bride and bridegroom are introduced to relatives and friends at a wedding dinner. No religious or legal form is required, except that, by the present civil code, notification must be made to a registrar in order that the marriage may be officially sanctioned. With the coming of Christianity marriages are increasingly performed in churches; and recently the custom has arisen of holding services at Shinto shrines. The law, however, requires no religious sanction, as it is only a civil marriage that is officially recognized.

10. **Divorce.**—Before the promulgation of the present civil code (1898-99), divorce, or, rather, repudiation, was very easily secured at the husband's will. No legal procedure was necessary beyond the husband's writ with his signature, but the law fixed seven causes, one of which must exist in order to make the repudium effective.

Thus the power of the husband was somewhat curtailed; but only the husband could repudiate. The present code recognizes two forms of divorce: by mutual consent, and by judicial decree. The former requires only the mutual consent of the parties, while the latter requires an act of the court upon the contested request of one of the parties. This form of legal divorce must be for some one of certain causes recognized by law, and becomes operative only after judicial judgment has been given. Statistics for 1908 show the total number of marriages to have been 2,552,100 and of divorces 80,376, i.e. about 7 divorces out of 1000 marriages. Only judicial divorces, however, are given in statistics, and by far the greater number are by mutual consent.

11. **Judicial separation.**—This system does not exist in Japan.

12. **KOSA.**—In Korea marriage is according to the old custom. Early marriage prevails, and government control has had but little effect, though upon several occasions laws have been issued, even setting the age for marriage at 20 for men and 16 for women. It is usual for a girl of 12 or 13 years to marry a boy of 10 or less. Wives are usually a few years older than their husbands. Second marriage is not prohibited, but is considered a disgrace by most; and those above the middle class never re-marry. Arrangements for marriage are made by fathers, grandfathers, or elder brothers and relatives in authority; and the wishes of those who are to be married are not taken into account. The ceremony is performed at the home of the bride, and it is not necessary to notify a civil officer. Only the husband can divorce, and the wife has no way of refusal. There is no system of divorce by consent, but by the new law, since annexation, a way has been opened for a wife to seek divorce. The number of marriages made in 1912 was 121,003, and that of divorces only 9058.

T. NAKAJIMA.

MARRIAGE (Jewish).—'Every man is bound to marry a wife in order to beget children, and he who fails of this duty is as one who sheds blood, diminishes the image [of God], and causes the Divine Presence (*shekhina*) to depart from Israel'—thus runs the rule in the Code of Qaro (*Shulchan Arukh*, *Eiden Ad'sav*, i. 1). It is based on ancient Rabbinic (Tannaitic) prescription (*Y'bamda*, 63b, 64a), itself inferred from well-known Biblical texts (esp. Gn 2^d combined with following verse), and is emphasized by the somewhat later apophthegms: 'Whoever has no wife rests without blessing'; such a one 'is not called a man' (ib. 62b). Marriage was the means by which the human race imprinted on the generations the divine image; it, with the consequent domestic felicity, was the expression of true manhood. It was the basis of the social order, and thus its regulation was, in Rabbinic opinion, one of the chief differences between Jewish and primitive systems (cf. Maimonides, *Yosida*, i.). The marital obligation was strengthened by Messianic hopes: 'the son of David—i.e. the Messiah—will not come until all souls stored up for earthly life have been born' (*Y'bam*, 62a). Though the purpose of marriage was the begetting of children, other aspects of marital life were fully appreciated (see art. **FAMILY (Jewish)**); and cf. the quotations in M. Mielzner, *The Jewish Law of Marriage and Divorce*, New York, 1901, p. 18 f.; L. Abrahams, *Jewish Life in the Middle Ages*,

London, 1908, p. 114). Very profound is the Rabbinate view that man's *yepes* is in this instance the cause of good, but for his passions man would not build a house, nor marry a wife, nor beget children (*Gemara Rabbat*, ch. ix.). Man, in Rabbinate theology, is impelled by two *yepes* ('impulses', 'inclinations'), one good and one evil, both of which are to be used in turning him to the love of God (*Sifra* on *De 10*, *Mishnah Berakhot*, ix. 5). The bodily passions are not in themselves evil (cf. F. C. Porter, 'Yefes Hara,' in *Yale Bicentenary vol. of Biblical and Semitic Studies*, New York, 1901, pp. 91-100, and M. Lazarus, *Ethics of Judaism*, Eng. tr., Philadelphia, 1901, ii. 70 E.); Torah was the means by which the control of passion and its direction into holy ends were effected (cf. Maimonides, *Guide of the Perplexed*, iii. 33). The Rabbinate theory of marital intercourse is summed up ideally and, in a sense, mystically in the saying: 'Three are associated in every human being: God, father, and mother' (*Qiddushin*, 30b).

With regard to the authority of parents in arranging the marriages of their children while minors see *ERE* v. 742^a. When the parties were adult, the consent of parents was not necessary to make a marriage valid (Maimonides, *Sefer*, vii.), but, as Mielziner adds,

'In consequence of the high respect and veneration, however, in which father and mother have ever been held among Israelites, the laws of contracting marriages without the parents' consent fortunately belong to the rare exceptions' (p. 67).

Early marriages, arranged by the parents, were long considered a valuable aid to morals. The legal age for valid marriage was the age of puberty, but the usual age of the bridegroom in Talmudic times was 18 to 20 (S. Krauss, *Talmudische Archäologie*, Leipzig, 1910-11, ii. 22). A Jewish court would often put pressure on a man over 20 to compel him to take a wife (*Ebhen Ad'asur*, i. 2), but such pressure was not applied in the case of students, while (as the gloss *ad loc.* points out) in modern times all attempts at compulsory marriages have become obsolete. Curiously enough, no rule is stated with regard to the age of the bride. Girls were treated as marriageable from the beginning of their thirteenth year, and at various times very youthful marriages have prevailed (see Abrahams, ch. ix.). In recent times, while, on the whole, Jews probably marry at a somewhat earlier age than the general population, assimilation in social customs is modifying differences (statistics in *JE* viii. 230). The general impression prevails that Jews more frequently than others marry their cousins. Inter-marriage between Jews and Christians has increased (statistics in *JE* vi. 612). No section of Jewish opinion favours marriages between parties who are not of the same religion, the difficulties of the education of the children and the disturbance of the home harmony being felt to offer strong objections. There is no bar, however, to the religious solemnization of a marriage with full Jewish rites in the case of proselytes to the synagogue.

The Biblical 'degrees' were maintained in later Jewish law, with certain extensions (*Y'bh*, 21; Maimonides, *Sefer*, i. 6; Mielziner, p. 37), the latter being partly theoretical prolongations of lineal ascendants and descendants; but in one case a 'new degree homogeneous to the Biblical was added'; for, 'while the Mosaic Law [*Le 18*] expressly forbids only the father's brother's wife, the Talmudic Law adds also the mother's brother's wife, and, besides, the father's atavine brother's wife' (Mielziner, p. 38). The Karaites (see *ERE* vii. 662^a) imposed still further rigours on the marriage law.

The general question of the relation between Jewish marriages and the civil law of England is

historically and legally considered in the monograph of H. S. Q. Henriques, *Jewish Marriages and English Law*, London, 1908. It may in general be said that, while orthodox Jews maintain some disabilities not upheld by the law of the land, no Jews permit marriages which, though allowed by Jewish law, are forbidden by the civil law. Thus, though marriage with a deceased wife's sister is valid in Jewish law, such a marriage was never solemnized in England while English law disallowed it. So, too, though by Jewish law a man may marry his niece (though a woman may not marry her nephew), no such marriage would be performed by Jewish rites, since English law forbids such a union. But, where the Jewish law is more severe than the English, the severity is in most cases maintained, though the tendency in Jewish liberal organizations is toward equalizing Jewish custom with civil conditions. The orthodox Jews do not permit a *haleh*—i.e. one tracing descent from the ancient priestly family—to wed a divorced woman; nor would the re-marriage of a divorced person be solemnized by the orthodox synagogue unless a divorce had also been obtained from a *Beth Din* (Jewish ecclesiastical court). On the other hand, the levirate marriage, which was no longer in general use (though a few instances are recorded) at the beginning of the Christian era (the Sadducean question in *Mt 23* was probably theoretical), has now lost all vigour (*Ebhen Ad'asur*, clix., and commentaries; *JE* vi. 171). In the case of a childless widow the brother-in-law goes through the ceremony of *halitza* (*De 25*^a), which frees her to marry a stranger (Mielziner, p. 54 f.; *JE* vi. 170 f., where the rite is illustrated). On the levirate marriage see, further, I. Mattock, in *Studies in Jewish Literature*, Berlin, 1912, p. 210; on marriages between uncle and niece, S. Krauss, *ib.* p. 166.

Except for rare cases in countries where Mahomedan law prevails, monogamy is enforced by both law and custom among Jews, although neither Bible nor Talmud formally forbids polygamy (for the Talmudic evidence see Krauss, *ib.* 27). Only in the case of the levirate marriage did the Pentateuch actually ordain a second marriage, and, as has been mentioned above, the levirate marriage fell into disuse. That monogamy was the Biblical ideal is shown by *Gen 2*^a, *Pr 2*^a, and the whole tendency of the Song of Songs (cf. A. Harper, *Song of Solomon*, Cambridge, 1902, p. xxxiv); and the same conclusion must be drawn from the prophetic imagery in which marriage typifies the relation between the one God and the unique people Israel. Polygamy survived among the Jews into the Christian era (see references in *JE* viii. 358), but monogamy was then and thereafter the general rule. The difficulty was that, as the end of marriage was the begetting of children, childless marriages were no fulfilment of that end, and in case of the wife's sterility the older authorities were divided in view as to the relative advisability of insisting on divorce or of permitting a second simultaneous marriage (on this and several other questions of Jewish marriage and divorce, see the writer's evidence before the Divorce Commission); but by the beginning of the 11th cent. monogamy was made the binding and absolute rule for all western Jews (Abrahams, ch. vi.).

The ancient and medieval preliminaries to marriage have, in modern times, lost much of their old significance. Betrothal (*Arbit* or *qiddushin*) in Rabbinate law was not a mere agreement or contract for a future marriage (*mesuda*); though not involving the actual privileges or responsibilities of the married state, betrothal was so far the initiation of marriage that it could be terminated only by death or divorce.

*Fulfillment on the part of the betrothed female was treated as obligatory. Without having been formally divorced, she could not enter a marriage contract with another person. If married upon it was void' (Mielziner, p. 77, on the status of the betrothed woman in the 1st and 2nd centuries A.D., cf. A. Harkavy, in *Peṭurim*/f. on *Israel's 70th Anniversary*, Brooklyn, 1911, p. 126).

Since the 16th cent. the two ceremonies of betrothal and marriage have been performed on the same day, though in Talmudic times a year might intervene between them (*Ḥiddush, Qiddushin*, v. 3). The legal betrothal was always preceded by an 'engagement' (*ḥiddushin*), and this 'engagement' gradually replaced the older betrothal. Often a professional match-maker (*ḥiddushin*) was employed in the Middle Ages, and the custom is still in some vogue (Abraham, p. 170 f.). The ceremonies of marriage now include the older betrothal and marriage rites. The essence of the marriage ceremony in the presentation by the bridegroom to the bride, in the presence of two witnesses, of an object of value, and the recital of the formula: 'Be thou consecrated unto me by this [ring] according to the law of Moses and Israel.' The marriage rite was and is invalid without the bride's consent—her consent is formally stated in the *ḥiddushin* (see below); but, until recent times, she took a passive part in the ceremony, the formula being spoken by the man only. In some orthodox and in most liberal synagogues the bride's part is now more active. For the validity of a marriage the presence of a Rabbi is not essential, but such presence is usual, and so are other ceremonies: the use of a ring and a canopy (*ḥuppah*), the breaking of a glass, the recital of the *ḥiddushin*, and the repetition of the 'Seven Benedictions'.

The ring, now so usual in Jewish weddings, is not mentioned in the Talmud, but was introduced in the Geonic age (A. Harkavy, *Ḥiddushin Hagronim*, Berlin, 1887, § 66), perhaps in the 7th century. The ring replaced the older gift of money or of an article of value; it must not contain gems (Abraham, p. 183), and need not be of gold. Possibly the use of the ring was derived from Rome, just as the objection to marriages between Passover and Pentecost corresponds to the Roman prohibition of marriages in May (J. Landsberger, in *Jüd. Zeitschrift für Wissenschaft und Leben*, vii. [1896] 81). In the Middle Ages Friday was a favourite day for Jewish marriages, though the Talmud objected to such a choice. Wednesday was also a common day for virgins, and Thursday for widows. In modern times there are no restrictions as to days of the week, except that marriages are not celebrated on Sabbaths or festivals. In the orthodox synagogues marriages are still not performed (except on specified dates) between Passover and Pentecost, nor on certain anniversaries of a mournful nature. During the marriage ceremony the ring is put on the forefinger of the bride's right hand; she afterwards removes it and places it on the customary finger of the left hand. Marriages are now frequently celebrated in the synagogue, though there is no loss of validity if the ceremony occurs elsewhere, as is widely the custom in America. The whole problem as to the place where Jewish marriages may be celebrated is treated by L. Löw in his *Gemeinde Schriften*, where many other Jewish marriage questions, historical, social, and legal, are also discussed (lit. Baegediz, 1893, pp. 12–334).

The bride and bridegroom usually stand under a *ḥuppah*, or 'canopy', during the marriage ceremony; the rite has been abrogated in some of the modern Jewish congregations. Originally the *ḥuppah* was the marriage chamber, into which the bridal pair were conducted after a procession; but it is now merely symbolical, and consists of four upright posts covered by an awning of silk

or tapestry (for details see Abraham, p. 186; for illustrations, *JE* vi. 504 ff.). A regular preliminary of the ceremony is the signing by the bridegroom of the *ḥiddushin* (lit. 'writing'), or marriage contract (for the ordinary wording see Mielziner, p. 67), which sets forth the amount payable to the wife in case of the husband's death or the wife's divorce, and in older times often rehearsed the wife's dowry, in respect of which, as of the husband's settlement, the *ḥiddushin* conferred on her an inalienable claim on her husband's property. The wife had considerable rights over her own property (see Mielziner, p. 104 f.), and the *ḥiddushin* protected those rights, and also formed a potent restraint against rash divorce. Mielziner's statement (p. 66) that the *ḥiddushin* is 'now almost entirely dispensed with,' refers only to certain American and other reform congregations; it is still retained in most Jewish marriages, though it has little legal significance in many countries. The *ḥiddushin* is ancient, being perhaps referred to in *To 7*¹¹; it is certainly as old as the beginning of the 1st cent. B.C. (*Ḥiddushin*, 126; Abraham, p. 207, note 2; E. N. Adler, in *JE* vii. 474; for the earliest instances of the terms of the wife's jointure the reader may refer to L. Ginsburg, *Geonim*, New York, 1908, ii. 72). In Oriental lands the *ḥiddushin* often included a solemn undertaking by the bridegroom to observe strictly the law of monogamy (see Abraham, p. 180, and the document published by him in *Jews' Colleges Jubilee Volume*, London, 1908, p. 101).

Of the many marriage customs which have prevailed in Jewish marriages one deserves special mention. The bridegroom breaks a glass, but the meaning of the rite is uncertain. Some have seen in it a symbolical allusion to the close of the ante-nuptial condition, but 'the most acceptable theory is that the custom arose from . . . a desire to keep even men's joys tempered by more serious thoughts, and on the other hand from the never-forgotten memory of the mourning for Zion' (see *Annotated Edition of the Authorized Daily Prayer Book*, London, 1914, p. cxxvii). The memory of Zion is frequently recalled in the Jewish wedding hymns and songs (on which see Abraham, p. 188 f., and 'Hebrew Love Songs,' in *Book of Delight*, Philadelphia, 1912, p. 184 ff.). The same phenomenon is seen in the 'Seven Benedictions' cited below, where *Jer 23*²⁰ is effectively used. As regards the *memento mori* idea the following incident is recorded in the Talmud (*Ḥiddushin*, 206):

When the son of HANAN was married, the father saw that the Rabbinic present were in an uproarious mood, so he took a costly vase of white crystal worth 600 sabbas and broke it before them to curb their spirits.

On the other hand, joyousness is the predominant note of Jewish weddings—a joyousness hallowed by the principle that the participation in such functions is a religious duty. The dowering of poor brides was an act of sanctified loving-kindness (*Shabbat*, 157a); and the assistance at wedding festivals was an element in pious life (*Pesahim*, 48a). Lyric praises of the bride were so regular a habit that we find quaint discussions as to the terms to be used in the eulogies (*Ḥiddushin*, 17a). On the subject of other wedding customs, both Oriental and Western, see Abraham, *chs. ix. and x.*; *JE* viii. 240 ff.; Kraus, ii. 37; W. Rosnan, *Jewish Ceremonial Institutions and Customs*, Baltimore, 1912, *ch. xi.*

Most characteristic of the Jewish marriage ceremony are the Seven Benedictions, which are already quoted in the Talmud (*Ḥiddushin*, 8). First comes the benediction over wine (on the use of wine in Jewish ceremonial see *Annotated Prayer Book*, p. cxxix); then follows the praise of God as the creator of all things to His glory; after this

eulogy of the creator of all comes the praise of Him as creator of man; and next the benedictions pass to the creation of woman, the memory of Zion, the bridal joy, and the hope of Israel's restoration. The current text is as follows (*Annotated Prayer Book*, p. 289):

'Blessed art thou, O Lord our God, King of the universe, who createst the fruit of the vine.

Blessed art thou, O Lord our God, King of the universe, who hast created all things to thy glory.

Blessed art thou, O Lord our God, King of the universe, Creator of man.

Blessed art thou, O Lord our God, King of the universe, who hast made man in thine image, after thy likeness, and hast prepared unto him, out of his very soil, a perpetual fabric.

May she who was barren (Rea) be exceeding glad and exult, when her children are gathered within her in joy. Blessed art thou, O Lord, who makest them joyful through her children.

O make these loved companions greatly to rejoice, even as of old thou didst gladden thy servants in the garden of Eden. Blessed art thou, O Lord, who makest bridegroom and bride to rejoice.

Blessed art thou, O Lord our God, King of the universe, who hast created joy and gladness, bridegroom and bride, mirth and exultation, pleasure and delight, love, brotherhood, peace and fellowship. Soon may there be heard in the cities of Judah, and in the streets of Jerusalem, the voice of joy and gladness, the voice of the bridegroom and the voice of the bride, the joyful voice of bridegroom from their canopy, and of youths from their bands of song. Blessed art thou, O Lord, who makest the bridegroom to rejoice with the bride.'

Thus the married state is brought into relation with the story of creation and with Israel's Messianic hopes. The Seven Benedictions, which were recited during the grace at the wedding banquet as well as during the wedding ceremony, cover the whole of Israel's history. The popular maxim, 'Marriages are made in heaven,' was accepted as a commonplace truth by the Rabbis (Abraham, *Book of Delight*, p. 173 ff.). The reverence for the wife was shown by the husband's recital every Friday eve of the eulogy of the virtuous woman from the last chapter of Proverbs. In many other ways the sanctity of wedded life was symbolized, both in its human aspects and as a type of perfect harmony with the divine scheme of creation.

LITERATURE.—This is cited in the course of the article.

I. ABRAHAM.

MARRIAGE (Roman).—It is a comparatively easy task to describe the Roman idea and practice of marriage, if we confine our description to historical times; for there the evidence is fairly complete, and the state of society familiar to us. But the subject is complicated by its antiquities; and these cannot be wholly omitted, for they are interesting to a student of marriage systems, and they reflect the earlier conditions of Roman society from which the later practice descended. We shall begin, then, with these antiquities, and so clear away the main difficulties, which, however, cannot be fully explained in the present state of our knowledge.

1. *Pre-historic.*—There is some evidence, in the form of survivals in later procedure, that marriage by capture existed among the ancestors of the Latin race; but at what stage, whether among the people of the *terramare* in N. Italy or still further back, we cannot tell. The simulated rape of the bride at the *deductio* (see below), the parting of her hair with a spear, possibly the lifting her over the threshold of her husband's house, taken together with the legend of the rape of the Sabine women, may well suggest capture. True, each scrap of evidence may, if taken separately, be explained otherwise, but it must be allowed that the cumulative evidence is strong. On the other hand, capture implies exogamy, of which there was no trace in historical Rome; marriage was originally within the limits of the *gens* (Marquardt, *Privatrechtliche*, p. 22, notes 1 and 2); if, therefore, marriage by capture is to be assumed as an original practice of the race, it must have been so before the development of the *gens* as a social

institution. But, if this early form of marriage is not provable for the Roman people, it is highly probable that the later form of marriage by purchase existed among them at one time, leaving its traces in the later *coemptio*, which, as we shall see, was a simulated transference of the bride by purchase from the *potesas* of her father to the 'hand' (*manus*) of her husband (for the possible connexion of the *des* with marriage by purchase see Westermarck, *M/I*, 394 ff.).

2. *Early forms of marriage: confarreatio, coemptio, and usus.*—In early Roman society we find three distinct forms or rules by which marriage could be effected. As to the historical interpretation of these there is endless dispute, but the object and conception of marriage as an institution are clear enough. The object of a *factum matrimonium*, such as was the result of all of these methods, was beyond doubt to produce children capable of keeping up the religion (*sacra*) of the family, and also of serving the State in war and peace. Children of *concordia*, i.e. cohabitation without marriage, were not so capable; they could not be Roman citizens, and could not represent either family or State in any capacity. The word which covered all legitimate forms of union was *conubium*; as Ulpian says, in the clearest exposition that we have of the subject (v. l. 2), '*factum matrimonium est ad inter eos qui nuptias contrahunt conubium sit.*' *Conubium*, or *concordia*, is thus the right of contracting true or legal marriage, and belonged, as Gaius tells us (l. 86), to Roman citizens only, to Latins and foreigners only when it had been granted by the State. And, as marriage in this true sense meant the transference of the bride from one definite legal and religious position to another, from the *sacra* of one family to those of another (see FAMILY (Roman)), and from the *potesas* of one *paterfamilias* to the *sacra* of another, it is obvious that the process was one of the utmost gravity both for the families concerned and for the State. The sense of this grave importance is best seen in what, rightly or wrongly, is generally believed to have been the oldest form of patrician marriage, which was applicable only to patrician families throughout Roman history—*confarreatio* or *farreum*, so named from the sacred cake of *far* (the old Italian wheat) used sacramentally in the rite.

Confarreatio stood alone as needing the presence of the Pontifex Maximus and the Flamen Dialis, the former, no doubt, representing in the Republican age the Rex of an earlier time (see Fowler, *Religious Experience of the Roman People*, London, 1911, p. 271), and the Flamen representing Jupiter, the deity of good faith in all alliances. When the preliminaries had been adjusted (*sponsalia, auspicia*, etc. (see below)) which were common to all *matrimonia*, a cake of *far* was offered to Jupiter *Farreus*, and sacramentally shared by bride and bridegroom, in the presence of the Pontifex Maximus, the Flamen Dialis, and ten other witnesses. This number ten has given rise to much conjecture; but it is so common throughout Roman procedure that there need be no special significance in it (in Livy, xxvii. 2, it apparently has a religious meaning, and so perhaps in *confarreatio*). A victim also was offered (to what deity is uncertain), the skin of which was stretched over two seats, on which the bride and bridegroom had to sit (for these and other details see Gaius, l. 112; Serv. ad *Aen.* iv. 108, 374, *Georg.* i. 31; Dion. Hal. ii. 20). The priests, it must be noted, do not perform the service, but witness it, giving this rite a peculiar solemnity which our authorities do not explain, probably because they did not understand it. Modern scholars and students of Roman law have usually thought of it as the real original form of marriage

in the Roman State, which must be imagined as consisting entirely of patrician families; it survived into historical times only as a means of supplying persons duly qualified to fill the old priestships descended from that patrician State, viz. the Rex Sacrorum and the three Flamines maiores, Dialis, Martialis, and Quirinalis (see Gaius, i. 112). Of late, however, it has been suggested (by Cnq. *Institutiones Juridicae*, p. 216 ff., followed by Lauspaeh, *State and Family in Early Rome*, p. 159 ff.) that it came into use only when the old custom of marrying within the gens was broken through, when the religious difficulty of transferring a bride from one gens to another called for special religious interference by the State. There is something to be said for this; but to the present writer it seems hardly sufficient to account for the sacramental character of the rite and the use of the skin of the victim. No ancient author says that this was the only form of patrician marriage; if it had been so, the Rex and the Flamines must have been constantly in requisition for weddings, more often than would be consistent with their other duties. But it is possible that *confarreatio* may have been a very special religious form, originating in the marriage of the Rex only, or in families forming an inner circle of aristocracy, from which the Rex might be chosen, and which would be likely or willing to supply children qualified to become *augures*, *patries* or *maiores* in the service of the State (Serv. ad Georg. i. 31). It must be remembered that the patrician State itself had a history, and did not come into existence full-blown; the *confarreatio* probably represents an early form of it, but not exactly that which we have been accustomed to imagine.

There were two other ancient methods of transferring a bride from one family to another, from the *potestas* of her father to the *manus* of her husband; but it is to be noticed that neither of these was, strictly speaking, a marriage ceremony, and it is to be assumed that, when they were used, the real marriage rite was that described below under *matrimonium* which did not produce *conventus* in *manus*. In other words, the true marriage rite was, except in *confarreatio*, distinct from the act which transferred the bride from the *potestas* of her father to the *manus* of her husband, or to that of his father, if he were a *filiusfamilias* in the *potestas* of his father. Thus *coemptio*, the form by which, in the presence of five witnesses and a *libripens* (a form which could be used for other purposes besides marriage), the bride was made over to the *manus* of her husband by a symbolic purchase (Gaius, i. 113), looks as if it were a legal addition devised for some particular purpose, perhaps to enable the ordinary patrician family, which did not seek to produce children capable of filling the highest religious offices, to obtain by a single act the same legal results as in *confarreatio*. This is, indeed, a mere guess, and one among many, into which it is not necessary to go in this article.

The other method which produced *conventus* in *manus* took a whole year to complete the process; if a duly qualified pair lived together for an entire year without a break, *manus* followed of necessity by *prescriptio*; but by the XII Tables it was possible for the bride to escape this result by absenting herself yearly for three nights from her husband's house, by which means, in legal language, the *conventus* would be barred (Gaius, i. 111). It is not unlikely that this was really the oldest form by which the husband could acquire *manus*, and the one most commonly in use. *Confarreatio* and *coemptio* both presuppose the existence of the law and religion of the State in full development, but *usus* may go much further back. *Usus* and *coemptio* are, however, alike in this, that they have

a private and not a public character, and do not need the presence of priest or magistrate; it was easy, therefore, to pass them on to non-patricians, plebeians or Latins, when these attained *conubium*; but this could not be so with *confarreatio*, if, as we have assumed, the main object of the latter was at all times to produce children capable of holding the exclusively patrician religious offices.

In these three methods of marriage the union was accompanied by *manus*, though in the case of *usus* not till after a year had elapsed. *Usus*, indeed, shows us plainly that the Roman of early times did not think of marriage and *manus* as inseparable: for the bride must have been properly married under *usus*, if her children were to be Roman citizens, though for a year at least she was not under *manus*. We must also remember that, if the husband were not *sui iuris*, but a *filiusfamilias* under the *potestas* of his father, as must constantly have happened, the wife passed under the *manus*, not of her husband, but of his father. Quite early marriage and *manus* became separable both in thought and in fact; under the XII Tables, as we have seen, the wife was given the option of escaping a change of *manus* altogether, and this may be taken as proving that a tendency in this direction had shown itself much earlier. After that time, mainly, no doubt, from reasons of convenience connected with the family property, marriage without *manus* came to be almost universal. *Usus* died out altogether (Gaius, i. 111); *coemptio* survived as a legal expedient in certain cases (e.g., CIL vi. 1027—the *Laudatio Turani*, line 14); and *confarreatio* became so irksome that its bonds had to be relaxed by Augustus in order to get a supply of candidates for the old patrician priestships (Gaius, i. 113; Tac. Ann. iii. 71, iv. 16; Sueton. Aug. 31). Yet marriage long continued to be as complete and binding a union as before, and we now have to see what made it so, by briefly examining the process as we know it in historical times.

3. The historic period.—(a) *Conditions of marriage*.—The necessary conditions of marriage were: (1) the families of both parties must possess the *ius conubii* (as explained above); (2) the parties must not be within the prohibited degrees of relationship (*cognatio*). Originally no *cognati* could marry who were within the seventh degree of relationship; i.e., second cousins could not marry; this was, no doubt, a survival from a period in which families of three generations lived together under the same roof, and were therefore, by a well-known psychological law, unsuited for intermarriage (see E. Westermarck, *Hist. of Human Marriage*, London, 1904, p. 290 ff.). Traces of such large households are not wanting in Roman history (Val. Max. iv. iv. 8; Plut. Crassus, l. and *Cato the Elder*, xxiv.). But these strict rules were gradually relaxed, and from the time of the Punic wars it seems to have been possible for first cousins to marry (see Marquardt, *Privatalterthum*, p. 20, note). When the Emperor Claudius married his brother's daughter, he had to obtain a decree of the Senate for the purpose, and this licence, which was afterwards repealed, was not generally approved (Tac. Ann. xii. 6; Gaius, i. 69). (3) The consent of the parents was absolutely necessary, but not that of the parties themselves, who were often betrothed by their parents at a very early age; e.g., Cicero betrothed his daughter when she was only ten years old (Fowler, *Social Life*, p. 140 f.). This was a survival of a practice still common in many parts of the world, where the maintenance of the family is a matter of supreme importance, and no time is to be lost in securing that children shall not remain unmarried. The betrothal (*sponsalia*), however, at Rome was a promise rather than a legal contract, and might be broken by

consent if there was a strong dislike on the part of either boy or girl (see, however, *Sorv. Sulpicia*, in *Ant. Gell.* iv. 4). The early betrothal serves to show us that the idea at the root of marriage was that of service to family and State, i.e. the procreation of children capable of such service, and that love and romance lay wholly outside it. Steady affection there might be and often was (Fowler, *Social Life*, pp. 141, 150 ff.); but the modern idea of passion with marriage as its consummation, which too often subdues and ends in divorce, was unknown at Rome. (4) As a last condition, we must note that bride and bridegroom must be of proper age, i.e., they must have reached the age of puberty and laid aside the *toga praetexta* of childhood; this might happen at different ages, according to natural development, but the minimum age was 12 for a girl and 14 for a boy.

(5) *Ritual*.—If all these conditions were fulfilled, a day was fixed for the marriage which must be one of good omen; as with us, May was an unlucky month for this purpose, and so was the early part of June, while certain other *dies religiosae* were to be avoided (Fowler, *Rel. Exper.*, p. 28 ff.). At earliest dawn, according to ancient usage both public and private, the auspices were taken by the flight of birds; but by Cicero's time this seems to have dropped out, and the examination of the entrails of a victim took its place, as a preliminary to the first step in the procedure, which was the declaration of consent by the parties, usually but not necessarily recorded on *tabulae nuptiales* . Then the bride assumed the wedding dress, viz. the *stamineum* , or hood of red or yellow, and the *tunica recta* with a woollen girdle fastened with the *nodus Aeneas* ; this knot, we learn from Pliny (*HN* xviii. 63), was also used for binding up wounds, and we may therefore suppose that it was a charm against various kinds of evil (cf., however, *ERE* vii. 749). Her hair was parted into four separate locks with a spear-head (*hastae capillariae*), which may have been a survival from pre-historic marriage by capture; and under the *stamineum* she carried a bunch of herbs picked by her own hand (Festus, s.v. 'Corolla' [p. 58, Lindsay]). She was then ready for the actual marriage rite, which, as will now be seen, was a matter not only of secular contract, but of religious usage; it is occasionally called a *sacramentum* , as in Lucan, *Phars.* ii. 360 (of the marriage of Cato): 'sacraque domo admittere tentes.'

(1) The first act of the ceremony was the *destrarium iunctio* , a symbolic act of union, in which, under the guidance of a *pronuba* , who must be a matron only once married, the bride placed her right hand in the right hand of the bridegroom (Festus, p. 242 [p. 282, ed. Lindsay]). This act, and the sacrifices which seems to have followed, are represented on many monuments, of which accounts will be found in A. Rombach, *Römische Hochzeiten und Ehenenkmale*, Leipzig, 1871, *passim*; these are, however, all of very late date, and not easy to interpret. The *destrarium iunctio* took place, so far as we can discern, either in the bride's house before the hearth or in front of some temple (Nonius, 631); but what temple this was we do not know, nor is it clear to what deity sacrifices was offered. On the monuments we see both cow and pig, which suggest Juno and Tellus (Varro, *de Re Rust.* ii. iv. 9, refers to the pig as an Etruscan marriage victim). Possibly Tellus was the usual deity in early times (Fowler, *Rel. Exper.*, pp. 121, 122), and Juno later on; but Vergil combines the two in *Aen.* iv. 100. When the sacrifice had been offered by the pair, the persons present shouted 'Feliciter' by way of good omen, and the wedding-meal followed, and lasted till evening.

(2) The next act was the *deductio* , in which the bride was conducted to her new home—a beautiful

ceremony, exquisitely described by Catullus in his 61st poem. She was taken, as it were by force, from the arms of her mother, and led in procession to the house of her husband by three boys, sons of living parents (*patrui et matrum*), pure and of good omen, one of whom carried a torch of white-thorn, while the other two held her by the hands; flute-players and torch-bearers went before, the mysterious and unexplained cry 'Talaeus' was raised, and nuts were thrown to the youthful lookers-on. When the bride reached the house, she smeared the doorposts with oil and fat (of wolf or pig), and tied a thread of wool around them; probably these old customs were originally charms to avert evil (for wool see J. Ploy, 'De Lano in antiquorum ritibus noua,' in *RVV* xi. ii. [Gleason, 1911] 22). She was then lifted over the threshold, perhaps as a last sign of simulated reluctance to be thus transplanted, and was received in her new home.

(3) This reception, the third act in the procedure, is obscure in its detail, but the general meaning is plain. It was called 'reception into community of fire and water' ('*aqua et igne accipere*'), i.e. into partnership in those necessities of human existence (E. Sauter, *Familienfeste des Griechen und Römer*, Berlin, 1901, p. 15 ff.). We are also told that she brought with her three coins (*aesae*), one of which she gave to her husband, one she laid on the hearth, and the third she threw down at the nearest *compitum* ('crossway' [Nonius, p. 266, Lindsay]). Here she seems to be making an offering to the genius of her husband, to the spirit of the hearth-fire, and to the Lar of the family's land allotment, who dwelt in a *compitum* at the *compitum* (see Fowler, *Rel. Exper.*, p. 77). She was now in the *atrium* , at the end of which, opposite the door, the *lectus genialis* had been made ready. The morrow would find her a *materfamilias* sitting among her maids in that *atrium* or in the more private apartments behind it.

To help maintain the establishment which the marriage was to set up, she brought with her a *dos* , or dowry, which in strict law became the property of the husband (for modifications of this rule see art. 'Dos,' in Smith's *Dict. of Gr. and Rom. Antiquities*). As Caq well puts it (p. 231), her position of dignity in the house, and her title of *domina* as mistress of its slaves, would have been impaired if she entered it with empty hands and lived at the expense of her husband. The *dos* was also the means of securing to the children born of the marriage succession to their mother's property as well as to the *patrimonium* of the father.

The ritual which we have been examining plainly indicates that the Roman bride was to hold a much nobler position in the household than the Greek wife (see MARRIAGE [Greek]). She shared with her husband all the duties of the family, religious and secular; she lived in the *atrium* , and was never shut away in a woman's chamber. She took her meals with her husband; in all practical matters she was consulted, and only on questions political or intellectual was she expected to be silent.

'When she went out arrayed in the graceful stola matronalis, she was treated with respect, and the pueri made way for her; but it is characteristic of her position that she did not as a rule leave the house without the knowledge of her husband, or without an escort' (Fowler, *Social Life*, p. 104).

The character induced and expressed by such a position is exemplified in the legendary Volumnia of the story of Coriolanus, in Cornelia the mother of the Gracchi, in Caesar's mother Julia, and, among many others, in the perfect lady whose conduct, good sense, and domestic virtues live for ever on the marble of the *Laudatio Turis* (*CIL* vi. 1387; Fowler, *Social Life*, p. 100 f.).

4. Divorce.—No doubt towards the end of the

Republic the type of womanly virtues just described was growing rare, owing to the gradual break-up of the old type of family life—the result of a moral degeneracy which even Augustus was unable effectually to check. This downward tendency is best seen in the history of divorce. Marriage by *confarreatio* had been practically indissoluble; we hear of *diffarreatio*, but it is said (Plut. *Quaest. Rom.* 80) to have been so awful a rite that we assume that it was used only for penal purposes. But the other forms of marriage, not being of the same mystical or sacramental character, did not present the same difficulty, and the legal formula of divorce is as old as the XII Tables, and therefore probably earlier than the 6th cent. B.C. ('*claves adirere* or *exigere*' (Cic. *Pat. ii.* 26; cf. above, p. 125)). By the 2nd cent. marriage was becoming unpopular in high social circles, and divorce was becoming common (Fowler, *Social Life*, p. 147 ff.). In the Ciceronian age it was extraordinarily frequent; almost all the well-known ladies of that period were divorced at least once. Pompey, though a man of excellent character, was married five times, Caesar four times, Cicero three times, and under the Empire the virtuous Pliny the Younger also three times. There was no difficulty in the operation of divorce; it was purely a private matter, and either party could send the other notice of it without any given reason or any complaint of misconduct. No remedy was found for a disorder so universal; and to the loosening of the marriage-tie, and the corresponding disregard of what had once been the chief object of marriage, must be ascribed in part at least the degeneracy of Rome and Italy in the first three centuries of the Empire (L. Friedländer, *Sittengeschichte Roms*, Leipzig, 1901, Eng. tr., London, 1908-13, i. 242 ff.).

LITERATURE.—A. Rosbach, *Entstehungsgeschichte der römischen Ehe*, Stuttgart, 1885 (still the standard work); G. Karlowa, *Die Formen der röm. Ehe und Manu*, Bonn 1908; cf. *Marriage*, in Daremberg Saguo and Smith's *Dict. of Antiquities*, vol. i. col. 1478. J. Marquardt, *Private Antiquities of Rome*, Leipzig, 1900, p. 274. A. de Marchant, *La vie privée à Rome*, Paris, 1906, 1908, 1910, 1911, 1912, 1913, 1914, 1915, 1916, 1917, 1918, 1919, 1920, 1921, 1922, 1923, 1924, 1925, 1926, 1927, 1928, 1929, 1930, 1931, 1932, 1933, 1934, 1935, 1936, 1937, 1938, 1939, 1940, 1941, 1942, 1943, 1944, 1945, 1946, 1947, 1948, 1949, 1950, 1951, 1952, 1953, 1954, 1955, 1956, 1957, 1958, 1959, 1960, 1961, 1962, 1963, 1964, 1965, 1966, 1967, 1968, 1969, 1970, 1971, 1972, 1973, 1974, 1975, 1976, 1977, 1978, 1979, 1980, 1981, 1982, 1983, 1984, 1985, 1986, 1987, 1988, 1989, 1990, 1991, 1992, 1993, 1994, 1995, 1996, 1997, 1998, 2032, 2033, 2034, 2035, 2036, 2037, 2038, 2039, 2040, 2041, 2042, 2043, 2044, 2045, 2046, 2047, 2048, 2049, 2050, 2051, 2052, 2053, 2054, 2055, 2056, 2057, 2058, 2059, 2060, 2061, 2062, 2063, 2064, 2065, 2066, 2067, 2068, 2069, 2070, 2071, 2072, 2073, 2074, 2075, 2076, 2077, 2078, 2079, 2080, 2081, 2082, 2083, 2084, 2085, 2086, 2087, 2088, 2089, 2090, 2091, 2092, 2093, 2094, 2095, 2096, 2097, 2098, 2099, 2100, 2101, 2102, 2103, 2104, 2105, 2106, 2107, 2108, 2109, 2110, 2111, 2112, 2113, 2114, 2115, 2116, 2117, 2118, 2119, 2120, 2121, 2122, 2123, 2124, 2125, 2126, 2127, 2128, 2129, 2130, 2131, 2132, 2133, 2134, 2135, 2136, 2137, 2138, 2139, 2140, 2141, 2142, 2143, 2144, 2145, 2146, 2147, 2148, 2149, 2150, 2151, 2152, 2153, 2154, 2155, 2156, 2157, 2158, 2159, 2160, 2161, 2162, 2163, 2164, 2165, 2166, 2167, 2168, 2169, 2170, 2171, 2172, 2173, 2174, 2175, 2176, 2177, 2178, 2179, 2180, 2181, 2182, 2183, 2184, 2185, 2186, 2187, 2188, 2189, 2190, 2191, 2192, 2193, 2194, 2195, 2196, 2197, 2198, 2199, 2200, 2201, 2202, 2203, 2204, 2205, 2206, 2207, 2208, 2209, 2210, 2211, 2212, 2213, 2214, 2215, 2216, 2217, 2218, 2219, 2220, 2221, 2222, 2223, 2224, 2225, 2226, 2227, 2228, 2229, 2230, 2231, 2232, 2233, 2234, 2235, 2236, 2237, 2238, 2239, 2240, 2241, 2242, 2243, 2244, 2245, 2246, 2247, 2248, 2249, 2250, 2251, 2252, 2253, 2254, 2255, 2256, 2257, 2258, 2259, 2260, 2261, 2262, 2263, 2264, 2265, 2266, 2267, 2268, 2269, 2270, 2271, 2272, 2273, 2274, 2275, 2276, 2277, 2278, 2279, 2280, 2281, 2282, 2283, 2284, 2285, 2286, 2287, 2288, 2289, 2290, 2291, 2292, 2293, 2294, 2295, 2296, 2297, 2298, 2299, 2300, 2301, 2302, 2303, 2304, 2305, 2306, 2307, 2308, 2309, 2310, 2311, 2312, 2313, 2314, 2315, 2316, 2317, 2318, 2319, 2320, 2321, 2322, 2323, 2324, 2325, 2326, 2327, 2328, 2329, 2330, 2331, 2332, 2333, 2334, 2335, 2336, 2337, 2338, 2339, 2340, 2341, 2342, 2343, 2344, 2345, 2346, 2347, 2348, 2349, 2350, 2351, 2352, 2353, 2354, 2355, 2356, 2357, 2358, 2359, 2360, 2361, 2362, 2363, 2364, 2365, 2366, 2367, 2368, 2369, 2370, 2371, 2372, 2373, 2374, 2375, 2376, 2377, 2378, 2379, 2380, 2381, 2382, 2383, 2384, 2385, 2386, 2387, 2388, 2389, 2390, 2391, 2392, 2393, 2394, 2395, 2396, 2397, 2398, 2399, 2400, 2401, 2402, 2403, 2404, 2405, 2406, 2407, 2408, 2409, 2410, 2411, 2412, 2413, 2414, 2415, 2416, 2417, 2418, 2419, 2420, 2421, 2422, 2423, 2424, 2425, 2426, 2427, 2428, 2429, 2430, 2431, 2432, 2433, 2434, 2435, 2436, 2437, 2438, 2439, 2440, 2441, 2442, 2443, 2444, 2445, 2446, 2447, 2448, 2449, 2450, 2451, 2452, 2453, 2454, 2455, 2456, 2457, 2458, 2459, 2460, 2461, 2462, 2463, 2464, 2465, 2466, 2467, 2468, 2469, 2470, 2471, 2472, 2473, 2474, 2475, 2476, 2477, 2478, 2479, 2480, 2481, 2482, 2483, 2484, 2485, 2486, 2487, 2488, 2489, 2490, 2491, 2492, 2493, 2494, 2495, 2496, 2497, 2498, 2499, 2500, 2501, 2502, 2503, 2504, 2505, 2506, 2507, 2508, 2509, 2510, 2511, 2512, 2513, 2514, 2515, 2516, 2517, 2518, 2519, 2520, 2521, 2522, 2523, 2524, 2525, 2526, 2527, 2528, 2529, 2530, 2531, 2532, 2533, 2534, 2535, 2536, 2537, 2538, 2539, 2540, 2541, 2542, 2543, 2544, 2545, 2546, 2547, 2548, 2549, 2550, 2551, 2552, 2553, 2554, 2555, 2556, 2557, 2558, 2559, 2560, 2561, 2562, 2563, 2564, 2565, 2566, 2567, 2568, 2569, 2570, 2571, 2572, 2573, 2574, 2575, 2576, 2577, 2578, 2579, 2580, 2581, 2582, 2583, 2584, 2585, 2586, 2587, 2588, 2589, 2590, 2591, 2592, 2593, 2594, 2595, 2596, 2597, 2598, 2599, 2600, 2601, 2602, 2603, 2604, 2605, 2606, 2607, 2608, 2609, 2610, 2611, 2612, 2613, 2614, 2615, 2616, 2617, 2618, 2619, 2620, 2621, 2622, 2623, 2624, 2625, 2626, 2627, 2628, 2629, 2630, 2631, 2632, 2633, 2634, 2635, 2636, 2637, 2638, 2639, 2640, 2641, 2642, 2643, 2644, 2645, 2646, 2647, 2648, 2649, 2650, 2651, 2652, 2653, 2654, 2655, 2656, 2657, 2658, 2659, 2660, 2661, 2662, 2663, 2664, 2665, 2666, 2667, 2668, 2669, 2670, 2671, 2672, 2673, 2674, 2675, 2676, 2677, 2678, 2679, 2680, 2681, 2682, 2683, 2684, 2685, 2686, 2687, 2688, 2689, 2690, 2691, 2692, 2693, 2694, 2695, 2696, 2697, 2698, 2699, 2700, 2701, 2702, 2703, 2704, 2705, 2706, 2707, 2708, 2709, 2710, 2711, 2712, 2713, 2714, 2715, 2716, 2717, 2718, 2719, 2720, 2721, 2722, 2723, 2724, 2725, 2726, 2727, 2728, 2729, 2730, 2731, 2732, 2733, 2734, 2735, 2736, 2737, 2738, 2739, 2740, 2741, 2742, 2743, 2744, 2745, 2746, 2747, 2748, 2749, 2750, 2751, 2752, 2753, 2754, 2755, 2756, 2757, 2758, 2759, 2760, 2761, 2762, 2763, 2764, 2765, 2766, 2767, 2768, 2769, 2770, 2771, 2772, 2773, 2774, 2775, 2776, 2777, 2778, 2779, 2780, 2781, 2782, 2783, 2784, 2785, 2786, 2787, 2788, 2789, 2790, 2791, 2792, 2793, 2794, 2795, 2796, 2797, 2798, 2799, 2800, 2801, 2802, 2803, 2804, 2805, 2806, 2807, 2808, 2809, 2810, 2811, 2812, 2813, 2814, 2815, 2816, 2817, 2818, 2819, 2820, 2821, 2822, 2823, 2824, 2825, 2826, 2827, 2828, 2829, 2830, 2831, 2832, 2833, 2834, 2835, 2836, 2837, 2838, 2839, 2840, 2841, 2842, 2843, 2844, 2845, 2846, 2847, 2848, 2849, 2850, 2851, 2852, 2853, 2854, 2855, 2856, 2857, 2858, 2859, 2860, 2861, 2862, 2863, 2864, 2865, 2866, 2867, 2868, 2869, 2870, 2871, 2872, 2873, 2874, 2875, 2876, 2877, 2878, 2879, 2880, 2881, 2882, 2883, 2884, 2885, 2886, 2887, 2888, 2889, 2890, 2891, 2892, 2893, 2894, 2895, 2896, 2897, 2898, 2899, 2900, 2901, 2902, 2903, 2904, 2905, 2906, 2907, 2908, 2909, 2910, 2911, 2912, 2913, 2914, 2915, 2916, 2917, 2918, 2919, 2920, 2921, 2922, 2923, 2924, 2925, 2926, 2927, 2928, 2929, 2930, 2931, 2932, 2933, 2934, 2935, 2936, 2937, 2938, 2939, 2940, 2941, 2942, 2943, 2944, 2945, 2946, 2947, 2948, 2949, 2950, 2951, 2952, 2953, 2954, 2955, 2956, 2957, 2958, 2959, 2960, 2961, 2962, 2963, 2964, 2965, 2966, 2967, 2968, 2969, 2970, 2971, 2972, 2973, 2974, 2975, 2976, 2977, 2978, 2979, 2980, 2981, 2982, 2983, 2984, 2985, 2986, 2987, 2988, 2989, 2990, 2991, 2992, 2993, 2994, 2995, 2996, 2997, 2998, 2999, 3000, 3001, 3002, 3003, 3004, 3005, 3006, 3007, 3008, 3009, 3010, 3011, 3012, 3013, 3014, 3015, 3016, 3017, 3018, 3019, 3020, 3021, 3022, 3023, 3024, 3025, 3026, 3027, 3028, 3029, 3030, 3031, 3032, 3033, 3034, 3035, 3036, 3037, 3038, 3039, 3040, 3041, 3042, 3043, 3044, 3045, 3046, 3047, 3048, 3049, 3050, 3051, 3052, 3053, 3054, 3055, 3056, 3057, 3058, 3059, 3060, 3061, 3062, 3063, 3064, 3065, 3066, 3067, 3068, 3069, 3070, 3071, 3072, 3073, 3074, 3075, 3076, 3077, 3078, 3079, 3080, 3081, 3082, 3083, 3084, 3085, 3086, 3087, 3088, 3089, 3090, 3091, 3092, 3093, 3094, 3095, 3096, 3097, 3098, 3099, 3100, 3101, 3102, 3103, 3104, 3105, 3106, 3107, 3108, 3109, 3110, 3111, 3112, 3113, 3114, 3115, 3116, 3117, 3118, 3119, 3120, 3121, 3122, 3123, 3124, 3125, 3126, 3127, 3128, 3129, 3130, 3131, 3132, 3133, 3134, 3135, 3136, 3137, 3138, 3139, 3140, 3141, 3142, 3143, 3144, 3145, 3146, 3147, 3148, 3149, 3150, 3151, 3152, 3153, 3154, 3155, 3156, 3157, 3158, 3159, 3160, 3161, 3162, 3163, 3164, 3165, 3166, 3167, 3168, 3169, 3170, 3171, 3172, 3173, 3174, 3175, 3176, 3177, 3178, 3179, 3180, 3181, 3182, 3183, 3184, 3185, 3186, 3187, 3188, 3189, 3190, 3191, 3192, 3193, 3194, 3195, 3196, 3197, 3198, 3199, 3200, 3201, 3202, 3203, 3204, 3205, 3206, 3207, 3208, 3209, 3210, 3211, 3212, 3213, 3214, 3215, 3216, 3217, 3218, 3219, 3220, 3221, 3222, 3223, 3224, 3225, 3226, 3227, 3228, 3229, 3230, 3231, 3232, 3233, 3234, 3235, 3236, 3237, 3238, 3239, 3240, 3241, 3242, 3243, 3244, 3245, 3246, 3247, 3248, 3249, 3250, 3251, 3252, 3253, 3254, 3255, 3256, 3257, 3258, 3259, 3260, 3261, 3262, 3263, 3264, 3265, 3266, 3267, 3268, 3269, 3270, 3271, 3272, 3273, 3274, 3275, 3276, 3277, 3278, 3279, 3280, 3281, 3282, 3283, 3284, 3285, 3286, 3287, 3288, 3289, 3290, 3291, 3292, 3293, 3294, 3295, 3296, 3297, 3298, 3299, 3300, 3301, 3302, 3303, 3304, 3305, 3306, 3307, 3308, 3309, 3310, 3311, 3312, 3313, 3314, 3315, 3316, 3317, 3318, 3319, 3320, 3321, 3322, 3323, 3324, 3325, 3326, 3327, 3328, 3329, 3330, 3331, 3332, 3333, 3334, 3335, 3336, 3337, 3338, 3339, 3340, 3341, 3342, 3343, 3344, 3345, 3346, 3347, 3348, 3349, 3350, 3351, 3352, 3353, 3354, 3355, 3356, 3357, 3358, 3359, 3360, 3361, 3362, 3363, 3364, 3365, 3366, 3367, 3368, 3369, 3370, 3371, 3372, 3373, 3374, 3375, 3376, 3377, 3378, 3379, 3380, 3381, 3382, 3383, 3384, 3385, 3386, 3387, 3388, 3389, 3390, 3391, 3392, 3393, 3394, 3395, 3396, 3397, 3398, 3399, 3400, 3401, 3402, 3403, 3404, 3405, 3406, 3407, 3408, 3409, 3410, 3411, 3412, 3413, 3414, 3415, 3416, 3417, 3418, 3419, 3420, 3421, 3422, 3423, 3424, 3425, 3426, 3427, 3428, 3429, 3430, 3431, 3432, 3433, 3434, 3435, 3436, 3437, 3438, 3439, 3440, 3441, 3442, 3443, 3444, 3445, 3446, 3447, 3448, 3449, 3450, 3451, 3452, 3453, 3454, 3455, 3456, 3457, 3458, 3459, 3460, 3461, 3462, 3463, 3464, 3465, 3466, 3467, 3468, 3469, 3470, 3471, 3472, 3473, 3474, 3475, 3476, 3477, 3478, 3479, 3480, 3481, 3482, 3483, 3484, 3485, 3486, 3487, 3488, 3489, 3490, 3491, 3492, 3493, 3494, 3495, 3496, 3497, 3498, 3499, 3500, 3501, 3502, 3503, 3504, 3505, 3506, 3507, 3508, 3509, 3510, 3511, 3512, 3513, 3514, 3515, 3516, 3517, 3518, 3519, 3520, 3521, 3522, 3523, 3524, 3525, 3526, 3527, 3528, 3529, 3530, 3531, 3532, 3533, 3534, 3535, 3536, 3537, 3538, 3539, 3540, 3541, 3542, 3543, 3544, 3545, 3546, 3547, 3548, 3549, 3550, 3551, 3552, 3553, 3554, 3555, 3556, 3557, 3558, 3559, 3560, 3561, 3562, 3563, 3564, 3565, 3566, 3567, 3568, 3569, 3570, 3571, 3572, 3573, 3574, 3575, 3576, 3577, 3578, 3579, 3580, 3581, 3582, 3583, 3584, 3585, 3586, 3587, 3588, 3589, 3590, 3591, 3592, 3593, 3594, 3595, 3596, 3597, 3598, 3599, 3600, 3601, 3602, 3603, 3604, 3605, 3606, 3607, 3608, 3609, 3610, 3611, 3612, 3613, 3614, 3615, 3616, 3617, 3618, 3619, 3620, 3621, 3622, 3623, 3624, 3625, 3626, 3627, 3628, 3629, 3630, 3631, 3632, 3633, 3634, 3635, 3636, 3637, 3638, 3639, 3640, 3641, 3642, 3643, 3644, 3645, 3646, 3647, 3648, 3649, 3650, 3651, 3652, 3653, 3654, 3655, 3656, 3657, 3658, 3659, 3660, 3661, 3662, 3663, 3664, 3665, 3666, 3667, 3668, 3669, 3670, 3671, 3672, 3673, 3674, 3675, 3676, 3677, 3678, 3679, 3680, 3681, 3682, 3683, 3684, 3685, 3686, 3687, 3688, 3689, 3690, 3691, 3692, 3693, 3694, 3695, 3696, 3697, 3698, 3699, 3700, 3701, 3702, 3703, 3704, 3705, 3706, 3707, 3708, 3709, 3710, 3711, 3712, 3713, 3714, 3715, 3716, 3717, 3718, 3719, 3720, 3721, 3722, 3723, 3724, 3725, 3726, 3727, 3728, 3729, 3730, 3731, 3732, 3733, 3734, 3735, 3736, 3737, 3738, 3739, 3740, 3741, 3742, 3743, 3744, 3745, 3746, 3747, 3748, 3749, 3750, 3751, 3752, 3753, 3754, 3755, 3756, 3757, 3758, 3759, 3760, 3761, 3762, 3763, 3764, 3765, 3766, 3767, 3768, 3769, 3770, 3771, 3772, 3773, 3774, 3775, 3776, 3777, 3778, 3779, 3780, 3781, 3782, 3783, 3784, 3785, 3786, 3787, 3788, 3789, 3790, 3791, 3792, 3793, 3794, 3795, 3796, 3797, 3798, 3799, 3800, 3801, 3802, 3803, 3804, 3805, 3806, 3807, 3808, 3809, 3810, 3811, 3812, 3813, 3814, 3815, 3816, 3817, 3818, 3819, 3820, 3821, 3822, 3823, 3824, 3825, 3826, 3827, 3828, 3829, 3830, 3831, 3832, 3833, 3834, 3835, 3836, 3837, 3838, 3839, 3840,

as the son of his mother, which indicates that kinship was reckoned through the mother.¹ F. H. Peiser pointed out that among the Babylonians a man could, if he chose, join the kindred of his wife, which is a relic of the same custom.² Wellhausen has observed that in the Pentateuch J counts descent through the mother, while P reckons it through the father.³ Among some primitive peoples kinship is counted through the mother because they are ignorant of the part of the father in reproduction;⁴ among others, as, e.g., the Nairs of the Malabar coast, it is reckoned through the mother because a system of polyandry prevails. The wife has several husbands, no one of whom lives with her, but all of whom visit her occasionally, and it is not known which one of them may be the father of a child.⁵ Which of these causes led to the Semitic system of female kinship? We have no evidence to show that the Semites were so ignorant of the processes of reproduction that paternity was unknown to them. On the other hand, there is considerable evidence indicating that at one time a type of polyandry somewhat similar to that of the Nairs prevailed among the early Semites.

In three of the *Mu'allafat* poems there are specific statements that the women whom the poets visited only occasionally were members of other clans, and that they often visited them at personal risk,⁶ on account of the strained relations of the clans. The marriages of Samson (Jg 14, 16) were of this nature. Such marriages were often terminated by the migration of the tribes in different directions.⁷ Ammianus Marcellinus was, no doubt, speaking of this type of marriage when he said that among the Arabs the bride presents her husband with a spear and a tent, and, if she chooses, withdraws after a certain day.⁸ In this type of marriage kinship would necessarily be reckoned through the mother, and the fact that such alliances prevailed would be sufficient to account for the early Semitic custom of female kinship.

Such marriage conditions, while compelling the women to live with their brothers and sons rather than with their husbands, left them comparatively free from the masculine domination to which they were subjected after the rise of polygamy. Something of this freedom still survives in Arabia in parts of the peninsula like Oman and Haam, which are not so dominated by Islam as the rest of it.⁹

The type of marriage which seems to have prevailed, at least in part, was a combination of polyandry and polygamy. Just as a woman might receive successive husbands, so the husbands also might have several wives in different clans. On the whole, however, the more numerous partners would seem to have been enjoyed by the women, for the practice of putting girl babies to death prevailed down to the time of Muhammad (see Qur'an, xvi. 61, lxxxi. 8), so that women must have been fewer than men. Marriages of this early Semitic form were not always exogamous, for Imr al-Qais boasts in his *Mu'allafat* that he followed one day the women of his tribe and spent a day in their company, and the Unaiyah with whom he afterwards rode and whose fruit he boasts he repeatedly tasted was the daughter of his uncle.¹⁰ In like manner Lailah, the woman celebrated in the poem

of 'Amr b. Kulthûm, was 'Amr's kinswoman.¹¹ Whether the marriages which occurred within the tribe were more permanent than the alliances which were made in other clans cannot be determined, but one would naturally suppose that they were. Out of these general conditions there developed a type of temporary marriage for a specified time—three nights or more—called *mafah* marriage, which continued till the time of Muhammad.¹²

Another type of polyandry, that called Tibetan, because first studied in Tibet, was the form of marriage in vogue at one time in the southern part of Arabia. In this form of marriage a whole family of brothers possess one wife in common. The most important witness to this type of marriage is Strabo, who says, in describing Arabia Felix:

'All the kindred have property in common, the eldest being lord; all have one wife, and it is first come first served, the man who comes to her leaving at the door the stick which it is customary for every one to carry, but the night she spends with the eldest. Hence all are brothers of all; they also have conjugal intercourse with mothers, an adulterer is punished with death; an adulteress is a man of another stock.'¹³

The reference to conjugal intercourse with mothers is probably not to be taken literally, but it is to be explained by Qur'an, iv. 23, where it appears that men had married wives of their fathers.¹⁴ In other respects the passage describes all the features of Tibetan polyandry. Its existence in that part of Arabia is also attested by epigraphic evidence.¹⁵

W. Robertson Smith collected considerable evidence to show that this type of polyandry was also known in N. Arabia.¹⁶ His points are:

(1) Bukhari relates that two men made a covenant of brotherhood, which resulted in their sharing goods and wives—a fact which seems to betray a survival of a custom of fraternal polyandry. (2) In Arabic *hammah* means the wife of a man or brother, but is used also to denote one's own wife. In Hebrew *hithah* means both betrothed and daughter-in-law, while in Syriac *hithah* means both bride and daughter-in-law. These facts can be most easily explained as remnants of fraternal polyandry. (3) The Arabs law that a man has the first right to the hand of his cousin, and the fact which the fourth strand and its attendant traditions attest, that, if a man died and left only female children, the father's male relatives inherited the property and married his daughters, are regarded as the results of a previously existing condition of fraternal polyandry. (4) The Qur'an (iv. 23 f.) forbids men to inherit women against their will, and forbids them to take their stepmothers in marriage 'except what is past.' This is regarded as evidence that down to the time of Muhammad these attendant circumstances of polyandry had continued, and that the Prophet did not dare to utter existing customs, though he forbade such marriages in future.

Wellhausen, F. Buhl,¹⁷ I. Benzinger,¹⁸ and Barton¹⁹ have also held that the existence of the levirate marriages in Israel was an outgrowth of fraternal polyandry. This has been contested by C. N. Stürcke²⁰ and Westermarck,²¹ but their arguments appear inconclusive. It is difficult to explain why one should ever have thought of counting the seed of one brother as that of one who had died, if there had not been a previous state of polyandry in which all brothers shared in the offspring. The levirate was known in Arabia,²² in Abyssinia,²³ and in Israel.²⁴

It would seem that fraternal polyandry of the Tibetan type may have been an intermediate stage between the less well regulated polyandry of an

earlier time and the patriarchal form of marriage, which generally was prevailing at the time of Muhammad. W. R. Smith so regarded it. But, be this as it may, by the time of Muhammad there had come into vogue in Arabia a type of marriage in which the husband was practically the owner (*ba'al*) of the wife, and which is, consequently, known as *ba'al* marriage. In this type of marriage children belonged, of course, to the father's clan. Smith attributed the origin of the *ba'al* marriage to wars and to the consequent custom of marriage by capture. Marriages of this type might be either monogamous or polygamous, according to the caprice or the wealth of the husband. In much earlier times they had become the custom among the other Semites, who had migrated to lands more fertile than Arabia.

What form of marriage ceremony the early Semites had is largely a matter of conjecture. The type of marriages of which the early poets boast was probably without ceremony. A simple affinity or agreement between the parties sufficed.¹ This must often have been the case also with the later *mushak* marriages. After a marriage of this kind was recognized by the clan of the bride, a feast was celebrated for a week, during which there was much jollity of a type suited to the rough character of the civilisation (see Jg 14th). As marriage became more permanent, somewhat similar festivals became the rule and have persisted in all parts of the Semitic world.

2. Babylonian and Assyrian.—There is little direct evidence of marriage and the position of women in Babylonia earlier than the time of Hammurabi (c. 2000 B.C.), though it is certain that the regulations embodied in his Code of laws are for the most part only the expression of customs that had then been of long duration.

The most conspicuous instance of the position of a married woman of the earlier time is that of Barnamtarra, wife of Lagalanda, Patel of Lagash about 2025 B.C. From an archive of tablets discovered at Telluk, which contained the pay-rolls of the attendants of her palace, memoranda of her gifts to temples and festivals,² and even a record of her *accouchement*,³ it appears that she held a position in Lagash analogous to that of a queen in a modern European country. One cannot say that her husband had no other consorts, but it is certain that her position and importance were shared by no others. Her freedom and prominence in the eyes of the public have few parallels in Babylonian history, and are in striking contrast to the insignificance of the women in the *harim* of Amurhanipal (600-590 B.C.), into which many princesses went, never to be heard of again.⁴ Sammuramat, the wife of Adad-nirari IV. (810-782 B.C.), was prominent enough to be described as 'lady of the palace and its mistress.'⁵ She is the nearest Mesopotamian parallel to Barnamtarra. In the light of later Babylonian laws, however, it is probable that Barnamtarra was the only wife of Lagalanda, and that he was, at least in theory, a monogamist. If this was true of the ruler, it would be true for most of the men of his kingdom.

For the period of the first dynasty of Babylon (2190-1994 B.C.) the Code of Hammurabi affords an authoritative source of information on marriage. The Code contains this regulation: 'If a man

takes a wife and does not execute contracts for her, that woman is no wife' (§ 126). This is proof that in Babylonia marriage had passed from the less formal stage of early Semitic life, and had, in consequence of long legal development, become a matter of record. The marriage ceremony was incomplete without the signing of contracts. The law did not recognise anything like our modern 'common law' marriage. One reason for this was that the bride usually brought a dowry from her father's house, which the law safeguarded for her and her children. The husband also generally gave a bride-price to his father-in-law, which, upon certain conditions, reverted to him (§§ 130 f., 133-134). As Babylonian law dealt much in the evidence of written contracts, these were regarded as necessary in a legal marriage. The terms of the marriage, according to the Code, bore somewhat more heavily upon the woman than upon the man. True, if a man was caught defiling the wife of another, both he and she suffered capital punishment (§ 130); if he forced the betrothed of another, he was put to death and the woman went free (§ 130); but a woman, if only slanderously suspected of infidelity, was required to purge herself by the ordeal of throwing herself into the sacred river. The man, on the other hand, might have children by a concubine and suffer only the inconvenience of rearing the children (§ 137). If a man was taken captive, and there were means in his house to support his wife, she must remain true to him; if means were lacking, she was free to marry another (§ 133 f.). If she contracted such a marriage and bore children to her new husband and her former husband afterward gained his freedom and returned, she was bound to return to him, but the second husband retained his children (§ 135). If the husband's absence was due to desertion of his city, he had no claim on his wife on his return, if she had re-married (§ 136).

The Code assumes that marriages shall be monogamous, although it imposes on the father the duty of raising the children of his concubines. Nevertheless, it recognizes that in the case of women who had served as sacred servants in the temple (see *HIERODOLAI* [Semitic and Egyptian]), and had married late and were, accordingly, unlikely to bear children, and also in the case of wives who through sickness were rendered barren, he may take another (§§ 145-149). If the second wife is taken because of the chronic illness of the first, the first may, if she wishes, take her dowry and return to her father's house (§ 149). Slave concubinage was frequently practised, but a female slave who had borne her master children could not be sold (§§ 146 f., 171).

According to the Code, a man might divorce his wife, if he wished, but in that case he must make certain specified monetary settlements, which varied according to whether the wife had or had not borne him children (§ 137 f.). A woman might take the initiative in a divorce. If she did so, her husband could, if he wished, divorce her without alimony (§ 141). If the wife complained of ill-treatment, the life of the family was subjected to investigation. If her claim proved true, she could take her marriage portion and return to her father's house; if untrue, she was to be thrown into the river (§ 142 f.).

In the marriage contracts of the time of the 1st dynasty it appears that greater privileges of divorce were sometimes secured to the bride than the Code would have granted her. E.g., a priest married, and his contract provided that, if he divorced his wife, he must return her dowry, and pay a half-mano as alimony.⁶ Another contract, which seems to equalize the penalties for

divorce, provides that, if the husband divorces the wife, he shall be driven out to the oxen of the palace; if she divorces him, she shall be driven to the carriage-house of the palace.¹ Another contract provides for a divorce on the part of the man by payment of the usual alimony; on the part of the wife, on pain of having her hair cut off and being sold for money.² The latter was a less severe penalty than being thrown into the river. In general, however, the penalties for initiating divorce imposed upon the wife in the marriage contracts are as severe as those of the Code, though not always identical. In one case the wife is to be thrown from a tower;³ in another, impaled.⁴ Nevertheless, the penalty most often imposed is that mentioned in the Code.⁵ One marriage, concerning which two documents bear witness,⁶ records the wedding of two sisters by one man, but provides that the older shall be the chief wife, and that the other shall perform for her certain specified duties.

From the Neo-Babylonian and Persian periods several marriage contracts have come down to us.⁷ The stipulations in them as to bride-price and dowry are in general the same as in those of the time of the 1st dynasty, but the conditions on which the parties may separate are generally omitted from the contracts of that period, although divorce did then occur.⁸ In most of the marriage contracts the man acts for himself and arranges with the parents of the bride, though, if the husband is a minor, the parents make the arrangement for him. The bridegroom enjoyed in this respect more liberty of action than the bride. In Babylonia, as in the ceremony of the English Church, she had to be 'given away.'

We have no knowledge of ancient Babylonian marriage ceremonies further than that before marriage every woman had to act once as a temporary *hierodoulos* (see *HERODOCLOS* [Semitic and Egyptian], vol. vi. p. 674).

3. Hebrew.—In the story of Samson there are, as noted above, some faint traces of that early Semitic type of marriage in which the wife belonged to a hostile clan, lived with her people, and was visited by her husband for longer or shorter periods. The stories of the Patriarchs reflect various phases of matrimonial development. The marriage of Jacob to the daughters of Laban indicates a type of marriage in which the husband resides in the wife's clan and the children are counted to her family, for Laban says: 'The daughters are my daughters, and the sons are my sons' (Gn 31⁹). Then Jacob broke away, and the children were counted to his stock. This narrative forms a transition from one system of kinship to the other. A number of survivals of the two matriarchal types of marriage just mentioned are found in the narratives of the OT; Shechem, e.g., consented to circumcision to render himself acceptable to the clan of his proposed wife (Gn 34¹⁰). A number of instances also occur in which a son inherits his father's concubines; Ishbosheth regarded Saul's concubines as his own, and resented Abner's taking her (2 S 3⁷); Solomon for the same reason regarded Adonijah's desire to marry Abishag as treason (1 K 2²⁰; cf. v. 13); Reuben was denounced for endeavouring to anticipate the inheritance of

his father's concubine during his parent's lifetime (Gn 35²⁰). As noted above (§ 1), there are survivals of Semitic polyandrous marriages. Another survival was the levirate—a custom which required a brother to take the widow of a deceased brother and count the first fruit of the union as the child of the deceased (Dt 25⁵, Gn 38¹¹, Ru 3, 4). The influence of these early forms of marriage is also seen in the great liberty enjoyed by women of the early period (see 1 S 25⁴, 2 K 4²⁰). In the stories of Abraham and Jacob the type of marriage is also reflected in which slave concubines may be given by a wife to a husband, for the sake of obtaining an offspring which the wife is unable to bear (see *Code of Hammurabi*, §§ 144, 146). The general type of marriage of which we have evidence in the Hebrew writings was, however, *deaf* marriage, the regular Hebrew word for husband being *deaf*, and that for a married woman *deafa*, which means 'owned,' 'possessed.' Another evidence of this conception of marriage may be seen in Ex 20¹⁷, where the wife is counted among a man's possessions. Among the poor, marriages were probably often monogamous, but there was no sentiment against polygamy, and it was often practiced by the rich and powerful, as the large *harims* of David and Solomon abundantly show. Dt 21¹⁵ presupposes that a man will also often have two wives. The law of Ex 21⁷⁻¹¹ takes it for granted that female slaves will become the concubines either of their owner or of his sons. A similar assumption underlies Dt 21¹⁰⁻¹¹.

The list of the degrees of kinship in which marriage was prohibited in Lv 18, 20, and Dt 27 belongs to the period of Judaism, which began with the Babylonian Exile. At no period were young people allowed to arrange matrimonial affairs for themselves; such arrangements were made by the parents (cf. Gn 21²¹ 24³ 28¹ 34⁴ and Jg 14³). Down to about 650 B.C. a man could divorce his wife without any formalities whatever (see Hos 2² and 2 S 3¹⁴). This liberty was somewhat modified by the Deuteronomic Code, which provides (24¹³) that, if a man wishes to divorce a wife, he must give her a written statement to that effect. It permits him to issue the divorce for any cause; she need only 'have found no favour in his eyes.' Apparently this law was designed to make divorce less easy than in earlier times, when no written statement was necessary; for, in an age when writing was not a usual accomplishment, it was quite an undertaking to get the document composed. In Judaism, however, this provision was held to justify frequent divorces.

The law of Deuteronomy permitted only the man to initiate divorce; it granted to the woman no corresponding power. It represents, no doubt, the usual custom among the Hebrews. One instance, however, is known in which a Hebrew bride secured by her marriage contract a similar liberty. Among the Jewish papyri discovered at Elephantine in Egypt a marriage contract was found, which contains this passage:

'If to-morrow or any later day Mithabiah shall stand up in the congregation and say, "I divorce Aa-Hor, my husband," the price of divorce shall be on her head. . . . If to-morrow or any later time Aa-Hor shall stand up in the congregation and say, "I divorce my wife, Mithabiah," her marriage settlement shall be forfeited.' etc.

Whether other Jewish women at Elephantine were accustomed to gain this liberty by contract, or whether there were special reasons why it was secured to Mithabiah, we do not know, but in any event it is a significant modification of the OT status of women in such matters.

The Deuteronomic law defined two cases in which a man was for ever powerless to divorce a wife: if he had falsely charged his bride with not

marriages may be dissolved at the desire of either party to the contract. This liberty is freely exercised. Wives are changed at will, by mutual agreement, a man divorcing his own and marrying the wife divorced by another.¹ Divorces do not necessarily dissolve friendly relations between those who separate; Parkyns visited a man whose divorced wife and her children lived in the same compound with him and his new wife and family.² It frequently happens that those who have been divorced and have each married others divorce their second spouses and are again reunited. If the separating couple have children, the children are divided. The eldest son falls to the mother, the eldest daughter to the father; if there is only one son, he goes with the mother; and, similarly, one daughter goes with the father; if the remaining children are unequal in number, they are divided by lot.³

In addition to these irregularities, there is also much concubinage in Abyssinia, as in other Semitic countries. The levirate exists there, and its compulsion operates not only when a brother dies, but when, as so often happens in African wars, he is emasculated, so as to be incapable of begetting children.⁴

These peculiarities of Abyssinian matrimonial life are clearly a survival from early Semitic conditions, and Christianity has never been able to eradicate them.

When a man desires to marry a girl, he applies directly to her parents or nearest relatives; when their consent is obtained, and the dowry arranged, the affair is considered settled, the girl being given no voice in the matter. Civil marriages are celebrated by feasts much as in other Semitic lands, the bridegroom and his friends feasting by themselves, and the bride and her friends by themselves. After a day of festivity, the bride is carried to the house of her husband, and the marriage is accomplished. This formality is observed no matter how many times the bride may have been married before.

GEORGE A. BARTON.

MARRIAGE (Slavic).—As early as the pagan period the family life of the Slavs was regulated by legal marriages, which were concluded in a solemn manner. Like other nations, the ancient Slavs had two forms of marriage: marriage by capture of a girl belonging to another family or tribe, and marriage by purchase. In the Christian period only the latter was sanctioned by the Church as a more civilized and noble form of marriage, whereas marriage by capture was prohibited and gradually disappeared. Nevertheless, a series of traditions and observances which visibly reflect traces of the old form of marriage by capture is

¹ See Hotten, *Abyssinia and its People*, pp. 41, 42, 43; Winstanley, *A Visit to Abyssinia*, II, 73 f.; Bent, p. 21 f.; and Wylde, *Modern Abyssinia*, pp. 161, 284.

³ Hotten, p. 41.

⁴ Letourneau, p. 284.

preserved in the wedding ceremony. To these customs belongs, e.g., that of stopping the bridegroom on his way to the house of his bride and that of shutting the door before the bridegroom and hiding the bride; and here may also be mentioned the habit of presenting a false bride to the bridegroom. In S. Russia the wedding-guests engage in symbolical fights, which may rightly be deemed a survival of the ancient marriage by capture. The companions of the bridegroom violently attack the house where the bride lives, while her kinsfolk defend it and repel the aggressors, but at last the two parties put an end to the hostilities and restore harmony by a peaceful negotiation. The Southern Slavs (the Jugoslavs) have preserved the custom of marriage by capture to the present time, and, where this form of marriage has died away, symbolical traditions have taken its place.

The wedding ceremonies celebrated by the different Slavic nations vary widely, but it is possible to discover in them some fundamental traits which are common to all Slavs, and which may be regarded as a survival of ancient times, while their antiquity is also confirmed by their accordance with the chief type of Indo-European wedding ceremony, as reconstructed by H. Hirt and O. Schrader.¹ Among all the Slavic peoples the first preliminaries to the ceremony proper are the 'wooing' and the marriage contract. The deputies of the bridegroom (*drubba*, *svat*, *starosta*, *djevec*, etc.) negotiate with the bride's father concerning the conditions of the marriage and arrange the precise date for the wedding ceremony. The ceremony begins with the crowning of the bride with a wreath variously arranged and more or less ornate; the bride and the bridegroom shake hands as a mark of their mutual consent, and pass three times round the table or the hearth. Thus the nuptial knot is formally tied, and the pair give each other various presents of symbolical meaning (rings, apples, wedding-shirts, etc.). Afterwards the bride is veiled and conducted in solemn procession to the house of the bridegroom, where a hearty reception is given her, and bread and honey are distributed among the guests, who cast upon the bride various fruits, such as corn, millet, peas, nuts, hops, rice (nowadays sweets), etc., to express their wish that she may bear many children. A similar meaning underlies the custom practised by some Slavic peoples of placing a child in the bride's lap when she arrives at her new home. It is customary, when she reaches the door of the bridegroom's house, to carry her over the threshold and to place her upon a fur, the hair of which is turned upwards. One of the most significant gifts which the wedding-guests bring to the couple is a cock and a black hen. In S. Russia the bride throws such a hen under the hearth, probably as a sacrifice for the domestic genii. A very important place in the wedding pastry is occupied by a large wheat cake, decorated with eggs, flowers, ribbons, and sweets, which is cut in pieces at the wedding feast and distributed among the guests. To the symbolic nuptial ceremonies belong, further, the untwisting or cutting of the bride's plaits and the covering of her hair with a cap-like scarf. There was a rule among the Slavs—which is still, for the most part, observed—which obliged unmarried women, for the sake of distinction, to wear their hair in long, loose plaits, while married women wore a cap. The bride's entrance upon the status of a married woman was symbolized by the ceremony just mentioned, which was performed in a closed room by the women present. Then the bride used to unlace the shoes of her bridegroom

¹ H. Hirt, *Indogermanen*, pp. 428-447; O. Schrader, *Einleitung der Indogerm. Altertumskunde*, Strassburg, 1901, pp. 245-255; *Sprachvergleichung und Ursprung*, II, 512-522, 525-526.

to show her sublimation (sometimes she even received symbolical blows), and, after being clothed in new garments by the women and the 'best man,' she went to bed with her husband in the presence of the witnesses. After the nuptial night purification was performed in a clear stream or at a well; later on, this procedure was reduced to a mere sprinkling with water.

Besides these chief and almost fundamental ceremonies, the various Slavic peoples have other customs connected with the popular wedding, the details of which cannot be described at full length in this article. It is interesting, however, to notice that for a long time the people attached far greater importance to these domestic wedding ceremonies than to the rites prescribed by the Church. Historical documents testify that, even in the 10th and 17th centuries, not only the common people but also the more cultured classes regarded the ecclesiastical ceremony as a purely religious act without any legal significance. A marriage remains legal only after the precise performance of all prescribed observances inherited from the ancestors and consecrated by the family tradition; and this conviction is still to be found among some of the Slavic nations.

MARTINEAU.—James Martineau (1805-1900) was born in Norwich, April 21, 1805, the fourth son and seventh child of Thomas Martineau, a manufacturer of bombazines. Of Huguenot ancestry, he was also descended through his father's mother from John Meadows, one of the ejected ministers of 1662. After four years at the Norwich Grammar School he was placed under the care of Dr. Lant Carpenter at Bristol (1819-21), to whom he owed his 'spiritual rebirth.' His teacher was a pioneer in education, and combined instruction in the elements of science as well as psychology and moral philosophy with classical and mathematical training. Thus equipped, he was placed in machine-works at Darby, but relinquished his apprenticeship after a year (partly under the shock of a horse-accident which 'turned him from an engineer into an evangelist' [speech at Nottingham, 1876; Carpenter, *James Martineau*, p. 24]), and in 1822 he entered Manchester College, York, as a student for the ministry. He had been brought up in the Unitarian theology of Priestley, and embraced his necessitarian pantheism with ardour, though at Bristol he had read Wilberforce and Hannah More, and was not without occasional misgivings concerning the freedom of the will. On the completion of his College course he took charge of Dr. Carpenter's school for a year (1827-28), and, after a short period of ministerial service in Dublin (1828-33), terminated through his refusal of the endowment known as the Raglan Donem, he began his longest pastorate in Liverpool (1833-57). In 1840 he undertook the additional duty of Professor of Philosophy and Political Economy in Manchester New College, on its return from York to the city of its foundation. During the erection of the Hope St. Church by his congregation (1848-49) he spent fifteen months with his family in Germany, returning to resume his ministry. The transference of the College to London led to his settlement there in 1857, and from 1859 he also ministered in Little Portland St. Chapel till 1872, when a threatened failure of health led to his retirement. In the meantime he had succeeded to

the Principality of the College in 1869, which he held till June 1885.

For more than fifty years he had been actively engaged in literary work of many kinds. To the religious denomination of his birth and education he gave unstinted service, and he was the chief influence in transforming its fundamental theological conceptions, while in the wider field of philosophy he was the powerful antagonist of the empiricism and utilitarianism of the Mills, the monism of Spinoza, scientific materialism, and the agnostic philosophy of Spencer.

The Unitarians of Martineau's youth followed the tradition of Locke. Accepting the NT as the final authority in Christian doctrine, they recognized Jesus Christ as the Messiah, whose teachings were authenticated by miracles. To this interpretation Martineau remained faithful till after 1852. But further study of the Gospels confronted him with the predictions which implied the return of Jesus in the lifetime of His disciples to judge the world, and this began an investigation into the significance of revelation which led him to declare in his first work, *The Rationality of Religious Inquiry* (1836), that 'no seeming inspiration can establish anything contrary to reason, that the last appeal in all researches into religious truth must be the judgments of the human mind' (p. 125). To work out this principle was to be one of the main occupations of his life. He followed the progress of German critical study; he was familiar with Paulus and Strauss; he adopted the general results of the Tübingen school, and became their earliest and most accomplished English exponent ('The Creed and Heresies of Early Christianity,' *Westminster Review*, 1853). By 1845 he had abandoned the apostolic authorship of the Fourth Gospel, and in the third edition of the *Rationality* (1845) he ceased to demand belief in the gospel miracles as essential for the Christian name. In the *Prospective Review* (1842-44) and its successor, the *National Review* (1845-44), he secured an organ for his theological and philosophical essays, while others not less brilliant appeared in the *Westminster*. Indefatigable in study, a constant teacher of the young, he devoted long courses of lectures to the exposition of the NT and the history of Christian doctrine, and in his last large treatise, *The Seat of Authority in Religion* (1890), he returned to his earliest theme. He re-examined the claims of the Roman Catholic Church, the infallibility of the Bible, and the historical significance of Christianity, and presented Jesus no longer as the Jewish Messiah, but as the 'prince of saints,' revealing the highest possibilities of the soul. Looking back at ninety (1895), he wrote to William Knight:

'The substitution of Religion as first-hand, straight out of the immediate interaction between the soul and God, for religion as second-hand, fetched, by copying, out of anonymous traditions of the Eastern Mediterranean eighteen centuries ago, has been the really directing, though hardly conscious aim of my responsible years of life' (Carpenter, p. 240).

Martineau thus remained to the last a Unitarian in his interpretation of the Deity, and a Christian in his allegiance to Jesus Christ. But his position was often misunderstood, partly because of his sympathy with many aspects of traditional devotion, and partly because of his steadfast refusal to belong to a Unitarian Church. This was due to the discovery of the real nature of the foundation on which the majority of chapels occupied by Unitarians were held. Some of these had been founded in the 17th cent., others in the 18th, by the English Presbyterians, who, under the leadership of Baxter, had stood for 'orthodoxy against all parties,' and repudiated creeds of 'human imposition.' In dedicating their chapels 'for the worship of God by Protestant Dissenters' (sometimes specified as Presbyterians, sometimes as

Independents, sometimes as both together), they deliberately rejected all limiting doctrinal axioms. By slow processes of Scripture study many ministers and congregations gradually became Unitarian in theology. Attention was at length called to this issue, and a suit was instituted against the trustees of a charity in York founded by Lady Hewley, whose husband, Sir John Hewley (M.P. for York in the reign of Charles II.), had been a warm supporter of the Presbyterians. The decision (December 1835), which displaced the Unitarian trustees, was at once seen to imperil the tenure of all the chapels of similar foundation; and after long litigation the existing worshippers were secured in possession only by the Dissenters' Chapels Act (1844). The controversy had a life-long effect on Martineau's views of the true basis of Church union. To the association of individuals for the promotion of Unitarian teaching he remained constant all his life. But he could not accept a theological name as a condition for religious fellowship. It was inevitably exclusive instead of catholic; it seemed to involve treachery to his spiritual ancestors; it barred the way to those very possibilities of change which had been the secret of the Unitarian advance. Deeply conscious of indebtedness to various schools of religious life, Martineau endeavoured (1808) to form a Free Christian Union, which was joined by representative men of every British Church, but was disbanded two years later. Subsequently he worked out a scheme for 'the National Church as a Federal Union' (*CR II*, [1807] 408 ff.), which proposed to abolish the Act of Uniformity, to release the Church of England from State control, and associate it with the other communions in a United English Christian Church. The plan aroused considerable academic interest, but the Bill in which it was embodied was never actually laid before Parliament.

From the time of his settlement in Liverpool, Martineau had been continuously engaged in teaching and writing, and his intercourse with the young was a prominent cause of the changed view of the moral consciousness which led to the reconstruction of his philosophy. Trained in the pantheistic necessitarianism of Priestley, he had lived under a habitual tension of obligation without realizing its significance. Many influences now contributed to give it new meaning. Wordsworth had long been his favourite poet; Plato called forth his admiration for 'the fair and good'; Coleridge and Carlyle revealed unsuspected depths of thought and passion in human nature; Channing emphasized its freedom and dignity. In reviewing Bentham's 'Deontology' (*Monthly Repository*, 1834), while still placing the 'arbitration of right' in the 'tendency of an action to promote the happiness of an agent,' he laid stress, against Bentham, on the reality and worth of the disinterested affections, and prepared the way for a wholly new set of moral values. The questions of his pupils, his persistent NT studies, and the hymns of the Wesleys opened new aspects of the inner life; and in the lecture on 'Moral Evil' in the Liverpool Controversy (1839) he formally abandoned the determinism of his youth. The change involved many modifications. He ceased to regard revelation as 'communicated truth'; it was effected through character; its organ was the conscience and the affections; its supreme historic type was seen in Christ as the image of the Father.

Reinforced by his reading of Kant, and in opposition on the one hand to the 'association' philosophy of James Mill, and on the other to the monistic schemes of Spinoza and Hegel, Martineau began to work out his new analysis of man's moral nature. The sphere of judgment was transferred

from consequences without to springs of action within. In this inner world lay a multitude of appetites and energies, which were not all of equal rank. When they were examined side by side, some revealed themselves as higher, while others fell into a lower place; and this distinction of rank was irresolvable into any other element such as order, truth, beauty, sympathy, or reason. All moral estimates, therefore, were *preferential*; there was always an alternative before the mind, and the power to recognize these diverse values lay with conscience, which pronounced this better and that worse. This view was first expounded in the *Prospectus* (1846), in an essay on Whewell's 'Elements of Morality,' and led to the definition: 'Every action is *right* which, in the presence of a lower principle, follows a higher; every action is *wrong* which, in the presence of a higher principle, follows a lower' (*Essays*, III, 302). The year before, during a visit to Liverpool, Mrs. Carlyle had described Martineau as 'the victim of conscience.' He was to become the greatest English moralist since Butler. Here was the witness of Deity within; here the access of the soul to divine things; here the true ground for the conception which he was afterwards to define as 'the personal Indwelling of God in Man and in the Universe.' Alongside this view of man's ethical constitution ran an exposition of our knowledge of the external world (in a review of J. D. Morrell's *Historical and Critical View of the Speculative Philosophy of Europe in the Nineteenth Century*, London, 1846, in *Prospectus*, 1846): 'The act of Perception gives us simultaneous knowledge of subject and object' (p. 542). Again and again in subsequent essays Martineau vindicated this 'natural dualism' against idealism on the one hand and pantheism on the other, and vigorously defended the veracity of our faculties. But perception involved more than passive consciousness; it was evoked by resistance and the effort needed to overcome it; besides the space-relation of the I and the not-I, a cause-relation was revealed in the same antithesis. In the strenuous conviction of personality which he derived from his ethical experiences, Martineau found the true meaning of cause; its seat was in the personal power of the will, and this he boldly applied to the interpretation of the surrounding scene. The 'not-self' must be comprehended personally; its varied energies were but the manifestations of one living Will. Science, by the rising doctrine of the correlation of forces, might point to their ultimate identity. Martineau entrenched himself securely in his prophetic recognition of the part played by the same energy in the constitution of human nature. The relation of the soul to God was a moral relation. Known in the conscience, He was one; the manifoldness of the world, therefore, was only the veil of a hidden unity; and the foundations of theism were thus laid on the conception of God as cause of the universe and revealer of righteousness in man.

Such was the general scheme of the philosophy of religion which Martineau worked out with rich elaboration in the next forty years. His sojourn in Germany and his renewed studies in Plato and Hegel gave him a ~~new~~ ^{deeper} insight of great ontological conceptions. He described it afterwards as 'a new intellectual birth.' But he remained faithful to the English tradition of psychological method, and slowly built up the fabric of thought on the basis of self-knowledge. Again and again he sought to construct a table of the springs of action in the order of their relative worth. This was finally embodied in the first of his three large treatises, *Types of Ethical Theory* (2 vols., 1855). After reviewing 'unpsychological theories,' transcendental (Plato), immaterial (Descartes, Male-

branches, Spinoza), and physical (Comte), he expounded (vol. ii.) his own interpretation of the nature of moral authority. This involved a classification of the propensities, passions, affections, and sentiments, and an arrangement of them in a scale of values. The scheme thus wrought out of human experience was then contrasted with the hedonist ethics of the older utilitarians, and the modifications introduced by the idea of evolution. In emphasizing 'Hitches in the Evolutionary Deduction' he denied that laws of matter and motion could explain the genesis of consciousness, while the feeling of moral right and freedom involved another point of fresh departure. The section on 'Conscience developed into Social Consensus and Religion' further supplied hints which modified the stress of individualism in some of his earlier writings.

The stream of *Essays* had ceased for some years after the suspension of the *National Review* (1864); but an important address on *Religion as affected by Modern Materialism* (1874), suggested by John Tyndall's discourse to the British Association at Belfast, and its sequel, *Modern Materialism, its Attitude towards Theology* (1876), brought Martineau again prominently into the field of philosophical discussion. Two other addresses, *Ideal Substitutes for God* (1879) and *The Relation between Ethics and Religion* (1881), belonged to the period in which he was slowly completing the treatise modestly entitled *A Study of Religion* (2 vols., 1888). It opened with an investigation of the limits of human intelligence, a fresh defence of 'natural realism,' a plea for the objective reality of space and time, a reply to the empirical doctrine that we know nothing but phenomena, and a refutation of the agnosticism of Spencer. God had been presented at the outset as a 'divine Mind and Will ruling the Universe and holding Moral relations with mankind' (vol. i. p. 1); and the basis of theism in the doctrine of His sole causation in the natural order and His perfection in the moral order were re-established and supported with fresh illustration. The teleological conceptions which had been discarded in earlier revolt against Paley were now revived on a far wider scale, and the presence of rational ends was displayed with varied scientific knowledge in the vast process of evolution. Assuming the results of his analysis of human nature in the previous treatise, Martineau then argued that the principle of obligation implied the presence within us of a moral order in which God was disclosed as transcendently holy. The intelligent Purpose and the righteous Will were then identified, the place of pain and sin under such a rule was defined; and the theology concluded with a refutation of pantheism and a defence of human freedom. A final book carried the argument up to 'the Life to come.'

Martineau's last word on the grounds of belief and their illustration in the NT was uttered in *The Seat of Authority in Religion* already cited, in which the origins of Christianity were expounded with remarkable force and daring (1890). The work was less technical than its predecessors, and appealed to the wide circle of those who had found invaluable help in the author's devotional writings. In the *Endeavour after the Christian Life* (2 vols., 1843-47) he had unfolded secrets of personal religion and moral experience in language often of lyrical poignancy. Successive collections of hymns (1821, 1840, 1874) testified to his deep sympathy with many types of Christian devotion. Later series of *Hours of Thought on Sacred Things* (1876, 1879) carried on the application of his thought to the varied incidents of the human lot. A small book of *Home Prayers* was issued (1891) in response to the urgency of many friends, and in four

volumes of *Essays, Reviews, and Addresses* (1890-91) he gathered up those of his detached writings which he wished to preserve. Even their wide range, over history, science, and philosophy, does not exhaust the whole scope of his productivity, which included political economy and psychology. In the theological timidity and the ecclesiastical strife of the early Victorian era he stood forth (often alone) as the fearless advocate of the principle of religious freedom. Later years brought unsought appreciation. Gladstone designated him as 'the greatest of living thinkers'; and a younger philosopher (A. Seth Pringle-Pattison, *HJL* [1908] 444) aptly fixed the character of his service to his age by describing him as 'an ideal champion of the spiritual view of the world in a time of transition and intellectual insecurity.'

LITERATURE.—Besides the works already named, some of Martineau's earlier writings were collected by American friends in *Essays and Addresses*, 1844, *Studies of Christianity*, 1860, and *Essays Philosophical and Theological*, 2 vols., 1868. We may also name his *Lectures in the Liverpool Controversy* (1859), *A Study of Spinoza*, 1858, and *National Duties and other Sermons and Addresses*, 1858. See further, A. W. Jackson, *James Martineau, a Biography and a Study*, 1898; J. Drummond and C. B. Upton, *The Life and Letters of James Martineau*, 2 vols., 1891; J. E. Carpenter, *James Martineau, Theologian and Thinker*, 1905.

MARTYRS.—See SAINTS AND MARTYRS.

MARY.—The following article, dealing with the cult of the Virgin Mary, starts from the Scriptural and orthodox positions (1) that our Lord Jesus Christ, being the eternal Son of God, became man, being conceived by the Holy Ghost and born of the Virgin Mary; and (2) that, inasmuch as He is thus God and man in two distinct natures and one person for ever, so is she, His mother, truly and properly described as Theotokos and Virgo Deipara—the Mother or Bringer-forth of Our Lord and God, who was God when He issued from her virgin womb, wearing the manhood which of her substance had been prepared for Him, which He had taken to Himself, which He carried with Him to the Cross, which He raised in spiritual glory from the tomb, which He wears for ever at the right hand of the Majesty on high. These things are part of the faith of the whole Catholic Church; they are treated here as historical facts.

Another matter which, though Scripture is silent upon it, unquestionably exercised a powerful influence on the development of the cult of the Virgin Mary, is assumed in this article in accordance with the view of overwhelmingly the larger part of Christendom, viz. her perpetual virginity: 'virgo concepit, virgo peperit, virgo permansit.' With the general question of the Invocation of Saints, and the merits or demerits of that practice, this article is not concerned.

The only questions, therefore, to be here discussed concern the implications of these facts. We shall inquire historically (1) what was inferred from them in the Apostolic and early ages of the Church as to the duty of Christians towards the Virgin Mother of the Lord; (2) when and how the wide-spread developments of her cult arose; and (3) the grounds on which these developments have been justified, or are rejected, by those who accept the facts.

1. In Holy Scripture.—Over and above the witness borne by the four Evangelists to our Lord's having a human mother (Mk 3⁶, Jn 3⁴ & 6⁷) whose name was Mary (Mk 6³), and the direct statements of two of them (Mt 1¹⁸, Lk 1²⁶⁻²⁸) that she was a pure virgin when by the power of the Holy Ghost she conceived and bore our Saviour, we have in the third Evangelist several notes expressive of the high reverence and honour due to her. St.

Luke records the angelic salutation, 'Hail, thou that art highly favoured, the Lord is with thee' (1st); and the angelic assurance, 'Thou hast found favour with God' (1st). He makes it plain that she was the moral, and not simply the physical, instrument of the Incarnation; he brings out her wonderful faith, believing in God's power, seeking no sign, though she gets one, and asking only what course the divine call may require her to adopt (1st); his narrative evinces her conscious risking 'the reproach among men with which the poor Jews still blaspheme her Son and revile herself' (Pusey, *Evangelion*, iii. 25); and he records how 'Elizabeth, filled with the Holy Ghost,' saluted her, 'Blessed art thou among women, and blessed is the fruit of thy womb. And whence is this to me, that the mother of my Lord should come to me? . . . And blessed is she that believed' (1st). Mary herself, in her inspired song, while acknowledging that God in her Saviour too, expects from 'all generations' a like honour to that which Elizabeth had assigned her, and speaks of 'the great things' that God had done for her (1st).

Yet, while the NT thus justifies the Church's instinct of loving and reverential gratitude to the Holy Mother of the Lord, and authorizes the naming of her with lofty titles, it presents us with not one instance of her influence with Christ being invoked either in her lifetime or after her departure. At Cana, when she does interpose, she is bidden wait His time; and her advice to those whom she is sure that He will help is, 'Whatever He saith unto you, do it' (Jn 4th). When, on another occasion, she 'saith unto him, calling him,' 'He apparently did not go, but answered, "Whosoever shall do the will of God, the same is . . . my mother" (Mk 3rd, Lk 8th). When a woman exclaimed, 'Blessed is the womb that bare thee,' He replied, 'Yea rather, blessed are they that hear the word of God, and keep it' (Lk 11th). He does not imply, of course, that Mary had not those graces—they were conspicuous in her; but He certainly puts the moral virtues higher than even her unique privilege. And when, from the Cross, He commends her to St. John saying, 'Behold, thy mother,' and him to her, 'Behold, thy son,' while to have her with him in 'his own home' (Jn 19th) was doubtless a precious legacy to the theologian apostle, yet the obvious meaning of our Saviour's words was rather that St. John should take care of her than that she should be his protectress (H. Stier, *The Words of the Lord Jesus*, Eng. tr., Edinburgh, 1886-88, vii. 407 ff., on Jn 19th). There is certainly no evidence in St. John or elsewhere in the NT that he, or any other, so much as thought of her being established as a mother to pity all Christians, and help them in their approach to Christ. On the other hand, to expound the passage, as some Protestant writers (even Stier, *loc. cit.*) have not hesitated to do, as an intimation that all Christ's earthly relationships—even Mary's to Him as His mother—ceased and determined by His death is to come perilously near the denial of His abiding manhood whereby, as our High Priest within the veil, He is still 'touched with the feeling of our infirmities' (He 4th). A sufficient explanation of our Lord's neither calling her here His mother nor naming either St. John or her is supplied when we take it as an instance of His consideration: had He betrayed the relationship, those who mocked at Him would not have been slow to insult her; and the newly re-awakened courage of the disciple might have again been shaken by the utterances of their names.

The only other notices of Mary in the NT are (1) the mention of her by St. Luke (Ac 1st) in the place of honour as the first, and only one named, among the Christian women, and as still, after the Ascension, 'the mother of Jesus'; (2) the reference

to her by St. Paul (Gal 4th) as 'a woman'—an obvious allusion to the Protevangelium (Gn 3rd); and (3) St. John's taking from her experiences certain features for his prophetic portrait of the Church as the sun-clothed woman (Rev 12).

2. In the first three centuries.—The Christian literature of this period keeps in regard to Mary strictly to the lines of the NT. References to her are sparse; and these, though distinct as to her being the Virgin Mother of the Lord and therefore to be honoured, give no suggestion of aught that could be called a cult of her. Polycarp's short Epistle does not contain her name; but in his *Life* by Pionius there is this:

He, according to the prophecy, . . . being born of an undelivered and spotless virgin' (xiii.).

In the *Apology* of Aristides she is simply 'a Hebrew virgin.' Ignatius, in the short recension of his seven Epistles (here regarded as genuine), is fuller.

He tells (ad Ephes. xii.) how the virginity of Mary drew out the Deceiver; that 'hidden from the prince of this world were the virginity of Mary and her childbearing . . . mysterious wrought in the silence of God, now to be cried aloud'; he adores our Saviour, 'Son of Mary and Son of God'; and he insists (ad Trall. ii. 1.) that His birth of her demonstrates against the Docetists that His flesh is a reality and no semblance, 'but the correspondence between Ignatius and the Virgin is a Latin forgery, which never existed in Asia Minor, and is based on the mist's son of the word *gynæceion*'.

Justin Martyr (*Dial. cum Tryph. c.*) and Irenæus speak of her as does the Puritan Milton, as 'the second Eve.'

The least of Eve's disobedience was loosed by the obedience of Mary, for what the Virgin Eve had bound fast through unbelief that did the Virgin Mary cut free through faith' (Irenæus, *adv. Her. m. xiii. 1*). And again he dwells on the moral side of her part in the Incarnation. 'Mary, having a man betrothed to her and being nevertheless a virgin, by yielding obedience because the cause of salvation to herself and to the whole human race' (ib.).

If, however, we find Irenæus, in the barbarous Latin version of his works, calling Mary the 'advocate' of Eve, we shall do well to remember that his Origen had, apparently, *evangelos*, which implies not advocacy in our sense, but rebuke. Origen supplies one of the only two places in the Fathers where the words of our Lord from the Cross to her and to St. John have the least appearance of ascribing to her a permanent office for Christians.

Seeing that, according to those who think exactly of her, Mary had no other son save Jesus; and that Jesus said to her, "Behold, thy son," therefore thenceforth whom Christ Jesus was gone of Mary' (St. John. i. 6).

But does this go further than Christ's own, 'Behold, my mother and my brethren' (Mt 12th, Mk 3rd)? Both Origen and Tertullian, like Ignatius before them, draw from her motherhood of Christ arguments against Gnostic or Docetic heresy. Yet even of the Gnostics—so strong already was the Church's faith in the Virgin-birth of the Redeemer—several were constrained to admit the fact, while others, allowing that He issued from her womb, protested that He drew nothing from her substance.

If any cult of the Virgin existed in these early centuries, it is in the records of the Church's worship at the time that we should expect to find it, rather than in the treatises of divines or the apologies of the defenders of the faith. But such accounts of the Church services of the period as have come down to us exhibit precisely the same features as do the writings of the ante-Nicene Fathers. No mention of Mary's name, no reference to her, occurs in the notices of Holy Communion in the NT; nor in the liturgical thanksgiving in the 1st Epistle of St. Clement of Rome; nor in the *Didache*; nor in Justin Martyr's or Tertullian's account of the Eucharistic service. The only place where an invocation of St. Mary could come is in the Commemoration of Martyrs and the Commemoration of the Departed; and on this all that St. Cyprian has to say is:

'Substantiated Christiana tenet, as the faithful knew, that all the people whose lives were offered at the altar of God, they were not offered for, but for others who are commemorated in prayer is offered' (Ep. I. [Oxford, 1888, p. 63]).

There is no direct evidence that among 'the martyrs' the Virgin was so much as mentioned.

The one thing in these centuries that points in the direction of any cult of her in the Church is the appearance, somewhere in the 2nd cent., of an apocryphal *Evangelium Jacobi*, which was very popular and became the basis of two later works, *Liber de Infantia Mariae et Christi Salvatoris* and *Evangelium de Nativitate Mariae*. It is from these that the 'traditional' names of her parents, Joseph and Anna, have been derived, and the story of Mary's nurture in the Temple from her third to her twelfth year. These books, if they were not genuine, at least met a growing and significant demand, which was not checked by their condemnation as heretical in the earliest papal index *expurgatorius* attributed to Pope Gelasius (A.D. 493-498).

3. During the period of the four great councils (A.D. 325-451).—With the conversion of Constantine Christianity became fashionable, and, as Newman puts it, the spirit of the world was poured into the Church (*The Arians of the Fourth Century*, London, 1878, p. 256). The leaders of the faithful had to raise their standard against an inrush at once of pagan sensuality and of heresies born of pagan conceptions of the Godhead. It is among the latter that we find the earliest notice in Christian history of an actual worship of St. Mary. Epiphanius reckons it a heresy (*Her. lxxix.*) that 'certain women in Thracia, Berythia, and Arabia' were in the habit of adoring the Virgin as a goddess and offering to her a certain kind of cake (*καλλυπία ρωά*), whence he calls them 'Collyridians'. Their practice (cf. Jer 44⁹) and the notion underlying it were undoubtedly relics of heathenism always familiar with female deities. Epiphanius rebukes them:

'Let Mary be had in honour, but let the Lord be worshipped' (*Her. lxxix. 9*).

'Honour to Mary' was inevitably augmented by the Church's answer (true and necessary as that answer was) to the much more formidable heresy of Arius. Arianism, stumbling at the awful mystery of the Word made flesh (Jn 1¹⁴), and chiming in with the old pagan conceptions of gods older and younger, greater and less, presented to men the Eternal Son as only the first of creatures. It did not deny that Christ was born of the Virgin, but, by denying that He who issued from her womb was personally God, it lowered the greatness and the glory of her motherhood. It is not so much, however, in the interests of her dignity as for the attestation of the full truth concerning Christ that the orthodox theologians of this period are accustomed to refer to her. This holds of them all—of Cyril of Alexandria as well as of Athanasius, Basil, and the Gregorys, of Ambrose and Augustine as well as of Leo. It was in this connexion that Athanasius had spoken of her as *θεοτόκος* long before the Nestorian preacher shocked the congregation of St. Sophia by refusing her the title.

Athanasius gave it her because 'from the flesh of holy Mary the Son of God by essence and nature did proceed. . . . How can they wish to be called Christians who assert that the Word descended on a holy man as upon one of the prophets, and deny that He Himself became Man, taking the body from Mary?' (Ep. lxx. 'ad Epict. 7'), and, again, because 'when He was descending to us, He fashioned His body for Himself from a Virgin, thus to afford to all us small proof of His Godhead, in that He who formed this is also Maker of everything else as well' (*de Incarn. Verbi, xviii.*)

Athanasius was anxious to secure the reality of our Lord's manhood as less than His divinity, and in support of this truth also he, like Ignatius before him, appeals to Christ's birth of Mary. 'Human then, by nature, was that which was from Mary according to the holy Scriptures, and true was the body of the Lord. True it was, since it was the same with ours. For Mary was our sister, since we are all from Adam' (Ep. lix. 'ad Epict. 7').

In like manner, Gregory of Nyssa, 'Have any of ourselves dared to say "Mother of Man" of that most holy Virgin the Mother of God?' (Ep. xix.); and Ambrose, 'Talis deest partus Deum' (*Hymn iv. 'de Adventu Domini'* [PL xvi. 1474]). Cyril of Jerusalem, with equal force, uses Christ's birth of Mary as demonstrating the companion truth of His real manhood.

'Believe that this Only-Begotten Son of God . . . was begotten of the holy Virgin by the Holy Ghost, and was made Man, not to assume and mere show, but in truth, and yet by passing through a channel, but truly of her made flesh. . . . If the incarnation was a phantom, salvation is a phantom too' (Cat. Lect. iv. 9).

All the heresies, we may say, of this period were, in one form or another, denials of the Incarnation; they all fixed men's thoughts on the question propounded by our Lord Himself, 'What think ye of the Christ? whose son is he?' (Mt 22⁴²). It was impossible for the Church to refute any of them without speaking, as of God His Father, so of the Virgin Mary His Mother—to reply to Macedonianism, with its denial of the Godhead of the Holy Ghost who overshadowed her (Lk 1³⁵); to Apollinarianism, which, refusing to Christ a human soul, cut off from His sacred heart its thousandfold return of her love; and then to Nestorianism, which, dissolving the unity of Christ's Person, by one and the same stroke reduced the Saviour from being Himself the Word incarnate to a man in close association with the Word, and made Mary the mother only of a human infant. All these errors helped to burn in upon the mind of the Christians of that age the truth which E. B. Pusey tells us so

'started him in his young days when first it flashed upon him that it must be true, that one of our nature, which is the best and lowest of God's rational creation was united to a creature to Almighty God above all the choirs of angels. . . . Yet it was self-evident, as soon as stated, that she of whom Christ deigned to take His human flesh was brought to a creature to Himself above all created beings, that she stood single and alone in all creation or all possible creations, in that in her womb He who is His Godhead is consubstantial with the Father, deigned, as to His human body, to become consubstantial with her' (*Homilies, 8. 26*).

It is no creature-worship; it is the sense of this tremendous fact brought home to a heart inflamed with the love of the incarnate Son that explains at once the profound solemnity of Cyril's Letter to Nestorius and the splendid eloquence of Proclus's oration on the Virgin Mother. It is not that she is the mediator (there is no hint of such a thought); it is that He is God whom she bore, whom 'she alone inexplicably housed.' Nor need we fancy (with the writer on 'Mary' in *EBr*¹¹) that it was the Nicene 'solution of the Arian controversy, however correct it may have been theoretically, that 'undoubtedly had the practical effect of relegating the God-man redeemer for ordinary minds into a far away region of "remote and awful Godhead," so that the need for a mediator to deal with the very Mediator could not fail to be felt' (*EBr*¹¹ xvii. 212f.). As a matter of fact, it was the complete manhood of our Lord that the Church in the next succeeding controversies (Monophysite and Monothelite) triumphantly asserted, while at the same time carefully retaining the condemnation of Nestorianism. Indeed it has been observed that it is in the creed of Chalcedon, and not in the canons of Ephesus, that the term *θεοτόκος* occurs. With all the honour that they gave to her, the Fathers of this age never forgot that, if she ministered to our salvation by becoming, on and through her faith, the Mother of our Redeemer, it was through her faith in Him that she herself was saved. The great titles bestowed upon her by the Fathers relate to the fruits of the Incarnation.

'The flesh of the Virgin differs nothing from the flesh of sin; . . . but her body transmits it not to the Body of Christ, which she did not conceive through concupiscence' (Augustine, *s. Jul. Pol. v. 11*).

And Pope Leo I. (in a passage still remaining in the Roman Breviary as one of the Lessons for Christmas Day) says that 'to [Christ's] birth alone the throes of human passion had not contributed.'

In entire consistency with this teaching of the great Fathers, we find that the worship of the Church in the conciliar period shows hardly a trace of any cult of the Virgin. There are indications that she was prayed for.

Thus in the Armenian Liturgy, 'We beseech thee that in this holy sacrifice remembrance be made of the mother of God the holy virgin Mary, and of John the baptist, of the proto-martyr Stephen, and of all the saints' (P. R. Brightman, *Liturgy of Eastern and Western*, I. 440).

But she is not often mentioned. In the liturgy in the *Apostolic Constitutions* she is not even named; if she is referred to there at all, it is as included with others—'apostles, martyrs, virgins . . . whose names Thou knowest.' In other liturgical works of the period—e.g., the *Statutes of the Apostles* (Ethiop. c. 300)—there is no mention of any commemoration of the departed, nor is there in the Arabic and Syriac versions of this book. The Eucharistic service in the *Testamentum Domini* gives thanks that the 'Word . . . was born of the Holy Ghost and the Virgin'; but its commemoration of the dead, 'Remember those who have fallen asleep in the faith, and grant us an inheritance with Thy saints,' names neither the Virgin nor any other saint. The *Pilgrimages of Silvia* also is silent concerning her, while the *Catechetical Lectures* (Leet. xxiii. on the Eucharistic service) of Cyril of Jerusalem, where we might have expected to find something, has only this:

'Then we commemorate also those who have fallen asleep before us, first Patriarchs, Prophets, Apostles, Martyrs, that of their intercession God would receive our petition—still no mention of Mary.'

In the liturgy of the civil 'diocese' of Africa in the time of Augustine (A.D. 400) 'the only place where an invocation of the Virgin could have come in is in its commemoration of the saints and martyrs, but there is again no direct evidence that her name appeared' (*Ordo Rom. Primus*, App. iv.). Of Basil his latest editor says:

'Of any cultus of the Virgin, St. Basil's writings show no trace.' Even Letter CCCXL, which bears obvious marks of spontaneity, and of proceeding from a later age, does not go beyond a recognition of the Blessed Virgin as Guardian, in which the Catholic Church is agreed, and a general invocation of the apostles, prophets, and martyrs, the Virgin not being set above them (Benedict Jackson, *Prolegomena to St. Basil's Nicene and Post-Nicene Fathers*, viii. (1894) p. lxxiii). The passage runs: 'I invoke them in supplication to God, that through them, that is through their mediation, the merciful God may be propitious to me.'

That the departed saints, now 'with Christ' (Ph 1st), do pray for us is an obvious conclusion from their perfected love; it has some sanction in the NT (Rev 8th); it is argued for on this ground by Origen (*de Orat.* 31), Eusebius (*de Martyr. Palest.* v.), and Jerome (*Ep.* ix.); and it was an easy transition to ask God that their intercessions might be heard for us; but 'Omniscience alone can hear the cry of every human heart, and Omnipotence alone can deliver everywhere,' and it was quite another thing to credit any saint, however highly exalted, with powers or prerogatives of this extent. Not so did the Fathers of the Church and the holy martyrs pray. Cardinal Newman admitted that no prayer to the blessed Virgin is to be found in the voluminous works of St. Augustine. And when, late in the 4th cent., we do find cases of direct invocation of this or that individual saint, it is in private prayer, and in regard to some more restricted matter in which that saint had been interested when on earth and might be presumed to be interested still. Of this limited sort was the prayer of Justina, mentioned with incidental approval by Gregory Nazianzen (*Orat.* xxiv. 11), 'imploiring Mary the Virgin to come to the aid of a virgin in danger.' St. Mary

had already been thought of as the 'virgin of virgins'—the leader of those virgin bands to whom, next to the martyrs, the Church felt that she owed a special debt. The martyrs were her witnesses to Christian truth; her virgins the conspicuous exponents of Christian purity. Virginity, be it remembered, had been praised—though not enforced—by our Saviour Himself (Mt 19th), and by St. Paul (1 Co 7th); under the pagan persecutions the virgin martyrs had won a twofold triumph; and when, on Constantine's conversion, pagan sensuality proved a menace no less formidable to morals than heresy to doctrine, virginity, organized into monasticism, became more and more like the expression and the shield of this side of Christian virtue. Athanasius found the monks and virgins of Egypt of the greatest use to him in his contest with Ariasism. He introduced monasticism at Rome; Ambrose and Martin carried it respectively to Cisalpine and Transalpine Gaul; through the latter, the trainer of missionaries, it spread over the Celtic West. Jerome carried it to Palestine; Basil was its protagonist through Asia Minor. Virginity and monasticism, no less than orthodoxy, turned the thoughts of the faithful very much towards St. Mary. If orthodoxy found, as we have seen, that Christ's birth of her was a witness at once of His Godhead and His manhood, so did monasticism boast of her as the crown of virginity. If orthodoxy called forth the panegyrics on Mary by Proclus and Cyril of Alexandria, the thought of her virginity led even more directly to her being regarded as a patroness.

It is while collecting the vestiges of the virgin life that Augustine reminds them how 'the birth from the one holy Virgin is the glory of all holy virgins: they, too, are mothers of Christ if they do the will of His Father' (*de Sanct. Virg.* v.).

Thus, too, Jerome:

'Therefore the virgin Christ and the Virgin Mary have dedicated in themselves the attributes of the virginity of both sexes' (*Ep.* xlviii. 'ad Pam.' 31);

and Gregory of Nyssa:

'What happened to the stainless Mary when the fulness of the Godhead which was in Christ shone out through her, that happens in every soul that leads by rule the virgin life. No longer, indeed, does the Mother come with bodily presence, . . . but, spiritually, He dwells in us and brings His Father with Him' (*de Virg.* 1).

4. During the mediæval period.—For the purposes of this article, this period may be dated from the extinction of the Western Empire by Odoacer (A.D. 476) to the close of the Council of Trent (1563). Throughout this period Christianity runs in an Eastern and a Western stream; but, in spite of their divergence, there took place in both a remarkable development in the cult of the Virgin. It came to a head more early in the East. There, where the chief heresies concerning the Trinity and Incarnation had arisen, and where theological speculation was more congenial to the public taste, new forms of error on these subjects were constantly springing up, and to all these the orthodox found a complete answer in the Scripture records of our Saviour's birth of a Virgin Mother. His Virgin-birth witnessed alike the reality of both His nature and the unity of His Person; it hallowed monasticism; it rebuked the impieties first of the iconoclasts and then of the Muhammadans, while the calamities which afflicted and cut short, if they did not, till A.D. 1453, destroy, the empire in the East, were at least sufficient to impress all Christians who remained, or had been, its subjects with awestruck thoughts of Christ as the Judge of men. They remembered how, in the days of His flesh, the good centurion had, unrebuked, deemed himself not worthy to come to Christ direct (Lk 7th), but had besought Him through the elders of the

¹ W. M. Ramsay argues that so early as the 4th cent. the honour paid to the Virgin Mary at Ephesus was the recrudescence in a baptized form of the old pagan Anatolian worship of the Virgin Mother (*Pauline and other Studies*, p. 136).

Jews. How much more, then, might they, sin-burdened, approach Him through the prayers of His spotless Mother? The 'Theologian' among the orthodox divines (Gregory Nazianzen) had, as we have seen, approved of Justin asking her help; why might not Justinian ask her advocacy for his Christian empire, and Narces look for her direction on the field of battle, and Heraclius bear her image on his banner, and Simeon Stylites, in his post-communion thanksgiving, invoke as supplicants 'all the saints . . . and with them Thy most holy Mother, . . . receive their prayers, O Christ'! (*Euchology of Orthodox Church*, tr. G. V. Shann, Kildermister, 1891, p. 257 f.). So strong was the current of feeling that even the great liturgies, already venerable, received interpolations to express it. In some of these we can see the process going on. Thus in the Liturgy of St. Mark (Alexandrian), though originally St. Mary was simply included in the prayer that God would give rest to all the holy dead, now she is mentioned by name, 'especially the most holy, stainless, blessed, our Lady, Mother of God, and ever-Virgin,' and the sequence of thought, which still shows that she is prayed for, is interrupted by a salutation, 'Hail, thou that art full of grace . . . because thou didst bring forth the Saviour of the world.' So in St. James, the parent of all the Syrian liturgies, she had originally simply been commemorated, but now it is added 'that we may obtain mercy through their prayers and intercessions'; and in the Anaphora there is interpolated, not only the angelic salutation, but a long quotation from Proclus's glowing panegyric (Neale and Littledale, *Liturgy*, p. 84). The alteration is very naively made in the liturgy of the Coptic Jacobites:

'To our fathers and our brethren who are fallen asleep . . . give rest, remembering all saints . . . and most chiefly the holy Theotokos Mary . . . Not that we are worthy to intercede for their blessedness . . . but . . . that standing before the tribunal of thine omniscience they may in compassionate intercession for our poverty and weakness' (Brightman, l. 149).

In the Armenian Liturgy St. Mary's name remains in the Great Intercession:

'We beseech thee that in this holy sacrifice remembrance be made of the mother of God the holy virgin Mary, and of John the Baptist, of the protomartyr Stephen and of all the saints' (ib. p. 246). But at an earlier stage the Deacon bids the worshippers 'make the holy mother of God and all the saints their intercessors with the Father' (ib. p. 235).

The two liturgies remaining in use among the orthodox Greeks are those of Chrysostom and Basil, and are more moderate.

The latter merely mentions her in the Eucharistic Thanksgiving for Christ 'born of a woman, the holy Mother of God, ever-Virgin', and prays that God 'would unite all of us who are partakers of the one Bread . . . that we may find mercy with all Thy saints . . . especially our all-holy, immaculate, supremely blessed glorious Lady, the Mother of God, and ever-Virgin Mary' (ib. pp. 288, 290 f.).

It is not impossible, in view of Basil's own writings, that even the last is an interpolation. The liturgy called Chrysostom's is fuller on St. Mary:

The Prayer of the Trisagion closes 'through the intercession of the Holy Mother of God and all the Saints'; but, again, it prays for her: 'We offer to Thee this reasonable service on behalf of those who have departed in the faith . . . Apostles . . . Virgins . . . especially the most holy, undivided, excellently beautiful, glorious Lady, the Mother of God, and ever-Virgin Mary' (ib. pp. 214, 221).

When, however, we turn to the less august and more popular of the authorized devotions of the Greek Church, we find her invoked in the most direct manner:

'O most holy Mother of God, light of my darkened soul, my hope, protection, refuge. I thank thee that thou hast enabled me to be a partaker of the . . . Body and . . . Blood of Thy dear Son. Enlighten the eyes of my heart . . . quicken me . . . give me tears of repentance and thanksgiving' (*Euchology*). In the Book of Needs, the 'Prayerful Canon at the Departure of a Soul' teaches the dying man to cry to her:

'Known refuge of the sinful and the low, make known to me thy mercy, O thou pure one, and not me from the hands of demons, which come about me like dogs.'

It must be admitted that such prayers are but inferences, not unnatural, from the deliberate teaching of the latest, and henceforth the most influential in the East, of the Greek Fathers, John of Damascus, that Mary is the sovereign Lady to whom the whole creation is made subject by her Son—implying, of course, that, over and above her office in the Incarnation, she is herself, through His gift, a direct giver of help to such as may seek it at her hands. It should be added that the Feast of her (not of Christ's) Presentation in the Temple (the story is from Proter. Jac.) originated in the East in the 8th cent., and was not adopted in the West till the 16th. See art. IMMACULATE CONCEPTION.

The Western Church, too, was to find through many ages the practical value of monasticism, and to carry the doctrine of celibacy to further lengths than its Eastern sister. It, too, was to have experience of errors (such as the 8th cent. Adoptionism) which, disparaging the Saviour, disparaged her also. In Spain, Hungary, and the two Sicilies, as well as through the Crusades and Algerian piracy, it was to come into painful contact with Islam. In the West too, therefore, the reaction from those errors contributed its impetus to every movement in the Virgin's honour, while manifold oppressions of the poor turned them naturally to the thought of her as the Mother of Pity, and the chivalry of the knight made her the Lady of his orisons. But the development of her cult was slow in the West. In Adamant and Bode it is hardly perceptible; in the *Life of St. Columba* she is not mentioned.

In Bede's *EE*, St. Wilfrid has a vision of St. Michael telling him, 'the Lord has granted you life, through the prayers of your disciples, and the intercession of His blessed Mother Mary of perpetual virginity' (v. 19), and the hymn concerning St. Bede's death has 'over the Virgin Mother a shining virgin head rejoices'; and here 'her haven has made many virgin blossoms to spring forth' (v. 20).

At Rome in the pope's (8th cent.) mass on Easter-day at the Basilica of St. Mary Major, the only mentions of her are those (1) in the Great Intercession:

'Venerating the memory first of the glorious ever-Virgin Mary, Mother of the same our God and Lord Jesus Christ, and also of Thy blessed apostles and martyrs . . . and of all Thy saints; by whose merits and prayers do Thou grant that in all things we may be defended by the help of Thy protection, through the same Christ, our Lord';

and (2) in the Post-Communion:

'Deliver us, O Lord . . . and as the intercession for us of the blessed and glorious ever-Virgin Mary, the Theotokos, and of Thy blessed apostles . . . and of all saints, graciously give peace in our days . . . through our Lord . . . There is no direct invocation of her, our prayer to her (*Ordo Rom. Primus*, App. 6):

nor, indeed, is there anything more in the Canon of the Roman Mass to the present day, though in the *Proprium Missarum de tempore* this 'collect of St. Mary' is said on all Sundays in Advent:

'God, who villed that Thy Word should take flesh from the womb of the blessed Virgin Mary, grant that we who believe her to be in truth the Mother of God may by her intercessions be helped before Thee.'

But neither is this, nor the *Shrovetide de S. Maria*, nor the *Post-Communion de S. Maria* a prayer to her; the last was indeed adopted in the English Book of Common Prayer as the collect for the Annunciation. The confession of sins in the Mass made 'to Almighty God, to the Blessed Mary, ever-Virgin . . . and to all saints,' is held to be but a recognition of the fact taught us by St. Paul, that the whole body of the Church (from which death does not separate the saints [Ro 8th]) suffers with the suffering of every member (1 Co 12th); and, inasmuch as, in like manner, the honour of Christ the Head is the honour of all His members, it cannot be wrong, it is thought, to ask, as is done in the prayer 'Suscipe sancta Trinitas,' that our memorial of Christ's Passion, Resurrection, and Ascension may redound to the honour of Mary and all saints, as well as to the salvation of all for

whom they pray. These are regarded as fair inferences from the truth which we all confess, in the Apostles' Creed, of the Communion of Saints. The moderation of the Roman Missal did not suffice, however, for the popular devotions, which more and more tended to assume the forms, first, of invoking her directly to intercede for us ('*ora pro nobis*'), and, next, of asking her personal help for both soul and body. Two festivals really of our Lord—His Presentation in the Temple (Feb. 2), and His Conception (March 25)—became rather those of her Purification and of the Annunciation to her, while the Feasts of her Conception (Dec. 8), her Nativity (Sept. 8), and her Assumption (Aug. 15), already observed in the Eastern Churches, were introduced into the West, at first in other lands rather than in Italy or at Rome, and not always either with the same meaning or without protest.

Thus, the observance of the Assumption was appointed by the synod of Salzburg in A.D. 800, but is marked as doubtful in the capitularies of Charlemagne; literally its title imports no more than her death—the taking of her soul to God—and it is sometimes called her *dormitio*, or 'sleep.' The doctrine of her bodily assumption into heaven, derived from the apocryphal story condemned by Pope Gelasius, though widely believed, and implied in the Breviary lection from John of Damascus, is not even now *de fide* in the Roman Catholic Church, but only a 'pious opinion.' The Feast of the Visitation of the Virgin (July 2), also apocryphal in origin, was introduced from the East in the 14th cent., withdrawn from the Calendar by Pius V. (1566-72), and reintroduced by Sixtus V. (1585-90). The Nativity of Mary (Sept. 8) would be older if the sermon of Augustine, cited in its Office, be genuine, but it is commonly said that this fact is first mentioned by Andrew of Crete (s. 750); its observance was appointed by the synod of Salzburg in 800; two centuries later it had not become general in Italy, while (s. 1140) St. Bernard blames the monks of Lyons for the innovation of keeping the feast of her conception because it was not holy like her Nativity, St. Mary being, he held, not conceived without sin, but sanctified in the womb. Thomas Aquinas said (*Summa Theol.* III. xxix.) that the Church of Rome tolerated it but did not keep it (a not uncommon way with some in those days of treating popular devotions); and, when it did come in at Rome, in the church of St. Mary Major, it was still, as late as 1840, the festival only of the 'Benediction of the B. V. Mary.' Underlying these different names for this festival lay the long controversy as to the sinlessness of Mary. All agreed (as all orthodox Christians must agree) that she was sanctified so as to yield a perfectly sinless manhood to the Son of God (Lk. 1st, He 7th); but there arose in the 13th cent. a question when the process of her sanctification began, and, while divines of the date and authority of Aquinas denied her Immaculate Conception, the arguments on which Scotus based his support of it were derived wholly from abstract and *a priori* considerations. The discussion, nevertheless, tended to her exaltation above all other saints, on the ground not alone of her office, but of the grace bestowed on her. It must be confessed that some medieval writers transgressed all bounds in the language which they employed, Peter Damian, e.g., speaking of her as 'deflata' (*Sermon de Nativitate Mar. (PL cxiiv. 740)*), while the very natural use of what Archbishop John Hamilton's *Scottish Catechism* of 1658 calls the 'bonny image of the Baby Jesus and His Blessed Mother' to remind us of His gracious coming as an infant to sanctify childhood and maternity was darkened into something not far from idolatry when—as sometimes happened—one image of the Virgin (generally a black or an ugly one) was re-

garded and resorted to as more powerful for the help of supplicants than another.

5. From the Reformation to the present day.—The fundamental position of the Protestant Reformers, that the justification and salvation of the sinner are through faith in Christ alone, involved, on the one hand, the fullest recognition alike of His Godhead and His manhood; and the Reformers, accordingly, were at one in confessing the Catholic faith as set forth in the ancient creeds and by the great councils, which meant, of course, their acceptance of His birth of a pure virgin, and her honour as His mother. It involved, on the other hand, an insistence that the soul should come to Christ direct, and a repudiation of the idea of any creature coming between it and Him. The latter principle, it is true, could be pushed to the extreme of disparaging the helps which He has graciously provided in His Body the Church (Eph. 1st), for bringing men to Himself, and in the ordinances whereby 'Christ and the benefits of the covenant of grace are . . . applied to believers' (*Shorter Catechism*, 88). It brought almost everywhere the practical elimination from Protestant teaching of all thought of the departed saints having any function whatsoever (save that of remembered examples) towards Christians in this world. The 'Communion of Saints,' while admitted in words, was interpreted as existing simply between believers in this present world; and, contrariwise, the prayers of the living were limited to the 'Church militant here on earth.' The prominence of St. Mary in Roman Catholic devotions reacted among the Reformed in an opposite direction, till Puritanism (in certain sections) 'scrupled' even the singing of her inspired *Magnificat*, gave up the public use of the Apostles' Creed because her name occurred in it, and even so late as the publication of the *Church Hymnary* (1860) was able to secure the rejection of Bishop Richard Mant's version of the *Stabat Mater* and the deletion of the words 'Son of Mary' from H. H. Milman's hymn. It may be doubted whether such courses have helped either to a livelier faith in Jesus Christ or to a deeper love towards Him; or how far they have furthered Christian ideals of purity, chivalry, and saintliness. Puritanism, however, has not conquered either the Scottish or the Anglican Church. The former in the 18th cent. dared to speak of the Virgin in the public service in one of its 'Paraphrases' (Par. 38), and restored the use of the *Magnificat* (in metre) in another (Par. 26), and of late years 'authorized' the chanting of it in prose, as well as the recital of the Apostles' and Nicene Creeds (*Church Hymnary*, *Church of Scotland Anthems Book*, and *Minion Hymns*). These have always kept their place in the Anglican Books of Common Prayer; and the Church of England has further secured a commemoration of St. Mary by retaining among 'the Feasts to be observed' both 'The Purification of the Blessed Virgin' (Feb. 2) and 'The Annunciation of the Blessed Virgin' (March 25). In both countries divines universally respected (e.g., the Scottish Dr. W. Haana and the English Bishops Joseph Hall and John Pearson) have spoken of her in terms of singular reverence and beauty, while W. M. Ramsay, holding, as he does, some pagan ancestry for her cultus as it exists in Asia Minor, speaks of it nevertheless as 'a purifying and elevating principle' (*Pausanias and other Studies*, p. 160).

In the Roman Catholic Church there was some hope at the beginning of the Counter-Reformation that much then complained of in the extreme cult of St. Mary would be abated or put down. Something certainly was done; and the Council of Trent in its Decrees, and even in its Catechism, is fairly moderate, distinguishing, as did the older councils, between the *latria*, due only to God, and the

like aristocracy of E. Equatorial Africa — implanted this long-horned type of ancient Egyptian ox on the highlands between the Victoria Nyanza, Tanganyika, and the frontier of the Congo forest. But the long-horned Galla ox has never yet made its appearance to the east of the Victoria Nyanza or among the Māai tribes, whose cattle are Indian in type.

2. *Gods.*—Though in physical characteristics the Negro element predominates in the Māai over any other, this people is superior in mentality to the pure-blood Negro; and one is struck with a certain imaginativeness and a natural poetry in their thoughts, stories, and religious beliefs rarely found among Negro peoples, and probably due to some ancient or modern infusion of the Caucasian. The Māai believe in a far reaching divine power emanating from the sky high above the earth, and even above the lower regions of the atmosphere. This divinity, to which they can pray at times with real earnestness, is known usually by a female name, *Efi ai* (*Efi* is the feminine article, *ai*, or *ga*, is the root). *Efi ai* is occasionally referred to as 'the Black God,' though in some stories or in some minds there seems to be a triad consisting of (1) *Efi ai*, the greatest and remotest of all gods, the god of the elements; (2) the benign Black God of rain, who takes a real, though far off, interest in humanity; and (3) the early or malignant Red God, who is, on the whole, spitefully disposed towards mankind and dwells in the lower part of the atmosphere. *Efi ai* and the Black God (or both fused in one personality) would like to send the rain to the parched lands below in perpetual abundance, so that there might always be fat pastures to feed the Māai cattle, or perpetual cultivation for the Māai agriculturists; but the Red God frequently intervenes and intercepts the moisture so necessary to life under an equatorial sun. Distant thunder is believed to be the remonstrances of *Efi ai* at this uncharitableness of his subordinate deity, whom, however, he seldom bestirre himself to circumvent. *Efi ai* is known to some of the non-Māai tribes as 'Kai' or 'Gai' without the article, and by the Māai themselves is called by other names, such as *Paasai*.¹

3. *Demons.*—In addition to these two gods or three gods (according as the Black and Good God is or is not identified with the Ruler of the Heavens, *Efi ai*), the Māai believe in superhuman beings somewhat resembling the *jinn* ('*genii*') of the Arabs—devils, it is convenient to call them. Similar beliefs reappear in the Sudan and in many parts of the northern range of the Bantu languages, such as the Cameroons. These *jinn*, or devils, trench in some of their characteristics on the werewolf conception, being in some aspects like a lion and in others like a man, or having originally taken the form of lions and then put on an appearance half human and half like an inanimate stone; or they are believed to go about looking like a lion on one side, and on the other like a monstrous human being. Their favourite home is the forest. They are mainly, if not entirely, anthropophagous in their food preferences, and do not touch wild beasts.

In one of the Māai stories recorded by Helle² it is narrated that the devil's custom is to call to human beings who pass the place of his concealment in the forest, 'Come, my brother, help me lift this load of firewood.' If they are foolish enough to proceed to his help, they are struck with a pointed stake which he carries. When any particular district was believed to be haunted by a devil and the Māai wished to pass through it to their customary migrations in search of pasture for their cattle, they would arrange to march past the cannibal's haunt in as

large a body as possible, the warriors going both in front and behind. 'Should a robber be heard howling from the mist and calling some one, everybody remains silent, for they know that it is this devil that is calling.' In another story³ the anthropophagous *jinn* ate up all the human beings in one district except a woman, who succeeded in hiding herself with her child in a pit. As the boy grew up, he made a bow and arrows, which (presumably) he poisoned, and, when the demons, discovering their extinction from the smoke of their fire, came to eat them, the boy from the branches of a tall tree shot all his arrows into the monster's body, who at first thought that it was merely the sting of gad flies, until he succumbed to their effects. Repenting apparently in his dying moments, he gave the boy information as to how he might proceed to recover the cattle of the tribe, and most, if not all, of the people whom he had eaten. Out of gratitude these remonstrated Māai started the boy as their chief.

It is quite possible that this and similar stories, wide-spread over Negro Africa, refer to the lurking cannibals of some big and brutish race which lingered on in the forests of Africa long after the more open country had been populated by the modern types of man. Such grim ogres may have worn over their backs the pelts of wild beasts that they had killed, and thus have seemed on one side beast, and on the other a ghoulish type of man.

4. *Cosmology.*—The Māai believe that, when Netherukop,⁴ the demi-god of Mount Kenya, decided to start a race of true men on the earth—presumably Māai—he found three things in E. Africa, viz. an already existing *Dorobo*⁵ (the word is properly *apoti* Turobo and means 'dwarfish'), who was a kind of pre-Adamite man, an elephant, and a serpent, all of whom lived together. In course of time the *Dorobo* hunter killed both the serpent and the elephant mother, who, however, before her death had given birth to a calf, which escaped from the *Dorobo*, and in its journeying about the world met a Māai, to whom it confided its troubles. At this juncture God Himself (*Efi ai*) intervened, and summoned both the *Dorobo* and the Māai to His presence. The Māai came, but the *Dorobo* seems to have delayed. The consequence was that the Māai received God's good gifts and benevolence became rich in cattle and the master of E. Africa. Other variants of this story make Netherukop (the divine man of Mount Kenya) the donor of machines throughout, and do not involve the intervention of the great sky-god, *Efi ai*.

5. *Eschatology.*—With regard to a life after death, in some of the Māai traditions it is related that, when the man god Netherukop gave to their primal ancestor, Lo-oyo, instructions what to say when a child died, the latter out of selfishness—because the child went to the west not his own—invented the prayer which was to adjure the child-spirit to return. Lo-oyo consequently prayed that the moon, though it died, might return again, but that the dead child might remain dead. Some time afterwards Lo-oyo was likely to lose a child of his own, and therefore said the prayer rightly. But it was too late, only the first invocation of nature held good, and this man, when he died, never came back, but the moon always returns.

Yet this great agony of the mind of man—this refusal to regard death as the end of all in the personalities of those whom we have loved or respected—prevails with the Māai, thwart the reported assertions in their folklore that 'All is over with man as with the cattle, and the soul does not come to life again.' With this people there has been a gradually growing belief (it is so also among many Bantu tribes) that a medicine-man, a great doctor, a great chief, or a very wealthy

¹ Helle, p. 232.

² J. L. Krapf, the great missionary pioneer of Equatorial E. Africa, writing in 1846 in his preface to the *Fauna of the Empire of Ethiopia* (the Western Māai), thus describes the religious beliefs of the Māai: 'At the remotest antiquity there was one man residing on "Oldoinyo elbor" (Mt. Kenya) who was superior to any human being, and whom Elgai (heaven, supreme being, god) had placed on the mountain. This strange personage whose beginning and end is quite mysterious and whose whole appearance impresses the Wakama mind with the idea of a demi-god is called . . . Netherukop. The intelligence of this strange person residing on Oldoinyo elbor reached a man named Enjamael Enamer, who with his wife Shamba lived on Mount Shamba which is situated to the south-west of Oldoinyo elbor and is a high mountain but does not attain to the height of Oldoinyo elbor. . . . Enjamael went to the White mountain with his wife who by the intervention of Netherukop became fruitful and gave birth to a number of children. Netherukop also taught Enjamael Shamba the tanning of wild cows which he saw in the forest. . . . It is to Oldoinyo elbor ("Lion's") as the Wakama call it that the Wakama resort in order to obtain the intervention of Netherukop for getting rain, cattle, and health from the Elgai.'

³ The *Dorobo* are the nomad hunters of E. Africa, shorter in stature than the Māai, but not very dissimilar from them in appearance, and containing many mixed strains of blood—Māai, Negro, and possibly Bushman.

⁴ From the circumstances that this root assumes the form of god or had when borrowed by adjoining Bantu or *Dorobo* tribes it is possible that it was originally *Efi ai* in Māai.

⁵ A. C. Helle, *The Māai*, Oxford, 1886, p. 246.

⁶ *Id.* p. 245.

person cannot entirely cease to exist in personality even after the body is dead, buried, and decayed. It is thought by the Majai, as by Zulus and numerous tribes of W. African Bantu, that the soul of a deceased person of importance enters one or other of the python like snakes which frequent the vicinity of human habitations in pursuit of rats and other vermin. These (usually black) snakes are, therefore, feared in the eyes of the Majai, who are careful not to kill them. If a woman sees one in her hut, she pours milk on the ground for it to lick up. A variety of species of snake are even regarded as totem animals by one of the Majai clans, who protect them against ill-treatment by the members of any other clan, and will even call on them for help if they get worried in a fight, exclaiming, 'Avengers of my mother's house, come out!' The Majai believed that the female snake thus invoked would bite snakes as had not adopted them as a totem.

It has even been thought by some Majai, probably not earlier than the latter years of the 19th cent., that the souls of very great chiefs are not sufficiently provided for by transmigration to a snake, but in some way go to heaven, to the abode of Ea-ai. It is not impossible that this growing belief may have resulted from their talks with the early missionaries in E. Africa. They certainly believe that there is what we should define as a soul, some impalpable living essence, and that this quits a man's body when he falls asleep. Therefore a sleeper must not be too suddenly awakened lest the soul be left outside the body and the man die. In one mood the Majai will assert that no such things as 'ghosts' exist, because they cannot be seen; in another they appear to believe that ghosts do exist and can be seen by cattle, though not by men. When a herd of cattle halts and stares fixedly at something, if it is not a lion or a leopard, it is a ghost.

6. Divination.—They also believe in omens, and, like all the Negro peoples of E. Africa, pay great attention to the cries and the actions of birds which are propitious or unpropitious. Their medicine-men practice divination of future events (1) by shaking a handful of stones out of a horn, (2) by examining the entrails of a slaughtered goat, (3) by getting drunk on mead, and then prophesying at random, and (4) by the interpretation of dreams.

7. Prayers.—The Majai have a very real belief in God, and, if they are vague about His personality and uncertain whether they are praying to the Great God of the Firmament or to the Black God of the Upper Clouds, to one or other they occasionally make sacrifices of sheep—a rite usually conducted by the women, who, as a matter of course, pray twice a day, while men and children only occasionally utter prayers. In these prayers men and women associate the evening and morning stars, and even the snow peaks of the great mountains, Kenya and Kilimanjaro, with the Deity. They pray for children and for the health of their children, for rain, for successes in time of war, and plenty of cattle. The present writer, however, when residing many years ago at Taveta near the eastern base of Kilimanjaro, noted that the men of the Wa-Taveta (mainly Majai in race and religion, though now speaking a Bantu language) could pray most earnestly and touchingly to Ea-ai, the Power of the Sky, if their children were sick.

When one of their number gives birth to a child, the Majai women gather together and take milk to the mother; they then slaughter a sheep, which is called a 'purifier of a hut,' or simply a 'purifier.' The women slaughter the animal by themselves and eat all the meat, and no man may approach the spot where the animal is slaughtered, for it is

considered unlawful. When they finish their meal, they stand up and sing a song, which may be rendered approximately thus (paraphrased from Hollis):

God to whom I pray,
God who thunders and is mild,
Give me offspring.
To thee only every day do I pray,
Thou morning star;
To thee only every day do I pray,
Thou who art of even milder like my plume.
To thee only every day do I pray,
Who art prayed to and who hearest;
To thee only every day do I pray.

Women and children also pray for rain. The old men's prayer in time of drought (chanted round a bonfire of sweet-smelling wood into which is thrown a charm from the medicine-man) is:

'Black god, Be!
God water us;
O thou of the uttermost parts of the earth,
Black god, Be!
God water us.'

Young men pray that their battle raids may be successful and that they may bring back herds of cattle. All these prayers seem to be indifferently addressed both to God and to the morning and the evening star. God is not confused with the sun or the moon, but is something behind, above, beyond, and more powerful than these heavenly bodies, which are beings of either sex that alternately marry and quarrel. Of the stars other than the planets Venus and Jupiter they take little heed, with the exception of the Pleiades (the appearance of which in the heavens is indicative of seasonal changes), the Sword of Orion, and Orion's Belt. Comets are perturbing as indicative of approaching disasters.

8. Sources of Majai religion.—M. Markur, a German officer, who lived much among the Majai of German E. Africa, published a work (first issued in 1904) in which, after discussing various Majai beliefs and customs, he attributes these and, in part, the origin of the Majai, to a strong wave of Semitic influences from the north, even reviving that old story, the dispersal of the Ten Tribes. It is difficult to understand how he can see anything in Majai belief and ritual that especially suggests Jewish blood or influence and at the same time overlook the presence of similar beliefs and rites in the intervening Hamites or the Semiticized Somalis. For unnumbered centuries waves of Caucasian influence and even trickles of Caucasian blood have been passing from Western and Southern Arabia, Syria, and Egypt through Ethiopia into Nileland, the Central and Western Sudan, and the steppes and forests and lake regions of E. Africa. The Majai have brought their share of these beliefs, superstitions, and customs from their northernmost centre of development—somewhere, possibly, in the basin of Lake Rudolf, a region that, no doubt, was influenced from Abyssinia a score of centuries ago, as it is at the present day. At the same time, attention should be given to Markur's records of Majai traditions and beliefs, especially as set forth in the later edition of his work (*Die Majai*, Berlin, 1910). A. C. Hollis, whose own work on the Majai is one of importance, and Albert Stegall, a missionary long resident in the eastern part of Majai-land, both argue that Markur got his information regarding Majai beliefs chiefly from Majai who had long been connected with the Roman Catholic mission, and, consequently, that these informants were merely giving him versions of the Hebrew traditions in the OT. The receptivity of the Majai mind is no doubt great; but no mission had been established in those regions a sufficient length of time for much teaching to have been imparted to Majai boys, nor, from what the present writer knows of mission work in those regions, is it likely that either Roman Catholic or Protestant missions

at that stage in their development spent much time in translating and teaching the book of Genesis to Māmi inquirers. It is more probable that the ancestors of the Māmi in their northern home were in contact with the Christian Gallas or Abyssinians, and from them imbibed those ideas of Adam and Eve and the other traditions regarding the great Patriarchs which irresistibly recall the legends enshrined in the first chapter of Genesis; or the ideas may even have percolated through N.E. Africa in pre-Christian days, when the Jews and Idumaeans were influencing a good deal of W. Arabia and of Ethiopia.

The stories transcribed by Marker are not only reminiscent of the Jewish myths of Adam and Eve, Cain and Abel, Enoch, Methuselah, Lamech, and Abraham, but even extend to a personality like Moses, actually bearing the name of Musanna (or Marumi). There are even traces of a belief in a fiery serpent, of the Ten Commandments of Sinai, and of a paradise garden like Eden.

A good deal of this account of the Māmi religion must be taken in the past tense. Year by year old beliefs and traditions are fading away, and the people are becoming either absolute materialists (with the white man as their wonder-working divinity) or adherents of the various Christian missions, to which they are proving useful and influential converts.

LITERATURE.—In addition to the works of Hölles and Marker quoted throughout, see J. L. Krapp, *Language of the Engwada People, or Language of the Wakwāh Nation*, Tübingen, 1864 (French is noteworthy); J. Erhardt, *Vocabulary of the Engwada People, as spoken by the Masai Tribes in E. Africa*, Bonn, 1867; J. Thomson, *Through Masai Land*, London, 1888; H. H. Johnston, *The Kilima-njaro Expedition*, do, 1888; *The Uganda Protectorate*, do, 1904; S. L. and H. Hinde, *The Last of the Masai*, do, 1902. H. H. JOHNSTON.

MASBOTHMANS.—According to Bus. *HE* iv. xiii. 51, Hegesippus had written of the Hemerobaptists and the Masbothmans (*Masbothai*)¹ as two distinct sects 'in the circumcised among the children of Israel.' The brief characterisations of the Masbothman sect given by the ancient heresiologists are based simply upon their etymologies of the name, which they connect either with the word 'sabbath' or with *mas*, 'will,' 'purpose.' Among modern scholars A. Hilgenfeld has advanced the conjecture that the Masbothmans were the followers of the early heretic Thebuthis, also mentioned by Hegesippus, but in all likelihood the name simply means 'baptists.' In glossaries of Palestinian Aramaic the only word given for 'baptism' is *masbōthā*, and, as we know that among the Mādmans on the Euphrates the regular term for ceremonial immersion in running water was *masmo* (see art. *MANDMANS*, p. 387^b), we can hardly doubt that *Masbothai* signifies people in whose religious practice such immersions formed an outstanding element. Thus the Gr. term 'Hemerobaptists' might quite well have been applied to the same group, and the idea that the two names denoted different sects may simply have been a mistake on the part of Hegesippus. It is, no doubt, the case that in the time of Hegesippus there were among the Jews various parties which advocated the practice of immersion, each, however, after its own particular form: there were, e.g., the devout, who bathed every morning and evening, and the 'bathers of the early morning,' who thought it necessary to perform an immersion before morning prayer. The term 'Hemerobaptists' would, of course, be quite appropriate for both groups.

The designation 'Masbothmann,' however, would

¹ In *Apoc. Const.* vi. 8 *Masbothai* (= *mas*); the form *Masbothai* (*masbōth*, *Masbothai*) appears as a Lat. transcription of the name from the *Armen. tr.* of a Syr. text in one of the two MSS. of G. Monod's, *Fragmenta concordantiae apostolicae fidei et canonis Ephraemi*, Venice, 1874, p. 120.

also suit the Elkasaite, and, in fact, pointedly suggests that sect, as the Elkasaite tradition contains the name *Zakai*, formed from the same verbal root as *masmo* (cf. art. *ELKASITES*, vol. v. p. 265^a). By the time of Hegesippus the Elkasaite had become so numerous in Palestine—though only, it is true, in the territory east of the Jordan—that he can hardly have remained ignorant of their existence. On these grounds, accordingly, it would seem very probable that those who had become known to him as the sect of the Masbothmans were none other than the Elkasaite.

LITERATURE.—A. Hilgenfeld, *Die Ketzergeschichte des Urchristentums*, Leipzig, 1884; W. Brandt, *Die mandäische Religion*, do, 1888, p. 180; *Elkasaite*, do, 1912, p. 23 E. On the Jewish Hemerobaptists and 'bathers of the early morning': Brandt, *Die jüdischen Baptisten*, Göttingen, 1910, pp. 42-43, 51 ff. W. BRANDT.

MASK.—A mask may be defined as a moulded surface, representing the anterior half of a head and face, and usually worn over the face of a person. Further significations are the cast taken from the face of a dead person and the parallel form in sculpture—the front half of a human head and face preserved—and the head of a fox. A division is made by W. H. Dall into 'mask' proper, 'maskette,' resembling mask but worn not upon but above or below the face, and 'maskoid,' resembling mask, but not intended to be worn.¹ This division is primarily anthropological.

The use of masks in one form or other and for various purposes has been practically universal in all stages of culture above that which the natives of Australia may be assumed to represent. The greater proportion of the Polynesian peoples are an exception. It will be most convenient to arrange the subject according to the purposes for which the mask is employed, incidentally noting details of form and manufacture and variations of general type. It may be noted at once that both in form and in use there is the usual similarity between the most widely separated races. The mask is in most cases ethnologically independent in origin.

1. Views as to the original meaning of masks.

—The usual purpose of a mask is disguise by a more or less defined impersonation, impersonation alone, or, more rarely, protection, physical or moral. The figures impersonated may be real persons, imaginary persons, especially spiritual and divine, or various animals and natural objects. Robertson Smith regarded the use of animal masks in religious ceremonial as a survival of an earlier practice according to which the worshipper put on the skin of a victim, in order to 'envelop himself in its sanctity.'² In the form of a 'maskette' many peoples have used the heads of animals, even as a war head-dress. The ritual mask is frequently credited with the power of imparting to the wearer the qualities of what it represents. The Eskimo believe that the wearer is 'mysteriously and unconsciously imbued with the spirit' represented by the mask, and, when wearing the mask of a totem, he becomes that totem.³ In the drama of the Pueblo Indians the actor is 'supposed to be transformed into the deity represented.'⁴ The wearer of a mask in the dances of 'primitive' peoples is 'assimilated to the real nature of the being represented'—possessed by him.⁵ But neither this belief nor the desire to be enveloped with sanctity can be regarded as the original factor in the invention of the mask. Dall considers the original mask

¹ W. H. Dall, 'On Masks, Labrets,' etc., in *J. R. S. S.* [1884], p. 26.

³ E. W. Nelson, in *J. R. S. S.* [1899], pt. i. p. 104 f.

⁴ J. O. Frazer, *Totemism and Exogamy*, London, 1900, pt. 2, 227 f. *Kashima* means both 'deity' and 'masker.'

⁵ H. Weber, *Primitive Social Societies*, New York, 1908, p. 70 ff.

to have been a shield held in the hand to protect the face from missiles, and later worn on the face, after which it was carved into a terrifying aspect, with the object of frightening the foe. On another line of development it became the helmet; but this view also fails to give any original psychological element. The Australians do not have the mask, but in their ceremonies they disguise the face by painting, or with down and blood. Previous to the invention of the Attic dramatic mask, the Dionysian mummers painted their faces with wine, possibly with the idea of assimilation to the deity, as in the case of the ancient Roman kings and generals, whose faces were painted with vermilion on state occasions to resemble Jupiter. But this idea is clearly secondary. Again, it cannot be argued that the mask is a development from the custom of painting the face. The two are parallel reactions to the irreducible dramatic instinct in its elemental phase of the assumption of another personality. The elaborate facial make-up of modern dramatic art is, when contrasted with the Attic masks, a fair analogy to the blackened face of the modern peasant mummer, as contrasted with the wooden masks of the N. American dancer. We may conclude that the ideas of assimilation, whether magical or religious, of terrorism, of protection, and even of disguise are secondary, and that the primary meaning of the mask is dramatic; the mask is a concrete result of the imitative instinct.

The various purposes, therefore, to which the mask is applied have no necessary development from one another, but are natural applications to particular purposes of the original mimetic instinct.

2. *War masks.*—These are not of frequent use. In Central and E. Africa warriors used hideous 'masks' of zebra hide. The natives of Yucatan wore masks representing lions, tigers, and so forth, to terrify the enemy. In medieval Europe and Japan soldiers wore helmets fronted with frightful masks. The frontal skull on the helmet of the German 'Death's Head Hussars' is of similar origin.

3. *The mask of terror.*—For other purposes than those of battle, the terrorist idea has been applied. The Chinese placed horrible paper masks on the faces of their children in order to frighten away the demon of smallpox.¹ In Africa there has been the office of 'sham devil.' In China, in order to neutralise the activity of an evil spirit, a man was masked to represent it, and placed in its sphere of operations to discourage its advance.² The Greek myth of the Gorgon's head was inspired by similar ideas, with which a primitive custom may be compared: in Timor-laut, in order to deceive evil spirits and prevent them from injuring the remains of a dead man, a coco-nut mask was placed near the body.³ The further idea is here involved of protection by means of a mask which, so to say, draws the enemy's fire.

A similar use of the mask is seen in the expulsion of evils. The people of China and Celebes, when 'driving out devils,' blacken their faces or wear masks. Possibly the masked Perchten of Central Europe had originally a similar function. There may have been a mimic struggle between the Beautiful and the Ugly masks, symbolizing a struggle for the crops; masked mummers at Kayan sowing festivals represent evil spirits.⁴

4. *The mask of justice.*—Officers of justice or terrorism assume the personality of a supernatural

inquisitor, the Vehm of medieval Europe being a historical case. Executioners wore a mask, and possibly the black cap of the judge is an adaptation.

5. *The mask in secret societies.*—These institutions are practically universal in the middle culture.⁵ In some cases they include among their functions the administration of some form of justice. This, like all their proceedings, is carried out with mystery, and the mask is employed along with other disguises or impersonation.

The Bindango society of Loango collects debts; the collectors wear masks.⁶ The Kukkwi, Egbo, and Egungun are other instances of these W. African societies; their masks are based on various ideas connected with the tutelary spirits of the society.⁷ The Ogboni society of the Yoruba-speaking peoples is closely connected with the priesthood, and the king is obliged to submit to its decrees. The mask of Egungun represents a hideous human face; he is supposed to be a man risen from the dead, in order to spy out what is going on in the land of the living and carry off those who misbehave.⁸ The Tamate of the Banks Islands is a secret society whose name means 'ghosts.' The members possess much power, and periodically hold meetings and processions, wearing their masks.⁹

The famous Duk-duk societies¹⁰ of New Britain, New Ireland, and the Duke of York Islands comprise practically the whole of the adult male population. In one aspect of its functions the Duk-duk is a personification of justice—judge, policeman, and executioner in one. The remarkable head-dresses worn by the operators are technically mask-like structures, representing some spiritual force in the semblance of a camowary. The operators are two, Duk-duk representing the male and Tubuan the female camowary. The mask worn by each is a 'huge hat-like extingisher' of grass or palm-fibre, 6 ft. high. As far as the body-dress is concerned, it may be said to represent the camowary, but the head is 'like nothing but the head of a Duk-duk.' A long stick is at the apex, and the 'trees' are coloured red. The female is said to be plain, the male more gaudy. The extraordinary belief is held that the Tubuan mask gives birth to the novices when initiated into the society; and two female masks are kept from year to year for the purpose of annually breeding two Duk-duks. The persons acting seem to be lost or merged in the mask. No one is supposed to know who the actors are. The male masks appear to be burned after the ceremony.

The committees of adults who supervise the 'making of young men' are frequently dressed in disguise and wear masks. In Torres Straits on these occasions a man represents the deity Agud; he is painted all over and wears a leaf petticoat and a turtle-shell mask. Several masked megar (devils) frighten the novices, who are well beaten, and are told the dreadful names of the masks.¹¹ A 'wolf' society among the Natives holds initiation meetings; men wearing wolf-masks carry off the novices.¹²

6. The divine mask. — The shaman of N.W. America, e.g., among the Makaha, has one mask for each of his familiar spirits. When giving a dance, he puts on a mask and summons the spirit with his rattle.¹ The Eskimo shamans, in making their masks, give expression to their ideas of the spirits represented. Here is a primitive source of creative plastic art. The shaman is said to be able to see through the animal-mask to the manlike face behind.² In the ritual of ancient Mexico the priest wore a mask representing the god.³ On the other hand, priests in Nigeria may not wear or touch a mask.⁴

From a similar point of view the protégé of a guardian spirit wears a mask, when dancing, to represent that spirit and identify himself with it.⁵ The Mowambo of New Guinea wear masks representing guardian spirits, when they appeal to them for help, fair weather, and the like, among the masks being those of kangaroos, dogs, and emu-worms. The masks, when made, are fumigated in order to 'put life into them.' They are treated with respect and addressed as if they were living persons. A man wears a mask representing his totem. This practice is common in N.W. America,⁶ and the belief is that the wearer becomes the totem-animal.

The image of a god may wear a mask; the Mexicans placed on the face of certain idols masks of a human face cut off from the skull and preserved. They also used elaborate masks with pyrites for the eyes, and obsidian and turquoise mosaic in hands across the face.⁷ The image of the goddess 'Our Mother' wore a two-faced mask, and her priest donned a replica of this.⁸

7. The death-mask. — In connexion with the dead the mask has been exploited along interesting lines, assisting among other things the art of portrait sculpture. Besides the practice of embalming or otherwise preserving the heads of dead friends or enemies, several peoples have made masks of these. One such has been mentioned as placed upon the face of a Mexican idol, and there is a fine example in the Christy collection in the British Museum. In New Britain and elsewhere in Melanesia and New Guinea, such masks (skull masks) were worn in sacred dances.⁹ The Mexicans also placed painted masks or masks of gold or turquoise mosaic on the faces of their dead kings.¹⁰ The Aleuts covered the faces of their dead with masks.¹¹ The meaning of the last practice is obscure, but the Aleuts think that it is intended to protect the dead against the glances of evil spirits. Their practice of wearing masks in certain religious dances, so as not to behold the idol round which they revolve and whose glance means death, may be compared.¹² Similarly, among the Guaymis of Panama, during the initiation of young men, the women who attend upon them wear masks.¹³ Basuto girls at puberty wear straw masks,¹⁴ and Lilloot girls (British Columbia) wear goat-skin masks at the same period.¹⁵ In Mexico, when the king was ill, the images of the gods were masked, possibly to prevent them from drawing away his

soul.¹⁶ Some idea of disguising a person dangerous or in danger may be connected with the practice, and here the mask is merely a veil. In Siam and Cambodia masks of gold were placed on the faces of dead kings. The Shans have the same custom, using masks of silver or gold.¹⁷ These cases and the next seem to touch upon the idea of a portrait. The Egyptian mummy had an artificial face forming part of the portrait superstructure over the corpse. Death-masks proper, of gold, silver, bronze, and terra-cotta, have been found in Mesopotamia, Phoenicia, the Crimea, Italy, France, the Danube valley, and Britain.¹⁸ The most conspicuous and complete examples are supplied by Mycenae and Rome. In the famous shaft-graves opened at Mycenae golden masks, 'clearly portraits,' were found, corresponding to men and children. Those at least of the latter, being of thin gold leaf, 'must have been moulded with the hand on the faces of the dead.' The masks of the men were of thicker plate, and had no eye-holes. 'The hands and feet of the children were also wrapt in gold leaf.'¹⁹ This suggests that the informing idea was similar to that of swathing the dead, painting the face, and otherwise decorating, while protecting, the corpse. The Roman *nodulus* kept wax portrait-masks of their ancestors in the atrium.²⁰ The dead *nodulus* lay in state for seven days, during which the embalmer (*pollinator*) took a mould of the face, which he then cast in wax, and painted with the natural colours. The mask was placed on the dead man's face, or, in case of putrefaction, on an effigy. After the burial the mask was hung in the atrium, possibly fixed on a bust, and under it was a *titulus* giving the name and exploits of the man represented. These images were connected by lines, giving the genealogical succession, and termed *stemonata*. The *ius imaginum* gave a man the right of having his image carried in the funeral train of a descendant. The remarkable custom was that a man was followed to his tomb by all his ancestors, their masks being worn by persons as similar as possible in stature and form, riding in chariots. Marcellus was attended by six hundred of his forefathers and kin. The images were crowned with laurel on feast days. By Pliny's time the wax masks were giving way to *diapente imagines*, i.e. medallions of metal.²¹

Since Roman times the method of securing a portrait by taking a mould of the dead man's face has been continued in the case of great personages. This is the 'death-mask' of sculpture.

8. The dramatic mask. — The secret societies of N.W. America are, in contrast with those of Melanesia and Africa, chiefly concerned with dramatic representations. Their 'masonic' privileges are important, but they exercise little authority; in fact, these societies might be described as amateur dramatic clubs, with a religious setting like that of the medieval gilda. Fraser describes the institution as 'a religious drama' like that of ancient Greece.²² Various purposes other than that of entertainment are fulfilled by the performances; various, too, are the characters represented, according to the constitution of the society, whether totemic or consecrated to guardian spirits or otherwise. But the essence of their

function is pantomime, and the mask is the means of impersonation. The masks are made of various woods—alder, maple, or cotton-wood; they are large and prominent of feature, painted red, black, and white. In some of the grotesque sort the eyes and jaws are movable, and worked by a string. Some are held by means of a mouth-bar. Some masks are two-faced, enabling the actor suddenly to change his character.¹ The masks are surrounded, as usual, with considerable mystery, and are burned or thrown away at the end of the season. For their manufacture and use there are elaborate rules. No uninitiated person may see them being made. Little masks are worn on the fingers.² The masks represent human persons—mythical, sometimes hideous—or animals. Ancestors, spirits, *sukis* (tutelary spirits), natural objects (e.g., the sun-mask of the Kwakiutl, 'set round with seal's whiskers, and feathers, which gradually expand like a fan'), animals, and birds form the subjects of a remarkably varied collection. The Tsimshians have a mask representing the thunder-bird, and at the performance mock lightning is produced and water is poured from the roof on the spectators. Salish masks represent the ancestors of the clans, viz. the wolf, owl, frog, and coyote. But, since the wearing of a mask is regarded as being unlucky, well-to-do men hire professionals to represent them. This idea may be compared with civilized prejudices against the actor's profession. The dances are pantomimic representations of the myths stored by the society, and may thus be compared with the magical pantomimes of the Australians, intended to encourage the natural processes which they represent, and, on the other hand, with the medieval 'morality,' which was an object-lesson in good and evil. The use of the mask 'throws a sort of mysterious glamour over the performance and at the same time allows the actor to remain unknown.'³ Apart from entertainment, the pantomimes are performed in honour of dead personages, or to bring blessings on a particular man or the community. In N.W. Brazil a very pretty pantomime is performed in honour of the dead, at which the masked actors represent the gorgeously-coloured birds and insects of the forest.⁴ The drama of the Pueblo Indians is remarkable; it has features resembling those of the morality and the Greek drama. Divine beings are the characters represented by masked actors. The performances take place in the village square, and have (at least as a secondary object) the intention of procuring rain, good crops, or prosperity in general.⁵

The Lamas of Tibet practiced a regular religious drama, exactly parallel to the European morality and mystery; there were good and evil spirits, a protecting deity, men, and animals, and for all there were the appropriate masks.⁶ The Burmese drama employed masks for character types such as king and minister.⁷ Siamese actors wore paper masks, coloured green, red, black, or gold. A peculiarity was that the wearer did not speak; the parts were spoken by prompters.⁸ In Japan the dramatic masks of paper or lacquered wood were very elaborately artistic, gods, demons, men, and animals being represented in masks by good artists.⁹

The drama of ancient Athens, both tragic and comic, employed the mask, which had been used in the old Bacchic regimeries that seem to have produced the drama. Previously the mummery had smeared their faces with wine or covered them with fig leaves. Similarly, the peasants of Latium wore masks of bark in the Bacchic festivals.¹ The dramatic use of masks was first established by Thespis, who previously had painted his face with white lead or purlana. Linen masks unpainted were then adopted; Chorus improved them; Phrynichus introduced female masks; and Aeschylus added paint and generally fixed their form.²

The Greek mask was made of linen, or, sometimes, of cork or wood. It was large (in tragedy) to correspond to the superhuman proportions of the actors. The *oklos* (*ὄκλος*), a cone-shaped prolongation of the upper part of the forehead, added aim and dignity to the head. The white of the eye was painted strongly, but an aperture was made for the actor to see. The mouth was permanently opened wide, and the tradition remains, unexplained, that resonance was given to the voice by means of the shape of the mask. All that the mask aimed at was the bold emphasizing of types; every feature was exaggerated, and in the huge theatres of the Greeks this fact was essential. No change of facial expression being possible and the finer shades of emotion being excluded, the mask prevented any considerable evolution of the psychological drama. 'It would be difficult to imagine the part of Hamlet played in a mask.'³ Pollux enumerates twenty-eight styles of tragic masks. The tyrant's mask had thick black hair and beard and wore a frown. The lover's face was pale.⁴ The comic mask was, in the Old Comedy, the portrait of a real person; when Aristophanes presented *The Clouds*, Socrates stood up in the auditorium to enable the audience to identify the mask of his impersonation; but, when Cleon was to be staged, the makers refused to supply a mask, such was the fear inspired by the demagogue. In the New Comedy of manners types were represented. The hot-tempered old father wore a mask with one eyebrow drawn up and the other normal; he expressed his changes of temper by turning this or that side.⁵ The Roman drama dispensed with masks until the time of Roscius, who is said to have introduced them on his own account, being ugly and affected with a squint; but they had always been worn in the old fashioned *Atellanæ*, in which an actor, when hired, was obliged to remove his mask.⁶

In mediæval Europe and England the mask was used in the folk-drama from which the modern drama was evolved. At the Feast of Fools references are made to the wearing of masks through the period from A.D. 1200 to 1445.⁷ The term 'visor' was usual for the mask. 'Mumming' and 'disguising' were terms for the various folk-plays, which were often suppressed.⁸ A side-development of this drama, and a new application of the word 'mask,' were made in the 'masque' popular in Elizabethan times.⁹

The theory of Frazer as to the magical and religious origin of the drama may be tested by the special case of the mask. He writes:

² *Id.* pp. 282, 283.
³ See *Ant. Coll.* v. 7, and Smith's *Dict. of Gr. and Rom. Ant.* s.v. 'Purpura'; this term refers to the ressemblance.
⁴ Pollux, *Onomasticon*, IV. 120-121.
⁵ Hays, pp. 282, 283.
⁶ Smith's *Dict. of Gr. and Rom. Ant.* s.v. 'Purpura'.
⁷ E. E. Chambers, *The Medieval Stage*, Oxford, 1902, I. 307.
⁸ *Id.* p. 304. Chambers connects the terms 'mumming,' 'mummers,' with the Low German *Mumme* ('mask'); it is connected with *mum*, *mum*, used by nurses to frighten or soothe children, while pretending to cover the face.
⁹ *Id.* p. 305 ff.

'Adam sought to draw down blessings on the community by mimicking certain powerful supernatural beings and in their assumed character working them beneficent miracles which in the capacity of more man they would have confused themselves powerless to effect.'

The mimetic magical ceremonies of the Central Australian natives are a strong piece of evidence in favour of this view, but it seems more probable that the native mimetic instinct expressed itself first with no particular purpose, being later applied to various magical or religious aims. It is impossible to prove that the earliest masks or even face-paints represented anything but fanciful characters of merely dramatic import.⁹ The instinctive delight in personal disguise is a universal element in all the applications of the mask, and is repeated to-day in the custom of civilised peoples of wearing a mask on the upper part of the face at fancy-dress balls, which reproduces the barbaric entertainments of lower cultures. The burglar's mask is another modern reproduction of the idea of disguise, but employed for utilitarian purposes.

9. The swinging mask.—Cases have been cited of the mask being separated from its wearer and becoming more or less of an idol. The ancient Italian oscilla are an interesting parallel. These were miniature masks in wax, marble, or terra-cotta, and apparently wool, which were hung up on trees at agricultural festivals, and allowed to swing in the wind.¹⁰ The intention may have been magical, to make the crops or vines grow, by disseminating magical force, by swinging high,¹¹ or by the virtue of movement.

10. Masks in metaphor and history.—Many obvious metaphors have been inspired by the mask, which need not be recapitulated. In history the Faux Visages, a section of the Ghibelline faction in the 13th cent., otherwise the Mascarati, are curiously repeated in name by the 'False Faces' secret society of the Iroquois.¹² 'The man in the iron-mask' is a historic mystery illustrating the permanent fascination of this element of applied psychology.

LITERATURE.—This is fully given in the article.

A. E. CRAWLEY.

MASS.—See EUCARIST.

MAŠEUBHĀH.—In the OT מַשְׁבָּהָה (massebah) denotes a standing-stone, stele, obelisk, or pillar, sometimes conceived as being an abode of spirit or deity. The name is derived from mas, 'to set up' (Phoen. mas, 'tombstone'; Arab. masb, pl. masab; Aram. mas; Syr. prop. name Nisibis; Palmyrene (a)mas). The massebah is referred to as a heathen symbol of the Canaanites (Ex 23²⁴ E, 24² J, Dt 17¹⁷), and as an adjunct to a temple of Baal (2 K 17¹⁰). It is frequently conjoined with an Asherah, which was primarily a sacred tree and later a stump or post (1 K 14²³, 2 K 17¹⁰ 18²²). Massebah and Asherah were so frequent that it could be said that they might be found 'upon every high hill, and under every green tree' (2 K 17¹⁰). The word massebah is used to describe sacred stones in connexion with an altar (Ex 24² E [erected by Moses], Hos 10¹⁴, Is 19¹⁹ [without condemnation, the article being considered usual in Hebrew worship]). The strong pillars of Tyre doomed to destruction are called massebah by Ezekiel (26¹¹), and Jeremiah (48¹³) uses the same term for the Egyptian obelisks at Heliopolis. The use of massebah is strictly forbidden to Israelites by the

⁹ G. P. vi, The Shapenot, p. 176; cf. the custom of wearing masks representing the animals about to be hunted. This may have an obviously utilitarian origin (Dak, p. 167, n.).

Deuteronomistic code and in the Law of Holiness (Lv 24¹⁷), and the editor of the books of Kings estimates their character in the light of this prohibition. The earlier writers, especially E and Hosa, see no harm in these stones; but the teaching of the other prophets of the 8th cent. evoked an aversion, and Hosaiah, Josiah, and Deuteronomy insist on their destruction. Later writers, such as P, consider the altar a divinely authorized instrument of worship, and they scruple to describe the patriarchs as having anything to do with the massebah, representing them as making altars (cf. LXX Ex 24², substituting 'stones' for masb). Hebrew monotheism, when fully developed, denuded sun and moon of their ancient divinity (Gn 1¹⁶⁻¹⁷): 'The heaven is my throne, and the earth is my footstool: what manner of house will ye build unto me?' (Is 66¹⁷). At such a period in Hebrew thought there was no longer any superstitious regard for stones, cairns, cromlechs, or menhirs.

Stones are used with no occult associations.

Stones commemorated a victory by setting up a stone which he called Eden-ur (1 S 7¹²); the Temple has two pillars, Jacob and Beal, set up in the porch (1 K 7²¹). Inscriptions are recorded on stones (Dt 17¹⁶, Ex 24²) [the Ten Words], Jacob's grave is marked by a stone (Gn 35¹²), Abraham in his lifetime raised a pillar, called a 'heap,' to perpetuate his memory (1 S 14²⁵); an agreement between Jacob and Leah (Gn 31⁴⁵⁻⁴⁷) as to the boundary between them is marked by a stone and cairn (Gn 31⁴⁵⁻⁴⁷, 'cairn of witness').

When men sought an enduring memorial, when they wished to make the deity the protector of a covenant, they often chose some form of stone as an emblem of the divine presence. Something more than this is indicated in a few instances.

Jacob set up a stone for a massebah, poured oil upon the top of it, and called it Beth-el (Gn 28¹⁸). On 28¹⁸ adds that Jacob poured a drink-offering thereon. As the massebah is found associated with altars and Asherah figures in religious centres, Jacob's ceremony implies more than it states. Jacob set up a stone saying, 'This stone shall be a witness against me, for it hath heard all the words of the Lord which he spoke unto me' (Gn 28¹⁸ 22). The use of unburnt stones for an altar (Ex 20²⁵, Dt 17¹⁶, Jos 8²⁸) betrays the feeling that the stone would offend the deities in the stones.

Summit and other parallels show that such instances are surviving specimens of an elaborate system of stone-worship. The massebah is found in the cognate languages, and denotes 'lapides qui divi dicuntur' (Lampridine). Among the primitive Arabs the masb serves as an altar, the victim's blood is smeared over it; hence the name *sharby*. It is, however, more than an altar, it represents the god-head' (J. Wailhansen, *Revue arab. Haddentemas*, Berlin, 1887, p. 90). Herodotus (iii. 8) describes Arabs making a covenant.

As unburnt stones were used with a sharp stone from the head of each of the two persons making the covenant, and with part of their garments he smears the blood on seven stones placed between them, invoking Ormuz and Allah. Herodotus might have added that the parties tasted each other's blood (W. B. Smith, *Hebrew and Semitic*, London, 1907, p. 22 E.).

The Canaanite high-place discovered at Gezer reveals the conspicuous place assigned to standing-stones in the cult of Palestine before the Hebrew occupation (R. A. S. Macalister, *Excavation of Gezer*, London, 1912). Phoenician coins and temples confirm the sanctity of the stone column, and the Greek name *stairalos*, *stairalos*, appears to be derived from Beth-el.

Theophrastus, in the 4th century B.C., depicts the superstitious Greek passing the sanctified stones in the streets, taking with him phials and pouring oil on them, falling on his knees to adore, and going his way (PO II. 145).

Traces of like practice are recorded down to the present day. A full description of 'a shrine of pre-Islamic stone-worship' with a ritual preserving pre-historic customs in a Turkish village of Macedonia is given by A. J. Evans in his 'Mycenaean Tree and Pillar Cult' (JHS xxi. [1901] 99 ff.). It is due to prophetic intolerance of the irrational and immoral that so slight traces of idolatry remain in the OT.

'What mean ye by these stones?' asked the Hebrews; *ra'io in ebeuro*, answered Tacitus. To seek one principle consistently applied is as hopeless in custom as in a language. Feeling, variable and indifferent to logic, determines usage in regard to sacred stones. Mountains have inspired awe and affection—e.g., Olympus, Fujiyama, Hermon, Horob, Sinai—and it has been suggested that the sacred pillar is a little model of the Holy Hill. Meteorites have been found and treasured; and, if the host of heaven received adoration, any fragment coming on a path of light, like a falling star, or supposed to be sent amid thunder and lightning would command devotion (cf. Diana of the Ephesians and the image which fell down from Jupiter [Ae 19th]; *Survivor* in Damascus, quoted by Photius [A.D. 850], *Biblioth.* 342b, 26; 343a, 28; the Ka'ba at Mecca, as R. Burton thinks [*Pilgrimage to El-Medina and Mecca*, London, 1893, ii. 200 f.], retaining its sanctity in spite of Islam). Moreover, the shadow of a pillar is a clue to the movement of the sun and the regulation of the calendar. The structures at Stonehenge 'and for the most part an astronomical use in connexion with religious ceremonies' (N. Lockyer, *Nature*, lxxiii [1906-06] 153; see also series of Notes on Stonehenge, ib. lxxiii [1906] 32, 246, 270, lxxiii. 294). The same conclusion is maintained with regard to the standing stones of Stenness in Orkney by M. Spence (*Scottish Review*, xxii. [1903] 401-417). The late Hebrew term *ṣapṣā*, rendered uniformly 'sun-images' in RV (Ezek 8th, Lv 26th, Is 17th 27th, 2 Ch 14th [cf. 14th] 34th 7), probably represents the *ṣapṣā* with solar associations. Palestine had a human past before the Hebrews entered it. The stone-tables (*dolmens*) occurring in hundreds suggested limitation; the menhirs to the east of the Jordan served as prototypes of the *ṣapṣā*. Of the more obvious influences specified by the Biblical writers the commemoration of the dead has always been the strongest inspiration.

Cup-markings on the *ṣapṣā* or on adjoining altars are not infrequent (cf. art. CUP AND RING-MARKINGS). On an altar they are supposed to receive the blood of the victim; on a tombstone they would serve for food and drink offered to the dead, although a plain Turk explained the hollows on tombstones as meant to gather water for the birds. The cups are sometimes in the side, not on the upper surface of the stone; and they may be arranged in the shape of a horse-shoe. Cup-markings are held to be inconsistent with the purpose of the pillar in one case at Gezer, and the situation showed that the cups and pillar had not originated at the same period (PEFS^t xxvi. [1904] 113 f.). The cupped stone is cited to explain Zac 9: 'Behold the stone that I have set before Joshua; upon one stone are seven eyes: behold, I will engrave the graving thereof, saith the Lord of hosts, and I will remove the iniquity of that land in one day.'

An article by E. D. Eordmans (in *JBL* xxx. [1911] 109-118), entitled 'The Sepulchral Monument "Mappabab" has revived discussion on the meaning of the pillars.

The *mappabab* is easily explained as a house for the soul. Therefore the name of the deceased person is inscribed upon it, and the monument itself is called "soul." The male form was chosen for the graves of men, the female form for the graves of women' (p. 115).

This result has, with some reservations, been approved by E. Sellin, who adds corroborations and, in consequence, suggests striking interpretations of Is 6th and 51st. (*OLZ* xl. [1912] 119 ff., 271 ff., 566 f.). The views of Eordmans and Sellin are strongly contested by K. Budde (ib. 346 ff., 400 ff.). This indication of sex is a welcome improvement on the *suggestio concupiscentiae* which prevailed for some time. In spite of Herodotus, ii. 106, and

similar testimony in Lucian, and the phallic columns at Gezer and Petra, it appears that this was a subsidiary and occasional interpretation of the standing-stones. The feeling that the stone slab or pillar may serve as a resting-place for the soul is supported by the Jewish custom in Oriental cemeteries (ṣay ṣay, as they are called) of giving every individual a stone. The inscribed name indicates the sex, apart from a special shape of the stone. The tombstone of a Rabbi or of a person who died of cholera has a distinctive shape.

MASTER AND SERVANT.—See EMPLOYER, EMPLOYMENT.

MATERIALISM.—Materialism is one of several types of metaphysical theory concerning the nature and number of the ultimate principles to be assumed in order to explain the universe. Dualism (q.v.) asserts that two independent principles must be presupposed, viz. mind and matter. Monism (q.v.)—in the qualitative sense—regards these two principles as simply modes or aspects of one ultimate. Monism—in the quantitative sense—is opposed to dualism in regarding one principle as sufficient. There are two kinds of such monistic theory: spiritualism, which affirms mind or spirit to be the only ultimate reality, and materialism, which makes the same assertion of matter. Thus, according to the doctrine of materialism, extended, impenetrable, eternally self-existent matter, susceptible of motion, is the one fundamental constituent of the universe; mind or consciousness is but a mode or a property of such matter, and psychical processes are reducible to physical. More precisely, there are three kinds of metaphysical materialism, thus described by Külpe (*Introduct. to Philosophy*, Eng. tr., p. 117): 'attributive materialism, which makes mind an attribute of matter; causal . . . , which makes it an effect of matter; and equative . . . , which looks upon mental processes as really material in character.'

1. History.—The atomism of Leucippus and Democritus is the earliest example of materialistic theory. According to these philosophers, the physical world is composed of invisible material particles, and mind is made up of similar atoms, smaller, rounder, smoother, and more mobile. The theory reduced all qualitative differences to quantitative (of size, form, arrangement), banished final cause or intelligent purpose from the world, denied the immortality of the soul, and interpreted the universe only in terms of mechanism and fixed law. The last element in early Greek atomism does not necessarily presuppose or involve materialistic theory, though Lange, the historian of materialism, seems to see in it the chief virtue of early materialistic speculation. The theory of Leucippus and Democritus was developed by Epicurus and Lucretius, with certain modifications.

At the beginning of the modern period the early Greek materialism was revived by F. Gassendi, who, however, deprived it of metaphysical significance by reconciling it with belief in God as Creator of the atoms. T. Hobbes, at the same time, taught a similar view, so that, though the tone of his philosophical system is materialistic, he cannot be called a thoroughgoing materialist. He strongly insisted that all that exists is body or matter, and that motion is the only kind of change in the universe. Gradually developing in England, materialism perhaps reached its climax in the writings of the French Encyclopædists (q.v.), after sciences had revealed how closely psychical states and

mental development depend on the body. P. H. D. Holbach's *Système de la nature* (London, 1770), which rejects every form of spiritualism and supernaturalism, marks the culmination of this movement of thought.

Nearer to our own time materialism appeared, as a reaction from post-Kantian idealism, with renewed energy in Germany, K. C. Vogt, J. Moleschott, and L. Büchner being its leading exponents at about the middle of the 19th century. Their writings, though evincing—for the first time, perhaps, in the history of materialism—some sense of the need of an epistemological foundation for a metaphysics which resolves mental processes into material, reveal great crudity of thought and knowledge in this connexion, and in spite of their popularity are of no philosophical worth to an age which is careful and critical as to epistemological presuppositions, especially such as are involved in the physical sciences. Description of physical and even mental processes, in the language of materialism, is easier to science; and this fact, together with the jubilant confidence with which science, flushed with many successes, ever-hastily exaggerated its own scope and functions a generation ago, accounts for the materialistic colouring which many generalisations of natural knowledge have received—a colouring which has often been taken by students of the physical sciences, unpractised in philosophical reflection and criticism, for an essential implication or consequence of scientific truth rightly so called. T. Huxley, who on occasion could teach materialism of the most dogmatic kind, and in another mood would capitulate to spiritualism, sought permanent refuge in agnosticism; and, since his earlier and more militant essays, materialism has found no literary champion among British scientists. In dogmatic form it is to be found to-day, perhaps, only in the literature of secularist 'free' thought. Even the monism of E. Haeckel, which is materialism in all but its name, awakens no enthusiasm among scientific students in Britain; it is rightly regarded as involving an obsolete standpoint which science, more alert and cautious—if not more critical—than formerly, has left behind.

3. The attractiveness and plausibility of materialism.—The chief outbreaks of materialistic metaphysics have coincided with occasions of renewed interest in, or remarkable progress of, physical science. The emergence of this tendency to regard the world as fundamentally material, at successive epochs in the history of thought, is evidence that materialism strongly commends itself to many minds, especially to those whose studies chiefly lie in the sphere of the physical sciences.

There are many reasons for the attractiveness of materialism as a metaphysical theory or view-of-the-world to such minds, and the view possesses great plausibility when it is contemplated from the epistemological standpoint which the natural sciences, as well as the philosophy of common sense or ordinary social intercourse, take for granted. These reasons may now be specified, and the assumed theory of knowledge whence they derive their plausibility examined.

One reason why, as H. Höffding says (*Problems of Philosophy*, New York, 1906, p. 146), 'ever and again essays are made in the materialistic direction, although—since the advent of the critical philosophy—not with such dogmatic assurance as formerly,' is that our knowledge of matter, its changes and its properties, is so much greater, and so much more easy to obtain, than our knowledge of mind. Psychology is a comparatively young science. In so far as it embraces psychophysics and is pursued in its relation to physiology, even psychology deals with matter rather than

with mind. And in so far as it is pursued by the analytic method—the only truly psychological one—it is a study beset with enormous difficulties. Moreover, such psychological knowledge as is forthcoming and established is rarely studied by the investigator of physical phenomena, so that he proceeds in abstraction from essential elements involved in every 'objective' fact that he examines and classifies. Psychology, again, more immediately involves metaphysics, which for the most part is as yet disputed ground. Lastly, the physical sciences owe much of their prestige to the fact that they are based on measurement, and, being thus quantitative, are capable of mathematical treatment, whereas in psychology (of the pure or analytic kind) measurement is out of the question.

The physical sciences, again, impress us with their connectedness. The connectedness of the material world exercises an overwhelming power on our minds, and especially upon the imagination. Mind, on the other hand, is discontinuous; it is known only in the form of individual minds; and these minds are not known, as yet, with anything like certainty, to communicate with each other through any other medium than that of matter. Further, we know minds only in connexion with bodies or material organisms, and, so far as observation goes, we have no knowledge of mind existing independently of body, though—again, so far as observation goes—it seems that most material 'things' exist without mind. Science teaches us almost of the past history of a material world which existed for ages before organic beings, which alone experience enables us certainly to endow with minds, could exist upon it. Yet more impressive is the array of facts furnished by physiology, comparative anatomy and psychology, and pathology as to the concomitance of psychical processes with physical, their dependence on material phenomena such as the functioning of the brain, the correlation of mental development throughout the animal kingdom with organization and complexity of brain-structure, the effects upon mind of injury or disease in brain tissue, and so forth. Thus a very strong, clear, and convincing case for the priority of matter to mind, and for the dependence of the mental on the material, is presented by science; and there is much to suggest that consciousness is a property, and, indeed, a product or an effect, of matter or material process. The progress of science would seem, as Huxley put it, to have meant the extension of mechanical law and the realm of matter, and the concomitant banishment of spirit and spontaneity from the universe, and to afford as good ground for asserting mental phenomena to be effects of material as for asserting heat to be due to physical causes.

Moreover, it may be added, it is impossible to invalidate this coherent and cumulative argument for materialism from the standpoint of the physical sciences. No counter-case can be made, for instance, out of the fact, if it be a fact, that to some mental events no correlated material changes within the brain have been discovered; for future research may possibly discover them, and it is precarious to stake our metaphysical theory on gaps in scientific knowledge. Nor can materialism be refuted by saying that thought, or consciousness in general, is unlike other activities or properties of matter. Heat, light, sound, and electricity are qualitatively different, yet all of them are properties of matter or of other possessing some of the characteristics of matter. It is a baseless dogma that the effect must resemble the cause, so long as we refer to phenomenal causes and effects. Science, in its more abstract developments, does indeed reduce all diversity to quantitative differences, all causality to identity, so that

heat, light, electricity, etc., are resolved into motions of matter—i.e. of extended and inert substance; but at this level of analysis consciousness, looked upon as one kind of phenomenon among others, and regarded from the purely or abstractly objective point of view adopted by science, might similarly be held capable of resolution into physical antecedents. Perhaps the most that can be urged, from this epistemological standpoint, in opposition to materialism, is that the adoption of it as metaphysical truth would involve us in absolute scepticism, and therefore in doubt as to the validity of materialism. For, if thoughts and all other modes of being conscious are produced by material causes, and their co-existence and sequence are mechanically determined (so that all purposiveness is excluded), there would seem to be no reason for believing that any of our thoughts and judgments, even concerning matter, are true. This argument should suffice to dispose of the dogmatic certainty of materialism, though not necessarily of the possibility of its (indemonstrable) truth. That material change, while ever pursuing the sole path of least resistance, should throw off psychical epiphenomena, the connexion of which is that of logical sequence, is a possibility with which the materialist must be credited, and to which, perhaps, his opponent will allow him to be welcome. A similar oxymoron which materialism has to encounter is the order in the universe. If there be enough disorder to disturb the equanimity of the spiritualist and to put the theist in a difficulty, there is surely too much order in the world to allow the materialist to feel at home there.

3. *Refutation of materialism.*—But there are more telling arguments against a materialistic metaphysics than any of those hitherto mentioned. They emerge only when the question of the epistemological standpoint of physical science is raised, and the first principles and presuppositions of such knowledge are exposed to the searching light of criticism.

When science boasts of the 'objectivity' of its knowledge, it does not merely imply possession of knowledge (concerning fact) such as is universal, or capable of being common to all subjects—which is a perfectly legitimate contention; it further drops out of sight altogether, as convenient or essential to its own practical procedure, all reference to the subject of such knowledge, or to the subjective elements which are essential to the very existence of knowledge at all, and which survive in some form even when science has developed its abstractive processes to the furthest limit. Rightly recognising that any object of universal human experience, such as the sun, is 'independent' of any individual subject's consciousness, we are often apt to speak as if such an object were similarly independent of the experience of human subjects collectively—which is a very different matter. The phenomena which science studies are not indeed the objects of individual experience, the nature of which—in complete isolation from intercourse with other individuals' experience—we can only guess or reconstruct in part; but they are the sum of objective elements common to many individual experiences. Consciousness of an object which is not owned, a cognition which is nobody's, a phenomenon which does not appear to some subject—these things are impossible, inconceivable, and meaningless. Knowledge, moreover, as distinguished from pure passive sensation (if there be such a thing in reality), reveals the work of subjective activity and creative elaboration; and the more generalised and abstract the principles of theoretical science become, the more, and not the less, of this teleological or subjective shaping, guided by interests, ends, and purposes, do they

disclose. Thus, to consider the 'objects' of universal experience as entirely sundered from, or independent of, all subjects, to regard the phenomena of science as the phenomena *per se*, however convenient and harmless it may be for purposes of ordinary discourse and practical scientific investigation and description, is epistemologically false, or, rather, nonsensical. Yet it is precisely by the erection of this colloquial fiction into an epistemological principle that materialism and all kindred forms of thought obtain a fixed foundation. Experience—the only ultimate datum, the one thing which cannot be doubted or explained away without involving the assertion of its reality—is always essentially a duality in unity, subjective and objective; either aspect without the other is an impossibility. Science can ignore—so long as it confines itself to its own business—the one element in experience, the subjective, though of course its whole procedure involves subjective activity; and it ignores it so completely that its students have sometimes come to look upon what they have agreed to leave out of sight (it being none of their business) as non-existent. Objects come to be talked of as if they were really subjectless; their independence, their priority, their exclusive reality come to be affirmed. The scientist, leaving himself out of account at the beginning, cannot discover himself at the end; he is thus led to think that his own mind, which has largely shaped his phenomena and made them what they are for him, is but an illusion, an effect, an epiphenomenon, a shadow cast by the machinery that he is engaged in contemplating. It is small wonder that, when science, without raising the previous question as to the nature of experience and the implications and presuppositions of knowledge, sets out in quest of a metaphysic, it should land in materialism. It is just as natural that, setting out forearmed with knowledge of the elements of the science of knowledge, it should come, when it seeks a metaphysic at all, to adopt the opposite creed of spiritualism.

Once, then, the materialist is allowed the right to talk of objects without implicated subjects, of 'purely objective' facts, of phenomena *per se*, he can proceed to lay before us an array of imposing facts and arguments which, from the standpoint conceded to him, are as irrefutable as they are impressive. But, once the epistemological assumption that objects, as known to us, can exist to be known independently of all experiencing subjects is shown to be impossible, the tables are turned. Not only do the arguments in question lose all their apparent force, but consciousness, which materialism would resolve into an epiphenomenal effect or property of self-existent matter, is seen to be the primary reality, and matter as we know it is shown to be a conceptual construction of mind. Materialism, we conclude, misunderstands human experience, in which subjective and objective form one whole, while they are gradually differentiated only through increasingly complicated processes of conceptual distinction. The objective, moreover, is not to be identified with the material, as if these were convertible terms. Matter is a conceptual abstraction from experience, and so cannot be taken for the ground or source thereof. Atoms, again, are only figurative ideas; and that they have to be endowed with the very attributes which, in gross matter, they were invented to explain, is not indeed with attributes that contradict all observation, is a sufficient warning against adoption of the naively realistic view that they are corporeal or material particles.

Materialism also involves the old and obsolete assumption that the so-called secondary characters of matter (colour, tone, odour, etc.) are fundamen-

tally different from the so-called primary (extension, impenetrability, etc.). It was one of G. Berkeley's great contributions to philosophy to show that this distinction is untenable. The secondary qualities of matter have been generally admitted to be 'in our mind' and not 'in matter.' But on closer examination it is to be seen that the primary qualities are in precisely the same case. Our idea of extension, for instance, is gained only through touch or sight; and the perceived 'size' of a body depends on our distance from it. That a material object is of the same size, though at one time it may appear larger and at another smaller to a perceiver, is an inference, and involves the revision of the evidence of our senses by reasoning. The extension which we attribute to a physical object, then, is inferred, and not perceived, extension; and, if we abstract from our idea of extension the sensation-elements supplied by touch or sight, nothing remains. Therefore matter possesses extension no more than it possesses colour, except as perceived by our minds. If, then, there be anything at all (which Berkeley denied) other than our minds and the direct action of God upon them which causes the sensations whence our idea of extension (or any other quality of matter) is derived, it is obvious that this something cannot be matter as it is perceived. There may be what J. S. Mill called a 'permanent possibility of sensation' independent of us, whose senses are not perceptive; but, if there be, it is an entity wholly different from the 'matter' of physical science and common sense, and, for all we know, may just as aptly be described as mind or spirit. We can, therefore, without self-contradiction ascribe our sensations to God (Berkeley) or to other spiritual existences (pluralism); but we cannot ascribe them to matter as perceived. Either of the views just mentioned would explain our experience; and, unless we ascribe our sensations to the influence of other spiritual existences endowed with 'being for self,' we cannot but assume, with Berkeley, that the noumenal matter, the substratum of sensations, the substance which constitutes the permanent possibility of sensation, is but a medium or means existing solely for our sakes, and one which, from a theist's point of view, must seem superfluous. The concept of matter, then, is built on the basis of sense-impressions; and materialism uses this manifestly conceptual construction to explain the origin of sense-impressions. It thus seeks to derive the undervived from the derived.

There are several other inconsistencies involved in materialistic doctrine, one or two of which may briefly be mentioned. Materialism implies that everything which happens and is accompanied by consciousness of its happening would happen equally well without consciousness; or, in other words, that consciousness makes no difference to the course of the world. But, if so, it is difficult, on the theory of evolution by survival of the fittest, which is the current scientific explanation of the origin and permanence of every organ and every function, as well as of every individual organism and every species, to account for the emergence, and still more for the development, of mind. Materialism, again, of the more thoroughgoing type, regards consciousness as the product or effect of matter, while cherishing the principle of *conservation of energy* in its application to what physicists call 'energy.' The law of the Conservation of Energy is often held—though doubtless quite erroneously—to assert that not only is there quantitative equivalence between the energy which, in any physical change, disappears in one form and that which appears in another, but also that the sum-total of energy in the universe is constant. The latter, and illegitimate, part of the generalization

has been a tenet of materialists; and it is difficult to reconcile it with their assertion that mental phenomena are caused by material. For in every such production of consciousness a disappearance of physical energy should take place, unless energy is also attributable to consciousness. The last view is so objectionable on many grounds to materialists, partly because it opens the possibility that mind can produce physical effects, that they have avoided working it out. Lastly, it is generally admitted that materialism cannot explain even the simplest type of conscious process. The difficulty of conceiving how a sensation or a feeling could be the necessary consequence or effect of motion in matter or mass-points, and of imagining how mathematical physics would cope with such a possibility, is overwhelming; and, of course, it has never been faced.

4. Recent substitutes for materialism: hylologism.—It is not surprising, under the pressure of all these difficulties and in the light of the criticism to which the structure of physical science has of late been subjected, that materialism should at the present time be a practically abandoned philosophical theory. Useful as a method, it is wanting as a metaphysics; and representatives of natural science with a leaning towards metaphysical speculation and a preference for materialistic terminology adopt in its stead a monism which has much in common with the ancient doctrine of hylologism, according to which all matter is not inert—as mathematical physics asserts for its necessary postulate—but living. Thus J. Tyndall was willing to endow primordial matter with 'the promise and potency of life'; and W. K. Clifford, in his 'mind-stuff' hypothesis, and Haeckel, in his imaginative theory of atoms indwelt by rudimentary souls, go yet farther, and couple hylologism with pan-psychism.

Hylologism is as ancient as the Ionian school of Greek philosophy, and was taught in a crude form by Thales. The Stoic doctrine of a world-soul is another form of it, revived and developed by several thinkers in the period of the Renaissance (Pico della Mirandola, Telesio, Bruno, etc.). Hylologism reappears again in the writings of the Cambridge Platonists (7 c.), as well as in the speculations of philosophers such as J. B. Robinet and G. T. Fechner; and pan-psychism—the view that all matter is psychical or has a psychical aspect—which was held by Spinoza ('omniaque via diversae gradibus animata' [*Ethics*, II. prop. xiii. note]) and Leibniz, is common to the numerous advocates whom pluralism finds at the present day. It is doubtful whether hylologism, with its assertion that all matter is organized or living, can be maintained without the further assumption of pan-psychism, that the real elements of the world, and all that we call 'things,' are psychical entities endowed with 'being for self'; and, indeed, many writers seem to use the term 'hylologism' as if it included the latter doctrine. But, without this added implication, and taken in the etymological sense alone, hylologism involves the repudiation of most of the consequences drawn from rigid materialism. For it denies the inertia of matter and the statement that motion is exclusively caused by external forces, crediting material bodies with capacity for self-movement, and regarding life as an inherent or essential property of all matter as such. Thus, as Kant saw, hylologism is the death blow to science—'science' being understood, as Kant understood it, to mean a priori pure or mathematical physics. The latter kind of knowledge being assumed by Kant to be necessary and universal, he could write thus:

"The possibility of living matter cannot even be thought; its concept involves a contradiction because lifelessness, inertia, constitutes the essential character of matter" (*Enquiry of Judgment*, tr. J. E. Bernard, London, 1896, p. 305).

While Kant thus saw that hylologism meant ruin to science in so far as it involves the calculability (by an intelligence higher than ours, though strictly finite like that imagined by Laplace) of all past and future states of the world from a sufficient knowledge of the position and motion of each of its mass-points at any given moment, modern upholders of the mind-stuff hypothesis, and of Haeckel's hylologistic or pan-psychic theory, have not been so clear sighted. They would retain materialism, for all intents and purposes, while changing its name. Qualitative monism is, indeed, in all its forms a position of unstable equilibrium; or, to change the metaphor, it is a half-way house (for temporary lodging) between materialism and spiritualism. And, as retreat upon materialism becomes more and more impossible, as hylologism is seen to possess greater capacity to explain actuality than the doctrine of dead and absolutely inert matter, and as, finally, life means the power to set or change according to an internal principle, while only one such principle is known to us—*i.e.* thought, together with feeling, desire, and will, which depend upon it—it will doubtless come to be more and more plainly seen that the implications of natural science are not materialistic but spiritualistic.

MATERIALISM (Chinese).—Chinese religion and philosophy have been declared by many writers to be materialistic; one of them¹ went even so far as to regard materialism as a special creed taking rank with Confucianism, Taoism, and Buddhism. This view implies a misconception of materialism: a philosopher who does not believe in a personal God, or who assigns to a Supreme Being a substantial body, is not a materialist. Materialism assumes matter to be the only basis of reality. This is 'cosmological materialism,' to be distinguished from 'ethical materialism,' which sees the aim of life in egotism, pleasure, and sensuality. Both are to be found in China, but they are not at the root of her great religious systems, although materialistic tendencies may be found occasionally. Nobody will seriously think of imputing materialism to the Buddhist faith, which teaches that the visible world is nothing but a semblance, a vision without any reality. Taoism takes a similar view-point: there exists nothing except Tao, the Absolute, a supernatural, incomprehensible entity. But how about Confucianism, which has often been described as materialistic?

Confucius himself owned to a 'benevolent agnosticism,' declining all metaphysical speculations, but was not averse to popular beliefs and customs. To a disciple asking him about death he replied, 'While you do not know life, how can you know about death?' and on another occasion he made the remark, 'Show respect to the spirits, but keep aloof from them.'² He believed in a superior being which he called Heaven, but never used the personal name God—a fact by which he laid himself open to the charge of atheism. Probably he had no clear notion of heaven, but certainly he did not conceive it as an anthropomorphic god. Still more than Confucius himself his followers, especially the philosophers of the Sung period (12th cent. A.D.), have been denounced as materialists, but unjustly. The system of Chu Hsi, the head of this school, is a pure dualism. He recognizes two principles, matter and reason, and to the latter

even concedes priority. Out of their combination the world was evolved. Matter splits into the five elements (metal, wood, water, fire, and earth); reason is the life- and mind-producing element, which also contains the virtues (benevolence, righteousness, propriety, and knowledge).

Another kind of dualism favouring much of materialism was in vogue in ancient China, and seems to have been the starting-point of Chu Hsi's philosophy. At the earlier stages of civilisation religion, philosophy, and sciences are usually not yet separated. So it was in China, where we meet with the dualistic theory of yin and yang in Confucian as well as in Taoist works. It was the first germ of a natural philosophy universally accepted by the Chinese irrespective of their religious convictions or philosophic ideas. In the commentary to the *Yi K'ang* ascribed to Tzu-ssu, the grandson of Confucius (5th cent. B.C.), we read that the origin of existence is due to the cosmic dual forces yin and yang; yang is the bright, male, generative principle, yin the dark, female, and receptive power; yang forms the heaven, yin the earth. Most Chinese critics look upon these principles as material substances—an interpretation open to doubt. But we have another testimony by the Taoist writer Lieh-tzu of the same time, showing that he at least considered the yin and the yang to be substances. The evolution theory, though not quite scientific, reminds us of that of modern naturalists.

'The sages of old held that the Yang and the Yin govern heaven and earth. Now, form being born out of the formless, from what do heaven and earth take their origin? It is said: There was a great evolution, a great incipience, a great beginning, and a great homogeneity. During the great evolution, vapours were still imperceptible, in the great incipience vapours originated, in the great beginning Forms appear, and during the great homogeneity Substances are produced. The pure and light matter becomes the heaven above, the turbid and heavy matter forms the earth below' (Lieh-tzu, i. 27).

No divine being intervenes in the creation of the world, and yet we are not justified in calling Lieh-tzu a materialist, for, notwithstanding this materialistic theory, the highest principle remains Tao, a spiritual being which alone is endowed with reality; the world with all its changes is imaginary.

At an early age the Chinese had further developed this dualistic theory of yin and yang by enlarging on the working of the five elements which were conceived as physical and as metaphysical essences as well. They were believed to predominate and vanquish one another in regular turns, thus bringing about the four seasons: in spring the element wood reigns supreme, in summer fire, in autumn metal, and in winter water; to earth there is no corresponding season. The elements have their seat in different directions: wood in the east, fire in the south, earth in the centre, metal in the west, and water in the north. They are ruled by five deities, the gents of the seasons and the four quarters.

Whereas this attempt at natural philosophy is nothing but a medley of heterogeneous, more or less fanciful, thoughts, the old dualistic theory was transformed into a consistent materialistic system by the sceptic Wang Ch'ang (1st cent. A.D.). From various utterances it would appear that he thought of yang as a fiery and of yin as a watery element. The former produced the sun, the moon, and the other stars of heaven, while from water and its sediments earth, the oceans, and the atmosphere were developed. Both fluids are in constant motion, but their movement is not governed by any intelligence or subservient to the purpose of any *spiritus rector*; it is spontaneous and regulated solely by its own inherent natural laws; heaven and earth do not act on purpose, nor are they endowed with consciousness. Wang Ch'ang rejects all anthropomorphisms which have clustered

¹ H. A. Giles, *Religions of Ancient China*.

² *Ibid.* xi. 11, vi. 10.

round the idea of heaven or God. The human body is formed of the two fluids, the yin producing the body, and the yang the vital spirit and the mind. At death they again disperse, the yang, or heavenly fluid, returning to its original state of unconsciousness. Consequently there can be no immortality, which Chu Hsi likewise disclaims.

Wang Ch'ang's materialism has not had any serious influence on the Chinese people, not because they had a horror of materialism, as many Westerners have, but owing to Wang Ch'ang's bold criticisms on the national sages, Confucius and Mencius, which they have never condoned. So far as we know, Wang Ch'ang is the only Chinese thinker who set forth a scientific system of cosmological materialism.

Already in the 4th cent. B.C. ethical materialism found an advocate in Yang Chu, the philosopher of egoism and pessimism. He maintains that in human life happiness is far exceeded by misfortune, and that this is the result of the badness of the world and of men's own doing. The practice of virtue is of no avail, because in this world the wicked thrive, and the virtuous are visited with disasters. Therefore men ought not to harass themselves in striving after unattainable or useless aims such as wealth, honour, or fame, or sacrifice themselves for others, but should enjoy their short span and be satisfied with the good that they have, for with death everything ends. In consequence of the vehement imprecations of Mencius this doctrine has never got a hold on the Chinese mind.

Both Yang Chu and Wang Ch'ang have been long buried in oblivion, until they were rediscovered by the congenial interest of foreign admirers.

MATERIALISM (Indian).—1. We possess several comparatively modern works which set forth the various philosophic systems of India—e.g., *Summary of all the Systems*,¹ and *Reunion of the Six Systems*.² The systems are arranged in the order of their increasing orthodoxy, from the author's point of view: the first, for which, as we shall see, materialism is a suitable name, is the worst of all, and the only one which is expressly in contradiction with the general conception of Indian philosophy and mysticism.

In more ancient sources—in the *Mahābhārata*, on the one side, and in the Buddhist scriptures, on the other—we find data concerning this materialistic system which are scanty but generally in agreement.³

As regards the sources that would give us direct

¹ Skr. text, ed. Calcutta, 1855, and Poona, 1909; *The Sarva-dharma-samgraha, or Review of the different Systems of Hindu Philosophy*, by Mahārāṣṭra (A. D. 1811), tr. E. B. Cowell and A. E. Gough, London, 1882; Germ. tr. (which owes much to Cowell's work, but does not mention it) in P. Deussen, *Allgemeine Geschichte der Philosophie*, I, 111 (Leipzig, 1908).

² *Saddharmasmuṃbhāva*, by Maitrībhāṣya (? A.D. 800), ed. L. Gauthier, Calcutta, 1906 (the chapter which interests us has been translated into French by L. Baul, in *Bulletin*, ix, [1905] 277 ff.); among the other 'modern' sources is the *Pravāṇasaka-dropana*, xviii, 18 (11th cent.).

³ For the *Mahābhārata* see E. W. Hopkins, *The Great Epic of India*, New York, 1901, and the works on materialism cited in the bibliography, *Shārngada* Gṛha, xvi, 8 (tr. L. D. Barnett, Temple Classics Series, London, 1904, p. 169).

information about the materialist school only a few citations can be brought forward, and their authenticity is not certain.

We are not convinced that a materialistic 'school,' a 'system,' in the exact sense of the word, existed. There have been 'materialists' who have entertained some very well-defined theories, to whom the 'spiritualists,' whether Brāhmanas, Buddhists, or Jains, give different names, and whose opinions are, perhaps artificially, grouped in the works of which we have spoken.

The most characteristic name is Nāstika, literally 'deniers,' 'misbelievers,' those who say *na asti, etc. asti*.⁴ The most famous are (a) CĀRAKA (difficult to interpret; Cārvāka is said to be the founder of the sect; he is undoubtedly the demonic ogre spoken of in the *Mahābhārata*);⁵ (b) Lokāyata, 'worldly,' 'spread throughout the world' (a term which, according to T. W. Rhys Davids, denotes primarily the knowledge of nature-laws, and whose adherents are said to be the 'explainers of [the genesis of] the world'); and (c) Bhāṣaputra, 'disciple of Bhāṣpati' (the chaplain of the Vedic gods and the lord of wisdom).

2. In the Buddhist *Sūtras* the doctrine of materialism is attributed to 'Ajita of the garment of hair,' one of the scholars and famous ascetics of the time of Buddha. He said:

'There is no such thing as souls or mortals or offspring. There is neither fruit nor result of good and evil deeds. There is no such thing as this world or the next. There is neither father nor mother, nor beings springing into life without them. There are in the world no recluses or Brāhmanas . . . who, having understood and realised, by themselves alone, both this world and the next, make their wisdom known to others. A human being is built up of the four elements. When he dies, the earth in him returns and belongs to KṢHĀRA, the fluid to the water, the heat to the fire, the windy to the air, and his faculties (—the five senses, and the mind as a sixth) pass into space (or ether). The four elements, on the other hand, take his dead body away; till they reach the burning-ground men utter forth eulogies, but there his bones are bleached, and his offerings and in ashes. It is a doctrine of fools, this talk of gods. It is an empty lie, more idle talk, when even my there is profit therein. Food and wine alike, on the dissolution of the body, are not *astī*, annihilated, and after death they are not.'⁶

It will be seen (1) that these formulas show a really authentic character. They are quite independent of Buddhism, for the Buddhists do not believe much more than Ajita in the use of sacrifice and offering. Perhaps they come from the Agnikas or Jāṇas (ascetics who give bare offerings, who have braided hair), who entered in large numbers

⁴ Citations in the 'commentaries' mentioned in notes 1 and 2 on previous col., and also in the Buddhist canon (see p. 480, n. 4).

⁵ *Naṣṭi* ('non-existence'), *Naṣṭi*, *Mahābhārata*, the name originally extended to all kinds of sceptics, deniers of the Vedic gods, or of the Brāhmanic laws (see below).

⁶ See O. Donath and R. Roth, *Samasti-Wörterbuch*, Petersburg, 1886-75, II, 107.

⁷ See Rhys Davids, *Dialogues of the Buddha*, I (Oxford, 1898) 14, 116, 120, 166. C. Beal (in *Alambana*, 1904, June 1905) rightly remarks that Rhys Davids is wrong in saying 'Of the real existence of a school of philosophy thus called itself by the name (Lokāyata) there is no trace.' The traces are numerous. See also art. *LOKĀYATA*.

⁸ *Dīpa Nidāna*, I, 85; *Saddharmasamgraha*, III, 207; *Mahābhārata*, I, 515, and also in the *Upanishads*. This passage has often been translated. The version reproduced above is that of Rhys Davids, *Dialogues of the Buddha*, I, 78. Attention should be drawn to those of E. Burnout (*Le Lotus de la doctrine*, Paris, 1884), P. Oriollet (*Sept Sūtras pāṇas*, de 1876), and R. O. Froese (*Dharmasūtra in Sanskrit*, Göttingen, 1912). The sacred writings of the Jains contain the same evidence, and confirm the Buddhist tradition (see H. Jacobi, *Jaina Sūtras*, II, pp. 2311, 232, 242; *SEE* xiv, [1883]).

A more complete study would describe the opinions of Pūrva Kassapa, another materialist contemporary with Buddha (*Dīpa*, I, 82), who denies responsibility, and teaches what is called the 'theory of non-action.' If with a diadem with an edge sharp as a razor he should make all living creatures on the earth one lump, one mass of flesh there would be no guilt thence resulting, no increase of guilt would ensue; and the opinions of Mahābhāṣya, who denies liberty: 'There is no such thing as power or energy, or human strength or human vigour. Things are bent this way and that by their own, by their individual nature, and come very near the well-known point of view of the *Mahābhārata*, namely, the omnipotence of fate (*daiva*) and the weakness of human activity (*puruṣa*). It was Buddha who said that fate (*daiva*) is only the sum of our former actions.'

The objects connected with the Jain cult have been discovered for the most part in the Kankali or Jain Tila (mound) to the S.W. of the city, which was the site of two Jain temples, one Digambara and the other Svetāmbara, as well as of a remarkable stūpa, the only Jain monument of the kind about which details are known. In its earliest form it dated from remote antiquity, possibly from 600 or even 700 B.C. The Jain faith was vigorous in the Kushān period early in the Christian era, and the images found came down to the 11th century. At the present day Jains are few and unpopular in the Mathurā District, their principal settlement being at Kori, where there are three temples.

The numerous Buddhist remains, which are of great interest, disclose the former existence of an important monastery founded by Hui-shia Kushān, probably early in the 2nd cent. after Christ. In Fa-Hsien's time (A.D. 406) there were twenty Buddhist monasteries with some 3000 monks in the neighbourhood of Mathurā. When Hsien Tsang travelled, more than two centuries later, the number of monks had diminished. The Muhammadan attacks from A.D. 1018 onwards wiped out the Buddhist establishments. There are plain indications that the popular Buddhism of Mathurā included a sensual erotic element, which probably has contributed to the subsequent development of the Bādhā and Kṛpā worship now specially associated with the Mathurā region. Nāga worship was much practised during the Kushān period.

Brāhmanical Hinduism appears to be the most ancient of the Mathurā religions. The Greek writers call the chief local god by the name of Herakles, and the sculpture representing the fight of Herakles with the Nemean lion is one of the most famous of Mathurā antiquities.

The temple of Kṛṣṇa Deva at the Kātrā on the western side of the city, rebuilt early in the 17th cent., was described by J. B. Tavernier (c. A.D. 1680; *Travels in India*, tr. V. Ball, London, 1809, II. 360) as 'one of the most sumptuous buildings in all India.' Aurangzib destroyed it in 1666, and built a mosque on the site. All the old Hindu temples in the city were destroyed by the Muhammadans at one time or another.

Archaeological evidence shows that the cultus of Kṛpā was well established as early as the 4th and 6th cent. after Christ (Bhitari insur. of Skandagupta, c. A.D. 406; sculptures III Mapār in Mārwār [Arch. Surv. Asia. Rep., 1905-06, p. 140]), but the Vaiṣṇava cultus of Mathurā in its present form was not developed until the close of the 10th cent. under the influence of the Bengālī Gaudīas of Brindāban. The history and character of the cult are well described by Growse, to whose book the reader is referred. The great temple of Vīṣṇu under the name of Raṅg Jī, built between 1848 and 1861 by local merchant princes, is remarkable for being designed on Dravidian lines. It cost 4½ millions of rupees. The notorious erotic cult of Vaiṣṇava founded by Vallabhācārya (q.v.) (born A.D. 1479) has its headquarters in the town of Gokul.

Three Christian missions (Baptist, Church Missionary, and Methodist Episcopal) are established in the city.

Surv. of India*, pt. 1, 1898, pp. 136-143, (c.v. 114, 115, 116, 117, 118, 119, 120, 121, 122, 123, 124, 125, 126, 127, 128, 129, 130, 131, 132, 133, 134, 135, 136, 137, 138, 139, 140, 141, 142, 143, 144, 145, 146, 147, 148, 149, 150, 151, 152, 153, 154, 155, 156, 157, 158, 159, 160, 161, 162, 163, 164, 165, 166, 167, 168, 169, 170, 171, 172, 173, 174, 175, 176, 177, 178, 179, 180, 181, 182, 183, 184, 185, 186, 187, 188, 189, 190, 191, 192, 193, 194, 195, 196, 197, 198, 199, 200, 201, 202, 203, 204, 205, 206, 207, 208, 209, 210, 211, 212, 213, 214, 215, 216, 217, 218, 219, 220, 221, 222, 223, 224, 225, 226, 227, 228, 229, 230, 231, 232, 233, 234, 235, 236, 237, 238, 239, 240, 241, 242, 243, 244, 245, 246, 247, 248, 249, 250, 251, 252, 253, 254, 255, 256, 257, 258, 259, 260, 261, 262, 263, 264, 265, 266, 267, 268, 269, 270, 271, 272, 273, 274, 275, 276, 277, 278, 279, 280, 281, 282, 283, 284, 285, 286, 287, 288, 289, 290, 291, 292, 293, 294, 295, 296, 297, 298, 299, 300, 301, 302, 303, 304, 305, 306, 307, 308, 309, 310, 311, 312, 313, 314, 315, 316, 317, 318, 319, 320, 321, 322, 323, 324, 325, 326, 327, 328, 329, 330, 331, 332, 333, 334, 335, 336, 337, 338, 339, 340, 341, 342, 343, 344, 345, 346, 347, 348, 349, 350, 351, 352, 353, 354, 355, 356, 357, 358, 359, 360, 361, 362, 363, 364, 365, 366, 367, 368, 369, 370, 371, 372, 373, 374, 375, 376, 377, 378, 379, 380, 381, 382, 383, 384, 385, 386, 387, 388, 389, 390, 391, 392, 393, 394, 395, 396, 397, 398, 399, 400, 401, 402, 403, 404, 405, 406, 407, 408, 409, 410, 411, 412, 413, 414, 415, 416, 417, 418, 419, 420, 421, 422, 423, 424, 425, 426, 427, 428, 429, 430, 431, 432, 433, 434, 435, 436, 437, 438, 439, 440, 441, 442, 443, 444, 445, 446, 447, 448, 449, 450, 451, 452, 453, 454, 455, 456, 457, 458, 459, 460, 461, 462, 463, 464, 465, 466, 467, 468, 469, 470, 471, 472, 473, 474, 475, 476, 477, 478, 479, 480, 481, 482, 483, 484, 485, 486, 487, 488, 489, 490, 491, 492, 493, 494, 495, 496, 497, 498, 499, 500, 501, 502, 503, 504, 505, 506, 507, 508, 509, 510, 511, 512, 513, 514, 515, 516, 517, 518, 519, 520, 521, 522, 523, 524, 525, 526, 527, 528, 529, 530, 531, 532, 533, 534, 535, 536, 537, 538, 539, 540, 541, 542, 543, 544, 545, 546, 547, 548, 549, 550, 551, 552, 553, 554, 555, 556, 557, 558, 559, 560, 561, 562, 563, 564, 565, 566, 567, 568, 569, 570, 571, 572, 573, 574, 575, 576, 577, 578, 579, 580, 581, 582, 583, 584, 585, 586, 587, 588, 589, 590, 591, 592, 593, 594, 595, 596, 597, 598, 599, 600, 601, 602, 603, 604, 605, 606, 607, 608, 609, 610, 611, 612, 613, 614, 615, 616, 617, 618, 619, 620, 621, 622, 623, 624, 625, 626, 627, 628, 629, 630, 631, 632, 633, 634, 635, 636, 637, 638, 639, 640, 641, 642, 643, 644, 645, 646, 647, 648, 649, 650, 651, 652, 653, 654, 655, 656, 657, 658, 659, 660, 661, 662, 663, 664, 665, 666, 667, 668, 669, 670, 671, 672, 673, 674, 675, 676, 677, 678, 679, 680, 681, 682, 683, 684, 685, 686, 687, 688, 689, 690, 691, 692, 693, 694, 695, 696, 697, 698, 699, 700, 701, 702, 703, 704, 705, 706, 707, 708, 709, 710, 711, 712, 713, 714, 715, 716, 717, 718, 719, 720, 721, 722, 723, 724, 725, 726, 727, 728, 729, 730, 731, 732, 733, 734, 735, 736, 737, 738, 739, 740, 741, 742, 743, 744, 745, 746, 747, 748, 749, 750, 751, 752, 753, 754, 755, 756, 757, 758, 759, 760, 761, 762, 763, 764, 765, 766, 767, 768, 769, 770, 771, 772, 773, 774, 775, 776, 777, 778, 779, 780, 781, 782, 783, 784, 785, 786, 787, 788, 789, 790, 791, 792, 793, 794, 795, 796, 797, 798, 799, 800, 801, 802, 803, 804, 805, 806, 807, 808, 809, 810, 811, 812, 813, 814, 815, 816, 817, 818, 819, 820, 821, 822, 823, 824, 825, 826, 827, 828, 829, 830, 831, 832, 833, 834, 835, 836, 837, 838, 839, 840, 841, 842, 843, 844, 845, 846, 847, 848, 849, 850, 851, 852, 853, 854, 855, 856, 857, 858, 859, 860, 861, 862, 863, 864, 865, 866, 867, 868, 869, 870, 871, 872, 873, 874, 875, 876, 877, 878, 879, 880, 881, 882, 883, 884, 885, 886, 887, 888, 889, 890, 891, 892, 893, 894, 895, 896, 897, 898, 899, 900, 901, 902, 903, 904, 905, 906, 907, 908, 909, 910, 911, 912, 913, 914, 915, 916, 917, 918, 919, 920, 921, 922, 923, 924, 925, 926, 927, 928, 929, 930, 931, 932, 933, 934, 935, 936, 937, 938, 939, 940, 941, 942, 943, 944, 945, 946, 947, 948, 949, 950, 951, 952, 953, 954, 955, 956, 957, 958, 959, 960, 961, 962, 963, 964, 965, 966, 967, 968, 969, 970, 971, 972, 973, 974, 975, 976, 977, 978, 979, 980, 981, 982, 983, 984, 985, 986, 987, 988, 989, 990, 991, 992, 993, 994, 995, 996, 997, 998, 999, 1000).

VINCENT A. SMITH.

MATRCHETA.—Matrcheta is the name of a Buddhist author, identified by the Tibetan historian of Buddhism, Tāranātha, with Advaghoṣa, concerning whom and the identification itself see art. ADVAGHOṢA and the works there mentioned. It may be pointed out that the identification is made only by Tāranātha, while a much older writer, the Chinese traveller I-tsing (2nd half of 7th cent. A.D.), plainly distinguishes the two authors; further, the ascriptions of works seem not to betray either in the Chinese tradition or, with one exception (see *Kāśīśāstrakāya-samastakāya*, ed. F. W. Thomas, in *Bibliotheca Indica*, new ser., no. 1308, pp. 28-30), in the Tibetan any confusion. The sole reason for the identification is the fact that both writers stood in relation to Kanika. But this reason will be seen upon reflexion to have actually a contrary bearing; for nothing is more certain concerning Advaghoṣa than that he was a figure at the court of Kanika, whereas we have an epistle from Matrcheta declining, upon grounds of old age and sickness, to visit the king. Perhaps this is the reason why Tāranātha, identifying the two poets, makes an untenable distinction between the Kanika of Advaghoṣa and the Kanika of Matrcheta.

According to Tāranātha, Matrcheta was the son of a rich Brāhman named Saṅghaguhya, who married the youngest of ten Buddhist daughters of a merchant belonging to the city of Khorā (Gandā?). The time is given as during the reign of Bṛihasandra, nephew and successor of Bindusara—a statement which reflects the confusion of the Tibetan author's chronological system. The name given to the child at birth is said to have been Kāla; that he was subsequently known as Matrcheta and Pitrcheta is set down to his filial devotion. We must, however, distrust the whole story; Saṅghaguhya is not a suitable name for a Brāhman, nor is a marriage with a Buddhist woman very probable. The name Matrcheta, which in later times was attached to other persons, means, no doubt, like its equivalent Matrīśa, 'servant of the Mother (i.e. Durgā), or of the Mothers (i.e. the forms of Durgā)'; and this is quite in harmony with the fact that Matrcheta was at first a worshipper of Mahotvara-Siva (Tāranātha and I-tsing) and composed hymns in his praise (I-tsing). He became an expert in *Mantra* and *Tantra* formulae and a master of dialectic. In the latter capacity he entered upon a course of controversy with the Buddhists of Odhira (Orissa), Gandā, Trāhātī (Tibet), Kāmārupa, and elsewhere, forcing them to join the heretics, whereby he acquired the sobriquet Durdhara-Kāla, 'the unassailable Kāla.' At the suggestion of his mother, who hoped for his conversion by the leading doctors of her faith, he proceeded to the great Buddhist centre of Nālanda, where, in fact, he was overthrown in argument and joined the order.

According to Tāranātha, the agent of his conversion was Ārya Deva, who showed him a *śāstra* wherein he had been foretold by Buddha. If we must reject the introduction of Ārya Deva, which involves an anachronism and is due to a certain confusion (see *IA* xxxii. [1908] 346), the incident is confirmed by the statement of I-tsing; that Buddha, on hearing the notes of a nightingale,

simplified by science. The further claim that physics is thus capable of reduction to a branch of pure mathematics is, however, not allowable; in going too far it refutes itself. For physics professes to deal with the real or sensible material world; it indeed passes, as it becomes more and more abstract, into 'pure' physics; but then it is no longer a science of the real, but only of the ideal or conceptual. Conceptual or pure science applies to the real world, indeed, but only partially or fragmentarily; it exhaustively describes the world in one aspect only, and leaves others out of account. Thus pure or abstract science of the material is valid, within limits, for economical description; it is not adequate to full explanation. That this is true in particular of the kinetic theory of matter can be seen at once when we grasp the fact that the primordial fluid—the non-matter to which matter is reduced, or which science substitutes for matter—is not a real thing, but an abstraction. A perfect fluid, in the first place, is a fiction, not anything known to observation. In the second place, Lord Kelvin's medium, in so far as it is describable by the negative terms incompressible, frictionless, inextensible, and structureless, differs in no respect from empty space. The one property in virtue of which it has been argued that the ether differs from space is that of inertia. But, as Ward has maintained (*Nature*, vol. 1, book v.), inertia, in the qualitative sense, does not suffice to supply determinateness to the primordial fluid; inertia is a property of matter, but not of modes of motion, and it is precisely the property of mass in material bodies that, as both Clerk Maxwell and Lord Kelvin recognised, the kinetic theory of matter fails to explain. This theory of the constitution and nature of matter, therefore, belongs to the realm of symbolic description, not to that of explanation or interpretation. Science, indeed, in its higher or more abstract reaches, falls so far short of furnishing, as it was once jubilantly asserted to furnish, a complete philosophy of the world in terms of Newtonian mechanics that it professes to do no more than describe natural phenomena in so far as these are to be regarded as changes in the motion of masses. It abstracts from the qualitative properties and changes of matter, because these are not amenable to scientific method, and replaces them by hypothetically representative movements of ideal 'masses.' Matter, with its diversities of quality for perceptual experience, is not only one in kind for abstract science; as the goal and limit of abstraction is reached, or as physics passes into pure mathematics, matter becomes indistinguishable from space. It may similarly be shown that causality is eliminated by abstract science, and replaced, for descriptive purposes, by identity, change being explained and further explained until at last it is literally explained away. The development of scientific generalisation in the direction of the ideal of unification and simplicity has thus not established a materialistic metaphysics or a mechanical philosophy, but has only provided a provisional symbolical description of certain aspects of the material world, valid so long as other aspects may be neglected. Such is the philosophical outcome of the scientific mode of dealing with matter.

Until recently matter was regarded as divisible only so far as to the chemical atom. There were held to be some four score fundamentally different, simple or irreducible, kinds of matter. Matter was the primary concept of the physicist, and electricity was described more or less in terms of it. Matter was held to be strictly unchangeable in its elementary forms, the atom being supposed to be indestructible. Quite lately, however, all

these beliefs have been reversed. It has been found, by a series of researches mainly conducted at, or in connexion with, the Cavendish Laboratory, Cambridge, that the atoms are not simple, but that portions of them can be split off and exist separately, and that these detached fractions, called by J. J. Thomson 'corpuscles,' are identical, from whatever different kinds of atoms they may have been broken off, and possess the same 'mass' or inertia. Thus it has become necessary to regard the atoms as complex systems, and, in spite of their differences, as built up of parts or corpuscles which are identical. Further, the corpuscle has been found to bear, or to be, a constant electrical charge (electron). Corpuscles and electrons would seem to be identical, because the whole mass of the corpuscle appears to be due to its electric charge and its motion. Thus 'mass,' the most fundamental and characteristic property of matter, becomes resolvable into an electrical phenomenon; the electron is the fundamental unit alike of electricity and of matter, and matter is 'explained' in terms of electricity. An atom, in fact, is composed of a large number of units of negative electricity (electrons or corpuscles) associated with an equal number of positive units of electricity.

The full importance of the discovery and isolation of electrons cannot be indicated in an article dealing with matter, because they serve to explain the cause of the excitation of the ether-waves which produce light, and also render comprehensible other phenomena not belonging to the realm of the material. But it may be noted that the atomic (or, rather, the ultra-atomic) structure of matter, hitherto a supposition or indirect inference, has at length been experimentally demonstrated. The recent discovery and investigation of radium and other radio-active substances have led not only to the proof that the chemical elements are transmutable—beryllium, e.g., is produced by the breaking up of radium—but also to the revelation of single atoms.

'Single atoms of bismuth, shot off by Radium as a ray, have been revealed in two ways. Each atomic projectile produces a long train of electric ions as it passes through a gas before its energy is exhausted, perhaps by knocking loose corpuscles out of the molecules it encounters in its path. These ions have two effects. They make the gas a conductor of electricity, while they act, so that, by placing the gas in a circuit with a battery and an electrometer, Rutherford has shown the effect of such a particle by the sudden throw of the needle of the instrument. Secondly, the ions act as nuclei for the condensation of mist, and, in this way, C. T. R. Wilson has made visible as a line of cloud the track of each particle' (W. G. D. and G. D. Whitham, *Science and the Future*, London, 1911, p. 166).

Recent progress in science has thus furnished new light upon the question of the constitution of matter. But the ultimate question as to what matter is remains, as before, unsolved, and perhaps, as P. G. Tait (*Properties of Matter*, Edinburgh, 1895, p. 14) seemed to think, insoluble. To have learned that matter is electricity is not to have diminished the mysteriousness of its nature. To physical science indeed, matter, like a 'thing' or a 'fact,' is a datum. The data of science, however, are for philosophy or the theory of knowledge constructs. Hence it is to philosophy that we must betake ourselves if we are to hope for further elucidation of the problem contained in the question what matter is. As we have already seen, the more abstract departments of science cannot help us, because they proceed from an artificial definition of matter derived simply to make abstract science a possibility.

'The bodies we deal with in abstract dynamics are just as completely known to us as the figures in Euclid. They have no properties whatever except those which we explicitly assign to them' (J. Clerk Maxwell, in *Papers*, II, (1879) 114).

The fundamental property thus conventionally assigned to matter with a 'let it be created' is mass or inertia; and the science of matter is then

valid of matter if it be wholly inert, or in so far as it is characterised by inertia. Whether any matter is wholly inert is a question; that everything is inert must be denied. The science of matter is no basis for a materialistic metaphysics.

For other philosophical questions connected with matter see art. MATERIALISM.

Lodge, *Modern Views on Matter* (London, 1905); Oxford, 1905; S. Rutherford, *Radiation Activity*, Cambridge, 1904; A. J. Eddington, *Relativity and the New Theory of Matter*, London, 1918.

F. R. TRENHANT.

MAURICE.—The position of Frederick Denison Maurice (1805-77) in the history of English 19th cent. theology is difficult to define. He regarded himself as a simple old-fashioned Christian; but to the religious world of his time he was a most obscure and dangerous heretic. Julius Hare spoke of him as the greatest thinker since Plato, and Mill thought his intellect one of the most powerful of the age; but to most of his contemporaries Maurice seemed an obscure mystic, with a strange love for the Athanasian Creed and the Thirty-nine Articles, which much of his teaching appeared to contradict. Described as a leader of the Broad Church Party, he indignantly repudiated the epithet 'broad,' and still more the suggestion that he belonged to any 'party.' He spent much of his energy in controversy, sometimes bitter and occasionally hardly fair. Yet he was constantly on the look-out for points of agreement with his opponents, and those who knew him best were deeply impressed by his spirituality and goodness.

The paradoxes of his position may be partly accounted for by his family circumstances, and by the character of the age in which he lived. He was the son of a Unitarian minister, whose wife and daughters were converted to various forms of Evangelicalism, chiefly dissenting and Calvinistic. They were pious, clever people, much addicted to argument; and Frederick learned much from each, though he was repelled by all their theological systems. He combined his father's enthusiasm for the Fatherhood of God with his mother's conviction of the Divine Will as the root of all. His intense reverence for family relationships, together with the discordant doctrines of his loved ones, drove him to seek for some ground of unity more fundamental than doctrinal agreement. This he ultimately found in the conception of the Church as the divine family, and in the conviction that what God feels about us is far more important than what we feel about God. His view of Christ as ethically absolutely at one with the Father separated him from his Evangelical mother as well as from his Unitarian father. It precluded all idea of the Atonement as a changing of the Father's Will, as a bargain, or as a legal fiction. Similarly the popular beliefs about the Bible, the future life, and all the divine ways of working seemed to Maurice tinged with materialism. He was especially repelled by all sects, because he found in himself tendencies to fall into what he believed to be their errors. His controversial bitterness was often directed in reality against elements which he knew to be lodged in his own nature. Everywhere he discovered good, but also evil; and his position was generally a puzzle to his contemporaries.

His attitude towards politics showed the same character. Growing up in the Tory reaction that followed the French Revolution and the Napoleonic wars, he was naturally disgusted by the brutalities and bigotries of this reaction. But he was almost equally opposed to a Liberalism which consisted mainly of destruction of abuses. The forces which carried Wordsworth and Coleridge into

Conservatism and High Churchmanship operated strongly upon Maurice, with his reverence for the past and his attraction towards sacramentalism. For a time he hesitated. At Cambridge, after a distinguished career, he refused to take a degree, because this would have involved a profession of Churchmanship. He wrote a novel, edited the *Athenaeum*, and engaged in various literary ventures. Then he decided to offer himself for ordination, and, as a preparation for this, to go through another undergraduate course, this time at Oxford. Then he published a defence of the tests by which acceptance of the Thirty-nine Articles was required from all who would obtain an Oxford degree. His arguments were, of course, fundamentally different from those used by ordinary Tories, and perhaps equally unreasonable. He afterwards admitted that his main position was untenable.

Maurice's first really important book was *The Kingdom of Christ* (1844). The book was primarily intended for Quakers. Their doctrine of 'the Inner Light' and of the supreme value of the spiritual was enthusiastically accepted by Maurice; but he set himself to proclaim the massivity of the visible. Forms are witnesses to the invisible, and channels through which the divine spirit works. The Church is a spiritual kingdom, asserting human brotherhood, and protesting against human self-assertion and individualism, which would, if uncontrolled, destroy society. The author sometimes seems intensely Evangelical, sometimes a pronounced Catholic, sometimes a rationalist and a sort of socialist. He passes from an obscure mysticism to teaching as simple that it seems commonplace; he glances through the whole history of philosophy and theology; everywhere he discovers two tendencies, 'one belonging to the earth, one claiming fellowship with (the) Divine'; and the upward tendency is the search for that kingdom which God has provided in the Catholic Church. All this seemed orthodox enough. Its implications were not generally recognized, and in 1846 Maurice was elected to the professorship of Divinity at King's College, London.

It was characteristic that his next book dealt chiefly with the value of the non-Christian religions, the pagan philosophies, and the medieval theologians. *The Religions of the World* appeared in 1847, and one form of the *Moral and Metaphysical Philosophy* in 1848. The latter had originally been published in 1836, but it was expanded in a series of later editions. It illustrates the wide learning of Maurice and his extraordinary capacity for discovering his points of agreement with diverse and mutually contradictory thinkers. As a history it is open to the criticism that, instead of giving a well-balanced account of systems, it presents only those aspects of them towards which the writer was attracted.

At this period Maurice was keenly interested in social movements. He invented the phrase 'Christian Socialism' as a protest against unsocial Christians and un-Christian socialists. He recognised the good in the aims of Chartists and Revolutionists. He sympathised intensely with their protests against the condition of the poor and the competitive basis of society. He set himself sternly against appeals to force, and was utterly distrustful of democratic ideals; but he started little newspapers, like *Justice for the People* and *The Christian Socialist*, with more revolutionary friends. Naturally Maurice was made responsible for the views of his less eminent associates, whom he warmly defended against the abuse of the property classes and their representatives. Moreover, the co-operative schemes at which he worked were regarded as an attack on capitalism, on the leading political economists, and on what was con-

considered as the due subordination of the working classes. The 'respectable' press, secular and religious, fawned against Maurice, and at length the Council of King's College appointed a committee to investigate the matter. But there was nothing in the Christian Socialism of Maurice inconsistent with his duties or his position as a Divinity professor.

The attack was then shifted from charges of socialism to charges of theological heresy. In 1863 Maurice published the volume called *Theological Essays*. On most points the new book was only restating and expanding views previously expressed; but it made clearer the author's divergences from traditional and conventional theology, especially on the subject of eternal death. He maintained, in effect, that 'eternal' means spiritual. Knowledge of God, love, truth, and the like are eternal life. Eternal death is not a matter of time or place, but of spiritual separation from the divine. The locality and duration of future punishment were matters outside Maurice's message, and he seems to have believed that it was also outside the message of the Bible and of the Anglican formularies. The religious world felt that much of the book was fatal to what passed as Christianity, but it was expressed in such orthodox language that it was difficult to see how Maurice could be convicted of heresy. He must, therefore, be ejected from his professorship without the formulation of any specific charges. The Council of King's College refused to adopt Gladstone's suggestion that Maurice's writings should be submitted to theological experts; and they compelled him to resign. The responsibility for their decision cannot be laid on any one party in the Church. It represented the view of the High, the Low, and the Moderate. Some High Churchmen had been at first attracted by the fervid sacramentalism of Maurice; but they soon came to suspect that his meaning was something very different from theirs. At length Pusey declared that Maurice and he were not worshipping the same God. Low Churchmen were even more disgusted with books full of intensely Evangelical sentences, which were yet fundamentally opposed to their whole scheme of salvation, their doctrine of the Fall and of the Atonement, and of the doom awaiting those who did not accept the Evangelical tenets. Broad Churchmen alone protested against the expulsion, and even they were puzzled as to how one who was so much in agreement with their hostility to the prevalent doctrines of the religious world could yet enthusiastically accept much that seemed to them superstitious and out of date. Nevertheless, the Broad Churchmen stood by Maurice, though he vigorously repudiated Broad Churchmanship. The Evangelicalism of Wilberforce and Sumner and the Anglo-Catholicism of Keble and Newman were the dominant forces in the religious world. Maurice had learned much from both. But at bottom he was opposed to both powerful parties, and few were disposed to forgive this attitude, in consideration of his enthusiastic support of some at least of their cherished principles.

Time has revolutionized the situation. At present many of the best High and Low Churchmen speak with grateful reverence of Maurice, and appear to ignore the great gulf which separates his views from their own. The fervent sincerity and piety of the *Theological Essays* are unmistakable, though to most readers much of the book seems banalizing and obscure. More popular are *The Prophets and Kings of the Old Testament* (1863) and *The Patriarchs and Longivers of the Old Testament* (1865). Maurice meant by revelation a literal unveiling of truth, and especially of God's character, by a direct intercourse of the divine with the human. God literally speaks to the hearts of the

old heathen, and He speaks no less directly to men's hearts in all ages. This conviction attracted Maurice especially to the Johannine books, on all five of which he wrote valuable commentaries, in which, however, he almost ignored what Higher Criticism had to say. His attitude towards the Bible was in some respects vague. Without claiming for it infallibility, he was pained by any criticism of its contents, and disposed to re-interpret rather than reject. He would not join in the outcry against Colenso and Keane and Rieu; but he disliked the critical spirit, and had little sympathy with plain speaking which hurt pious souls, except when it was in defence of some spiritual truth. Nevertheless, he was always ready to scandalize the religious world in cases where the traditional views seemed to him profoundly irrational. Thus Massel's *Bampton Lectures* (1868) practically declared that man could have no knowledge of God, except what was given him by the Bible. Such orthodox agnosticism was horrible to one who believed in a Light that lightens every man. Massel taught, in effect, that man had no right to assume that words like 'fatherhood,' 'righteousness,' and 'justice' meant, when applied to God, all and more than what they imply in human relationships. To Maurice this seemed practically atheism; and in his book *What is Revelation?* (1866) he poured out the vials of his wrath upon the Bampton lecturer. There followed a very bitter controversy, in which Maurice for a time received little support. Gradually, however, the more spiritually minded men of all classes rallied to his side.

Maurice's later years were spent in comparative quiet. The number of his actual disciples remained small, but his ideas spread, and the charm of his personality exercised a wide influence. It was also noticed that this mystic had proved singularly right in many of his ideas of practical reform. His Working Men's College and College for Women were imitated with more or less modification in numbers of institutions all over the country. His co-operative schemes, though unsuccessful, helped to pave the way for a great movement, conducted on less idealistic principles. Christian Socialism, under that or other names, became a great force; and meanwhile the more obnoxious features of the popular theology passed into the background, when they were not altogether dropped out of the conventional religion. Accordingly, though Maurice in books and sermons continually reiterated his old teaching, he aroused little fresh opposition. He continued to protest against popular doctrines, orthodox or liberal, but he had little to add to his old arguments. In 1866 he was appointed to the professorship of Cosmology, Moral Theology, and Moral Philosophy at Cambridge, and threw himself heartily into the duties of that position. Experts are divided as to the value of his contributions to metaphysics and to philosophy. For all departments of thought and life he claimed a theological basis, in a Father revealed in a Son through the operation of a Spirit, and witnessed to by a Catholic Church, with Bible and sacraments. Those to whom these things were either incredible or at least disconnected with philosophy and reason could regard him only as a somewhat middle-headed mystic, however much they might reverence his character, learning, and ability.

Leiman - Frederick Maurice, *The Life of Frederick Denison Maurice*, 3 vols., London, 1884, is an excellent compilation in which the editor has kept his own views and personality admirably in the background, shorter and more critical, but adequate, biographies are given by C. F. G. Masterman (London, 1907) and W. E. Collins (do. 1908). See also T. Hughes, *Portrait of Maurice's Friendship of Books*, do. 1874; Leslie Stephen, art. 'Maurice,' in *DSB*, do. 1904; and the references to Maurice in J. McLeod Campbell, *Reminiscences*, do. 1877, and Caroline F. E. Spurgeon, *Old Friends*, do. 1903.

J. K. STARR.

MAY, MIDSUMMER.—Agricultural peoples throughout the world have established a ritual, more or less elaborate, about the critical periods of their common industry. This ritual, in effect, is the farmer's religion, and it may be considered the culmination of all pre-ethical animism, and its most important development prior to the great organized faiths. In the form of holiday customs its semblance survives abundantly throughout Europe, and probably not a little of its belief is latent underneath Christianity to-day.

We shall discuss its meaning below. This is perhaps less complex than has been supposed; but it is clear that the agricultural meaning is associated with the popular attitude towards the changes of the seasons, lunar and solar movements, and the growth and decay of vegetation in general. The calendar of this cult is that of the countryside, and this is even suggested by the three categories to which this turns May, midsummer, and harvest belong.

1. *May.*—The typical European celebration of May Day is well known. Trees, green branches, or garlands are carried round, and a King and Queen of May are appointed from among the young people. According to Maanhart and Frazer, these objects and persons represent the tree-spirit or spirit of vegetation:

"The intention of these customs is to bring home to the village, and to each house, the blessings which the tree-spirit has in its power to bestow."

They had "originally a curious and, so to speak, sacramental significance: people really believed that the god of growth was present within the bough. . . . The idea of the spirit of vegetation is blent with a personification of the energies at which his powers are most strikingly manifested."

The custom of setting up a May Tree or May Pole has been widely spread in Europe. A typical case is that of Swabia; on the first day of May a fir tree was brought to the village, decorated with ribbons, and set up, and the people then danced round it. It remained on the village-green till the next May Day, when a new tree took its place.¹

At a later stage, at least in England, the May Pole was permanent, while in Bavaria it was renewed at arbitrary periods of three, four, or five years.

"When the meaning of the custom had been forgotten, and the May-tree was regarded simply as a centre for holiday merry-making, people saw no reason for felling a fresh tree every year and preferred to let the same tree stand permanently, only decking it with fresh flowers on May Day."²

Instead of a tree or a branch, a branch decked with flowers, or simply garlands of flowers, are frequently employed. English children use two hoops of osier or hazel, crossing at right angles, and twine flowers round them; or a pole is carried with a bunch of flowers fixed on the top.³ In modern English folk custom the essence of the May Pole is the long ribbons attached to the top; each of these is held by a child, and as they dance round the pole the ribbons twine round it, to be untwined when the dancers reverse.

The tree-spirit is often embodied in human form or in a living person. English children carry a doll in the garland, sometimes styled 'The Lady of the May'.⁴ In Alsace a little girl is selected to be the Little May Rose, and carries a small May Tree. The Russian Lithuanians crown the prettiest girl and address her 'O May! O May!' In Brie a boy is wrapped in leaves; he is styled 'Father May'. The 'Green George' of Carinthia and Rumania is a boy covered with green branches; at the end of the procession an effigy of him is flung into the water.⁵

Here is what Frazer terms the double or bilingual representation of the tree-spirit by a tree and doll

or a living person.¹ Instances of the single representation by a living person are numerous, such as the Little Leaf Man of Thuringia, the English Jack-in-the-Grass, usually a chimney-sweep, who wore a framework covered with ivy and holly, and the innumerable May Kings and May Queens.² These still, in many cases, remember to announce the coming of spring, as well as to wish the people good luck.

Often the symbolism is that of a wedded pair, king and queen, lord and lady, bridegroom and bride. Trees, Fraser notes, are sometimes married to each other.³ In some cases one party is a 'forsaken sleeper,' who is awakened by a kiss or the like. In a few cases there is an indirect representation of a marriage between the May couple.⁴ The folk-drama of the marriage of Zeus and Hera in ancient Greece may be similar to the above, and certainly that of the Queen to Dionysus was identical. According to Fraser, the principle is that marriage promotes fertility.

One aspect of these customs is that the symbolic figure is supposed to ensure fertility to women and cattle as well as to vegetation and the crops. This is brought out in German and English folk-custom. The European customs are certainly to be correlated with those of other peoples, whose definite object is to promote the growth of the young crops or of the seed. In N. Morocco, for instance, during May, or at any time in spring, the women engaged to weed fields make a doll. A villager mounted on a horse runs away with it. A regular pursuit follows, and, if a man from another village succeeds in carrying it home, the village where it was made must buy it back, usually with a feast. The doll is termed *Mâta*, and is dressed up as a girl.⁵

Another element besides that of the spirit of vegetation is detected here by Westermarck.

"The doll *Mâta* is obviously a personification of the wheat, its vital energy; she is regarded as the bride of the field, and the ceremony itself I have heard called 'the wedding of the wheat.' Considering how commonly violent movements, contests, and racing are found as rites of purification, I venture to believe that the ceremony of *Mâta* is originally meant to serve a similar purpose, that it is essentially a magical means of cleaning the corn, which is added to the more realistic method employed by the women on the field. At the same time, however, there may also be an idea of distributing harvest over the fields by racing about with the doll. Sometimes a large wicker spoon is used for the frame of the doll."⁶

The two polar ideas of Moroccan magical belief are *l-bas*, evil magic, and *haraka*, holiness or good magic, each being a force or substance. The negative method of assisting the latter by first eliminating the former is conspicuous in Berber custom. But it would be futile to attempt to decide which method is the earlier; they are obviously complementary. A consideration to be adduced later may, however, have some significance here.

The negative aspect of agricultural ritual, viz. the imposition of tabu, has traces in European custom, especially in the prohibition of unlucky acts or times. Tabu is best exemplified, however, in lower cultures. The Dayaks of Borneo, for instance, consider the whole period of farming and all its operations to be subject to supernatural influences, while planting and harvest are especially critical times. The most elaborate tabus are imposed, and omens are constantly taken. Marriage and feasting follow the period of tabu.⁷

The Amazon procures a game (common tabu) at planting and harvest. The idea underlying the various restrictions is that one must not give them and attention to anything but the care of the crops.⁸

If the Christian Lent was developed out of a period of agricultural tabu, there is complete continuity between the old and new faiths.

The question of date may here be noticed. European folk-custom has a large body of similar ritual celebrated previously to and during Lent, such as the Death of the Carnival, the Burial of Shrove Tuesday, Carrying out Death, Saving the Old Woman, followed by a dramatic advent of Spring, Summer, or Life.¹ The former generally are dated on Shrove Tuesday, sometimes at Mid-Lent, the latter sometimes follow immediately, or at a later date—the fourth Sunday in Lent, for instance—while in Russia similar ritual in both forms is celebrated in spring and at midsummer, and also on St. Peter's Day.² These dates suggest that the old agricultural calendar was altered to suit the ecclesiastical.

In the majority of these Lenten customs the tree or branch or doll or person is termed Summer or Summer-tree.

'The "customs" of bringing in the May and bringing in the Summer are essentially the same. . . . The Summer-tree must likewise be an embodiment of the tree-spirit or spirit of vegetation.'³

With regard to the representation of Death, more prominent in the 'Summer' (Lenten) ritual than in that of May Day, Fraser's view is that it is 'an embodiment of the tree-spirit or spirit of vegetation,' the Summer-tree being often a 'revivification of the effigy of Death.' The idea is 'the death and revival of the spirit of vegetation in spring.'⁴ There is also, as already noted, a natural identification of season or date with the spirit. The death is represented frequently by killing, and this may be connected with the idea of slaying the incarnate or embodied spirit while still vigorous, in order that its successor's vigour may be guaranteed.

Another feature of May ritual is the kindling of bonfires,⁵ though this is most conspicuous at Midsummer-tide.

The Beltane fire of Scotland was kindled on May Day as late as the 18th century. The traces of human sacrifices at them were particularly clear and unequivocal. The most significant example is that of the north-east of Scotland. Here the Beltane fire was lit not on the first but 'on the last of May, O.E. They were called *bon-fires*. The belief was that on that evening and night the witches were abroad in all their forces, meeting ill on cattle and stealing over' with. To counteract their evil power pieces of the roven-tree and woodbine, chiefly of roven-tree, were placed over the hyre doors, and fires were kindled by every farmer and cottier. Old thistles, or straw, or turf, or broom was piled up in a heap and set on fire a little after sunset. Some of these *bonfires* kept constantly burning up the blazing moon, and others named portions of it on pitch forks or poles, and ran higher and thicker, holding them as high as they were able, while the younger portion, that emitted, danced round the fire or ran through the smoke, shouting, "Fire! burn on burn the witches; fire! fire! burn the witches." In some districts a large round cake of oat or barley-meal was rolled through the smoke. When the material was burned up, the ashes were scattered far and wide, and all continued till quite dark to run through them still crying, "Fire! burn the witches."⁶

In Ireland, Sweden, and Bohemia bonfires were lighted on the first day of May; and in the last-named country the 'burning of the witches' is prominent.⁷

Bathing, washing the face with dew, and drunching effigies and mummies are common customs on May Day. The European May customs are also, among some peoples, celebrated at Whitsuntide. This date is especially marked in Russia, but also occurs in the Altmark, Bavaria, and other parts of Germany, Denmark, and Austria-Hungary. They are elsewhere celebrated at Midsummer, and on St. John's Eve or St. John's Day. One or two

III, *The Dying God*, London, 1911, pp. 321, 322, 323, 324, 325, 326, 327, 328, 329, 330, 331, 332, 333, 334, 335, 336, 337, 338, 339, 340, 341, 342, 343, 344, 345, 346, 347, 348, 349, 350, 351, 352, 353, 354, 355, 356, 357, 358, 359, 360, 361, 362, 363, 364, 365, 366, 367, 368, 369, 370, 371, 372, 373, 374, 375, 376, 377, 378, 379, 380, 381, 382, 383, 384, 385, 386, 387, 388, 389, 390, 391, 392, 393, 394, 395, 396, 397, 398, 399, 400, 401, 402, 403, 404, 405, 406, 407, 408, 409, 410, 411, 412, 413, 414, 415, 416, 417, 418, 419, 420, 421, 422, 423, 424, 425, 426, 427, 428, 429, 430, 431, 432, 433, 434, 435, 436, 437, 438, 439, 440, 441, 442, 443, 444, 445, 446, 447, 448, 449, 450, 451, 452, 453, 454, 455, 456, 457, 458, 459, 460, 461, 462, 463, 464, 465, 466, 467, 468, 469, 470, 471, 472, 473, 474, 475, 476, 477, 478, 479, 480, 481, 482, 483, 484, 485, 486, 487, 488, 489, 490, 491, 492, 493, 494, 495, 496, 497, 498, 499, 500, 501, 502, 503, 504, 505, 506, 507, 508, 509, 510, 511, 512, 513, 514, 515, 516, 517, 518, 519, 520, 521, 522, 523, 524, 525, 526, 527, 528, 529, 530, 531, 532, 533, 534, 535, 536, 537, 538, 539, 540, 541, 542, 543, 544, 545, 546, 547, 548, 549, 550, 551, 552, 553, 554, 555, 556, 557, 558, 559, 560, 561, 562, 563, 564, 565, 566, 567, 568, 569, 570, 571, 572, 573, 574, 575, 576, 577, 578, 579, 580, 581, 582, 583, 584, 585, 586, 587, 588, 589, 590, 591, 592, 593, 594, 595, 596, 597, 598, 599, 600, 601, 602, 603, 604, 605, 606, 607, 608, 609, 610, 611, 612, 613, 614, 615, 616, 617, 618, 619, 620, 621, 622, 623, 624, 625, 626, 627, 628, 629, 630, 631, 632, 633, 634, 635, 636, 637, 638, 639, 640, 641, 642, 643, 644, 645, 646, 647, 648, 649, 650, 651, 652, 653, 654, 655, 656, 657, 658, 659, 660, 661, 662, 663, 664, 665, 666, 667, 668, 669, 670, 671, 672, 673, 674, 675, 676, 677, 678, 679, 680, 681, 682, 683, 684, 685, 686, 687, 688, 689, 690, 691, 692, 693, 694, 695, 696, 697, 698, 699, 700, 701, 702, 703, 704, 705, 706, 707, 708, 709, 710, 711, 712, 713, 714, 715, 716, 717, 718, 719, 720, 721, 722, 723, 724, 725, 726, 727, 728, 729, 730, 731, 732, 733, 734, 735, 736, 737, 738, 739, 740, 741, 742, 743, 744, 745, 746, 747, 748, 749, 750, 751, 752, 753, 754, 755, 756, 757, 758, 759, 760, 761, 762, 763, 764, 765, 766, 767, 768, 769, 770, 771, 772, 773, 774, 775, 776, 777, 778, 779, 780, 781, 782, 783, 784, 785, 786, 787, 788, 789, 790, 791, 792, 793, 794, 795, 796, 797, 798, 799, 800, 801, 802, 803, 804, 805, 806, 807, 808, 809, 810, 811, 812, 813, 814, 815, 816, 817, 818, 819, 820, 821, 822, 823, 824, 825, 826, 827, 828, 829, 830, 831, 832, 833, 834, 835, 836, 837, 838, 839, 840, 841, 842, 843, 844, 845, 846, 847, 848, 849, 850, 851, 852, 853, 854, 855, 856, 857, 858, 859, 860, 861, 862, 863, 864, 865, 866, 867, 868, 869, 870, 871, 872, 873, 874, 875, 876, 877, 878, 879, 880, 881, 882, 883, 884, 885, 886, 887, 888, 889, 890, 891, 892, 893, 894, 895, 896, 897, 898, 899, 900, 901, 902, 903, 904, 905, 906, 907, 908, 909, 910, 911, 912, 913, 914, 915, 916, 917, 918, 919, 920, 921, 922, 923, 924, 925, 926, 927, 928, 929, 930, 931, 932, 933, 934, 935, 936, 937, 938, 939, 940, 941, 942, 943, 944, 945, 946, 947, 948, 949, 950, 951, 952, 953, 954, 955, 956, 957, 958, 959, 960, 961, 962, 963, 964, 965, 966, 967, 968, 969, 970, 971, 972, 973, 974, 975, 976, 977, 978, 979, 980, 981, 982, 983, 984, 985, 986, 987, 988, 989, 990, 991, 992, 993, 994, 995, 996, 997, 998, 999, 1000.

other dates are elsewhere found, cases apparently of arbitrary selection of a spring or summer critical day. The Swedes celebrate a minor form of the ritual on May Day, but are remarkable among European peoples for concentrating these customs upon Midsummer-tide, when May Pole, garlands, arbours, and jumping over bonfires are in great evidence.⁸ It is curious that parts of Bohemia have the same date, while in Russia both Whitsun and Midsummer are celebrated similarly. The same ideas and practices are more or less equally applicable to May Day and Midsummer Day, but a Pyrenean custom suggests a special causal connexion. Here a tall tree is cut down on May Day and kept until Midsummer Eve, when it is ceremonially burned.⁹

Similarly there is a continuous connexion between the ritual and beliefs belonging to the whole trio of the critical periods, May, midsummer, and harvest. In Morocco the first day of summer (17th May) is the death of the earth, the first day of a new season, and the first day of harvest.¹⁰ It is quite natural that green trees and green branches should be most conspicuous on May Day, and corn sheaves and the like at harvest; the preponderance of bonfires at midsummer, however, is a curiously difficult problem, whether on the theory of the tree-spirit with its corollary of sun-charms or on that of purification and burning.

2. Midsummer. — Turning now to the midsummer celebrations, we find that in Sweden May Poles are set up and decorated, and the people dance round them, and bonfires are lighted to be danced round and jumped over. In Bohemia the May Pole itself is burned.¹¹

In Russia on St. John's Eve a figure of the mythical puny-ape, Kupaia, is made of straw, and 'is dressed in women's clothes, with a necktie and a floral crown. Then a tree is felled, and, after being decked with ribbons, is set up on some chosen spot. Near this tree, to which they give the name of Marusa (Winter or Death), the straw figure is placed, together with a table, on which stand spirits and viands. Afterwards a bonfire is lit, and the young men and maidens jump over it in couples, carrying the figure with them. On the next day they strip the tree and the figure of their ornaments, and throw them both into a stream.'¹²

In some parts of Russia the ceremony is accompanied by weeping and wailing for the destroyed effigy, or by a mock combat between those who attack and those who defend it.¹³ In Bardonia there is a ritual which seems to be a survival of the ancient Greek 'Gardens of Adonis.' The village swain proposes to a village girl early in spring. Then in May she sows in a pot a handful of corn, which is well grown by Midsummer Eve, when it is called *Bras* or *Nessari*. On Midsummer Day the young couple go in a procession and break the pot against the church door. Feasting follows, and in some districts a bonfire is lighted, round which the people dance. A young couple who wish to be 'Sweethearts of St. John' clasp hands across the fire. The two 'gossips,' suggests Fraser, may correspond to the Lord and Lady of the May, and ultimately represent in flesh and blood the reproductive spirit of vegetation.¹⁴ In Morocco amouldering fires are made on Midsummer Day or the evening before.

'Men, women and children leap over them, believing that by doing so they rid themselves of the bad or evil, which may be clinging to them; the sick will be cured and married persons will have offspring. Nobody is hurt by the fire since there is baraka in it.'¹⁵

In the Moroccan custom the smoke is more

important than the blaze; the practical point is fumigation of men, cattle, trees, and various belongings.

It is also noteworthy that in Morocco at midsummer magic fires are supposed to be active in certain species of vegetation.¹ Fumigation by burning certain kinds of plants and the mere application of leaves and branches promote fertility, act as charms against the evil eye, and assist general well-being. There is also a custom of ending, in a quasi-ceremonial manner, special feasts, in which there is *haraka*.²

There is probably no corner of Europe in which it has not been the custom to kindle bonfires at Midsummer-tide. Besides the leaping through the fire, there are customs of throwing blazing disks through the air and of rolling burning wheels downhill.³ A certain sanctity, as in the need-fire ceremonies, attaches to the kindling of the fire in some instances. A frequent custom is that of making gigantic figures of wicker-work, which are paraded and then burned, these midsummer giants being apparently analogous to the May Kings in their leafy garb. There are also traces of burning animals alive.⁴

Fraser derives these customs of modern Europe, especially those of N. France, from the 'sacrificial rites of the Celts of ancient Gaul,' as typified in the druidical sacrifices, and mythically in the death of Balder.⁵

Two main interpretations of these fire-rituals have been put forward. Maunhardt, originally followed by Fraser, explained them as sun-charms.⁶

At the 'great turning-point in the sun's career,' the summer solstice, primitive man fancied that he could help the sun in his coming decline—could keep his falling steps and retard the sinking flame.⁷

The wheel and disk are suggestive shapes. Fraser also noted the purificatory aspect of these customs.⁸ Fire is a cleanser, and is frequently used for the purpose, as in the need-fire. Westermarck emphasized this aspect.

Their primary object in many or most cases is to serve as a protection against evil forces that are active at Midsummer.

In the Moroccan customs cleansing by fumigation is the chief idea, although there is also the ascription of positive virtue to the smoke. Westermarck finds no evidence for the sun-charm theory.⁹ Later Fraser regarded the two views as being not mutually exclusive, but admitted the purificatory theory as being the more probable.¹⁰

Traces exist of what has been interpreted as human sacrifice by drowning on this date. Various similar customs have been interpreted as rain charms.¹¹ In Morocco, however, midsummer ceremonial bathing is connected with the idea of securing health by cleansing, and the same idea is attached to the European custom of rolling in dew.¹² Various kinds of divination, as is natural on special dates introductory of a new season (as midsummer is often regarded), are practised. Mock fights, tug-of-war, games, and abuse of the ceremonial figure are common incidents. These have been interpreted as dramatic survivals of a ceremonial and magical representation of a struggle between good and evil influences, or designed to produce by homeopathic magic 'movement' in the weather or in the growth of the crops.¹³ Magic plants are gathered at midsummer

(see art. DEW); such are fern-blossom, fern-seed, mistletoe, and St. John's wort.¹⁴

For the special harvest-rites see art. HARVEST.

3. Basis of agricultural rituals.—The general theory of agricultural ritual propounded by Fraser can be connected with such primitive magical rites as the Australian *intichimeas* for developing the growth of food-plants and animals. But in many European cases it seems that the main object is to purify the sphere in which the corn grows, and many rites are concerned not with a spirit of vegetation but with vaguely-imagined evils, often in the form of witches.¹⁵ The burning or destruction of the tree-spirit is often a doubtful proposition. It is impossible to dogmatize on the origin and first intention of these agricultural rites, but it is necessary to bear in mind the possibility that beliefs in corn-spirits and the like, and even the magical practices themselves, may be late accretions upon some simple psychological and even utilitarian facts. There is also the sense of crisis, very strong in the primitive mind. Thus, psychic reactions in sympathy with the objects concerned might lead to dramatic, but unconscious, imitations—e.g., jumping to make the corn grow; in the same way imitative explanations might be made of such necessary processes as weed-burning. When established, these as *post facto* explanations, magical, mythical, or theological, obviously tend to usurp precedence.

LEMMERME.—This is very extensive, but the main edited works are cited in the text. A. E. CRAWLEY.

MAYĀ.—*Māyā*, 'illusion, appearance,' is a term in the philosophy of the Vedānta applied to the illusion of the multiplicity of the empirical universe, produced by ignorance (*avidyā*), when in reality there is only One, the *brahman-dhman*. It is not till a somewhat late period that the word assumes the technical meaning of the cosmic illusion, although this development of its sense is not an unnatural one. The word *māyā* is not uncommon even in the Rīgveda, where it has the meanings 'supernatural power,' 'enchanting,' 'mysterious will-power.' Sayana usually explains it by *prāyā*, 'mental power,' or *āpāyā*, 'enchanting,' 'guile,' 'deception.' Indra, e.g., is said to assume many forms *māyābhīṣ*, 'by magic wiles, or mysterious powers'; as the possessor of this power, he is called *māyīn*.

(The use of the term in the Rīgveda has been thoroughly analyzed by A. Bergaigne (*Religion védique*, Paris, 1878-82, III, 20-26, et al. H. H. Bhandarkar, *MAYĀ*, *WJRM* xiii, (1899) 216-220). It, or such derivatives as *māyā*, independent, is applied to the wiles of the demons conquered by Agni (v. 1. 8, etc.) and *dhmavā* (vi. 1. 1. 5), and especially by Indra, whether alone (i. 1. 1. 4, etc.) or accompanied by Viśva (vi. 1. 1. 4). By overcoming the wiles of the demon *Indra* was the *dhmā* (vi. 1. 1. 5). Men of evil craftiness are *māyīn* (i. 1. 1. 1. 5) or *dhmavā* (iii. 1. 1. 1. 5); the sorcerer uses *māyā* (vi. 1. 1. 1. 5), but the *māyīn* cannot overcome 'the primal firm ordinances of the gods' (iii. 1. 1. 1. 5). The *Adhvya* conquer the wiles of the evil *Dasyu* (i. 1. 1. 1. 5).

On the other hand, the terms are applied to *prāyā* dāttā. Through *māyā* *Indra* and *Varuṇa* send rain and guard their law (v. 1. 1. 1. 5, 7), through *māyā* the sun-bird is adorned (2. 1. 1. 1. 1). The Maruts employ it (v. 1. 1. 1. 1. 5), and are *māyīn* (v. 1. 1. 1. 1. 5), or *dhmavā* (i. 1. 1. 1. 1. 5, etc.). *Māyā* is known to, or used by, *Trāṣṭā* (i. 1. 1. 1. 1. 5), the *Adhvya* (ii. 1. 1. 1. 1. 5), and *Varuṇa* and *Indra* (i. 1. 1. 1. 1. 5, etc.), and it is a characteristic of *Varuṇa* (vi. 1. 1. 1. 1. 5, etc.); while by it the *Rbhu* attained divine dignity (iii. 1. 1. 1. 1. 5). It was also employed by Agni (iii. 1. 1. 1. 1. 5) and *Soma* (ii. 1. 1. 1. 1. 5), and in the former deity the wiles of the *māyīn* are united (iii. 1. 1. 1. 1. 5). It was a mark of the *Adhvya* (v. 1. 1. 1. 1. 5, etc.) and even earthly mortals are *māyīn* (ii. 1. 1. 1. 1. 5).

Through *māyā* *Indra* triumphs over the *māyīn* demons (i. 1. 1. 1. 1. 5, v. 1. 1. 1. 1. 5, etc.), and he 'has much *māyā*' (*prāyā* *dhmā*, vi. 1. 1. 1. 1. 5, etc.). Gores of the later development of the word are found in such passages as iii. 1. 1. 1. 1. 5, where *Indra* 'assumes form after form, working *māyā* about his body,' and vi. 1. 1. 1. 1. 5, where 'through *māyā* *Indra* goeth in many forms' (cf. also iii. 1. 1. 1. 1. 5). Sun and moon succeed each other in virtue of *māyā*.

is wrong to speak of obtaining freedom from it. The *ātmān* cannot be said to create or cause the universe any more than the rope creates the snake. Production would be either from the existent or from the non-existent; but the former is impossible, for it would be producing what already exists, and the latter is equally impossible, for the non-existent—e.g., the son of a barren woman—cannot be the cause of anything; it cannot even be realized by the mind.

Goṣṭhāpāda's monism assumed its final form in the commentaries of Śaṅkara (b. probably A.D. 700). Śaṅkara is well aware of the difficulties in the way of reconciling the various views of the Upaniṣads, and is further perplexed by the fact that as *śruti* ('revelation') they all ought to have equal weight; the latter difficulty he overcomes by his classification of knowledge as of two kinds: a higher, the knowledge of *brahman*, and a lower, including all that is not this metaphysical knowledge. He then investigates the cause of ignorance (*avidyā*), and concludes that it is to be sought in the knower. The phenomenal world is unreal so long as the unity of the *ātmān* is not realized, just as the creations of a dream are thought to be real till the dreamer awakes. Just as a magician (*māyādevī*) causes a phantom, having no existence apart from him, to issue from his body, so the *ātmān* creates a universe which is a mere mirage and in no way affects the self. It is through *avidyā* that plurality is perceived where there is really only the *ātmān*. Multiplicity is only a matter of name and form, which are the creations of ignorance, being neither the *ātmān* nor different from it, through the power of illusion (*māyāśakti*). The Highest One manifests himself in various ways by *avidyā* as a magician assumes various forms by his will. Śaṅkara further defines two kinds of existence, empirical and metaphysical, for the first time emphasizing clearly a distinction which seems, however, to be known even in the Upaniṣads. The phenomenal universe is a fact of consciousness, and therefore has a sort of existence; all experience is true so long as the knowledge of the *ātmān* is not attained, just as the experiences in a dream are real to the sleeper, until he awakes.

'... Therefore before the consciousness of identity with *brahman* is attained, all worldly actions are justified' (in *Vedāntasūtra*, II. 1. 12).

In spite of the discussion that has raged round it since Śaṅkara's time, the doctrine of *avidyā* as enunciated by him still holds the field in India to-day and, as one of the fundamental doctrines of his Advaitist school, pervades the philosophy of the great mass of thinkers in India.

MAYANS.—The territory of what is now the Republic of Guatemala, adjoining parts of the Republic of Honduras and of the Mexican States of Chiapas and Tabasco, and the peninsula of Yucatan, was inhabited in ancient times, as it is

to the present day, by a number of different tribes, speaking allied idioms and forming a linguistic family usually designated as 'Mayan,' from the name of its most conspicuous members, the people of Yucatan. This population is to be regarded as the second of the great culture-nations of Mexico and Central America, equal to the Mexicans in material and intellectual civilization and in some ways surpassing them, but, unfortunately, much less known than the Mexicans, as regards the special traits of their civilization, their history, and the elements of their daily life. The chief ancient monuments in Central America—Palenques in Chiapas, Menche Tinamit on the Usumacinta river, Quirigua in Guatemala, Copan in Honduras, Uxmal and Chich'en Itzá in Yucatan—are the work of members of that family. They were the great astronomers and mathematicians who calculated the duration of the revolution of Venus and, perhaps, of other planets as well, and were wont to write down and handle numbers exceeding a million. They had elaborated a system of hieroglyphic writing far superior to that of the Mexicans, but only partially deciphered as yet. They were unexcelled in the apprehension and reproduction of living forms of animals and men. As a whole, their civilization and their religion were closely allied to those of the Mexicans.

In their religious practices they were not so sanguinary as the Mexicans, human sacrifices being much less numerous and in many cases being replaced by the killing of dogs. They resembled the Mexicans in their methods of prayer and offerings, fasting, and torture, and in piercing their ears and tongues and drawing threads through the holes. They also sacrificed living animals by fire to the god of fire, and in some places tortured themselves by running with naked feet over burning coals.

Like the Mexicans, the Mayans divided the year into eighteen periods of twenty days each, and they also commenced their ceremonies early in the year, in our month of January, by renewing all kinds of ceremonial utensils—incense-burners, clay-idols, and the like. This feast was called *Oxot*, and was devoted to the *ahor*, the gods of labour, i.e. the rain-gods. When they had to make a new wooden image or, as they said, to create a god, the work began in the preceding months, and with great precautions (fasting, etc.), the artisans being confined to the house as long as the work went on. In March they had a great fire-ceremony, performed by the old men and directed to the rain-gods (*ahos*) and to the old god Itzamná, who may be considered the god of life and the god of fire. This ceremony was called *tupp'ah*, 'extinguishing the fire.' They brought together every species of animal that was at hand, and, after having kindled a great fire, they killed them by cutting the breasts and tearing out the hearts, which were cast into the flame. The larger animals, such as jaguars, pumas, eagles, were not so easily captured, so they made imitations of their hearts from copal, which was their incense, and threw these into the fire. The hearts having been consumed, the priests extinguished the fire by pouring water from their jars upon it. This ceremony was intended to secure sufficient rain for the crops of the new year. Another ceremony was connected with this performance. They made a kind of terraced pyramid of stones, which seems to have been regarded as an image of the clouds. The priests anointed the lowest step with mud and the upper ones with blue colour, invoking the *ahos* and Itzamná. This was, no doubt, another ceremony for bringing rain.

In April the cacao planters, who were also the great merchants, cacao being the staple merchan-

dise of ancient Central America, celebrated a great feast to the black god Ekchuah, the god of the caravans and the merchants, to the *ahau*, and to Hobuil, the god of the bee-hives. They killed a dog of the spotted colour of the *mano-pod* and offered blue iguanas, feathers of wild fowl, and incense. In the month of May there was another great feast, called *Pucumotoc*, celebrated to *Cit chas coh*, the god of war. It began with a five nights' watch in the temple of the god of war, and during this time the war-chief, called *uucum* and elected for four years by the members of the tribe, was seated on a throne in the temple of the god of war and venerated like a deity with incense-burning. The people performed a dance called *hobon-ahut*, 'warrior-dance.' At the end of the five days they performed the fire-ceremony described above, after which the war-chief was taken in a solemn procession all round the temple; a dog was sacrificed, and the heart offered to the god. The heart was put into a bowl and covered by another bowl, after which the assistant priests dashed to pieces some great jars full of water—undoubtedly another ceremony intended to produce rain for the crops. A great banquet of moid and general drunkenness followed. The same banquets and drinking-bouts were repeated in the course of the next three twentieths in all the smaller villages. These feasts were called *Zabocel tlen*, and it is expressly stated that they were made in order that the new year might be a fertile one and bring rich crops.

The month of July was reckoned as the beginning of the new year by the Yucatecans at the time of the conquest. The twentieth (week) in question was called *Pop*, 'straw-mat,' meaning 'dominion,' 'reign.' They swept their houses and the village streets and renewed all objects of domestic use—plates, jars, bowls, wooden chairs, garments, and the wrappings of their idols—throwing the old ones on the dust-heaps. The priests, who had fasted for one, two, or three months, eating only *mim* a day and abstaining from sexual intercourse, assembled in the temple and kindled new fire by friction, twirling a wooden stick in the hole of another; this new fire was put into the brazier before the idol, and all the priests and principal men burned incense with it to the idol. In the following months all the professional instruments of the different classes of the people—the books of the priests, the implements for casting lots and the fetichas of the doctors, the weapons of the hunters, and the fishing-nets of the fishermen—were consecrated by associating them with blue colour. This feast was called *Pocum*. In the month of September the bee-keepers had a special feast at which they brought offerings of incense and honey to their god Hobuil. In the month of October, called *Xal* by the Yucatecans, there was a great ceremony in the village of Mani, dedicated to the god *Kukulcan*, the 'feathered snake,' the Yucatec translation of the Mexican god *Quetzalcoatl*, who was venerated as a culture-hero in Yucatan, some of the most important towns of the peninsula, Mayapan, and Chich'en Itza, having been founded by Mexican emigrants. The last feast in the year, celebrated at the time of our months November and December, corresponded in a way to the Mexican *Ischali*, ceremonies being performed to promote the growth of the youth and to strengthen them. Contrary to the custom of the Mexicans, the Yucatecans performed very particular and important ceremonies in the last five days of the year, which they called *ama habu kin*, 'days without name,' i.e. 'unlucky' days, the names of which it is dangerous to pronounce. On these days they set up in the midst of the village the image of the deity that was to govern the

coming year, this god being one of four who corresponded to the four cardinal points and followed each other in turn. These gods were: (1) for the east and the years corresponding to the east, *Ah bolon u'saab*, the god of fertility; (2) for the north and the years corresponding to the north, *Kinch ahau*, the sun-god; (3) for the west and the years corresponding to the west, *Itzamná*, the old god, the moon god and the god of fire; (4) for the south and the years corresponding to the south, *Uacmitan ahau*, the 'lord of the six under worlds,' the god of the dead. A number of different ceremonies and offerings were performed in honour of these gods, and the evil that was to befall the village, according to the character of the new year and of the heavenly quarter corresponding to the god thereof, was taken, represented by the figure of a demon, out of the village in the direction of the coming year.

The priests were called *ah-bim*, 'lords of days,' i.e. 'lords of day-signs,' 'dealers in prognostics,' 'sooth-sayers.' They were the leaders and teachers of the people—the learned men whose principal occupation was with books, pictographs, and all the traditional knowledge embodied in them. There is one marked difference between Mexican and Mayan priesthood: in Yucatan the office of sacrificer (*uucum*), who had to kill the victim, was not a highly honoured one, whereas in Mexico the highest priests and—in extraordinary celebrations, such as the inauguration of a newly-built temple—the kings themselves acted as sacrificers.

EDWARD GREY.

MAZANDARÁN.—The Persian region of Māzandarān,¹ or Tabaristān, is bounded on the north by the Caspian Sea and on the south by the Alburz Mountains, and extends from Asterābād in the east to the Pul-i-Rūd in the west. The winds from the Caspian bring abundant rain, and the country is heavily wooded, in contrast to the arid regions south of the Alburz. The climate is decidedly unhealthy, and the difficulty of access to the country, increased by lack of good roads, has combined with Māzandarān's insularity to exclude it from any generous share in the progress of Persia. It is to these disadvantages that the district owes its place in the history of religion in Iran.

Of the aboriginal inhabitants of Māzandarān we know nothing beyond the statement of Strabo (p. 518; cf. 520) that it was their custom to 'give their married women to other men after they themselves had had two or three children by them.' The *Bundahishn* (xv. 28) has a fantastic tradition of their origin, and the *Dinurī* (IX. xxi. 19) describes them as filthy and dwelling in holes.

In regard to the latter point, we may note that Pindol (1844-1846), tr. A. G. and E. W. West, London, 1906 (p. 2, l. 8) makes the Māzandarān White Dēv inhabit a cavern, although one thinks involuntarily of the reported Avastā statement that demons hide under earth or dwell in caves (*Yc. ix. 18*; *Fr. xii. 22*; *Fr. iii. 7, 10*).

In the Avastā Māzandarān is the abode of the Māsaiya *dāevas*, concerning whom E. W. West (*SBE* xviii. [1885] 88, n. 10) expresses the general

¹ The meaning of the name Māzandarān is not certain. The old native etymology (The *Ishtārīyār*, tr. Brown, p. 14) makes it a loan form of 'Māzandarān,' 'within [a mountain named] Māz' (so also Osmann, *Persia*, I. 184 f., *Darmstadt*); its etymology (*Sand-Avesta*, II. 573, n. 52) is uncertain, but it more probably means 'Land of the Māzān Gāh' (*Z. Nōdabā*, *Qir'F* II. [1904] 173, n. 1). Tabaristān, the Arab. form of Pahlavi *Tabaristān* (on which see *Tabaristān*, *Sand. xii. 17*, *zll. 12, 22, 27*), is the land of the Yavān of Ptolemy (vi. II. 6) and the Yavān of Diodorus (ii. II. 8) and Athenaeus (443 B., *Marquart*, *Iranische*, p. 129). F. Windichmann's identification of Māzandarān with Media (*Savastān. Stud.*, Berlin, 1893, p. 203) was wrong.

view when he says that 'these demons were, no doubt, merely idolaters' while M. W. Dhalia (*Zoroastrian Theology*, New York, 1914, pp. 8, 160) sees in them the nomads of Māzandarān and Gīlān, 'who poured down in great numbers and pillaged the possessions of the Iranians.' A number of the Avesta references to the Māminya *dæmons* give no information as to their nature or habits (*Ys.* lvii. 17, 22; *Vend.* ix. 12, x. 16, xvii. 91). We have, however, more precise indications as to their location in the account of the threefold sacrifice by the hero Haohyangha Paradhāta on Mt. Hara to gain the victory over 'two-thirds of the Māminya demons' (*Ys.* v. 22. ix. 4, xv. 8, xix. 26), for Hara (or, as it is also called in the Avesta, Hara Bərəmīti, 'lofty Hara') is generally—and probably correctly—identified with Albāra, though construed in a mythological, rather than a geographical, sense (e.g., Spiegel, *Ersm. Alterthumskunde*, i. 191, 463, 465; Darmesteter, i. 101, n. 28; K. Geldner, *GIRP* ii. 33, and especially Geiger, *Ostirān. Kultur*, pp. 40–45), and the 'peak' (*čātra*, *Ys.* xv. 7; cf. xii. 25; *Bund.* v. 4; *Ys.* xlii. 3) of Hara is probably Mt. Damāvand (Geiger, *loc. cit.*). The identification of Māma (the noun from which Māminya is derived) with Māzandarān is also made by Nerionagh (s. A.D. 1900), who, in his Skr. paraphrase of the Pahlavi version of the *Yasna*, renders 'Māminya' by 'Māzandarā' or 'Māzandaradētiya' (*Ys.* lvii. 17, xvii. 1, lvii. 32).

Closely associated with the Māminya *dæmons* are the Varenyan *dæmons* and *dræpents*, or 'adherents of the Lie demon' (*Ys.* xvii. 1; *Ys.* v. 22, xiii. 137, xv. 4, xix. 26; cf. Darmesteter, ii. 373, n. 28; *Ys.* x. 97, xiii. 71, and *Vend.* x. 14 are unimportant in this connexion). The land of Varana was the fourteenth best created by Ahura Mazda, but Angra Mainyu cursed it with 'untimely infirmities and non-Aryan over-lords' (*Vend.* i. 17).¹ It was 'four-eared' (*čātrə-pəncāh*, i.e. four-square or quadrangular [?]; cf. Darmesteter, ii. 14, n. 28), and was the birthplace of the hero Thrāstaona or Varidāta, who overcame Aṣṣ Dabāka (*Vend.* i. 17; *Ys.* v. 22)—a tale which was discussed at length in the last *Sūthar Nask* of the Avesta (*Dinkart*, ix. xxi. 17–24; cf. also viii. xiii. 9, ix. xxi. 4).² The location of Varana is a matter of some dispute. It was certainly near Tabaristān (Spiegel, i. 546), but is hardly to be identified with the modern village of Verek, south of Sari, as argued by Spiegel (i. 73, n. 3, 546) and F. Justi (*Handb. der Zend-sprache*, Leipzig, 1904, p. 270 [with earlier literature], *GIRP* ii. 404). Equally uncertain is the view of C. de Harles (*Avesta trad.*, Liège, 1876–77, i. 57, n. 3) that it was the modern Kirmān. A. V. W. Jackson (*GIRP* ii. 653) and Dhalia (*loc. cit.*) identify it with Gīlān, and Darmesteter (ii. 14, n. 28) with Tabaristān or Dailam. Tabaristān was formerly preferred by Geiger (*Ostirān. Kultur*, pp. 127 f., 184); his later view (*GIRP* ii. 391), identifying Varana with the Caspian Gates, seems scarcely an improvement. Nerionagh was ignorant of the meaning of the term, for he renders *Varənya* by *vātrəmašara*, 'confusing,' and *hima*, 'love' (on *Ys.* i. 19; *Ys.* xvii. 1), confounding the epithet with the later Pahlavi Varuṇ, the demon of lust (Jackson, ii. 600, 603; Darmesteter, ii. 373, n. 28; L. C. Cassinelli, *Philosophy of the Mazdean Religion under the Sassanids*, Bombay,

1909, pp. 91, 163). On the whole, Gīlān appears to be the most probable identification.

It would seem that the legend of Haohyangha refers to an early invasion of Māzandarān and Gīlān by Iranians, and their conquest of it, at least in part. This is borne out by the local tradition of the early 13th cent., for Ibn Isfandiyyar (p. 15) held that

'until the time of Jamshīd it was in the possession of the demons. He conquered them, and bade them level the mountains with the plains, fill up the lakes, drain the fens into the sea, open up the country, and distribute the rivers and streams.'

The Iranian religion found some place, at all events, in Māzandarān, for tradition sees in Spitām and Ervātspā, who are mentioned in *Ys.* xiii. 121, two pious men who came from Māzandarān to receive the faith from Frashashtra, the father-in-law of Zarathushtra (*Dinkart*, ix. xxi. 17–24).

In the Pahlavi texts the most interesting passage in the present connexion is found in the *Šāh-nāmā* (*Ys.* xvi. 28–30), which records a belief closely similar to the frequent Gnostic concept of the entanglement of light in darkness combined with a touch of the Iranian heresy of Zoroastrianism.

'The ruin was the end of the Māzandarān for the reason that when the Māzandarān are bound on the celestial sphere, whose light is reflected by them, and, in order to pass it from them through a new regulation, discrimination, and evolution of the light of Time, the twelve glorious ones show the daughters of Time to the household-entangling male Māzandarān, so that while the lust of these Māzandarān, from seeing them, is well suited to them, and used is discharged from them, the light which is within the soul is poured on to the earth. From shrubs, and grain have grown therefrom, and the light which is within the Māzandarān is discharged in the soil.'

In the *Šāh-nāmā* Māzandarān is described with little geographical accuracy (Nöldeke, ii. 178), and the Kargashra ('Vulture-heads'), who are frequently mentioned as inhabiting the country, like the Saghara ('Dog-heads'), Bugdāh ('Oste-cars'), and Narupā ('Strap-foot, "Larrivadee"), betray the influence of pseudo-Callisthenes upon Firdausi (Nöldeke, ii. 140, n. 3). In his proper shape the king of Māzandarān had a bear's head (Warner, ii. 75). The land itself was

'The home of warlock-dive and under spells
Which none hath power to loose;
To go or 'ere to think of going thither
Is hard untask' (*ib.* 38 f.).

Nevertheless, it was invaded unsuccessfully by Kai Kāhs and successfully by Rustam (*ib.* 30–41, 43–44, 57–73), one of the great achievements of the latter being the slaying of the 'White Demon,' whom Warner (ii. 27 f.) holds to be a personification of the Māzandarān, rendered pale by the unhealthiness of their climate. This 'White Div' was

'mountain-tall,
With shoulders, breast, and neck ten cords across' (*ib.* 43).

The magic exercised by the 'White Div' against Kai Kāhs reads like a description of a severe hail-storm (*ib.* 40); the only other point worth noting is that his blood cured failing sight (*ib.* 62).

Even in the Arab period Māzandarān remained imperfectly Islāmized. As late as the 10th cent. many of the inhabitants of Dailam and Gīlān were 'plunged in ignorance' (i.e. heathenism), and some were Magians, this being particularly the case with those in the mountains, valleys, fortresses, and other inaccessible places (*Madādī, Provinces d'or*, ed. and tr. C. Barbier de Meynard and Pavet de Courteille, Paris, 1861–77, ix. 5). It was a

¹ With them 'non-Aryan over-lords' Geiger (p. 185, n. 3) compares the *Ampūras*, a tribe dwelling along the Caspian (*Dinkart*, pp. 507 f., 510; cf. W. Tomaschek, in Pauly-Wissowa, i. 1908, s. *Amprān*, § 1106).

² In a Turfān fragment Aṣṣ Dabāka, who was imprisoned in Damāvand, is called 'Māma.' The adjective has then far been found in two other passages, but in both cases the accompanying names are Gīlānī (C. Salomann, *Monachische Studien*, i. [Petersburg, 1903] 86). For the local Mazdean version, according to which Salomann imprisoned in Damāvand the final who stole his ring, see Ibn Isfandiyyar, p. 35.

³ The medical signs, appointed as celestial indices by Abū Maṣūd (*Dīn-ā-Mānāg-ā-Yas*, viii. 12).

⁴ According to Darmesteter (ii. 373, n. 28) and West (*GIRP* ii. 110), the Pahlavi *Jāmdād-nāmā* raises the question whether the Māzandarān were demons or men, and where their souls went after death, the reply being that they were all men, that some of them followed the religion of Abū Maṣūd and others the law of Angra Mainyu, and that most of them went to heaven, but the text, as edited and translated by J. J. Modi (Bombay, 1900), contains no statement whatever on this matter.

prince Khusrav as the presumptive heir to the throne. The course of the events which culminated in the massacre of Mandak together with many thousands of his followers is uncertain. According to the narrative of a Persian official who was converted to Christianity and assumed the name of Timotheus (Joannes Mahab, in *PG* xvii. 664; Theophanes, *ib. evli* 306), Kavadh pretended to yield to the Mandakites, and, having appointed a day for his abdication, caused his soldiers to cut down all the Mandakites who had assembled with their wives and children in the neighbourhood of Ctesiphon to witness the ceremony; he then gave orders that the surviving members of the sect should be seized and burned, and that their property should be confiscated. Most Muhammadan writers place this massacre in the reign of Khusrav, but the truth appears to be that, although it was carried out under Khusrav's direction and probably at his instigation, it preceded his accession (A.D. 591) by two or three years. Noldeke assigns it to the end of 598 or the beginning of 599 (*Gesch. der Perser und Araber zur Zeit der Sasaniden*, Leyden, 1879, p. 406). The ruthless enmity displayed by Khusrav on this occasion earned for him, it is said, the title of Antakarubin (Antakarwin, Nishirwin), i.e. 'he of immortal spirit,' and the further measures which he took were so effectual that henceforward the Mandakites vanish from history. That they were entirely exterminated is scarcely credible. There is some ground for the suggestion that Mandak's ideas maintained themselves in secret and found expression in various Antinomian sects which arose in Persia during the Muhammadan period (for an account of one of these see art. *MĀNDARĀN*).

2. Doctrines.—It must be remembered that the whole of our information concerning Mandak is derived from hostile sources. The epitaph written by an intolerant sacerdotal caste over heretics who had brought it to the verge of destruction may fairly be summed up in the words 'de mortuis nū nini malum'; and, unfortunately, we have nothing from the Mandakite side to set against the biased narrative of our Zoroastrian and Christian authorities. On the other hand, we cannot suppose that they have altogether obscured the essential character of Mandakism, however they may have misunderstood or misrepresented it in detail. Its socialistic basis is well described in the following passage of Tabari (Leyden ed., 1879-1901, i. 908. 111, translated by Noldeke, *op. cit.* p. 154):

'Among the commands which he [Mandak] laid upon the people and earnestly enjoined was this, that they should possess their property and families in common. It was, he said, an act of piety that was agreeable to God and would bring the most excellent reward hereafter; even if he had laid no religious commandments upon them, yet the good works with which God was well pleased consisted in such copartnership.'

In another passage (Tabari, i. 906. 191. = Noldeke, *op. cit.* p. 141) we read:

'They [the Mandakites] asserted that God placed the means of subsistence (arab) in the world in order that His servants might share them in common, but men had wronged one another in that respect. The Mandakites said that they would take from the rich for the benefit of the poor, and give back to them who had little their due portion of the earnings of those who had much; and they declared that he who possessed more than his share of wealth, women, and property had no better right to it than any one else. The mob eagerly seized this opportunity, . . . and the Mandakites became so powerful that they used to enter a man's house and forcibly deprive him of his dwelling, his womenfolk, and his property, since it was impossible for him to offer resistance. . . . Some things came to such a pass that the father did not know his son nor the son his father.'

While the principle that every man is entitled to possess an equal amount of property involves logically and practically copartnership, the removal of class distinctions, and the abolition of marriage, it may be asked from what point of view the principle itself was regarded by Mandak, whether these results of its application formed

part of his programme, and how far they were achieved by his followers. To take the last question first, Khusrav, in his speech to the priests and nobles after his coronation (Tabari, i. 906. 181. = Noldeke, *op. cit.* p. 160 f.), dwells upon the ruin of their religion and the heavy losses which they had incurred. The systematic regulations which he made for the purpose of compensating the sufferers, establishing the position of children of doubtful origin, etc., show that the social revolution must have developed considerably, and that the upper classes bore the brunt of it. Our authorities give great prominence to this aspect of Mandakism, and they are justified in doing so. Mandak was not a philosopher, like Plato, content to work out on paper a theory of the ideal communistic State. He was a militant social reformer, but he was something more. Noldeke has remarked that what distinguishes Mandakism from the organized socialism of modern times is its religious character, a peculiarity in which it resembles all Oriental movements of the same kind (*op. cit.* p. 480; cf. his art. 'Orientalischer Sozialismus' in *Deutsche Rundschau*, Feb. 1879, p. 294 f.). This character is preserved in the hostile Zoroastrian tradition. Mandak's asceticism—he is said to have forbidden the slaughter of cattle for food—gave offence to the orthodox, who saw in him 'the ungodly fasting Ashemaogha' (Pahlavi commentary on *Vendidad*, iv. 49; *SBE* iv. 3 [1886] 48). The passages from Tabari translated above, and still more the epic narrative of Firdausi (*Shah-nama*, ed. Turner Macan, Calcutta, 1880, p. 1611 f.), which reflects the sentiments of the priesthood, bring out quite clearly the fact that Mandak identified his doctrines of equality and fraternity with the religion of Zoroaster in its original uncorrupted form.

'I will establish this (communism) in order that the pure religion

may be made manifest and raised from obscurity.

Whoever follows any religion except this,

May the curse of God overtake that demon (dēv)!'

(*Shah-nama*, p. 1612, line 11 B.)

'Five things turn a man from righteousness;

The age cannot add to these five

Jealousy, anger, vengeance, greed,

And the fifth one that masters him is covetousness.

If these prevail against these five virtues

The way of the Almighty will be made manifest to thee.

Because of these five, we possess women and wealth,

Which have destroyed the good religion in the world.

Women and wealth must be in common.

If these destroy that the good religion should not be harmed.

Then two (women and wealth) possess jealousy and covetousness and greed,

Which secretly make with anger and vengeance.

The Demos (dēv) is always turning the back of the wise,

Therefore these two things must be made common property

(*ib.* p. 1614, line 7 E.)

Without claiming that Mandak was animated by no other motives than those which his enemies attribute to him here, we may well believe that he regarded his communistic scheme as the only sure means of enabling mankind to attain the object which Zoroaster had set before them, namely, the defeat of the powers of darkness and the triumph of the spirit of light. The astonishing success of his propaganda is to be explained by the force of his appeal to Persian idealism. He would not have gained extensive support for his social programme unless it had been, ostensibly if not in fact, the instrument by which he hoped to accomplish a great religious reformation. In the main he appears to have held fast to Zoroastrianism, and no reliance can be placed on the statements of Shahrastāni and later writers who credit him with cosmological speculations closely akin to those of *MĀND*.

Literature.—The principal references to Mandak which occur in Greek, Syriac, Pahlavi, Arabic, and Persian literature are collected by J. Nöldeke, *Gesch. der Perser und Araber zur Zeit der Sasaniden*, Leyden, 1879, at the beginning of the fourth volume, 'Ueber Mandak und die Mandakiten,' p. 466 f., which

the principle of reciprocity' (xlii. 3); and yet 'were the superior man to speak of his way in all its greatness, nothing in the world would be found able to embrace it; and were he to speak of it in its minuteness, nothing in the world would be found able to split it' (xlii. 3). 'The superior man does what is proper to the station in which he is; he does not desire to go beyond this. . . . The superior man can find himself in no situation in which he is not himself; and, if he fails in anything, he blames only himself' (xiv. 12, 3). He advances in regular order from stage to stage (xv. 1), and constantly strives to advance and develop his virtuous nature that he may permeate the path of the mean (xvii. 6). 'When occupying a high situation, he is not proud, and in a low situation, he is not insubordinate' (xvii. 7); and it is characteristic of the superior man, though 'appearing insipid, yet never to produce satiety; while showing a simple negligence, yet to have his accomplishments recognised; while seemingly plain, yet to be discriminating' (xxiii. 1). Among the many virtues of Confucius, special mention is made of the fact that he never swerved from the mean (xxi. 1).

The remainder of the *Chung Yung* is devoted to laudation of filial piety, and to the duties of government, the obligation of absolute sincerity, the path of the sage, and the character of the ideal ruler—all of which depend on the cultivation of *chung yung*.

The mean is mentioned a number of times in the other Chinese Classics; e.g., the *Yi King* says (xlii. 3) that the ruler should 'be sincere and pursue the path of the Mean'; but these texts add nothing to the main discussion in the *Chung Yung*.

LEWIS.—The *Chung Yung* is most conveniently ed. and tr. by J. Legge, *Chinese Classics*, Hongkong and London, 1891-73, I. 282-300 (cf. also his *Prolegomena* to this vol., pp. 32-44), and again tr. by him in *S.S.S.* xlviii. (1926) 322-323.

LOUIS H. GRAY.

MECCA.—Mecca (Arabic Makkah) is a city in Central Arabia, famous as the birthplace of Islam, and, except for a short period at the commencement of the system, at all times its chief sanctuary. A variety of the name, Bakkah, occurs once in the Qur'an (iii. 90), and this is probably the earlier form, though the etymology is uncertain. The classical geographers, who devote considerable attention to Arabia, are apparently not acquainted with this settlement; for the *Maiores* of Ptolemy (vi. vii. 32) is derived from a different root. The 'Chronicles of Mecca,' of which the earliest extant is by Asma' († 245 A.H.), so far as they treat of the pre-Islamic period, are collections of fables, in the main based on the Qur'an, but to some extent influenced by the later history also. It would appear that, when Islam arose, there were no chronicles in existence dealing with the affairs of Central Arabia, and for some generations the days of paganism were regarded with a sort of horror, which prevented the preservation of precise information concerning them.

The references to the city in the Qur'an throw little light on its early history. A *surah* incorporated near the end of the collection (*sur.*) reminds the Prophet of the Owners of the Elephant, who were destroyed by birds (*al-Burrah*), which sang at them stones of *sihil*. The tradition interprets this as an expedition by Abyssinians against the Meccan sanctuary, miraculously frustrated, but it is possible that this story is an invention of exegetes, who coupled *surah* *ev.* with *ev.*, which more decidedly deals with Mecca, and is itself a fragment, scarcely to be construed in its present form. Is it the Quraysh (the tribe in possession of the Meccan sanctuary) are advised to worship the Lord of this House, who has given them food after hunger and safety after fear. These two pheno-

mena, plenty and safety, are mentioned elsewhere in connexion with the Meccan sanctuary, the former as a result, it would seem, of visits from pilgrims, whereas the latter probably means safety for refugees; but the texts are not very clear. The sanctuary itself is called in the Qur'an either 'the house,' or 'the house of Allah, the Sanctuary,' or the Ka'bah (a word said to mean no more than 'house,' and perhaps the Ethiopic word for 'double,' i.e. two-storied), or 'the place of prostration, the Sanctuary.' In iii. 90 f. it is called 'the first house established for mankind, blessed and a guidance to the world, containing manifest signs, the station of Abraham, and whoever enters it is secure.' This would by itself imply that the Ka'bah was the first house ever built, as a model for all others, and that Abraham took refuge there and made it his abode. Elsewhere (xiv. 40) Abraham states that he had settled his family by it (or in it) in spite of the sterility of the valley, in order that they might pray there regularly; and he prays that the town (and not the house only) might be secure. In xlii. 27 he is represented as doing in his time much the same as was afterwards done by Muhammad: he was told to purify the house for those that perform the four ceremonies called *sa'at*, standing, inclination, and prostration. In ii. 119 f. Ishmael is coupled with Abraham; they laid the foundations of the house, and were told to purify it as before, the ceremony called *sa'at* being substituted for 'standing.' What may be inferred from these texts is perhaps that prior to Muhammad's time the Ka'bah was a sanctuary which enjoyed some popularity in part of Arabia, and that the right of sanctuary had to some extent been associated with the settlement of Mecca and with its inhabitants. The biography of the Prophet certainly implies that the Meccans had the very strongest objection to bloodshed, and possessed little aptitude for warfare. The association of Mecca with Abraham is unlikely to have been earlier than the Prophet, except so far as the N. Arabian tribes were known by monotheists, on the authority of Genesis, to be descended from the patriarch. It seems clear, however, that the Ka'bah was only one of many sanctuaries which were visited, and, if the word *hajjah*, which is used for 'pilgrimage,' be explicable from the Hebrew *hag*, 'draw round,' the Arabian month which is called after it is likely to mean 'month of going round,' i.e. the round of the sanctuaries, as opposed to the preceding 'month of squatting' at home. The word technically used of going round the Ka'bah, *sa'at*, seems also to be properly used of going a round, as, e.g., is done by a sentinel, and this ceremony may be due to a confusion of thought. The pilgrimage which became stereotyped in Islam involves visits to places which are likely to have been seats of distinct sanctuaries, some at a considerable distance from Mecca.

The difficult *surah* *ev.* speaks of 'winter and summer journeying,' which is traditionally interpreted of Meccan caravans, and in the biography of the Prophet these play an important part. The Muslim archaeologists suppose that the Quraysh, owing to their character as 'Allah's people,' enjoyed immunity from attack, and so had special facilities for the carrying trade. It is not easy to reconcile this with the primitive conditions which very clearly prevailed in Mecca at the rise of Islam, and the complete ignorance which the Qur'an assumes for its inhabitants. If there be any truth in this carrying trade, it is likely to have been on a small scale.

In the Qur'an Mecca is sometimes called 'the Mother of the villages,' i.e. the chief village; elsewhere the number of the villages is given as two, which the commentators suppose to mean Mecca

and Taif; it is more probable that only Mecca is meant. Of walls we first hear in the reign of Muqtadir (A.D. 808-832), and these did not surround the settlement, which was naturally protected by mountains, but merely blocked the passes. Snouck Hurgronje¹ is probably right in thinking that the community first gathered round the well Zamzam, which furnished a constant supply of brackish water. The tradition gives us the names of the tribes which formed the community, but scarcely hints at any sort of municipal organisation or government. Still more surprising is the absence of all mention of priests, such as we should have expected to be associated with a sanctuary. The wealth of the tribes is likely to have consisted mainly in camels, but other forms were probably known; visitors to the shrine have at all times had to pay more or less heavily for the privilege, and this source of wealth in, as we have seen, indicated in the Qur'an. We possess only casual notices of the amounts demanded in later times, but these indicate that the piety of pilgrims often afforded a considerable revenue. The Fatimid khalfs expected the governor of Mecca to make the pilgrim-tax his chief source of revenue; besides this visitors' fee, they had to pay for admission to the sanctuary, and those who brought goods had to pay import duty. Attempts were made by pious sovereigns to abolish these dues, but they had a tendency to revive, and their analogous doubtless existed in the period before the rise of Islam.

Prior to the rise of Islam it would appear that some notions of Christianity had penetrated to Mecca, and the biographies of the Prophet profess to give us the names of persons who had either adopted that system or showed some leanings towards it. There appears to be no recollection of the existence of any Christian place of worship at any time in this city. The tradition represents the pagan inhabitants as tolerant towards religious innovators and dissentients, as long as the local beliefs and practices were not assailed; but the life of such a community was so intimately bound up with the local religion that it is difficult to suppose that dissent could remain quite immune from persecution.

There is reason for thinking that the Prophet's original attitude towards the Meccan religion was uncompromising, and that his success would have involved the abolition of the ceremonies of which the Ka'bah formed the centre. His rejection by the Jews of Medina (q.v.) caused him to contemplate a partial return to the system which he had abandoned, and some time before the taking of Mecca he obtained a truce enabling him to perform the pilgrimage with some ostentation. Doubtless this performance paved the way for the subjection of the place. But, when Mecca had become Islâmic, its position was modified in two important ways. On the one hand, it became the only sanctuary in Arabia; on the other hand, the presence of non-Muslims at the festival was forbidden. Since the pilgrimage was now made compulsory, Mecca lost nothing by this innovation.

It is uncertain whether the Prophet contemplated retaining Medina permanently as his capital or at some time making his native place the seat of government. There is no doubt that there were jealousies between the two places before the Prophet's death. None of his successors (except perhaps 'Abdallâh b. Zubair, whose occupation of the khalfate lasted some ten years) seems to have regarded Mecca as a suitable metropolis for political purposes, but its position as the central sanctuary has rarely been endangered. Certain fanatical sects, such as the Carmatians and Wahhâbîs (q.v.), have at times done damage to its monuments, and

the substitution of Baghdâd or Jerusalem for it is said to have been considered by Umayyad and 'Abbâsid khalfs, although they recognised in time that such experiments would have been fatal to Islam or to their throne.

For the history of Mecca since its adoption of Islam we possess a series of *Chronicles*, of which those published by F. Wustenfeld² cover the first millennium from the Hijrah, and to these Snouck Hurgronje³ has added the substance of certain unpublished records which carry the history up to our time. Regular government was then introduced, perhaps for the first time, a prefect appointed by the sovereign being responsible for the maintenance of order. This personage was leader of the ceremonies at the time of the pilgrimage, unless the sovereign either came himself or sent a special representative. The governorships of the three towns, Mecca, Taif, and Medina were at times united in the same person, at times distinct; the first was much the most important of the three. In 'Abbâsid times it was the custom, at least for a considerable period, to appoint to the governorship some member of the reigning family. It would seem that the 'Alid pretenders, who rose in a fairly constant series, usually found some support in both sanctuaries, and on several occasions they fell for a time into the hands of these persons. After the reduction of the Baghdâd khalfate to impotence—a process which began in the second half of the 3rd cent. of Islam—it would appear that the dependence of the sacred cities on the central government became lax, though historical details are wanting. About A.D. 880 an 'Alid named Ja'far made himself master of Mecca, and introduced the rule of the Sharifs, which has lasted to our day; this word, signifying 'noble,' is applied in Muslim countries to the descendants of the Prophet. He submitted to the suzerainty of the Fatimids now established in Egypt, but in most respects was an independent ruler. His successors shifted their allegiance from Cairo to Baghdâd and back, according to the value of the gifts received; and throughout the subsequent history of Mecca recognition has been granted without difficulty to the sovereign who offered the highest price. According to Ibn Jubair,⁴ who visited Mecca in the years 1183 and 1186, the Sharifs were of the Zaidî sect, which, while recognising the rights of the Prophet's descendants to the succession, held that considerations of expediency might justify their being ousted; the practice of the Sharifs was then in accordance with this doctrine. The dynasty founded by Ja'far was displaced at the beginning of the 12th cent. of our era by another, also claiming descent from 'Alî. The founder was one Qatadah, who appears to have energetically supported the rising Zaidite dynasty of Sa'û, but whose successors fell back into the former practice of recognizing the power which for the time was capable of displaying the greatest generosity. The '*Chronicles of Mecca*' consist largely of the quarrels between Qatadah's descendants, which not infrequently had to be settled by the active interference of the Egyptian Sultans, who, from the fall of Baghdâd until the conquest of Egypt by the Ottomans, were ordinarily recognised as suzerains by the Sharifs. The Sharif 'Ajlân (1246-75), who for a time transferred his allegiance to the Mongol rulers of Persia, definitely rejected the Zaidî system and made that of Shâfi'î dominant in Mecca, though the other orthodox systems were recognised; the dominance of the Hanafite school, which is the official system of the Ottoman government, dates from a much later time. A permanent garrison was first established

¹ *Chroniken der Stadt Mekka*, Leipzig, 1885-81.

² *Op. cit.*

³ *ed. H. J. de Gough*, London, 1897, p. 101.

in the neighbourhood by the Egyptian Sultan Jaqmaq (1430-53). On the Ottoman conquest of Egypt in 1516 the allegiance of the Sharifs was transferred without difficulty to the Sultan of Constantinople. The new rulers interfered with the authority of the Sharifs to a greater extent than their predecessors, and the presence of a Turkish governor at Jeddah has constituted a permanent restriction upon it. The introduction of Turkish suzerainty also led to the adoption by the Sharifs of an intolerant attitude towards the Shī'ites of Persia, who could only with difficulty and at some risk obtain admission to the pilgrimage. In the 17th cent., owing to the decline of the Ottoman power, the Sharifs, who were almost always involved in family quarrels, became somewhat less dependent on Constantinople, and could even at times defy the representative of the metropolis at Jeddah. Both the sacred cities were threatened by the rise of the Wahhābīte movement towards the end of the 18th cent., and indeed in 1793 and 1798 appeals for help against this new power were addressed to the Ottoman Sultan. This was not forthcoming, owing to the European complications in which the Porte was involved, and in 1808 Mecca was evacuated by the Sharif, and presently occupied by the Wahhābīs, who reformed the place according to their ideas. The Sharif was, however, after a short time re-installed on his professing to adopt the Wahhābī tenets; and for some years Turkish subjects were excluded from the pilgrimage. In 1813 an expedition sent by Muhammad Ali, founder of the khedivial family in Egypt, succeeded in recovering the sacred cities, and a Turkish Pasha was installed in Mecca, where, however, the rule of the Sharif was nominally continued. After a time the Ottoman power was again represented by the governor of Jeddah.

Both the meaning and the limits of the sanctuary (*haram*) were extended by Islam. The sense of this Arabic word is 'to forbid,' and a sanctuary is a place where certain acts are forbidden, of which the most important is bloodshed; it is unlikely that this prohibition before Islamic times extended beyond the Ka'bah itself. *Amraḳ* is very likely right in asserting that at this time the dwellings of the citizens surrounded the Ka'bah, leaving only a small area (*ḥudūd*); the growth of the Muslim community rendered the destruction of these dwellings necessary; and operations of this kind were undertaken by the second and third khalīfs. The area was further enlarged by the pretender 'Abdallāh b. Zubair, but the actual mosque surrounding the Ka'bah was first built by the Umayyad al-Walīd I. (A.D. 705-715), who erected a colonnade with marble pillars and other luxurious decorations. Further additions to the area were made by the Abbāsid Manṣūr (in 755), who also built a minaret, and who, in the inscription placed on his work, claims to have doubled the area. Further large additions were made by his successor, Mahdī, who at great cost had a torrent diverted with a view to bringing the site of the Ka'bah into the centre of the mosque. Yet further extensions were effected by Mutawakkil (802), who also introduced luxurious ornamentation. The frequent repairs required by the mosque were due in part to the floods by which Mecca was repeatedly visited, and to some extent to damage done during civil disorders. Under the khalīf Mu'tamid considerable extensions and restorations were again carried out in the years 894-896, and the like are recorded for the year 918 under Muqtadir. Under this khalīf serious mischief was wrought by the Carmatians, who massacred the pilgrims, and for a series of years practically put a stop to the institution; their atrocities culminated with the seizure in 317 A.H. of the Black Stone, which they conveyed to their headquarters in Hajar, whence

it (or some substitute) was sent back twenty years later. This fetish had already been seriously injured in the time of 'Abdallāh b. Zubair, when the Ka'bah was burned down, and, in spite of great precautions, it again suffered violence at the hands of an Egyptian Shī'ite in the year 414, and not long afterwards was broken into three pieces by some Persian fanatic. The kissing of this object, which forms one of the pilgrimage rites, is not mentioned in the Qur'ān, but probably is a survival from pagan times.

In 1200 a large part of the mosque was destroyed by fire, and orders were presently given by the Egyptian Sultan Faraj for its restoration with increased magnificence; this was finished by 1404. In 1551 the Ka'bah itself was found to be in need of repair, but before this could be effected the question was raised whether this sacred building could lawfully be touched by the builders; and the fanatical populace were inclined to side with those holding the negative view. The precedent of Abraham and Ishmael (Qur'ān, ii. 119) finally decided the question in favour of the restoration. In 1571 orders were given for the complete rebuilding of the mosque by the Ottoman Sultan Salīm II., who, however, did not live to complete the work; this fell to the lot of his successor Murād III. In the colonnades the principle was followed that three marble columns should be succeeded by one of black stone from a local quarry. Details of the numbers and the location of the columns in the old and in the new mosque are given by Wüstenfeld (iv. 318, 9), together with other statistics and dates. The existing mosque appears to be substantially that erected by Salīm and his successor.

It appears, then, from this sketch of the history of the mosque that little remains in Mecca for which any considerable antiquity can be claimed. The archaeological taste has rarely developed in eastern countries, and no trouble was taken either in Mecca or in Medina to preserve historic buildings or retain ancient sites. The theoretic sanctity of Mecca has never stood in the way of leaders who wished to effect their objects by violence; and the Umayyad Yazīd, whose besieging forces were to some extent responsible for the burning of the Ka'bah in 64 A.H., did no more than would have been done by any other Muslim ruler who was engaged in suppressing a rebellion. Various buildings which figure in the early history of Islam were cleared away as the need for enlarging the temple area arose, and little regret was felt for them. On the other hand, many myths arose which have no justification in the Qur'ān; thus a stone which is called 'the station of Abraham' has acquired great sanctity, but in the Qur'ān (ii. 119, iii. 91) this phrase seems to mean only 'the dwelling-place of Abraham.' The jurist Mālik († 179 A.H.) asserts that this was restored by Omar to a place which it had occupied before the Days of Ignorance, on the faith of a chart preserved in the treasury of the Ka'bah.¹ As we have seen, the Black Stone, which is supposed to represent the 'right hand of Allāh,' is of very doubtful authenticity.

Besides the prohibition against bloodshed which theoretically covers the area occupied by the city, there are other legal peculiarities belonging to it. Closely allied to this prohibition is that against the chase, which is even extended to the cutting of trees and the plucking of birds. This ordinance is modified in a variety of ways; it seems clear that the slaughter of various beasts is generally permitted, and wedding to a certain extent is also lawful. The slaughter of game has to be atoned for by compensation, on a scale fixed by the Qur'ān. There is some difference of opinion between jurists on the question whether rent may be taken for

¹ *Meinungssatz*, Cairo, 1882, p. 313.

houses in Mecca; according to modern travellers, this question is purely academic, since the inhabitants largely earn their living by letting their houses to pilgrims.

The place of Mecca in the Muslim religion is otherwise not free from anomalies. On the one hand, it is clear that the standard of morality and piety practised by the inhabitants has at no time been particularly high, and various travellers have been shocked by their experiences; on the other hand, there is no doubt about the sanctity of the place and the spiritual benefits that accrue to those who go thither. There are not indeed free from danger; for, just as the value of good actions is higher in Mecca than elsewhere, so the debt incurred by evil deeds is there increased; and, according to the *Saifu*, evil thoughts and intentions are punished in Mecca, but not elsewhere. If Abū Talīb al-Makki († 805 A.H.) is right, pious men in early times who went thither on pilgrimage used to pitch two tents, one within and another outside the sacred area, devoting the former exclusively to religious exercises.¹ The resulting danger was one of the reasons why continuous residence in Mecca was discouraged; two others urged by Ghazālī († 805 A.H.) were the fear lest familiarity should breed contempt and the fact that absence makes the heart grow fonder. It could also be urged that, according to the Qur'an, 'the House' is a place of returning, i.e. one to be visited, not made a place of residence (ii. 119).

The various sovereigns who have been protectors or 'servants' of the sanctuaries have ordinarily been lavish in marks of their favour and somewhat jealous of munificences exercised by rival potentates; among the public works executed by these benefactors the greatest amount of space appears to be devoted in the Chronicles to the aqueducts; one which conveys water from Mt. Arafat to Mecca, utilising a channel originally constructed by order of Zubaida, wife of Harūn al-Rashid, occupied fourteen years (806-879 A.H.) and cost enormous sums, owing to the difficulty of piercing the rock and the primitive character of the methods in use. Numerous colleges, hospitals, and almshouses have been erected by Islamic sovereigns and their ministers, many of them furnished with endowments. The fate of all pious foundations in Mecca, according to Snouck Hurgronje,² is the same: most of the houses that have any value have been at some time or other purchased in order to serve as endowment, but gradually passed from hand to hand in such a way that they retain the name *waqf* (on which see *ERE* vii. 87 f.), without serving any pious purpose. The name, however, prevents their being legally sold, yet sale is often necessary, and this is effected in fact, though new names are employed to serve instead of 'sale' and 'purchase.' An attempt was made by a Turkish resident in the middle of the 19th cent. to declare all such transactions invalid, but his removal was procured before this could be carried out.

The erection of the places of learning has not had the effect of rendering Mecca at any time a university centre, and its printing press has contributed very little to Arabic literature; nevertheless as a gathering-place for the pious it has regularly served for the dissemination of ideas, which are worked out elsewhere. A. Le Chatelier, indeed, attributes the part played by Mecca in recent times to the influence of the *Sandaks*:

¹ *La condition nouvelle rendit à la Mecque le rôle de foyer du fanatisme musulman, que lui avait fait perdre la peste musulmane* (*Les Conquêtes musulmanes du Hedjaz*, Paris, 1897, p. 19).

The author of a dialogue on Islamic revival be-

² *Qas al-quḍā*, Cairo, 1914, II. 118.

³ *Qas al-quḍā*, Cairo, 1914, I. 100.

⁴ *Op. cit.* p. 100.

tween Muslims of various nationalities recently placed the scene in Mecca.¹ Yet the cosmopolitan character of the pilgrimage appears from the time of the early Islamic conquests to have rendered this sanctuary the place where it was easiest to address the Muslim world as a whole. Deeds of settlement of succession to the khalifate were issued and deposited here by Harūn al-Rashid.² If a man wished to procure a copy of a rare work, he would have a prior advertise the want among the pilgrims.³

In spite of the rule which forbids access to Mecca on the part of non-Muslims, many Europeans have undertaken the pilgrimage, some indeed having adopted Islam for the purpose of carrying out this project. In *Christmas at Mecca* (London, 1909) Augustus Halli gives accounts of sixteen such visitors, beginning with Ludovico Varthema, 'a gentleman of the city of Rome,' who reached the forbidden city in 1505. Since the publication of Halli's collection two more English travellers have been added to the list: Hadji Khan and W. Sparrow, *With the Pilgrims to Mecca*, 1908, London, 1909; and A. J. R. Wavell, *A Modern Pilgrim in Mecca*, do. 1912. Among the records of these pilgrimages that by E. F. Burton (*Pilgrimages to El-Medina and Mecca*, London, 1865-68) is classical; it adds, however, very little topographical information to that which had been given to the world by J. L. Burckhardt (*Travels in Arabia*, London, 1829). Of the others the account of the city by Snouck Hurgronje (*op. cit.*, 1886) is the most important. In several cases the travellers were so fully occupied with the task of preserving their lives that they had no time to make observations of value; and in not a few instances the veracity of the narrators has been questioned, not without cause. Besides these accounts by Europeans there are many in existence by Muslims, some of whom have employed the French language. It is asserted that the number of the former who have succeeded in witnessing the pilgrimage and returning to tell the tale is small compared with that of those who have sacrificed their lives in the attempt; and those who have accomplished the task safely have in most cases done so by the exercise of great cunning and ingenuity. The plan of H. Maltzan (*Walfahrt nach Mekka*, Leipzig, 1895), who, in order to pass for a Muslim, borrowed the personality of an Algerian, the latter undertaking to remain in hiding for the necessary period, may be commended both for boldness and for asceticism; it was not, however, free from danger.

MEDALS.—See COINS AND MEDALS.

MEDIAN RELIGION.—The religion of the ancient Medes is one of the most difficult and disputable questions in ancient Oriental history. The statements of the earlier classical authorities are not easy to reconcile with the Iranian Avesta, and fresh elements of difficulty have been introduced by the decipherment of the cuneiform inscriptions.

The actual facts are these. As far back as the 14th cent. B.C. the cuneiform documents of Boghaz Keui have shown that there was an Aryan, but not as yet Iranian, population in Mesopotamia who worshipped the gods Mithra, Varuṇa (written Uruwana and Aruna), Indra, and the two *Nāsatya*, the Vedic correspondents of the Dioscuri (cf. E. Meyer, *SBAW*, 1908, pp. 14-19). In the 9th cent. B.C. this Aryan population had become Iranian,

and was settled east of the Zagros mountains, where it was known to the Assyrians as Madā, or Medea, a name also written Amadā, like Amardi for Mardi. From this time forward the names of the kings and chiefs of Media and the neighbouring districts mentioned on the Assyrian monuments are Iranian, and in a list of Median princes conquered by Sargon in 714-713 B.C. we find the name of Mandaku, proving that Zoroaster's god Manda, 'the Wise,' was already worshipped (cf. also F. Hommel, *PSBA*, 1899, p. 182). The name of 'Mitra,' the sun-god, is also found in the tablets from Assur-bani-pal's library at Nineveh. On the other hand, Istuvagu, or Astyagus, the last king of Ekbatana, is termed in the inscriptions, not 'King of Media,' but 'King of the Umanen Nanda' or 'Horden,' an archaic title given by the Babylonians in early times to the northern barbarians, but applied in the Assyrian age to the Cimmerians and Scythians (q.v.). The similarity of the names Madā and Manda raises the question whether the Medes of the classical writers who were conquered by Cyrus were not really Scythians whose religious beliefs and practices have been transferred to their Median subjects or neighbours.

Like the Medes, the Persians also were Iranians.¹ But here again the inscriptions make it doubtful whether Cyrus and Cambyses, the founders of the Persian empire, were of pure Iranian stock, and whether the religion of Cyrus, at all events, was not the polytheism of Sum (cf. art. ACHÆMENIANS, vol. i. p. 70). Both he and his son conformed to the ancient worship of Babylonia. Gaumata (Gomates), 'the Magian,' is expressly stated by Darius (DA. (Pers. text) l. 65 f.) to have destroyed the *dywadas*, or 'prayer-chapels,' of Persia, a word which is translated 'temples of the gods' in the Babylonian version of the Behistūn inscription. These Darius claims to have restored, along with other possessions of the Persian and Median peoples, through the help of the 'great god Aura-masda,' the creator of the earth and heavens, who in the Sumian version of the Behistūn inscription (III. 77, 79) is specially called 'the god of the Aryans.' In the eyes of Darius he occupied much the same place as that occupied by Jahweh in the OT: he was the national god of the Persians and Medes and supreme over all other gods. The existence of the latter, however, was admitted: at Behistūn Darius says that he was assisted not only by Aura-masda but also by 'the other gods, all that there are.' Opposed to the righteous law of Aura-masda was 'the Lie' (*draugh*), the Achaemenian equivalent of the Zoroastrian Angra Mainyu (Abriman [q.v.]). But there is no reference to the Zoroastrianism of the Avesta in the inscriptions of either Darius or his successors; their priests, moreover, were not Magians, whose overthrow and massacre were, on the contrary, commemorated in the festival of the Magophonia;² and the bodies of the Persian kings seem to have been buried in the ordinary way instead of being thrown to dogs or birds of prey.³ This, Herodotus says (I. 140), was a Median custom.⁴

The date of Zoroaster (Zarathushtra) is uncertain,

¹ This is the general view, but J. H. Moulton (*Early Zoroastrianism*, London, 1912, pp. 225-226) doubts whether it is correct. He hints that the Medes were the aboriginal inhabitants, and that the Magi (q.v.) were their priests. If this be so, the Medes were neither Iranians nor Sumians. He directly states (above, p. 226) that the Medians 'belonged to neither of the two great races which divided Western Asia between them.' Fyssen (ibid. I. 2 f.) urges, in more detail, a similar view.

² For a somewhat different explanation of the Magophonia, see art. *FRATRICIDE AND PATRIS (INDIAN)*, vol. v. p. 274 f.

³ See Moulton, pp. 163, 166 f., 225 f., 227; and *IL. ACH. INDIA* and *INDIA OF THE DRAS* (Paris), § 45.

⁴ The statement of Agathias (II. 22), that the Medians buried the dead, whereas the Persians exposed them, is almost certainly wrong.

but modern scholarship is inclined to assign it to the 6th cent. B.C.; and Jackson⁵ seems to be right in concluding that he arose in Media rather than in Bactria, the tradition which makes him a Bactrian being late.

Zoroaster is unknown to both Herodotus and Ctesias, the earliest mention of him occurring in a fragment questionably ascribed to Xanthus of Lydia and in Ptolemy (*Geog. I.*, 132). Herodotus makes the Magi a Median tribe (I. 101),⁶ but he also implies that they were a class of priests (I. 140), and he describes certain of them as interpreters of dreams (I. 107). He further ascribes to them the Zoroastrian practices of reverencing the dog and destroying noxious animals (I. 140). No sacrifices could be offered without the presence of a Magus, who accompanied it with a hymn (the Avestan *Gāthā*); and there was neither altar, fire, nor libation (I. 132). The Greek historian adds (I. 131) that 'the Persians' (whose priests were the Median Magi) had 'no images of the gods and no temples or altars, considering the use of them a sign of folly.' They sacrificed to Zeus (Ahura Masda) on the summits of mountains, as well as 'to the sun and moon, to the earth, to fire, to water, and to the winds.' The worship of the goddess Anahita, and presumably also of Mithra, the sun-god, referred to in two inscriptions of Artaxerxes Mnemon (Siles a, 4 f., *Ham. 5 f.*) was borrowed at a later date from 'the Arabians and Assyrians' (Herod. I. 131).⁷

On the other hand, the seecuring of the Hellespont by Xerxes (Herod. VII. 36) is inconsistent with the belief that water was divine,⁸ and in Herodotus's account of Magian religion Avestan dualism is conspicuous by its absence. So, too, is any reference to the doctrine of a resurrection. The simplest way of explaining these anomalies is to suppose that the religious system described by Herodotus was that of the Medes, among whom the Magi were a sort of hereditary priests, like the Levites in Israel; and that the religious system of Darius represented the religion of the Persian aristocracy, but that the origin and fundamental principles of the two were the same. The conquest of Media by Persia would have introduced the Median forms of theology among the Persian people, though their influence would have been momentarily checked by the overthrow of Gomates and his party, who perhaps would have stood in much the same relation to the Achaemenian aristocracy as the Pharisees did to the Sadducees. Meanwhile the reformer Zarathushtra had appeared in Media, where he built upon pre-existing religious beliefs and practices and attracted the Magi to his side. The result in the course of centuries was the Mazdeism of the Avesta.

A. H. SAYCE.

MEDIATION.—Mediation is a word of extreme vagueness, but is here considered only in its technical or quasi-technical applications in religion. In a sense all we are and have is mediated to us somehow. Our very being comes to us through our parents. The society into which we are born and in which we are trained mediates to us most of

⁵ Zoroaster, pp. 210-211.

⁶ For the argument that Magianism was Median in origin see esp. Preller, II. 114 f.

⁷ W. Geiger (*Orbis. Kultur des Altertums*, Bruggen, 1899, pp. 485-486) derives the Zoroastrian fire-priests (*athraevans*) from Media.

⁸ See, however, Moulton, p. 225 f.

what we think of as intellectual, moral, and religious convictions. The greater part of what comes under these headings is not original achievement of our own, but inheritance or education; it comes to us in some way by the mediation of others. It may be possible to make our own what is thus mediated to us, and to become possessors, as it were, in our own right of what we have inherited or been taught; but, to begin with, every creature born in time owes to mediation of some sort the whole capital with which he adventures upon independent life.

2. The NT use of the term 'Mediator.'—The technical use of the word is most easily grasped if we start from that application of it which is most definite and concrete, viz. its application to the work of Christ. There are four NT passages where this is found: 1 Ti 2, He 9¹² 12¹². In all these passages Christ is represented as mediating between God and man. God and man have been estranged. The relation which normally subsists between them has been destroyed, and the work of the mediator is to restore it. In 1 Timothy this work is explicitly connected with the redemptive death of Christ; there is one mediator between God and men, Himself man, Christ Jesus, who gave Himself a ransom for all. The same connexion is implied in all the passages in Hebrews; there Jesus is spoken of as the mediator of a new or a better covenant. The covenant is the religious constitution under which God and men form one society, or live a common life. The old and inferior constitution, under which the ideal of religion was not realized, was the Levitical one. This was annulled because of its ineffective character, and in place of it, through the mediation of Jesus—i.e., by means of, and at the cost of, His incarnation and sacrifice—comes the Christian relation of men to God. In this the ends of religion are really attained. There is real forgiveness of sins, real purification of conscience, real and abiding access to God, and all due to the mediation of Christ. This use of the term 'mediation,' which may be called the specifically Christian one, is that which has been mainly developed in later theology. Christ's work as mediator is that in which He interposes between the holy God and sinful men who are estranged from each other, and makes peace. This specifically Christian use of the term, however, is only a continuation of its use in ordinary relations. In ancient as in modern times a State or a person could offer to 'mediate' between other States or persons at war. The substantive *μεσσητής* is used side by side with such terms as *ἀλλοτρίως*, *ἀλλοτρίως*, and is defined by Suidas as *μεσσητής*, 'peacemaker.' The verb *μεσσητεύω*, which occurs once in the NT without an object (He 9¹²), though some here would supply *τὸν ἑαυτοῦ*, 'He promises' is elsewhere usually transitive: *μεσσητεύει τὸν ἑαυτοῦ ἐχθρὸν* (Polyb. XI. xxiv. 3) = 'to achieve the settlement by friendly mediation.' A state of hostility or estrangement, in which the making of peace is the work of a third party, and can therefore be called mediation, is the background of the primary Christian use of the term.

3. Extension of mediation in the NT from redemption to creation.—But even in the NT it is not limited to this use. It is not only that peace with God, or the forgiveness of sins, or reconciliation, or eternal life for the spiritually dead is mediated through Christ and His redemption; Christ is presented also as the mediator of creation. All that is has come into being through Him. We find this stated without explanation, as if it were self-evident, or an agreed proposition among Christians, in 1 Co 8. It is expanded in Col 1¹⁶ with a view to securing to Christ, who has just been referred to as the mediator of salvation (in whom

we have our redemption, the forgiveness of sins (v. 14), a place of dignity above all angelic powers. In Colossae, apparently, such powers were recognised by some as mediating between God and man in a way which trenchanted on Christ's prerogative as the one mediator; and it was an effective method of precluding this to show that all such powers, whatever they were called, owed their very being to Christ, and could therefore in no sense become His rivals. The connexion of ideas in He 1³ is similar. It speaks of a Son whom God has appointed heir of all things, through whom also He made the worlds. The 'also' implies that the making of the worlds through the Son is what naturally corresponds to His being heir of all things. Probably no idea in the NT is so hard to enter into as this. When we think of Christ as mediating between God on the one hand and men alienated from God by sin on the other, we know where we are. We can speak on the basis of experience, and tell how Christ has come to us in our own estrangement, and made peace between us and God. We can speak of Him as mediator, because that is what He has been to ourselves. But creation is not a process, or an act, of which experience teaches us anything; it is not apparent that it needs to be, or that it can be, 'mediated' at all. The OT simply says that in the beginning God created the heaven and the earth. How does Paul come to say (Col 1¹⁶), 'In Him—that is, in Christ—were all things created? How did the thought originate in his mind? What exactly did it mean to him? We cannot accept it merely on his authority, as a piece of information about the beginning of things; the content of revelation—what a man knows by the inspiration of God—never has the character of information. Unless we can enter into the origin and process of the Apostle's thought, we can never really appropriate the idea in which it rests. The idea that not redemption only but creation as well is mediated through Christ, that to Him is due and by Him must be determined not only all that we can call reconciliation but all that we can call being, is so unexpected and so astounding that we cannot but ask how it took possession of his mind.

3. Rationale of this extension in Paul.—So far as can be seen, there are only two possible explanations of Paul's attitude. One is purely formal, and reduces the idea of mediation, so far as it applies to all being, to a pure formality. It assumes that Paul had identified Christ with some supernatural being to whom this attribute or function of mediating creation already belonged, and that with the identification there went, as a matter of course, the ascription of this attribute or function to Christ. This is supposed to explain why Paul, when he introduces the idea of creation through Christ, does it *simpliciter*, without any justification or explanation: he is only doing what every one would concede who agreed with him in identifying Jesus with the Christ. But to this there are many objections. As far as can be known, there was no trace whatever in the Pharisaism in which Paul was reared of any such idea as that the Messiah was participant in the creation of the world. Further, though this may be discounted as a subjective impression, Paul writes in Colossians with passionate earnestness on this subject, and not like a man manipulating borrowed ideas which have no vital relation to his experience. And, if it be said that it is not the Jewish eschatological Messiah with whom Jesus is identified by Paul, but a supernatural being of another sort—the Logos of popular Greek philosophy, of whom such things were predicated as Paul predicates of Christ in connexion with creation—then the further question is raised, How did Paul come to

make this identification? He never mentions the Logos by name. There is no indication in his writings that he knew anything about philosophy or that he had any interest in its problems. The Logos of the current philosophy, which did mediate somehow between God and the universe, was the philosophical solution of a difficulty which he had never felt; namely, how the transcendent God was to come into any relation to a material world. Paul was not troubled by this any more than the OT prophets or Jesus Himself, nor does he ever bring his doctrine of creation through Christ into any relation to it. The motive and the meaning of that doctrine must be sought elsewhere.

A real clue to his thought, as opposed to this formal one, may perhaps be found in another way. In Paul's experience as a Christian, Christ was everything. He had reconciled him to God and made him a new creature. He had put him in possession of the final truth and reality in the spiritual world, that which could never be transcended and could never fail. When he lived in Christ, he lived in the eternal world, and he felt that to that world and to the believer's interest in it everything else must be subservient. He could say, 'All things are yours' (1 Co 3²¹); 'All things work together for good to them that love God, to them that are called according to his purpose' (Ro 8²⁸). And 'all things' here must be taken without restriction. It means not only all that happens, but all that is. Creation must in the last resort be in alliance with the God and Father of our Lord Jesus Christ, and in league with His purposes. As J. Orr put it (*The Christian View of God and the World*, Edinburgh, 1903, p. 325), it must be built on redemption lines. That is the same as to say, it must be built on Christian lines; the world in which Christians live must be essentially a Christian world. It is not a world in which anything can defeat God's purpose in Christ; it is not a world in which the final sovereignty of Christ can be frustrated; it is a world which is essentially related to Christ, to His work of reconciliation, and to His supreme place at last as heir of all things. Now, is it not legitimate to say that a world which was created for Christ was created in Him and through Him? The difficulty of apprehending what is meant by the creation of the world through Christ is only one aspect of the difficulty of apprehending Christ's pre-existence, and that again is only one aspect of the omnipresent and insuperable difficulty of defining the relations of eternity and time. If pre-existence is a legitimate way of expressing the absolute significance of Jesus—the fact that what we see in Him is the eternal truth of what God is, and that therefore He belongs to the very being of God, 'before the foundation of the world'—then the mediation of creation through Christ is a legitimate way of putting the conviction that in the last resort, and in spite of appearances, the world in which we live is a Christian world, our ally, not our adversary, or, if our adversary, one who is necessary, that in conflict with and victory over him we may prove that we have found the way of salvation. Paul does not start with the speculative idea that creation could not be immediate, and that all material and spiritual existences—things on earth and in heaven, things visible and invisible—must owe their being to the mediation of some supernatural power which is identified in his mind, we cannot tell why, with Jesus. He does not start thus, and then give this vague speculative idea a particular application when he comes to explain the Christian redemption. On the contrary, he starts with Christ and with the experience of redemption which, as a matter of fact, is mediated through Him. But the redemption thus mediated

is something of absolute significance. It involves contact with ultimate realities, with the eternal truth and love of God in Christ; it kindles a light in the soul which must fall on everything in the world if we are to see it as it is; it involves no smaller a conviction than that the world is essentially a Christian world, and it is this conviction, which is still involved in Christian faith, that forms the vital content of Paul's doctrine that all things were created through Christ.

That the world has this character may, of course, be doubted. It may even be argued that no moral life, no life involving moral probation, is possible except with a background of nature which is morally indifferent; it is only in a world which is indifferent to the distinction of good and evil that man can prove his devotion to good for its own sake. But there is really no such world, though the lightning does not shun the good man's path. What the doctrine of creation mediated by Christ implies is that in the very constitution of nature it is possible to discover the same principles as are revealed in the life and work of Christ. If it were not so, no one with roots in nature would understand Christ when He appeared. The ultimate task of Christian philosophy is to discover spiritual law in the natural world. This is what Paul felt; it is what every idealistic philosophy teaches; it is the inspiration of the highest poetry; Wordsworth found in nature not an adversary or a neutral, but 'the soul of all my moral being'.

4. Mediation in the Fourth Gospel.—Without using words like *poetry* and *poetize* the Fourth Gospel makes perhaps a more conscious and continuous use of the idea of mediation than any other book of the NT. Leaving the Prologue out of account, it is mediation in the specifically Christian sense, just as in Paul and Hebrews. The whole book might be summed up in the phrase of 14⁶, 'No one cometh unto the Father, but by me.' It is to Jesus that men owe all the blessings which constitute salvation. They are variously described, most frequently as 'life' and 'eternal life,' but they come to men through Him and Him alone. Yet a counter or complementary truth is presented in the same Gospel. No man comes to the Father but by Jesus, yet no man comes to Jesus but him who is drawn by the Father (6⁴⁴). It is as though there were powers in the world antecedent to the historical Jesus which had Him in view, which prepared men to understand Him, and to welcome His mediation when He came. In the constitution of nature, in the impression which it makes as a whole on the spirit of man, in human life itself with its various experiences of success and failure, of wronging others and being wronged, of forgiving others and being forgiven by them, there is a sum or complex of forces which bears witness to Christ and constitutes a providential drawing of men by the Father to the Son.

But it is only when we receive the Son and believe in Him that we truly come to the Father. The earlier stages of religion are mediated to us through all the experiences of life; these provide for it a broad and indisputable basis here and now, and make it independent of any particular historical mediation—i.e., of any mediation through persons or facts which have their place in the past. But this immediate experience of religion—a religion, as some might call it, of pure inwardness and spirituality, which has its certainty in itself, and is not at the mercy of a historical criticism for which no fact is beyond question—does not, according to the Evangelist, enable men to dispense with what is mediated through Jesus; it only enables and prepares them to appreciate it. It is consummated through Him. Only he who has seen Jesus has seen the Father. And, para-

doxical as it may seem, this historical mediation does not shake the certainty of religion; the perfect religion does not become doubtful because the mediator of it lived in time. We are 'in Him that is true,' and he that believeth hath the witness in himself (1 Jn 5²⁰).

In the prologue the idea of mediation is even more explicit than in the body of the Gospel, and it is wider in its range. The first three verses are more speculative than anything in Paul, and it is difficult to think otherwise than that the author has identified Jesus with the Logos of the current philosophy, and that he is speaking of Him in terms whose antecedents are philosophical rather than evangelical. The very ambiguity of the terms Logos (*ratio, creatio*) may have commended it to him. It suited him equally well to have Jews feel that in Christ they had God's last word to man, and to have Greeks feel that in Christ they were in contact with the reason of the world, the rational principle or truth in which all things lived, and moved, and had their being. The one knowledge and the other alike, he would have held, were mediated to men through Jesus. It is by no means clear, however, that the prologue makes the Logos, as distinct from the historical Jesus, the mediator either of a universal revelation of God to man or of a special revelation of God to Israel. The interest of the Evangelist in such speculative ideas is perhaps less than has been assumed. The traditional and somewhat grandiose interpretation of the prologue, according to which the incarnation does not appear until v. 14—an interpretation which has so commended the passage to those who delight in the idea of a general revelation in nature and history culminating in a final and adequate revelation in Christ—is almost certainly wrong. The movement of thought in the prologue is spiral. The incarnation appears already in v. 4, and the history of Christianity up to the time of the writer is summarized in v. 9. Revelation in its full and specifically Christian sense, the mediation to men of that knowledge of God which is eternal life, is accomplished only through Jesus, the Word made flesh. The difference from Paul may be said to lie in this: in Paul Jesus mediates revelation through redemption (we know God as Father because He saves us by His Son), whereas in John He mediates redemption through revelation (we are saved from sin and death because through Jesus we have the knowledge of the Father). But the distinction is true only when it is not pressed. In both writers it is the specifically Christian sense of mediation that is vital; Jesus is the mediator between God and men. The wider sense of mediation, according to which Jesus mediates creation as well as redemption, while it is found in both, has not the same emphasis. The apostles seem to feel that their religion ultimately implies this, but it is not this that directly inspires or sustains it.

5. Mediation and Jesus' consciousness of Himself.—The most important of questions to the Christian religion is whether this specific sense of mediation, which is not only recognised by but pervades all the apostolic writings, is confirmed when we turn to the mind of Christ Himself. He never speaks of having anything to do with the creation of the world, but was He conscious of being in any sense a mediator between God and men? Did He stand between them to any intent? Did men in any sense owe to Him either the knowledge of God or reconciliation to God, or were those supreme spiritual blessings immediately open to them, in independence of Him? The questions have been answered in both ways. Harnack's famous dictum (*Das Wesen des Christentums*, Berlin, 1900, p. 91), that in the gospel as preached by Jesus the

Son has no place, but only the Father, is so qualified by other statements that its author can hardly be cited for the negative. Much more uncompromising representatives of this side are J. Weiss and W. Heitmüller. The former, in *Das Urchristentum* (Göttingen, 1914, p. 384), in discussing the relations of faith in Christ and faith in God (in Paul), explicitly renounces the idea of a necessary mediator of salvation. Christ was there, as a matter of fact, and therefore Paul had to give Him a place in his religion somehow; but Weiss, with a sense of his own daring,¹ declares that there was no necessity for His mission and work in the nature of God, and that God's eternal love, though Paul knew it only through Christ, must have had its way even if Christ had failed the redeeming work of the Father, or if God in the fullness of His love had been able to dispense with the sacrifice of Christ. There is not, indeed, any appeal here to the mind of Christ, with regard to mediation, but there is the expression of a conviction which forecloses any such appeal. In Heitmüller's *Jesus* (Tübingen, 1913) the denial is even vehement:

'It is quite beyond doubt that according to the preaching of Jesus we have to do in religion only with an immediate relation of man to God: between God and man nothing and no one has place, not even Jesus. Religious significance in the proper sense Jesus in any case does not obtain' (p. 78).

But Heitmüller feels a certain embarrassment when he deals explicitly with some words of Jesus. He admits that they disclose not merely a prophetic but a superprophetic consciousness—e.g., the well-known passage Mt 11²⁷. To be the bearer of a unique revelation, the *filiius a seipso*—it almost terrifies us to think of it. It is not a divine self-consciousness, but it is almost more than human. It might impel us to ask whether it was compatible with soundness and clearness of mind. 'Here is the point at which the form of Jesus becomes mysterious to us, almost uncanny' (p. 71). Further on, he speaks of the riddle as insoluble (p. 89), but apparently he thinks that he has reduced it to less disquieting proportions when he writes (p. 130) that Jesus seems to have claimed for Himself only that He is the way to the Father. It is difficult to see how He could have claimed more. The opposite view, that the place which the NT generally assigns to Jesus, as the indispensable mediator between God and men, is in harmony with Jesus' consciousness of Himself, is argued in the present writer's *Jesus and the Gospel* (London, 1908, p. 189 ff. on the self-revelation of Jesus). The argument covers both the Johannine idea of the mediation of the knowledge of God (as in Mt 11²⁷) and the Pauline idea of the mediation of redemption (as in Mk 10²⁷). What it does not expressly extend to is the speculative idea that creation as well as revelation and redemption is mediated through Christ.

6. Other mediators than Jesus.—Emphasis is laid in the NT on the exclusive character of Christ's mediation: there is one God, and one mediator between God and men. This is the idea of such passages as Ae 4¹⁰ ('none other name'), Col 3¹¹ ('in him dwelleth all the fulness of the Godhead bodily, and in him ye are made full'), and He 7²⁵ (the priesthood which does not pass to, or cannot be trampled upon by, another), as well as of Jn 14⁶. What is in view in these passages is the idea that Christ in His work of reconciliation may have rivals or competitors, powers which in independence of Him prepare for His work, or supplement it, or enable men to dispense with it. This is unambiguously and exhaustively denied. The idea of mediation in the Christian sense has no application but to Him. Spiritual beings, whatever their name or degree—principalities, powers, dominions—owe their own being to Him, and have their functions,

¹ 'My scheme of omnipotence . . . shall certainly seem very naive' (6).

whatever they are, in a world which He has reconciled to God.

The exclusiveness of His mediation with regard to nature (being) as well as redemption is strongly asserted both in Col 1¹⁰ and in Jn 1⁹. Probably in both these passages, as well as in 1 Ti 2⁵, there is reference to forms of Gnosticism which it is difficult for us to define. For ancient thought generally, and therefore for ancient religion, the world was full of invisible powers of a personal or quasi-personal sort, and these easily asserted a place for themselves in the religious life. They came between God and the soul in ways that we cannot appreciate, and the interest of the apostles is to expel from the relations of God and the soul every power but that of Jesus. Their argument is that of experience against uncontrolled imagination. The controversies of later theologians, Catholics and Protestant, on the mediation (intercession) of saints are like this, but not identical. Those who admit that we can pray for one another have no ground for denying that the saints can pray for us. All that is to be said is that we do not know anything about it; but whatever the saints may do for us they can do only in dependence on Jesus, not as mediators who might bring us to God apart from Him. For statements on opposite sides of this question see Calvin's *Institutes*, III. xxi. 20-27; *Westminster Confession*, ch. xxi. 3; Thomas Aquinas, *Summa Theol.*, III. qn. xxi. art. 11.; S. J. Hunter, *Outlines of Dogmatic Theology*, London, 1886-88, II. 574, 607; K. von Hase, *Handbuch der protestant. Polemik*, Leipzig, 1900, p. 204.

7. Mediation is the OT.—If we look back from the NT to the OT, we find much everywhere which can be described in terms of mediation, though *paritry* occurs only once in LXX (Job 9²⁹), where, according to T. K. Cheyne (*EBD*, col. 3009), it answers to *par*, and means a person who could interpose with authority between God and his imperfect or arbitrary God—an arbitrator who would see justice done. This is akin to the *diavros*, defined by Aristotle as *diavros*, and often found in Greek as a synonym of *paritry*; but it is hardly the equivalent of the NT *paritry*, whether we regard revelation or reconciliation as that which comes to men through Him. If we confine our attention to the relations of God and man, in which the term mediation is properly applied, both aspects of it pervade the OT. Revelation, or the knowledge of God, is mediated to men through the prophet. It is not necessary to ask here how it is mediated to the prophet himself; for the purposes of religion he obtains it immediately. He stands in God's council and hears His voice; it is the voice of God Himself, or such an echo of it as the prophet's voice can utter, that is heard when He speaks. There is no external criterion for distinguishing the true voice of God from a voice which speaks lies in His name. The secret of the Lord is with them that fear Him (Ps 25¹⁴); they have, without knowing it, what the NT calls (1 Co 12³) the gift of 'discernment of spirits.' As revelation is mediated through the prophet, so in the largest sense is reconciliation through the priest. The Levitical system may have been very imperfect—it was destined, indeed, to perish by its inadequacy; but the idea of it was to enable men to approach God, to give them peace with Him, to put it in their power, in spite of all that they had done, to have communion with God, living as members of a society of which He was the head. The Levitical system does not, of course, exhaust what the OT exhibits of the mediation of reconciliation. Much importance is attached to prayer: the hour of irremediable ruin is come—the final breach between God and His people—when Jeremiah hears that, though intercessors like Moses and Samuel stood before Jahveh, they could not

turn His heart toward Israel (Jer 16²). The ministry of intercession mediates for man to God, as well as the ministry of sacrifice—unless we reduce the latter to the former, and regard sacrifice as in essence 'embodied prayer.' It is another form, possibly a form inferior to intercession because less spiritual, of showing the cost at which reconciliation is mediated to sinful men.

8. Later developments of mediation.—Though the main content of mediation in the OT may be condensed under prophecy and priesthood, it is not quite exhausted there. Especially in post-Exilic literature, where the transcendence of God is emphasized till it depresses the soul, we find intermediate beings appear whose functions are wider and less defined. Sometimes they have to do with the creation of the world, sometimes with its government in nature or in history; sometimes they are specially concerned with Israel's fortunes, or with the giving of the law; sometimes they are interested in individual men, attaching themselves to pure souls and making them prophets or sages. Foreign influences as well as philosophical necessities determined the form of such thoughts, and they grew to have a larger and larger space in many minds. In A. Bartholet's *Bibl. Theol. des alt. Test.*, Tübingen, 1911, § 22, there is a sufficient account of this faith in intermediate beings (*Hypostasienlehre*), as far as it can be derived from the Greek Bible. The most important of them was Wisdom, though Wisdom, curiously enough, in spite of Mt 11¹⁹, Lk 11²⁹, seems to have fallen out of favour in the NT, and is not once mentioned where we might most have expected it, in the Johannine writings. Perhaps this was due, as J. Grill has suggested (*Untersuchungen über die Entstehung des ersten Evangeliums*, Tübingen, 1908, p. 198 f.), to the frequency with which in Gnosticism *wisdom* represented a lost man which had to be redeemed (cf. *ERE* vi. 226 f.). Next in importance to Wisdom came the Word or Logos. On this see W. Bouvier, *Die Religion des Judentums*, Berlin, 1900, p. 309, and cf. art. Logos, § 2. The doctrine of the Logos as 'mediating' is developed at great length and with infinite inconsistency in Philo. It can be best studied in E. Bréhier, *Les Idées philosophiques et religieuses de Philon d'Alexandrie*, Paris, 1908, li. ch. li. f. It is perhaps not unfair to say that in Philo the Logos mediates between God and the *sempiterni*; that it mediates, farther, between God and man as made in the image of God and participant in reason, but that it is not a mediator in the specifically NT sense of the term, i.e., a mediator of redemption between God and sinners. The verbal coincidences between Philo and the NT often, perhaps always, conceal a wide divergence of meaning. A full discussion of what Jewish belief in mediating powers eventually came to may be found in F. Weber, *Die Lehren des Talmud*, Leipzig, 1905, ch. xiii. He enumerates five: (1) the angel Metatron, (2) the Word, or *Mémd* (q.v.), of Jahveh, (3) the *Shékhinah*, (4) the Spirit of God, and (5) the *Bath Qól*, or heavenly voice through which revelation is given. Where the mind starts with these generalities, whether in a more speculative or in a more religious interest, it does not seem able or impelled to bring them to any convergence upon a single mediator; but the NT writers, starting from their experience of Christ as the only and the real revealer of God and reconciler of sinners to Him, are able to regard all these doctrines of mediating hypostases as hints or suggestions of what they possess in Jesus, and are not afraid in a manner to identify Him with them all. Whatever they promised or were intended to secure has been finally made good and secured through Him. He is the Wisdom of God—the Key to the world of nature, of history, and

of all human life; He is the Word made flesh; Paul can even say (2 Co 9th) that in His exaltation He is the Spirit. All mediation between God and sinful men is summed up and exhausted in Him. He is Himself our Peace. But all mediation, if the name is legitimately extended in this sense, between God and creation is also transacted through Him. The last, however, is not the starting point; the mind rises to it only inferentially through an overpowering impression of the absolute significance of Jesus as the mediator of reconciliation; it is one way of expressing the conviction that He is the Beginning and the End, the First and the Last.

g. Subordinate sense of mediation (means of grace).—Mediation in a subordinate sense is the subject of the whole doctrine of the means (media) of grace; that is, of the divinely appointed ordinances through which the salvation of Christ is brought home to man. Grace is mediated through these ordinances, especially, according to Protestant theology, through the Word, sacraments, and prayer. The conditions under which the use of them becomes effectual for salvation—i.e., the terms on which grace really is mediated through them—are stated in all the confessions in more or less experimental and argumentative forms.

Comparative religion offers examples of mediation more or less analogous to those here considered. Wherever there are religious institutions and customs, they are mediatorial. It is through them that the spirit of a religion is conveyed to those who are brought up within its pale. Sometimes there are what A. M. Fairbairn used to call 'developmental coincidences' between other religions and Christianity where there is no real interdependence. Thus Mithra was called *savior* in the first instance as dwelling in the air which is midway between heaven and hell. But the local meaning deepened into a moral one. Mithra became mediator between the inaccessible and unknowable God who reigns in the ethereal spheres and the human race which lives its restless life here below. He is addressed as great Mithra, messenger of the gods, mediator of the religion of the elect (P. Camont, *Les Mystères de Mithra*, Brussels, 1913, pp. 129, 130, 146). Similar phenomena are abundant in the religions of India. But we nowhere find a religion of which we can say, as has been said of Christianity, that it is what it is because of the presence in it of the mediator.

LITERATURE.—As the idea of mediation involves that of the nature of Christianity, and especially raises the question whether Christ has a necessary place in the Christian religion, and, if so, what precisely that place is, and what it implies as to Christ Himself (Christology), the literature is really co-extensive with that of Christian theology. Older discussions of main aspects of the subject are to be found in J. Butler, *Analogy of Religion*, ed. J. H. Bernard, London, 1901, pt. II, ch. v, and J. Martineau, *Studies of Christianity*, do. 1873, 147 ff. Besides the works mentioned in the article, all modern writings on NT theology are more or less relevant, but the formal treatment of it, even in the Jesus-Paul literature, is not frequent.

MEDICINE.—See DISEASE AND MEDICINE.

MEDICINE-MEN.—See SHAMANISM.

MEDINA.—Medina, in Arabic with the article, means 'the Town,' as opposed to the desert (Qur'an ix. 102, 121), and is the name usually given to the city whither Muhammad fled from Mecca, sometimes interpreted as 'the Prophet's City.' Its proper name was Yathrib (ib. xxiii. 13), evidently the *Yathrib* of Stephanus Byzantinus (s.v.) and the *Asphura* of Ptolemy (vi. vii. 31), apparently identical in origin with the Egyptian *Asphur* (indeed a form *Athrib* is mentioned). Another name which is sometimes cited is Taibah or Tabah, to be compared with the Hebrew *Tob* (Jg 11, etc.), and perhaps with the

Greek *Θαῖρα*, meaning 'fragrant' or 'good.' Many more names are collected by Samhūdī (383 A.D.) in his monograph on Medina (*Khuladāt al-waṭāʾ*, Cairo, 1285), but these are mostly honorific epithets; one, however, which he quotes from the OT is *Salqah*, which should rather be *Salkah* (Jes 12, etc.); but this identification is certainly erroneous.

Since Stephanus Byzantinus gives the relative adjective of Yathrib as *Yathribicus*, it must have been the home of some persons known to the Greco-Roman world not later than the 6th cent. A.D.; and to the end of the 7th cent. there probably belonged one 'John of Yathrib' mentioned in a letter of James of Edessa 'to John Stylites'; this Yathrib is identified with Medina by some writers (ZDMG xiv. (1870) 303), but it is difficult to suppose that there can have been a 'presbyter of Yathrib=Medina' at that time. For the early history of the place, then, as well as the later we have to rely exclusively on Muslim authorities, who naturally have much to say about a town which played so important a part in the history of their system. It is unfortunate that their notions of its pre-Islamic history are mainly fabulous, though they must contain a little fact as well.

The settlement, which is often called 'Between the two Mābas,' i.e. volcanic formations, was at the commencement of Islam a joint one of Arabs and Jews. The former were grouped in two tribes, the Aus and the Khazraj, whereas of the latter three tribal names are handed down—Qainuqā', Quraysh, and Nadir. The native Jewish tradition appears to know nothing of these colonies, whose names surprise us; for the last two are clearly Arabic, and the first apparently so. They are supposed to have had a dialect (or jargon?) of their own, some fragments of which are preserved in the Qur'an (iv. 48), but are exceedingly puzzling. This fact would seem to militate against the supposition that they were Arabs who had adopted Judaism. If we are justified in attributing to them some of the Jewish matter that is found in the Qur'an, they must have been acquainted with portions of the Oral Tradition, to which there are occasional references; and it is practically certain that the early Islamic lawyers were indebted to proselytes from these communities for certain technicalities and even whole maxims. The personal names which are preserved are partly Hebrew, partly Arabic.

The Muslim tradition represents the Jews as further advanced in civilization than the Arabs of Medina, and engaged both in trade, including lending money on security, and in cultivation of the soil; the date was the most important product. Further, they are said to have had schools, and to have written Arabic in Hebrew script, as was done at a later time and is done even now. They were under the protection of their Arab neighbours, and were occasionally compelled to fight in the tribal wars, much against their inclination.

Between the Aus and the Khazraj there was a long standing feud, which led to the parties summoning the Prophet in the manner recorded in his biography.¹ Hellenic antiquity, which furnishes many analogies to that of the Arabs, provides illustrations of this expedient for putting an end to civil strife. He called his new adherents *Anṣār*, 'Helpers,' a name which, according to the Qur'an (iii. 45, xxi. 14), originally belonged to the apostles, and doubtless is a popular etymology of Nazarene.

Like many other statesmen, the Prophet found in external warfare the best remedy for civil strife; and, since at least for some years all new adherents were required to migrate to Medina, the

¹ The History, ed. F. Wüstenfeld, Göttingen, 1898, p. 292 ff.

town grew vastly in magnitude and importance during his despotism. Neither he nor his immediate successors had any taste for architecture or other forms of art, and, though building must have gone on for the housing of the increasing population, it was, like the Prophet's mosque and domestic quarters, of a primitive kind. There are traditions, probably deserving credit, that the former had to be repeatedly enlarged and repaired during this period; but reconstruction on a considerable scale appears to have taken place first in the time of the Umayyad Walid b. 'Abd al-Malik, who gave orders in the year 88 for the destruction of the older building and the houses of the Prophet's wives, and the inclusion of the whole area in a new mosque covering 200 x 200 cubits. According to Tabari (*Chronicle*, Leyden, 1879-1901, II, 1194), the khalif demanded and obtained assistance from the Byzantine emperor, both in materials and in workmen. The new mosque was elaborately decorated, and rewards were offered to the artists, who, however, according to Samhūdī's authorities, were at times guilty of profanity. The whole was under the direction of Omar b. 'Abd al-'Azis (afterwards khalif), who introduced a *mihrāb* and four *miṣrāḥ*.

In 160 A.H. further additions were made by order of the khalif Mahdī, and his successors repeatedly repaired and decorated it. The whole building was burned down in the year 664 A.H., and restored chiefly by the Egyptian Sultān, whose successors continued to adorn and enlarge it. It was again burned down in 898 A.H., and rebuilt by order of Qāitbāi with great magnificence. This was in the time of the local historian Samhūdī, who was absent at the time of the fire, but lost much of his property owing to it. Qāitbāi's is the existing mosque. Architectural details connected with the various buildings are given by R. F. Burton (*Pilgrimages to El-Medīnah and Meccah*, London, 1865-66, vol. I, ch. xvii.), who also adds some details for the period since Samhūdī. Apparently a certain amount of destruction was effected by the Wahhābīs, who also plundered the treasures; but, when they had been forced to evacuate the place in 1815, the damage was made good.

Visitation of Medina is not incumbent on Muslims, but it is regarded as a dutiful act, the Prophet having said: 'Whoso performs the pilgrimage and fails to visit me deals undutifully by me' (quoted by Hariri, *Maqām* xxxii.). The visit is, of course, to the Prophet's grave, which is the chief object of interest in the sanctuary; for the Sunnis those of his first two successors and his daughter, who lie beside him, are also of importance. For a description of the tomb itself, which is screened off, Burton goes to the traveller Ibn Jubair (ed. M. J. de Goeje, London, 1907, p. 121), neither having seen it himself nor having met any one who had. According to Ibn Jubair, a place is supposed to be left vacant beside the others for 'Isā b. Maryam (i.e. the Christian Saviour). The European fable of Muhammad's coffin being suspended by a magnet between heaven and earth seems to be unknown to Islāmic writers, though it bears some resemblance to a story told about that of Timur-Lenk, which, according to Ibn Iyās (*History of Egypt*, Cairo, 1911, I, 347), had to be so suspended because the earth was unwilling to receive it. Various superstitions connected with this tomb are to be found in the works of European travellers, especially that of J. F. Keane (*Six Months in the Hejaz*, London, 1907, p. 225). By some puritan sects the visitation of the tomb is regarded as idolatrous, but this view is unusual.

Medina remained the political capital of Islām during the reigns of the Prophet's first three successors, but lost that position in the civil wars

which followed the death of the third. In normal times it counted as an annex of Mecca (q.v.), whose governor was responsible for it; hence there is a dearth of native chronicles, and Samhūdī makes use of the casual notices in the travels of Ibn Jubair, somewhat as modern European writers use the passage. On the other hand, owing to the continued residence of the Prophet's widows and each of his companions as were students or devotees, it became the first university of Islām, where what are called 'the Islāmic Sciences' were founded. Numerous jurists arose in Medina, and presently a canon of seven was formed. The people of the place claimed that the governors should consult them about all cases which came before them for trial. As late as 300 A.H. its jurists or traditionalists were regarded as more scrupulous than others (D. S. Margoliouth, *The Early Development of Mohammedanism*, London, 1914, p. 73). On the whole, the school of Medina, associated with the name of Mālik ibn Anas (q.v.), was supposed to attach more importance to tradition and less to inference than the school of 'Irāq, which had been founded by Abū Hanīfa. The differences which resulted were not of primary importance, though discussion at times raged fiercely (see LAW [Muhammadan]).

For at least the Umayyad period Medina was supposed to be the seat of literary criticism as well. When a question arose in Damascus at the court of one of these khalifs concerning the source of a certain line of poetry and the relative merits of certain poets, the khalif sent to the governor of Medina, ordering him after his sermon in the mosque to refer these matters to the congregation, which proved able to decide them (*Agadot*, Cairo, 1285, viii, 180). It would seem that the beginning of Islāmic libraries is to be sought in Medina; the poems of the Prophet's court-poet, Hammān b. Thābit, were kept there, and the copy was renewed when it showed signs of evanescence.

LITERATURE.—Of the work of Samhūdī cited above the abridgement was published 1335 A.H.; the original, of about three times the bulk, exists in the Bodleian Library. The portion of it which deals with places of interest in the neighbourhood is summarized by F. Wustenfeld, *Das Gebiet von Medina*, Göttingen, 1873. Accounts of the modern condition of the place are to be found in many of the records of pilgrimages, most recently in those of Madh Khan and Wilfred Scaryey, *With the Pilgrims to Mecca*, 1903, London, 1903, and A. J. S. Wavell, *A Modern Pilgrim in Mecca*, do, 1912.

MEDITATION.—See DEVOTION AND DEVOTIONAL LITERATURE.

MEDITATION (Buddhist).—See BODHISATTVA, vol. II, p. 728 f., DHYĀNA.

MEEKNESS.—1. OT conception.—The Hebrew word for meekness (*anā*) is closely connected with the ideas of humility, poverty, and affliction. A great feature of OT literature is the attempt which it constantly reveals to reconcile with the facts of experience the principle that righteousness brings prosperity, while wickedness is inevitably followed by disaster. In view of the apparent contradiction of this principle by the facts of life, some OT writers (Ps 37, Job) attempt to vindicate the ways of God to man, and to establish the ultimate reality of this principle by insisting that the suffering of the righteous and the success of the wicked are only temporary. In the end divine justice will compensate the 'meek' (who are thus identified with the righteous), while the transient prosperity of evil-doers will end in calamity and downfall.

2. NT conception.—Christian teaching derives the conception of meekness from the OT, but enlarges and spiritualizes its meaning and application. The deep significance attached to this con-

ception in the NT lies in its identification of the loftiest ideal with the profoundest reality. The meek man is thus defined as one who not only 'counts it better to suffer than to do wrong' (Plato), but as one who 'resists not evil' (Mt 5³⁹). He is the one who surrenders the immediate interests of life, but in so doing he is not emptying his life but rather filling it with larger interests. 'In ceasing to contend for his own rights against others he makes the rights of all others his own.' Accordingly, Jesus calls upon His disciples to surrender even the most obvious rights of property (Mt 5⁴⁰). But the ground of such surrender is not the denial of individual rights on the part of Christ. On the contrary, He assigns the highest importance to individual work, and He confers upon the meek a title not only to the Kingdom of Heaven, but also to the inheritance of the earth (Mt 5⁴¹). Such possession, however, is to be realized only through spiritual development; that is to say, such possession is not to be won by self-assertion or by insistence upon individual interest, but only as the individual identifies the common welfare of men with his own. Hence Christ's refusal to take part in a selfish struggle for private gain, and His ultimate conquest of all opposition by depriving others of the very power of setting up interests in opposition to His own.

3. Philosophical conception.—(1) *Its place in the history of ethics*.—While other ethical systems have in many cases been characterized by lofty ideals of conduct, the profound conception of meekness indicated in the preceding paragraph is distinctive of Christian ethics. The ethical ideal has generally been conceived as pleasure in some form or other. Hedonism (q.v.) conceives it as the pleasure of the moment, but the objection to this view is that such transient pleasure cannot satisfy a consciousness that is not momentary. Eudemonism (q.v.) seeks to repair this defect by setting up the happiness of the life as a whole as the *summum bonum*, but a fatal limitation of this view is that the happiness of life as a whole is incalculable. The balance of pleasures and of pains cannot be adjusted, and the values of competing pleasures cannot be quantitatively determined though they may be qualitatively distinguished. The same criticism applies to Utilitarianism (q.v.), for the greatest happiness of the greatest number is still less calculable than the happiness of the individual life as a whole. A further criticism applies to all three forms of Hedonistic ethics—the criticism that pleasure, if sought for itself, is not found. This radical defect can be met only by a radical change of ethical ideal. What the nature of the new standard is to be will depend upon the point of view taken. If this be the standpoint of Christian ethics, then the ultimate moral standard cannot be lower than the attainment of perfection; and an essential factor in the rule of conduct by which this ideal is to be realized is the quality of meekness (*πραΐτης, πραΐτης*, later form *πραΐτης*). True humbleness, gentleness, consideration for others, self-respect without vanity, reverence, and perfect humility—for all these qualities are connoted by the term 'meekness'—alone lead, according to Christian ethics, to the realization of moral perfection, and at the same time to the attainment of real temporal prosperity. In NT phraseology the meek are most truly happy (or blessed), because theirs is not only the Kingdom of Heaven, but also the inheritance of the earth.

But how is such a quality of character, which has for its distinctive feature an utter absence of self-assertion, actually to achieve the conquests and acquire the possessions which are thus ascribed to it?

(2) *Its relation to the doctrine of evolution*.—According to the principle of natural selection, it has been argued that in the evolutionary process the unworthy or 'unfit' must be set aside in order to make way for the survival of the fittest. There are some, therefore, who maintain that by supporting such institutions as hospitals, almshouses, and sanatoria we are retarding the process of evolution. It is argued that we are thus breeding degenerates and criminals, consumptives and lunatics, and, worst of all, taxing the sane, healthy, and law-abiding citizens for their support.

But this view fails to recognize all that the doctrine of evolution implies. It confuses this principle with that of letting the weakest go to the wall. It is hardly necessary to point out that by adopting such a principle we should blunt our finer feelings and should therefore sink in the moral scale. And the cost in time, money, and efficiency for other pursuits that is entailed in our care for the aged and diseased is negligible when compared with the moral gain. Thus we find that the preservation of the lafirm and consideration for the weak are strictly compatible with, and, indeed, an essential factor in, the law of evolution, inasmuch as they tend to develop a quality of human character which has the highest survival value. The growth of the spiritual Kingdom and the dominance of the world by meekness and humility are thus progressively realized.

Literature.—*MEG.*, art. 'Megarism'; cf. art. 'Stoicism on the Mount', vol. 7, p. 19. W. S. Brown, *The Ethics of the Old Testament*, Edinburgh, 1902. *The Formation of Christian Character*, 2d. ed., 1903. H. Sidgwick, *Outlines of Ethics*, London, 1904, esp. ch. III.; J. S. Macdonald, *Journal of Ethics*, 1904.

A. J. HORROCKS.

MEGARICS (*Μεγαρίται*).—Euclides of Megara is generally regarded as the founder of the Megarian school, though it would be more correct to keep the name for his successors a generation or two later. Euclides himself was an Eleatic and also an 'associate' (*δραστής*) of Socrates. The account of his philosophy given by E. Zeller (*Philosophie der Griechen*, II. 1^o, Leipzig, 1900, p. 244 f.) is vitiated by his adoption of Schleiermacher's identification of the Megarics with the 'friends of the forms' (*εἰδωτοὶ φῶναι*) of Plato's *Sophist*. It is quite impossible to reconcile the few facts we know about the teaching of Euclides with the theory of plurality of forms, and Proclus, in his commentary on Plato's *Parmenides* (p. 149, ed. V. Cousin, Paris, 1830-37), states quite distinctly that the 'friends of the forms' were the 'wise men of Italy,' that is to say, the Pythagoreans. On such a point Proclus's testimony is conclusive, for he had access to and was familiar with the works of Plato's immediate successors.

The most trustworthy account that we have of the Megaric doctrine is that of Aristotle, the teacher of Alexander of Aphrodisias (2nd cent. A.D.), some extracts from whose *History of Philosophy* are preserved in the *Prolegomena Evangelica* of Eusebius (xiv. 17). Its Eleatic origin is at once apparent from these, and Aristotle expressly says that it was first the doctrine of Xenophanes, Parmenides, Zeno, and Melissus, and later of Stilpo and the Megarics. In the first place, they made it their business to 'throw' (*συνάλλειν*, a metaphor from wrestling) all sensation and appearances, and to trust in reasoning alone. The method which they adopted was that elaborated by Zeno, a method which was known as 'dialectic' by its admirers and as 'eristic' by its critics. It consisted in showing that two contradictory but equally cogent conclusions could be established with regard to everything without exception, and that there was therefore no truth at all in any of the appearances presented to our senses. That is

what Plato calls *ἀνελκεία*, and we still possess a curious fragment of a work in the Doric dialect, generally known as the *Dialektikē* (the name is without authority), which applies the method to certain ethical antinomies. It is most natural to regard this work as a product of Megara, and we know that the Megarians clung with special tenacity to their native dialect.

The effect of this criticism is to leave us with nothing but the One or the Whole (ὅλον, ὅλη) and to deprive the Many and the Parts of all claim to reality. That was the doctrine of Parmenides, but there is evidence that Euclides understood it in a rather different sense than the founder of his school, and it is here that we can trace the influence of Socrates. The One of the Eleatics had been a continuous, corporeal *plénon*, whether finite (Parmenides) or infinite (Melissus), but Euclides took the step of identifying it with the Good, which was called by many names, such as God, Wisdom (*σοφία*), and Mind (*νόος*). It was in this way that 'the Absolute' made its first appearance in the history of philosophy, and its claim to be the sole reality was based on the inherent contradictoriness of all appearance.

The philosophy of Euclides had a very great influence on Plato, who had taken refuge with him at Megara after the death of Socrates, and it is to this influence that we may most probably ascribe the unique position assigned to the Good in the *Republic*. It was impossible, however, for Plato to acquiesce permanently in an Absolutist doctrine of any kind; for that excluded from Reality what he was most interested in, the Soul, and especially the best Soul of all, namely God. The *Parmenides* and the *Sophist* are chiefly occupied with this problem, and it is plain that Plato believed himself to have disposed finally of the Absolute. That led, of course, to a breach between the Academy and their fellow-Socratics of Megara, and from this time forward we may discern the beginnings of a distinct Megarian school. As was natural, the negative dialectic was more zealously cultivated than the central doctrine of Euclides. When an abstract Absolute has been set up, there is not much more to be said about it, but the dialectical method is always available for the criticism of rival philosophies. Aristotle was naturally the chief object of the Megarian attack, which was led by Eubulides. Aristotle's own logical theory was to a large extent moulded by this situation, and the title given to his course on fallacies, the *Sophistici refutatio*, bears witness to it; for, since the time of Plato's *Sophist*, the old term had been revived as a name for thinkers of the class known later as Megarians. The fallacies exposed by Aristotle are, in fact, for the most part, Megarian arguments, and that is the explanation of the cases in which the words 'sophism' and 'sophistry' have been used from that time to the present day. Many of these sophisms are well known, such as the Liar (*πρὸς ἑαυτὸν*), the Veiled Man (*ἐν σκελετοῦ*), the Heap (*συσπέρης*), and the Bald Man (*παλαστής*). As an extreme specimen, we may take the argument of the Horns: 'What you have not lost, you have. You have not lost horns. Therefore you have horns.' Some of the arguments are more serious, however, and raise the problem of continuity. The influence of Zeno is still felt in the *εὐκλείδης ἀκρόν* (*εὐκλείδης λόγος*), referred to by Horace (*Epod.* II. l. 46). The most important of all from a historical point of view, however, was the *ἐπιστολὴ* of Diodorus Cronus († c. 307 B.C.), which continued to be discussed in the schools for centuries. Aristotle's favourite doctrine of potentiality and actuality (*δύναμις* and *ἐνέργεια*) was specially objectionable to the Megarians, and Dio-

dorus set himself to destroy the conception of possibility altogether. The argument may be stated thus: 'Nothing impossible can proceed from anything possible. But it is impossible that anything in the past should be other than it is. If it had ever been possible still further in the past for it to be other than it is, then an impossibility must have proceeded from a possibility. Therefore it was never possible that it should be other than it is. Therefore it is impossible that anything should happen which does not actually happen.' Chrysippus confessed that he could not solve this, and Epictetus still busied himself with it.

The definite constitution of the Megarian school as a philosophical sect was the work of Stilpo of Megara, who for some time after the death of Aristotle (322 B.C.) was the most important philosophical personality in Greece. When Ptolemy I. took Megara in 307 B.C. he tried to induce Stilpo to return with him to Alexandria, but the invitation was declined. From the few facts that are told of him it is plain that he revived the positive side of the doctrine of Euclides and insisted on the sole reality of the One. He argued that to speak of man is to speak of nobody; for it is not to speak of A any more than of B. In the same way, he refused to admit that a cabbage shown to him was cabbage. There was a cabbage in just the same sense ten thousand years ago. As he further denied the real existence of forms or species (*εἴδη*), whether in the Aristotelian or in the Platonic sense, it followed that everything was mere appearance. But what distinguished Stilpo from all his predecessors, so far as we know, and what made Megarianism a reality for the first time, was the ethical principle which he deduced from this apparently barren Absolutism. It was the only ethical principle that such a doctrine can yield, that of quietism and inaction. Plato's nephew Speusippus had already maintained that pleasure and pain were both evil, and that good men aim at imperturbability (*ἀσκήσια*), and the word 'apathy' (*ἀπάθεια*) occurs in the Platonic *Dylogos* (413 A), which belong to the early Academy. In his *Éthique* (1104, 94) Aristotle alludes to those who define the various forms of goodness as *ἀσκήσια* and *ἀπάθεια*. But it was Stilpo who made the doctrine live. Teles, who was his fellow-citizen and a little later in date, holds him up as the great example of indifference to the vicissitudes of fortune. It is unnecessary to suppose that he was influenced in this direction by the Cynics; for the doctrine follows quite naturally from his denial of reality to the world of sense, which he certainly derived from a very different source. As Zeno of Citium was a disciple of Stilpo, we may certainly regard him as a spiritual ancestor of Stoicism. The same tendency was represented by the school of Eretria, whose chief representative was Menodorus (c. 300-270 B.C.), and which regarded itself as an offshoot of the school of Elis, which looked upon Phaedo as its founder. We know little about it, but its existence bears witness to the growth of the quietist ideal and its intimate connexion with a metaphysical theory which rejects the appearance of the world and holds fast to the One conceived as absolute.

LEVI-SCHTAUB.—There is little literature dealing with the Megarians outside the general histories of Philosophy, and what there is may be regarded as antiquated. It will be sufficient to mention C. Malet, *Histoire de l'école de Mégare et des écoles d'Élée et d'Éretrie*, Paris, 1876. JOHN BURNET.

MEIR.—Rabbi Meir, a Jewish sage who flourished in Palestine in the 2nd cent., belonged to the fourth generation of the Tannaim (Rabbis of the age of the Mishna); he was one of the foremost disciples of Rabbi Akiba, and helped, with

them, to give a new impulse to 'the study of the Law' (i.e. the consolidation and development of Jewish religious thought and practice) after the troubles attending the persecution under Hadrian. So great was the estimation in which he was held that, by one authority, those disciples are styled 'Meir and his associates' (*Midr. Rab. to Lv 12*). Learning, mental acuteness, and a ready wit combined with a lofty character to make him the remarkable man he was. His parentage and birthplace are either uncertain or unknown. Contrary to the Talmudic practice, he is cited without a patronymic, and his doubtful descent gave rise to the legend which made him a son of Nero, a fabled convert to Judaism (*Gitin, 56a*). Even his real name, Menahem (Moses), was half-forgotten. When Akiba, flouting the edict of the Roman authorities, continued to teach, Meir stood by him (*Tos. Brakhot, H. 6*). His other masters were Rabbi Ishmael, to whom he went because he deemed himself intellectually unequal to the task of following Akiba's discourses, and—a still more interesting fact—Elisha ben Abuyah, who was later to become an apostate and a declared friend of the Romans. From the latter, recreant though he was, Meir did not altogether dissociate himself in after years. He listened to his doctrine, and made discreet use of it.

'Like one who cuts dates, he devoured the fruit, but threw away the stones' (*Shabbat, 15a*). His motive was not exclusively love of learning; there united with it grateful regard for one who had once been a cherished teacher, and likewise the hope of winning back the renegade; but his relations with Elisha were viewed with suspicion, and were partly the reason why his reputation with his contemporaries fell short of his posthumous fame.

Returning to Akiba later on, Meir was ordained by that master, and began to teach in the Rabbinical schools. In his discourses he availed himself largely of the Haggada (the homiletical method of Scriptural interpretation) and also of fables and parables. Thus it was said of him in later times that 'when Rabbi Meir died the parable-makers died with him' (*Sotah, 48a*). He is credited with being the author of three hundred fables, of which only a few have been preserved in the Talmudic writings (*Sanhedrin, 88b*). His knowledge of Latin and Greek also helped him in his Biblical lectures. His acquaintance with the sacred text was so extensive and precise that, when once, on his travels in Asia Minor, he entered a synagogue on the eve of the Feast of Purim and found that there was no copy of Esther forthcoming for public recital, he wrote out the entire book from memory (*Tos. Megilla, 2*). For this intimate knowledge of the sacred text he was doubtless largely indebted to his profession as a scribe. Compared with the exegetical methods of his immediate teachers, his own mode of interpretation may be said to have been rationalistic. Keen and bold dialectic played a large part in his expositions, so that it was said of him (*Sanh. 24a*) that, in his lectures, he was like one who uprooted mountains and ground them together. He amazed and perplexed his colleagues by his daring decisions.

'He would declare the unclean permitted and the forbidden clean, and give his reasons' (*Brakhot, 13b*).

It was usual to regard consecutive passages in the Bible as necessarily having a common subject-matter; Meir, however, held a different opinion. There are many such passages, he declared (*Sotah to Nu 23*), which have no organic connexion. This originality of his was viewed differently by different minds. Some admired his rationalism and courage; 'Meir's very staff,' they cried, 'teaches knowledge' (*Jerns. N'darim, ix. 1*). Others disapproved. 'Enough, Meir,' protested his

colleagues when once he was more than usually daring (*Midr. Rab. to Ca 12*). Nevertheless, as Hamburger remarks (*il. 707*; as to the protest see I. H. Weiss, *Ges. d. 18*), in virtue of his qualities of mind and heart, he breathed into Judaism the breath of a new life. As to the Halakha (the body of decisions on ritual practice), his orderly and logical arrangement of the material contributed greatly to make the compilation of the Mishna possible. He was a stringent upholder of the ritual Law; but he was even more strict with himself than with others.

'Never have I presumed to set aside, in my own personal practice, the decisions of my colleagues when those decisions have been more stringent than mine' (*Shabbat, 134a*).

His strength of character is further illustrated by his opposition to Simeon ben Gamaliel II., then presiding over the Sanhedrin at Usha. To Meir had been assigned the office of *Adhikan* of that body (as to the duties of that functionary see *J.E.*, art. 'Bakan'). Holding Simeon's knowledge of the Law inadequate, and resenting the President's excessive regard for his own dignity, he conspired with Rabbi Nathan, one of his associates, to secure the Patriarch's deposition. Simeon, however, defeated the plot, and it was the conspirators who were ejected. Later on Nathan was re-admitted, but Meir sturdily refused to make the necessary submission, and he narrowly escaped excommunication in consequence.

His domestic life was at once happier and sadder. His wife Beruria (Valeria) is one of the great women of the Talmud. The daughter of the martyr Rabbi Hananiah ben Teradim, who suffered under Hadrian, she was noted for both learning and moral worth. The touching story which records her wonderful fortitude in the hour of crushing calamity has been told again and again.

During Meir's absence at the sanctuary one Sabbath eve, their two sons suddenly died. Beruria withheld the sad tidings from her husband until the day of pence was ended. Then she told him of it in a parable. 'A friend,' she said, 'left me some jewels to keep for him years ago—so long ago that I had come to look upon them as my own. Now, of a sudden, he has claimed them, but I find it hard to part with them. Must I really give them up?' 'Why ask such a question?' answered Meir, 'you should have restored them already.' 'I have done so,' she replied, 'as she had him to the death-chamber' (*Midr. Mishle to Ps 51*).

This is not the only instance in which the Talmud is just enough to admit that one of its greatest sages was taught by a woman; Beruria instructs her husband in the higher knowledge on another notable occasion.

Annoyed by the pin-pricks of unsmooth neighbours, Meir capriciously calls down imprecations upon his tormentors. His wife rebukes him. 'Rather,' she protests, 'let us pray that they may live to repent; for the Psalmist's supplication is not "Let sinners be consumed out of the earth," but "Let sin be consumed"' (the allusion is to *Ps 104*, where the Hebrew is susceptible of Beruria's interpretation; for the story see *Bv. 10a*).

The Rabbi, despite a certain severity and intolerance, was worthy of his wife. His defects were the defects of his qualities. If sometimes he set his face like a flint towards other men's weaknesses, he was strong and brave when life's sorrows touched himself. He, too, could preach and practice the great duty of submission.

Rebelling *Ec 5*, he says, 'Let thy words before God be few; shoo! thyself to say, "Whatever God doeth He doeth well"' (*Ec 506*). And, again, 'As we should thank God for the good, so should we praise Him for evil' (*Ec 406*). God Himself suffers with His sorrowing children (*Midr. Sana. vi. 6*).

Expounding in novel fashion the verse, 'A good name is better than precious ointment; and the day of death than the day of one's birth' (*Ec 7*), he said that death, the common lot of men, is good for those who pass hence with a good name (*Bv. 17a*). Again, he said that what, according to *Gen 12*, God saw and proclaimed 'very good' at the Creation was death (*Midr. Rab. to the verse*). The section of the Mishna known as *Adhikan*

(Ethics of 'the Fathers') assigns a typical maxim to each of the great Talmudic Rabbis. The maxim associated with Meir reads as follows:

'Limit thyself for worldly goods and give thyself to the Torah, but be loath of spirit towards all men' (*Abot*, iv. 10).

Meir was clearly no Pharisee of the baser sort; to be a sage was, for him, to have an incentive not to pride, but to humility. To study the Law, too, was not an end in itself; it must be made an impulse and inspiration to the noble life. Thus in another utterance of the sage he pictures God as saying:

'Devote thyself with all thy heart and soul to know my ways and to watch at the gates of my Law. Keep my Law in thy heart and my fear before thine eyes; guard thy mouth from sin, and purify thyself from all transgression. Then will I be with thee always' (*Ex*. 17a).

Equally notable are his teachings concerning social duty. Men are not to be judged by outward appearances.

'Look not at the flask, but at what it contains; there is many a new flask that contains old wine, many an old flask which has not even new wine in it' (*Abot*, iv. 39).

Nor are men to be judged by the honey of their words. If we have two friends, one of whom admonishes us and the other flatters, we should love the former, for he is leading us heavenwards (*Abot* d' R. Nathan, 29). He preaches sincerity even in the small things of social intercourse; he warns us against inviting a friend to dinner when we know that he will not accept the invitation, and against offering him a present which we believe he will not take (*Sederot* d' Hillel, 94a; *7th. Babla* *Babla*, vi. 14). It is a man's duty to adapt himself to the ideas and customs of the community in which he lives; in Rome he should do as Rome does. The angels, the sage points out, when they came down to earth and appeared to Abraham, ate like mortals; when Moses went up to heaven, he neither ate nor drank (*Nidr. Rab.* to *Gen* 18th). Applying to Aaron the words (*Mal* 9th), 'he did turn many away from iniquity,' Meir thus characterized the great high priest:

'If Aaron chanced to meet a bad man, he was careful to rebuke him, so that, when the latter next time meditated on evil deed, he said to himself, "Woe is me! how shall I then look Aaron in the face?" In like manner, if two men quarrelled, Aaron would go to one of them and say, "See, my son, what thy friend is doing; he is beating his breast, rending his clothes, and crying, "Woe is me! how can I look my friend in the face, seeing that I have sinned against him?" Then he would go and say the same to the other, so that at length they amended and were reconciled' (*Abot* d' R. Nathan, 13).

Meir has left many maxims on the self-regarding duties also. He exhorts us to contentment with our worldly lot. 'Who is rich?' he asks, and he answers, 'He that hath peace of mind with his riches' (*Sabb.* 25b). 'He that feels shame,' he says elsewhere, 'will not quickly be led into sin' (*Nidda*-*Am*, 30a). The sin of Samuel's sons (1 S 8th), he declared, lay in their demanding what was due to them (*Sabb.* 86a). The Law (*Ex* 22nd) ordains that a man who steals an ox must make fivefold restitution; but, if he steals a sheep, the restitution is only fourfold. The difference is to be explained by the fact that, unlike sheep, the ox is a toiling animal. 'Hara,' cries Meir, 'is a proof of the worth of labour in the sight of God!' (*Middot* to the verse). In common with the Rabbis who lived under Roman rule, and with the early Christians (see E. Gibbon, *Hist. of the Decline and Fall of the Roman Empire*, London, 1801-08, ii. 17), he condemns the theatre and the arena. The one is 'the seat of the scornful' (*Ps* 1st), the other a place of execution (a reference to the cruelties of the gladiatorial contests) (*Abot* d' R. Nathan, 37; *Abot* d' R. Nathan, 18b). He emphasizes the futility of human ambitions by an apt remark: man, he says, is born with his hands clenched as though he would grasp the whole world; he dies with his hands wide open, for he takes nothing with him (*Nidr. Rab.* to *Ec* 5th).

Unbending to the ignorant ('am ha-aref (q.v.) and the schismatic among his own people, Meir shows himself tolerant and liberal towards men of alien creed.

The Gentile who gives himself to the study of the Law is as worthy as the Jewish High Priest; for Holy Writ (*Le* 15th) speaking of God's statutes, says that if a man do them, he shall live by them—a man, not a priest or a Levite (*Abot* Quesada, 28c; *Sabb.* 28a).

He had many conversations with Gentiles, chiefly polemical.

One of these opponents designated Israel a people contemned of God, driven by the Master from His house, and put in subjection to other lords. 'God,' argues the controversialist, 'has made you exiles in our midst; why, then, do you not continue with us?' Meir presents against the theory. 'Rather,' he asserts, 'we are to be likened to a man whose father has discarded because of his evil life, but whom the paternal heart is ready to take back if he returns penitently' (*A. Jellinek*, *Abot* *Abot*, Leipzig, 1888-73, i. 21). 'If,' asks another disputant, 'your God loves the poor, why does He not sustain them?' 'In order,' Meir replies, 'to give us an opportunity of escaping Gehenna by the practice of loving-kindness' (*Abot* *Babla*, 10a).

Like Aquila, his master, Meir is pictured by the Talmud (*Qiddushin*, 81a) as undergoing the temptation of St. Anthony. Satan, so runs the legend, appears to the sage in the form of a beautiful woman, who would entice him with her wiles. But he escapes them. The legend puts in concrete shape the traditions concerning the Rabbi's unyielding rectitude which gathered about his name. Another story tells of a journey which he once made to Rome in order to rescue from a house of ill-fame his wife's sister, who had been taken captive after her father's martyrdom. It is said that his mission was successful (*Abot* d' R. Nathan, 18a).

Born, it is believed, in Asia Minor, Meir died in that country. He enjoined his disciples to bury him on the seashore, so that the waters which laved the land of his fathers might touch his bones (*Jerus. Klaym*, 28c). He had no equal in his generation in one Talmudic appreciation of him (*Eruvin*, 18b); and, in a public eulogy pronounced on him at Sepphoris, Rabbi Josè declared him to be 'a great man and a saint, but humble withal' (*Jerus. Ber.* ii. 7).

Of all the Tannaim, Meir's name is most widely known among the people. In the house of every pious Jew there is a money-box hung on the wall, in which the trustees deposit their alms for the poor of Palestine. This box bears the inscription 'Meir, Be al Han Kof' ('Meir, the wonder-worker'), an allusion to the miraculous power ascribed to him in Talmudic and popular lore (see *JE* vii. 468).

London, 1891-68, 2.); *JE* art. 'Meir'; I. M. Weiss, *Geschichte der jüd. Tradition*, Wilm., 1901, ii. 508.

MOHAMMAD JOSEPH.

MELANCHOLY.—In Greek physiology the bodily constitution of an individual, his appearance, his liability to disease, and also his mental character were explained by the proportions in which the four humours were distributed in his framework. These were blood, yellow bile, black bile, and phlegm, the predominance or excess of which gave respectively the sanguine, the choleric, the melancholic, and the phlegmatic 'temperament.' Melancholy (*μῆλας* and *χολή*) was thus the mental disposition of the melancholic temperament. The terms passed into literary and popular use, although the doctrine of the four humours, on which the distinctions were based, was forgotten or discarded. The names seemed, in fact, to correspond to certain broad differences, bodily and mental, among men, and writers on insanity are still careful, in their description of cases, to indicate the 'temperament' of each patient. The differences are now made to depend either upon the blood or upon the nervous system, or both. If the blood is decisive, the difference may be sought either in its substance—the number of red cor-

garden, etc.—or in its circulation; if the nervous system, in the strength or the rate of reaction, or both. Henle made use of the conception of nerve-tones, which has since been retained and developed (*Anthropologische Forträge*). No part of the nervous system, he showed, is ever wholly at rest during life; every stimulus finds a certain degree of excitation already present in the nerve-endings and nerve-fibres on which it acts; what we call rest is, therefore, a moderate degree of activity, which may rise or fall, and which is maintained by internal stimuli, acting through the blood. This is the 'tonus' of the nerves, their preparedness for action; the higher the tonus, the stronger the reaction. On the nerve-tone will, therefore, depend the sensitiveness of the individual, his prevailing emotional attitude, and his quickness and firmness of response. A low tone shows itself in the dull, heavy expression of face (in the phlegmatic, e.g.), the relaxed muscles, the indeterminate movements, the tendency to 'run to fat'; a high tone in the vivid complexion, alert expression, and quick movements of the sanguine or choleric. The melancholic, according to Henle, has also a high nerve-tone, but reacts through the emotional or affective system, rather than the voluntary; whereas the choleric relieves feeling by prompt and strenuous action, the melancholic is denied this advantage; his melancholy is the brooding upon and nursing of emotions, a habit from which genius, or, it may be, merely hypochondria and hysteria, spring. Wundt's simple formula has been widely accepted: that temperament is primarily a question of emotion, that emotion undergoes two forms of change, one in intensity, or strength, the other in rate; hence the fourfold division: strong and quick—choleric; strong and slow—melancholic; weak and quick—sanguine; weak and slow—phlegmatic. Strong emotions under modern conditions mean a predominance of pain; slowness of change means that the mind takes time to follow out its own thoughts, is not wholly absorbed by the present but looks to the evil ahead. These tendencies characterize the melancholic (*Grundsätze der physiologischen Psychologie*, iii. 637). The scheme is too simple to fit the complexities and subtleties of human character, however, and there is no general agreement even as to the number of distinct temperaments, as many as nine having been suggested.

2. Melancholy and pain.—Melancholy differs from the other dispositions in being a well-recognized temporary emotion or mood, as well as a prolonged or permanent trait, and also in being in an extreme form the most prominent symptom of a definite form of insanity—melancholia or mental depression. It has formed the theme of one of the most wonderful books in our language—*The Anatomy of Melancholy*, by Robert Burton, first published in 1621.

The melancholy with which he deals, and of which the 'causes, symptoms, progression, and cure' are set forth with such fertility of illustration, is 'an habit, — a chronic or continuous disease, a settled humour,' but it is built up, as he recognises, out of 'melancholy in disposition,' which is 'that transitory Melancholy which comes and goes upon the smallest occasion of sorrow, need, sickness, trouble, fear, grief, passion, or perturbation of the mind, any manner of care, discontent, or thought, which smother anguish, dullness, heaviness and vexation of spirits, any way opposite to pleasure, mirth, joy, delight, merriment, forwardness in us, or a dislike. In which equivalent and improper sense, we call him melancholy that is dull, sad, sour, lumpy, ill disposed, solitary, any way moved, or displeased.' Melancholy in this sense is the character of Morosity' (i. 104 (ed. London, 1895).

It might be said that this temporary melancholy is merely mental pain, however named, and that the permanent disposition or habit is a state of mind in which mental pain is the dominant tone. The expression of melancholy is that of pain, the pale face, the drawn look, lips and eyebrows turned slightly downwards at the corners; the respiration slow and sighing, the pulse-beat slow, the temper-

ture lowered, the nutrition-processes, including the appetite, impaired, so that the body seems insufficiently fed. One of the immediate consequences is also a loss of sensitiveness to outer impressions; they lose in clearness and distinctness; the judgment follows suit, and the whole mental character is, even though only for the moment, changed for the worse. In particular, egoism develops:

'The patient thinks only of himself and his sufferings; abstracts himself from family affection, yield to an egotism of the most standing and extreme type' (H. Benoit, *Les Dépressions Intermittentes*, Paris, 1889, p. 124 E.).

Mental pain may be less acute, but it is more persistent than physical pain, and it has the same reverberation throughout the organism. The distinction between the two is probably artificial; mental pain accompanies all physical pain, while in its turn physical pain—discomfort, loss of nervous tone—is a constant accompaniment of mental pain. The most common cause of the former, physical pain, is the over-excitation or exhaustion of some sensory or motor nerve; so the most common cause of the latter, mental pain, is the over-strain or exhaustion of the brain centres and tracts concerned in ideation, emotion, memory, and will. Love and over-study were two of Burton's causes of melancholy. The melancholy may be regarded as a pain of fatigue, as due to excessive functioning on the emotional or intellectual side, especially when the strain has not been rewarded with success.

The extraordinary persistence of melancholy, the difficulty of dislodging the mind from it, is due, as Benoit argues, not merely to the fact that its cause—the distress, the over-excitation—is persistent, but also to 'the excitement of the irritable, which is at the root of almost all mental pains, the idea that all is lost and without hope. The mother who knows that she will never see again the child that has died in her arms, the artist who sees that he will never be able to realize the ideal of his dream, the inventor whose discovery is held up to ridicule, the poet whose verse, that he believes to be inspired, are laughed at, the thinker who seeks for truth and finds only doubt, the Christian who sees the weakening of his belief and of his faith, all have this excitement of the irritable, of the lost beyond return, which leaves behind only nothingness and despair' (ib. p. 124).

3. Melancholy and the sense of volume.—Melancholy is the mood of an imaginative mind; it is true that an animal is sometimes described as 'melancholy'; a dog that has lost his master, a wild animal in captivity in a narrow space, a bird deprived of her mate; death, even self-inflicted death, is known to have followed such misfortunes. So a child may be 'melancholy' after the loss of a mother or a playmate. But in the strict sense melancholy is an adult and a human infirmity. Probably the time of its greatest frequency is the period of adolescence; in middle and old age it tends to disappear, to be replaced in senility, occasionally, by a state outwardly similar, but inwardly different. Byron's lameness and Hain's and Leopardi's delicate constitutions have suggested that physical disease may be the predisposing cause to melancholy; but, as Metchnikoff points out, Schopenhauer preserved his melancholy and pessimism to a vigorous old age, while there are innumerable cases of patients suffering from serious and even deadly diseases, yet retaining their native lightness of heart. If anything, melancholy is more common among the young, healthy, and vigorous. It does not really depend upon the health at all, but upon the sense or 'sentiments' of life. The typical case is Goethe, who in his own youth passed through the torment which he describes in *The Sorrows of Werther*, and had thoughts of suicide, but in his old age is described as casting off the sickly and morbid side of his character, replacing it by a serene and even joyous love of life (E. Metchnikoff, *Essais expérimentaux*, pt. viii.). The intensity of feeling is greater in the young than in the old, both for pleasure and for pain; hence they are more impressionable; but this is not due to the greater vitality or sensitive-

ness of their nervous system, but rather to the fact that the older man is better able, through his experience, to interpret the impressions, to see them in their true perspective, and in relation to life as a whole, whereas for the young each impression is taken in isolation, is weighed only in its relation to the immediate needs or desires of the self. Hence the vivid colouring of their life, the higher happiness, and the deeper pain. In the same way melancholy is more frequent in men than in women, in the northern races than in the southern races of Europe. A northern race, perhaps because its civilisation is a more recent growth, is more conscious of itself, and less conscious of the wider group in which the loss of one individual is compensated by the gain of another. It was mainly from Russia, Germany, and Scandinavia that the melancholy school of writers of last century—the *Fin de Siècle*—came. suicides are said to increase in number northwards, and one of the most common causes of suicide is melancholy (see Burton's discussion on suicide [1. 406]; and Metchnikoff, p. 306). At the back of all melancholy is fear—fear of pain in the first instance, then fear of loss, of failure, of death, of society's judgment upon oneself. The greater the value, or, rather, the greater the appreciation of a good, the greater the pain at its loss, and the greater the pain at the prospect of its loss. Hence melancholy is, paradoxically, more common in the idealist than in the materialist. Paul Bourget, writing of Baudelaire, finds the key to the profound melancholy of this rather repulsive figure in the mysticism and idealism of his early faith. When such a faith, the faith in the eternal, has been strongly held, its object deeply adored, the loss of faith in it, and of love, is irremediable. The individual may no longer have the intellectual need to believe, but he still has the need to feel as when he believed. The desires remain, strengthened by habit, and in the sensitive soul their influence is irresistible; yet their satisfaction is impossible. Melancholy then is the effect of failure of adaptation to the environment, in matters of faith and belief. The stronger the resistance to facts to the realization of the thinker's dream, the deeper his melancholy. To the mystic soul faith is not the mere acceptance of a formula or of a dogma; God is not for it a word, a symbol, an abstraction, but a real being in whose company the soul walks as a child in its father's, who loves it, knows it, understands it.

Once an illusion as strong and as sweet has gone, says Bourget, no substitute of less intensity will suffice, after the intoxication of opium, that of wine comes next and poetry. Drive away at the touch of the world, faith leaves to each soul a gap through which all pleasure slips away. The more the sufferer tries to escape, the more securely is he held, until at last there remains as his only satisfaction 'the redoubtable but consoling figure of that which rises from all disasters, and delivers from all doubts,—Death' (Paul Bourget, *Études de psychologie contemporaine*, Paris, 1906, p. 32).

Still deeper is the melancholy of unattained desire, when the failure of satisfaction lies, not in the resistance of external circumstances, but in the inability of the subject to enjoy, an inability which is itself a mark of exhaustion; it is the soul that has lived most, felt most strongly, indulged its passions to the full, till its power to feel is almost destroyed, that finds life most unbearable.

'Le message du destin qui nous fait souffrir entre la tranquillité matérielle des circonstances et les impuissances plus terribles encore de notre sensibilité' (ib. p. 145).

It is the melancholy of nature after the storm, of evening, of the grey light that comes after the sunset, of the brown tints of autumn trees—exhaustion or decay after stress and life.

Less tragic is the melancholy that is associated with penitence, deliberation, thought, as in Milton's *Il Penseroso*—the melancholy of the poet

and of the philosopher. Beausais connects this also with pain, however. When man reflects, he is forced to recognize, according to Beausais, that he is born to pain, and that pleasure is only an accessory in his life.

'There is no physical pleasure which can compensate for an hour of anxious pursuit, no mental enjoyment which does not disappear before the pain caused by the death of one we love, no intellectual pleasure which is not annulled when we think of how much is unknown in our fate. Penitence, an irrefragable conviction, is at the root of every reasoning, of every meditation' (p. 185).

Happily, he adds, most men do not reflect or meditate upon the fate either of themselves or of others; their interest faces outwards, not inwards; they have no time to worry over problems that great minds have found insoluble; or, if they do worry over them, they are able to set their worries at rest by the acceptance of a solution ready-made, on the authority of the Church or the pastor.

3. Melancholy and exhaustion.—The essential nature of melancholy has been probed more deeply from the point of view of pathology, and in various ways the idea of exhausted or decreased energy has been brought into connexion with the known laws of mental activity.

To Heron Lewis melancholy means nervous enfeeblement; the subject is no longer able to do easily and smoothly even the most familiar and habitual acts; it is only with effort that he can think, or attend to what he hears or reads.

It appears to us that the true explanation is due to mental operations being reduced to level so far as to establish constant effort in lieu of the usual unconscious operations, or beyond stages of consciousness which accompany all intellectual processes. The various movements of the intellectual eye (in the artist, poet, etc.) as well as those of the state of muscular excitement, brought in the former case the earliest motor element of thought, and in the latter a highly refined sensibility, but in the melancholic there remains of relational life an inability of very the eye is fixed, dull, heavy, sluggish in its movements and painful in effort, the eyelids are drooped, the face expressionless. The only muscles in a state of tension are those which conserve emotional life, viz. the small muscles of expression' (Fustel de Coulanges, *La Vieillesse*, p. 151). 'Failure in the muscular element of thought has as its results on the subjective side, unobscured ideas and the cause of objective resistance' (ib. p. 150).

The eye sees less clearly, the mind interprets less accurately; the will acts less vigorously, and less effectively; it may be that the motor ideas, which are the cues, if not the excitants, of action, cannot be formed or recalled accurately in the mind; hence apathy and inaction. The environment, the non-ego, appears as antagonistic or foreign to the self; it is no longer the world in which we moved freely and easily, therefore pleasantly, but one which is new and strange, which resists our efforts and counters our desires. The result is a rise in the subject-consciousness; the mind is thrown back upon itself. The man broods upon his sufferings, which become his wrongs, and, in interpreting or explaining them, suspicion of others is the simplest and therefore the most frequent way out.

According to Pierre Janet's interpretation, melancholy represents a stage on the way to *madness psychologique*, or psychic misery, with its accompanying disintegration of the personality, and subjugation of the conscious by the subconscious or unconscious self. There are innumerable degrees of attachment and detachment of acts and ideas to the self. In thought-reading and in table-turning we have simple instances of how acts are carried out which correspond to ideas or thoughts in the mind of the subject, yet the acts are neither voluntary nor conscious on his part; he is aware of the result, not of his own agency in it. In spiritualism—the possession of the medium by the supposed spirit of the dead, who gives through the medium information which the latter, in his normal state, is wholly unaware of enjoying—we have a more systematized form of the same thing.

Finally, in hypnosis, in hysteria, morbid impulses, fixed ideas, and obsessions, there are vivid examples of how thoughts, or, rather, systems of thought, though formed by the individual, may yet by the conditions of their occurrence appear entirely foreign to him; he is their slave, they take possession of him, he is carried away by them. Passions, of the source of which the patient is wholly unaware, dating back perhaps to a forgotten childhood, may yet lead to actions for which he cannot recognize his responsibility, which he may indeed forget immediately afterwards and, therefore, wholly fail to connect with his 'real' self. He is unaware even that he was the physical agent; any proof of this that can be brought forward must have a shattering effect upon the self-consciousness; the patient feels that he no longer has a grip of himself, that he may do some incredible act of violence, cruelty, immodesty, or crime. He becomes estranged from himself—and this doubleness is itself an added source of depression; it is the same in effect whether the two personalities succeed each other in time, as alternating personalities, or exist simultaneously, although acting separately; the disaggregation means an impairment of the self, often revealed by an actual loss of intellectual power, weakened concentration of attention and will. The subject becomes morbidly curious about his own feelings, his strength of will, his health, his prospects in life, etc. This subjectivity is the essence of the melancholy disposition. It remains to ask what is the cause of the disaggregation of consciousness, the psychological misery, of which melancholy is so prominent a symptom. According to Janet, the cause may be either physical or mental; physical, as the exhaustion of a prolonged illness, or of a sudden shock, or continued over-exertion, as in heavy physical strain; or mental, as in the shock of terror, excessive grief, prolonged mental worry, strong emotional excitement (e.g., religious). The great vital crises, at puberty, adolescence, and the change of life, with the feeling of strangeness which the loss of old and the gain of new sensations and impulses bring, are common causes of at least a temporary disaggregation and depression. The theory is not widely different in effect from that of Beran Lewis; in both it is the co-ordinating power that fails, through nervous exhaustion; the elementary impressions and impulses fall apart, as it were, into their primitive independence; the subject seems out of touch with his environment, is unable to face the tasks of his social or occupational life. According to the degree of disaggregation or rise of subject-consciousness, there may be simple melancholy, hysteria, or actual insanity (P. Janet, *L'Automatisme psychologique*, pt. II, chs. III. and IV.).

4. Melancholy and personality.—The cause of mystery, of strangeness, of possession, that occurs in melancholy deserves to be considered in detail. In melancholy, as has been shown above (§ 3), the sensations are less clear, their threshold is higher, the perceptions based upon them are blurred, partly from the relaxation of the muscles of attention, partly from the absorption of the mind by the pain, real or imaginary. The individual neither sees nor hears so clearly as before; the commonest objects may look strange, the most familiar voices sound different; but these things are interpreted not as a change in the experiencing subject, but as a change in the objects experienced. One's friends, one's country, one's world have changed, and the subject is unable to face the great activity required to adapt himself to the new sphere. Still greater is the loss of clearness in the memories. The most vivid experiences, when they can no longer be clearly and definitely recalled, tend to lose the

warmth and intimacy which memories of 'my own experiences' should possess, as compared with those of others of which I have merely heard or read. Thus in mental exhaustion and depression the memories of my own life lose their emotional tone; they seem to belong to another than myself. It is true that this state lends itself to analysis, and that the habit of analysis, once formed, may continue when normal life has returned.

Amiel is said to have written: 'The desire to know, when it is turned upon the self, is punished like the curiosity of Pythia, by the sight of the beloved object, the outward being lost makes for health; too prolonged a looking inward brings us to nothingness. By analysis I am annihilated.' And again, 'All personal happenings, all special experiences are for me protests to meditation. Such is the life of the thinker. He depresses himself every day; if he consents to experiment and to act, it is the better to understand, if he will, it is to know what will be. Although it is sweet to him to be loved, and he knows nothing sweeter, there again he seems to himself to be the creation of the phenomenon rather than its end. He contemplates the spectacle of love, and love remains for him but a spectacle. He is nothing but a thinking subject, he retains nothing but the form of things' (see L. Dugas and F. Morel, *Les Dépressions mentales*, Paris, 1912, p. 128 E.).

This is an exact description of the frame of mind in the milder forms of melancholy, as that of the poet or artist, like Byron, Edgar Allan Poe, Keats, the young Goethe, etc. Shakespeare's Hamlet is a classical instance; they are not real experiences, real agents, or lovers, but mere play-actors so far as emotion is concerned. Probably, however, their descriptions are the more accurate in that they are not blinded by passion, as is the cheerful ordinary mortal.

A somewhat different way of putting the case of melancholy might be drawn from the writings of S. Freud and others of his or allied schools—viz. that depression springs from the influence of a morbid complex on the personality. The complex may be any strong emotional experience, shock, terror, social disaster, etc. Wishes, desires, more or less closely connected with the shock-complex, are repressed, at first consciously, while suggestive ideas and associations, which arise from the same root, are expelled from the mind when they enter it. But a train of thought, when expelled, and a wish, when repressed, do not on that account cease to exist. They continue to live in the subconscious or in the unconscious, and may, so long as they are incomplete or unrealized, influence the conscious life indirectly. They may do this in two ways: (a) the complex draws off to itself, for its repression, a considerable degree of the available psychic energy; the individual is mentally weakened. As we have seen above, the greater effort required for the simplest, most habitual acts is felt as strain, as exhaustion, as pain; the self, with its distresses and difficulties, becomes more and more the centre of attention. (b) But, further, the complex, though itself driven below the level of consciousness, and shut off from direct connexion by the 'censor' of consciousness, is still enabled during moments of relaxation, half-sleep, reverie, distracted attention, etc., to send disguised messengers through. These take the form of dreams, phobias or terrors, obsessions, sudden impulses, etc. For the most part these dreams and impulsive acts are protective; they are a means of realizing, in however imperfect a way, the wish inspired by the complex; but the subject himself may be wholly unaware of this origin and of their meaning; they seem like an invasion of his personality by a foreign one. Painful experiences and memories have a far greater tenacity of life than pleasant; they have a high degree of 'persistence', as it has been called, i.e. the tendency to force their way into consciousness, of their own accord, and without any apparent stimulus or associative link. And, again, even the slightest of associations is enough to drag up the painful complex or its substitutes. On the

other hand, such memories are not 'ecclable'; they do not bring other thoughts in their train; especially they lack 'determination'-value, the tendency to direct the mind systematically from one thought to a train of others; they tend to clog thought. The subject becomes more and more conscious of inefficiency in his profession or in his social life; and the consciousness of failure has the usual consequences of making the actual failure all the greater.

5. *Melancholy and pessimism.*—Melancholy and pessimism are two sides of the same state of mind, the one expressing the subjective attitude and disposition, the other the theoretical interpretation. Happiness becomes a dream which is never realized, and which it seems hopeless to pursue. Subjectively, indifference, apathy, want of feeling; objectively, death, seem the only desirable things. The ideas, imaginations, and suggestions that arise in the mind of the melancholic, according to a well-recognized law (see Störing, *Mental Pathology*, p. 222 f.), tend to be of the same emotional tone as that of the disposition in which they are called up, i.e. painful, depressing; the melancholic sees only the end, the tragic, the bitter side of things, the pain that is suffered, the sins and crimes and follies that are committed, not the pleasures, the kindness, the goodness, that are in things. Hence melancholy, whatever its source, has played a powerful part in religious movements. It is not only that religion and its history furnish the melancholy mind with a cohort of images of the most terrifying type, but also that the consciousness of the suffering self sends it to religion, to the idea of sin and its punishment, as the most obvious and nearest interpretation; and, finally, that religion offers the only adequate relief and hope of escape. Religious melancholy is the subject of one of Burton's most curious dissertations (pt. iii. sect. iv. membrum 1.), and James's *Varieties of Religious Experience*, lects. vi. and vii., on 'The sick soul,' give a modern presentation. It is there shown how, as in Tolstoy's case, melancholy may be accompanied by a total change in the estimate of the values of things: things that seemed of the utmost value before now seem worthless; they excite no emotion or interest whatever; and a consequence of this is that the world, and people, look different and are thought of differently—as strange and unreal. It is also shown that in a rational being the strangeness and change of feeling incite to a search for a reason, for an explanation, either directly in oneself or in the action of other beings upon oneself. Either of these ways may lead to religious conversion and relief.

6. *Moroseness.*—The pathologist Pinel, in his treatise on *Mental Alienation*, depicted melancholics as of two distinct types—the one filled with enthusiasm for art, for literature, for all that is great and noble, or, among ordinary people, merely pleasant, lively, and affectionate, yet apt to torment himself and his neighbours by bursts of anger and chimerical suspicions; the other is the type to which the Emperor Tiberius and Louis XI. of France belonged—men who are gloomy and taciturn, deeply suspicious of others, fond of solitude. Suspicion of others is the dominant mark, with cunning and duplicity of the most dishonourable and cruel kind, which, if power is added, becomes fiercer and less restrained as age increases (P. Pinel, *L'Aliénation mentale*, Paris, 1809, p. 161). This represents with some accuracy the morose type of melancholy. Moroseness springs from the disposition to regard others as having secret designs upon one's property or life or place, and to avoid them in consequence. It involves extreme self-centring and misanthropy. Melancholy is a disease of the imaginative, moroseness of the unimaginative

mind—the man who does not aspire beyond that which he has already attained, the man of narrow range of ideas, unable to appreciate the values that others place upon things, especially the ideal values. Probably the pivot of the morose character is, like that of melancholy, fear or anxiety.

As de Fureux has said of the miser, 'It is undoubtedly true that from insecurity springs anxiety, and that anxiety becomes a torture and a source of trouble for the mind. It has for effects the diminution of activity, the development of defensive tendencies to the detriment of the expansive tendencies, the cult of absolute security, and the horror of risk. It is intimately bound up with miserableness' (*L'Avarice*, p. 22).

This is true also of the insecurity of power or of position, in narrow and selfish characters; there is no sense of the solidarity of the race, even of the family; the morose man sees only the bad side, the weakness of his neighbours; he has no sympathy with or any kind of feeling for others; he is vindictive, and, if opportunity allows, savage, brutal, cruel.

LITERATURE.—R. Burton, *The Anatomy of Melancholy*, Oxford, 1901 (by 'Democritus Junior', the author's name was attributed to an 'Apologetical Index' at the end of the volume). J. L. MCINTYRE.

MELANESIANS.—1. *Extent and limits of the subject.*—The region of the South Pacific, which is called Melanesia, is well defined, except on the western side. The boundary on the east lies between Fiji, which is Melanesian, and Samoa, which is Polynesian. To the south the Melanesian island of New Caledonia is separated by a considerable space of ocean from New Zealand, which is Polynesian, as are the small islands of Micronesia on the north from the Melanesian Solomon group, but to the west the islands of Melanesia overlap New Guinea. Some of the inhabitants of that vast island are Melanesian, at any rate in language; but, though Melanesians have been called Papuans, there can be no doubt that Papua, or New Guinea, cannot be placed as a whole in Melanesia. Five distinct groups of islands are without question Melanesian: (1) the Solomon Islands, with the groups which connect them with New Guinea; (2) the Santa Cruz group; (3) the Banks Islands and New Hebrides; (4) New Caledonia, with the Loyalty Islands; and (5) Fiji.

The first discovery in Melanesia was that of the Solomon Islands by Spaniards, under Mendana, in 1567. In 1595 the same voyager discovered Santa Cruz; and in 1606 Quiros and Torres discovered the New Hebrides and Banks Islands. The Dutch discovered Fiji in 1643. French voyagers in the latter part of the 18th cent., and finally Captain Cook in his second great voyage, completed the general survey of all the groups. In the records of these passing visits it is vain to seek for information concerning the religion of the natives. The discoverers saw what they believed to be temples, idols, worship and invocations of devils; they interpreted what they saw, as succeeding voyagers have done, according to their own conceptions of savage beliefs. It was not till missionaries, about the middle of the 19th cent., began to live in closer intercourse with the native people and to learn their languages that any certain knowledge

of Melanesian religion could be gained. The following account represents in the main the knowledge which has been gained by the Melanesian Mission of the Church of England. The religion of the Fijians is considered in another article (see *Fiji*). The account here given has been drawn from the Solomon Islands, the Santa Cruz group, the Banks' Islands, and the Northern New Hebrides. It has been gathered from natives of those groups in native language, and much of it has been gained from what educated natives have written in a native language. Very little, however, has come from the Western Solomon Islands or the Southern New Hebrides; but there is every reason to believe that religious beliefs and practices in these islands do not differ considerably from those of the central parts of Melanesia.

2. *Basis of Melanesian religion.*—From whatever source they may have derived it, the Melanesians generally have held the belief that their life and actions were carried on in the presence and under the influence of a power superior to that of living man. This power, they thought, was all about them, attached to outward objects, such as stones, and exercised by persons, i.e., either by men, alive or dead, or by spirits who never were men. This 'sense of the Infinite,' as Max Müller (*Lectures on the Origin and Growth of Religion* [*HL*], London, 1876, lect. i.) calls it, was the foundation of the religious beliefs of the Melanesians; the general object of their religious practices was to obtain the advantage of this power for themselves. This power is impersonal, and not physical in itself, although it is always put in motion by a person; and all remarkable effects in nature were thought to be produced by it. It is not fixed in anything, but can abide and be conveyed in almost anything. All spirits, beings superior to men, have it; ghosts of dead men generally have it, and so do some living men. The most common name for it is *mana* (q.v.). The methods by which living men use and direct this power may well be called magical; the controlling force lies generally in words contained in charmed or muttered charms. If worship is addressed to beings who are not living men, and if the use of their power is sought from them to do good or to do harm, it is because such beings have this *mana*; the forms of words have efficacy because they derive it from the beings which have *mana*; a common object, such as a stone, becomes efficacious for certain purposes because such a being gives it *mana* power. In this way the influence of the unseen power pervades all life. All success and all advantage proceed from the favourable exercise of this *mana*; whatever evil happens has been caused by the direction of this power to harmful ends, whether by spirits, or ghosts, or men. In no case, however, does this power operate, except under the direction and control of a person—a living man, a ghost, or a spirit.

3. *Objects of worship.*—The objects of religious worship, therefore, were always persons to whom prayer or sacrifice was offered, or in whose names charms were recited, with the view of gaining supernatural power, or turning it, either directly or indirectly, to the advantage of the worshipper. These personal objects of worship are either spirits or ghosts. By spirits are meant personal beings in whom the spiritual power already mentioned naturally abides, and who never were men; by ghosts are meant the disembodied spirits or souls of dead men. To keep these distinct is essential to the understanding of Melanesian religion. Natives themselves are found to confuse them at times, while Europeans are usually content to call all alike deities, gods, or devils.

(1) *Spirits.*—A native of the Banks' Islands,

where spirits are called *wai*, wrote the following definition:

'What is a *wai*? It lives, thinks, has more intelligence than a man, knows things which are out of sight without seeing, is powerful with *mana*, has no form to be seen, and has no soul, because it is itself like a soul' (see Oribington, *Melanesians*, p. 150).

The *wai* of the Northern New Hebrides is of the same nature. Yet such spirits are seen, in a shadowy, unsubstantial form; and there are many spirits called by the same name to whom the definition does not accurately apply, while the stories concerning them treat them as if they were men with superhuman and quasi-magical powers. Still the natives steadily maintain that these are not, and never were, men. In the Solomon Islands beings were believed to exist who were personal, yet who had never been men, and who lacked the bodily nature of men, but they were very few and enjoyed little religious consideration. The term which is applied to such beings is also applied to some who had undoubtedly existed at some time as men. The question arises whether those beings, concerning whom stories were told and believed in the Banks' Islands and New Hebrides which showed them to be like men of more than human power and intelligence, should not be called gods. Such were *Qat* in the Banks' Islands, *Tagaro*, *Suge* (in various forms of the names) in the New Hebrides, and *Lata* in Santa Cruz. To such as these it would certainly not be improper to apply the word 'god.' But the native word by which they are known, such as *wai*, is applicable also to other beings for whom 'god' is too great a name, this category including elves, fairies, nameless beings of limited influence whose nature is still spiritual, so to speak, not corporeal. To describe all these, to distinguish them from dead men, the best general term seems 'spirit'; and it is to these beings that the religion of the New Hebrides and Banks' Islands looks, as possessing and wielding *mana*, the power which must be called spiritual, which men have not in themselves, and which they seek to obtain for their advantage by sacrifices, prayers, and charms.

(2) *Ghosts.*—It makes the matter clear if this term be used when the beings spoken of are simply men who are dead in the body while that part of them that is not bodily retains activity and intelligence. In the Banks' Islands and New Hebrides the word used is merely 'dead man,' such as *lamato* or *natman*. In the Solomon Islands a very common word in various forms is *tindalo*. The question again occurs whether these should not rather be called gods. There are certainly some to whom prayers and sacrifices are offered, whose place and time in human life are forgotten or unknown, and whose existence as persons possessed of powers far superior to those of living men is alone present to the belief of the existing generation. Such may not unreasonably be called gods. But, whereas in the Eastern groups such beings are plainly called 'dead men,' it seems more correct, and serves better for clearness, to use an English word which shows them once to have been living men, and separates them from any such beings as are believed never to have belonged to human kind. The word 'god' cannot be a translation of 'dead man.' Where, as in the Solomon Islands, a distinct name, such as *tindalo*, is in use, this objection to the use of the word 'god' does not so plainly apply. Yet the natives emphatically declare that every *tindalo* was once a man, that the *tindalo* is the spirit (*arungu*) which once was the seat and source of life, intelligence, and power in a man who was then in the body. The living man who worships the *tindalo* regard themselves as possessed of that non-corporeal nature which alone remains in the dead, and is the seat of the dead

men's superhuman power. They believe that some of them have a measure of that power, derived by them from the dead. They believe that, when they are dead, they will also, it may be, receive a great access of this power. The difference which they recognize between themselves and the *tindalo* is that they are alive and have but a comparatively small measure of spiritual power. But it should be understood that every living man does not become a *tindalo* after death. The large majority of men are of no great importance, and show no remarkable powers in their lifetime; alive they are nobodies, and such they remain when dead. But there are always some living men who show qualities which give them success and influence. Such success and influence are not ascribed by the natives to natural qualities, but to the possession of that spiritual power which they have obtained from the *tindalo* with whom they live in communication. When a great man dies, it is expected that he should prove to be a *tindalo*, a ghost worthy of worship, an effective helper, one whose relics will put the living in communication with him. Thus, after the death of Genindo, a chief, a famous fighting man of Florida, his name was invoked and a sign of his power sought from him. On proof of this power a shrine was built for him, his head, his tools, and his weapons were preserved in it, and sacrifices with invocation were offered to him there. Such a one might, indeed, appear to European visitors to be a god; but to the natives of the place, who now worshipped him, and among whom he had lived as one of themselves, it was his ghost, in the common English sense of the term, who was among them.

Again, the question may arise whether this is not the worship of ancestors. The ghost of a dead man, however, who was well remembered in the flesh, and who was often, no doubt, younger in years than some of his worshippers, is not an ancestor. The natural tendency is, as new objects of worship of this character arise, and as one great man after another dies, to neglect and desert the ghosts and their shrines of the past generation, while the newer wonders and powers attract faith and veneration to new ghosts and shrines. As the object of worship thus became more of an ancestor, he was less an object of worship. But certainly there are some concerning whose time and place of life the natives profess themselves to be ignorant, but whose names, such as *Dania* and *Hauri* in Florida, are known to all, and who are now universally believed to be very powerful *tindalo*, though in ancient times they lived in human form on the island. These may be called ancestors, and they are worshipped, but not as ancestors.

The personal beings towards whom the religion of the Melanesians turns, with the view of obtaining their means for aid in the pursuits, dangers, and difficulties of life, are thus spirits and ghosts; and it is remarkable that the Melanesians are thus divided by their religious practices into two groups. In the Western group, as in the Solomon Islands, there is a belief in spirits who never were men, but worship is directed to the ghosts of the dead; in the Eastern group, as in the Northern New Hebrides, the ghosts of the dead have indeed an important place, but worship is in the main addressed to spirits who have never been men. And in the arts of life and in the advance from savagery towards civilization, the Solomon Islander who worships ghosts certainly ranks before the New Hebrides man who worships spirits.

4. *Prayers*.—The Melanesian native, believing himself surrounded with unseen persons who can help him, naturally calls upon them in distress,

just as he called upon his father as a child. Such appeals are not prayers according to the meaning of the various native words which would be translated 'prayer' in English. Prayers in the native sense are forms of words; and, strictly speaking, they are formulas which are known only to some, and which have in themselves a certain efficacy and even compelling force. It may be said that exclamatory appeals in case of danger at sea and in the extremity of sickness are prayers in a true sense of the term, which yet to the native are not strictly prayers, because they have public utterance and an elastic form. A man in danger by the sea may call on his father, grandfather, or some ancestor to still the storm, lighten the canoe, and bring it to the shore; when fishing he may beg for success, and when successful may thank his helper. But in such cases a formula, if one were known, would always be preferred, and that would be a prayer in the native sense of the word. Charms, muttered or sung under the breath for magical purposes and in the treatment of sickness, are easily distinguished; but it must be said that in Florida, an important centre of Christian teaching in the Solomon Islands, the word used for Christian prayer is taken from these charms.

It is remarkable that in the Banks Islands and the Northern New Hebrides, where spirits have a more important place in native religion than ghosts, all prayer must be addressed to the ghost of a dead person. Indeed, every proper form begins with the word *tatara*, which is, no doubt, a word meaning 'ghost.' It is true that in danger at sea a man will call on dead friends to help him, but this is not a true prayer (*tatara*) because no formula is employed. It is also true that men in danger call on spirits, either with or without a formula; but neither is a true *tatara*, since it is not addressed to ghosts. Many forms of words, moreover, which are true *tatara* prayers, are formulas for cursing as well as for petition. Such are used when a man throws a bit of his food aside before eating, and pours a libation before drinking *ava*, or when he pours water into an oven, since in them he asks for benefits to himself and mischief to his enemies. A *tatara* prayer is a spell; a call for help in danger is a cry.

5. *Sacrifices*.—There can be little doubt that sacrifices properly so called have a place in Melanesian religion. One simple form is probably universal. A fragment of food ready to be eaten, a bit of betel-nut, and a few drops of *ava* poured as a libation are offered as a common meal as the share of departed friends, who are often called by name, or as a memorial of them with which they will be gratified. This is accompanied with a prayer. With the same feeling of regard for the dead, food is laid on a grave or before a memorial image, and is then left to decay, or, as at Santa Cruz, is taken away and eaten by those who have made the offering. In a certain sense, no doubt, the dead are thought to eat the food. Yet the natives do not apply to these offerings the words which connote sacrifices in the strict sense of the term. In the Western Islands the offerings in sacrifices are made to ghosts and consumed by fire as well as eaten; in the Eastern groups they are made to spirits, and there is no sacrificial fire or meal. In the former nothing is offered but food; in the latter native money has a conspicuous place.

(1) *In the Solomon Islands*.—A sacrifice in San Cristoval, one of the Solomon Islands, has been thus described in writing by a native of the place:

'In my country they think ghosts are many, very many indeed, some very powerful, some not. There is one who is principal in war; this one is truly mighty and strong. When our people wish to fight with any other place, the chief men of the village and the morticians, and the old men, and the men older and younger, assemble in the place sacred to this ghost;

and his name is Haruman. When they are thus submitted to sacrifice, the chief sacrificer goes and takes a pig. . . . The pig is killed (strangled), cut by the chief sacrificer, but by those whom he chooses to assist him, near the sacred place. Then they cut it up; they take great care of the blood but it should fall upon the ground; they bring a bowl and cut the pig in it, and when the pig is cut up the blood runs down into this. When the cutting up is finished, the chief sacrificer takes a bit of flesh from the pig, and he takes a coconut shell and dips up some of the blood. Then he takes the blood and the bit of flesh and cowers into the shrine, and calls that ghost and says, "Haruman! Chief in war! we sacrifice to you with this pig, that you may help us to smite that place; and whatsoever we shall carry away shall be yours, and we also will be yours." Then he burns the bit of flesh in a fire upon a stone, and pours down the blood upon the fire. Then the fire blazes up greatly to the roof, and the house is full of the smell of pig, a sign that the ghost has inward. But when the sacrificer went in he did not go hastily, but with awe; and this is the sign of it, as he goes into the holy house he puts away his bag, and washes his hands thoroughly, to show that the ghost shall not reject him with disgust' (Codrington, p. 129).

The pig thus sacrificed was eaten by the worshippers. When this account was written, the older people well remembered Haruman as a living chief.

In the neighbouring island of Mala a native gives the names of seven kinds of sacrifice. (1) A man returning from a voyage puts food before the case which contains the relics of his father. (2) In sickness, or where failure of a crop shows that some ghost has been offended, a pig is offered as a substitute for the man whom the offended ghost is plaguing, and is strangled and burned whole on the stones of a sacred place, together with mixed food. The sacrificer calls aloud upon the offended ghost and upon many others, and eats a bit of the food which he has left unburned before the relic case of the dead man to whose ghost the pig was offered. (3) To 'clear the soul,' a pig or dog is killed and cooked; the sacrificer calls upon the ghost by name to clear away the mischief, and throws the sacrifices into the sea or sets it in the place sacred to the ghost invoked. (4) This is performed in the house of the sick person who is to benefit by it. A pig or dog is cooked and cut up; the names of the dead members of the family to which the ghost to be propitiated belonged are called out, with a petition to each on behalf of the sick man; the sacrificed animal is eaten by the males who are present. (5) (6) (7) are sacrifices of firefruits—yams, flying-fish, and canarium nuts—which are presented as food to the ghost concerned, with the invocation of his name, and set in a sacred place.

In Florida and Yasabel, both belonging to the Solomon group, sacrifice is of the same character. There are those who know, having been taught by their fathers or mother's brothers, how to approach the powerful ghosts of the dead, some of whom were the objects of a more public and some of a more particular worship. Such a ghost of worship, called a *tindale*, had his shrine in which his relics were preserved. The officiating sacrificer is said to 'throw the sacrifice.' A certain *tindale*, whose worship and influence are not local, is called Manoga. A native writes:

'He who throws the sacrifice when he invokes this *tindale* burns the offering round about, and calls him, first to the East where rises the sun, saying, "If thou dwellest in the East, where rises the sun, Manoga! come hither and eat thy manna food." Then turning he lifts it towards where sets the sun, and says, "If thou dwellest in the West, where sets the sun, Manoga! come hither and eat thy food." There is not a quarter towards which he does not lift it up. And when he has finished lifting it he says, "If thou dwellest in heaven above, Manoga! come hither and eat thy food. If thou dwellest in the Polesides or in Orion's belt, if below in Turvina, if in the distant sea, if on high in the sun or in the moon, if thou dwellest inland or by the shore, Manoga! come hither and eat thy food" (Codrington, p. 131).

Whether, as in this case, the offering be vegetable food or whether it be a pig, a piece is consumed in the fire within the shrine, and the people without partake of the sacrificial food. In these islands, moreover, the sacrifice of the firefruits must precede the general use of the products of each season.

Human sacrifices were occasionally made, and such were thought most effectual for the propitiation of an offended ghost. In this case the victim was not eaten by the assistants as when a pig was offered; but a piece of flesh was burned for the ghost's portion, and bits were eaten by young men to get fighting power, and by the sacrificer who had made the offering.

In the island of Santa Cruz the flesh of pigs or vegetable food is placed before the stock of wood that represents a person recently deceased for him to eat; feather-money and betel-nuts are laid out for ghosts, and food is thrown to them at sea. These are distinctly offered for the ghost to eat or use, but they are soon taken up and disposed of by the offerers as common things. Such offerings resemble those of food laid on graves or at the foot of an image in the Solomon Islands, which would not there have the name of sacrifices; but the full sacrifices of the Solomon Islands, as has been shown, have the sacrificial characteristics of intercession, propitiation, substitution, and a common meal.

(2) *In Banks' Islands and New Hebrides.*—To offerings here, no doubt, the name of sacrifice is far less properly applied, and yet it is almost necessary to employ it. The offerings are made in almost all cases to spirits, but in some cases to the ghosts of dead men. The offering is generally native money; nothing is killed or burned, nothing eaten; and the offering is laid upon a stone, cast into water, or scattered upon a snake or some other creature, the stone, the creature, or the sacred spot being chosen because of its connexion with the spirit who is to be conciliated or from whom benefits are sought. Access to the spirit is to be obtained through the sacred object; but the common worshipper or suppliant cannot obtain this access by himself, and is consequently obliged to use the services of a go-between who knows the stone or whatever it may be and through it is able to know and to approach the spirit. The worshipper generally gives native money to the 'owner,' as he is called, of the sacred object, who then gives a little money to the spirit, and perhaps pours the juice of a young coconut on the stone, while he makes his request on behalf of his client. There is thus an intercession, a propitiation, an offering of what the suppliant values and the spirit has pleasure in receiving. So far it is a religious action of a sacrificial character, and is distinct from prayer. In the New Hebrides, besides similar sacrifices to spirits, offerings are made to the ghosts of powerful men lately deceased, either at their graves or in the places which they haunt. Men who know them and have access to them take mats, food, and pigs (living or cooked) to the sacred place, and leave, or profess to leave, them there. Nowhere in these islands is there an order of men who can be called priests. The knowledge of the spirits and of the objects through which access to them can be obtained is open to all, and is possessed by many. Most of those who possess it have received it secretly from their fathers or older relatives, but many have found it by happy accident for themselves, and have proved their connexion with the spirit by the success of their ministrations.

6. *Sacred places and objects.*—The sanctity which belongs to such stones or sacred spots as have been mentioned in connexion with sacrifices has, of course, a religious character. Native life in Melanesia is, for the most part, in continual contact with the prohibitions and restrictions which belong to this religious feeling. The sacred character of the object, whatever it may be, is derived from one of two causes: it may lie in the nature and associations of the thing itself, or

It may be conferred by men who have the *mana*, the spiritual power, to confer it. It may be said, generally speaking, that among these sacred objects there are no idols, in the strict sense of the term. It is true that images are made more or less in all quarters to represent the dead, being set up as memorials at funeral feasts, in burial-places, in dance houses, and in places of general assembly. They are treated with respect; offerings of food are made, and other valuable things are occasionally laid before them; but the images are memorials of men deceased, *likanemes* to some extent, and representations; they are not worshipped, and are feared only because of what they represent.

(1) *Stones*.—Sacred places almost always have stones in them. The presence of certain stones gives sanctity to the place in which they naturally lie; and, when a place has for other reasons become sacred, stones which have that character are brought and placed there. Here again recurs the important distinction between spirits and ghosts. The stones of the burial-place of a powerful man receive *mana* from him, or a man who had *mana* is buried near sacred stones, thus connecting the ghost and the stone. In other cases, the stone is believed to have such a relation to a spirit, who never was a living man, that it acquires a mysterious quality, and becomes the means by which the man who has the knowledge of the stone can have access to the spirit. Many sacred stones then are sepulchral, and this is usually the case in the Solomon Islands. The sacrifices already described are offered upon stones. A stone is also frequently sacred in the Eastern Islands because a *vai* (spirit) belongs to it. In this group stones may be divided into those that naturally lie where they are revered, and those which have *mana* derived from various reasons from a spirit, and which are carried about and used for various purposes, and as amulets. The natives emphatically deny that the connexion between stones and spirits is like that which exists between the soul and body of man. Certain stones are kept in houses to protect them from thieves; and, if the shadow of a man falls on one of these, the ghost belonging to it is said to draw out his life and eat it. It has been supposed that the ghost which consumes the man's life must correspond in the stone to the soul in a living man; but the natives do not believe that the ghost dwells in the stone, but by it or, as they say, at it; they regard the stone as the instrument used by the spirit, which is able to lay hold on the man by the medium of his shadow.

(2) *Trees, streams, and living creatures*.—Trees are sacred because they grow in a sacred place, or because they have a sacred snake, *a.s.*, that haunts them. Some have a certain inherent awe attaching to their kind. The natives deny that they ever regarded a tree as having anything like a spirit of its own corresponding to the soul or *animes* of man. Streams, or rather pools, are sacred as the haunts of ghosts in the Western, and of spirits in the Eastern groups. The reflexion of a man's face upon such water gives the ghost or spirit the hold upon the man's soul by which it can be drawn out and its life destroyed. Among living creatures which are sacred, sharks have a conspicuous place. If one of remarkable size or colour haunts a shore or rock in the Solomon Islands, it is taken to be some one's ghost, and the name of the deceased is given to it. Before his death a man will give out that he will enter into a shark. In both cases it is well understood that the shark to which the ghost has betaken himself was, before it was thus occupied, a common shark; but, now that he is in it, the place where the man lived is visited by the fish, and the neighbours and relatives of the deceased respect and

feed it. A spirit, known to some one who sacrifices for it, can, in like manner, be introduced in the Banks Islands into a shark, which thus becomes familiar. In the Solomon Islands a crocodile may be a *tiadale*, since the ghost of a recent ancestor may possibly have entered it, or may be known to have entered it. Almost any living creature that haunts a house, garden, or village may well be regarded as conveying a ghost. Among birds the frigate-bird is conspicuous for its sacred character in the Solomon Islands; the ghosts of deceased men of importance find their abode in them, and indeed ancient and widely venerated *tiadales* dwell in them. In all the groups there is something sacred about kingfishers. Snakes receive a certain veneration wherever they are found in a sacred place. The original female spirit, that never was a human being, believed in San Cristoval to have had the form of a snake, has given a sacred character to all snakes as her representatives. In the Banks Islands, and still more in the New Hebrides, snakes with which certain *vai* associate themselves, and which therefore have much *mana*, are worshipped and receive offerings of money in sacred places. One amphibious snake is firmly believed to appear in human form to tempt a young man or woman.

Is, then, the religion of the Melaneseans altogether an animistic religion? Nowhere does there appear to be a belief in a spirit which animates any natural object, tree, waterfall, storm, stone, bird, or fish, so as to be to it what the soul of a man, as they conceive it, is to his body, or, in other words, so as to be the spirit of the object. The natives certainly deny that they hold any such belief; but they believe that the spirit of a man deceased, or a spirit never a man at all, abides near and with the object, which by this association receives supernatural power, and becomes the vehicle of such power for the purposes of those who know how to obtain it.

7. *Magic and charms*.—The belief in magic and the use of magic and charms do not perhaps properly belong to religion; but among Melaneseans it is hardly possible to omit this subject. The foundation of religion is the belief in the surrounding presence of a power greater than that of man; and in great part the practice of religion comes to be the method by which this power can be turned by men to their own purposes. The natives recognise, on the whole, a regular course of nature in the greater movements of things which affect their lives, but at every point they come in touch with what they take to be the exercise by men of the power which they derive from either ghosts or spirits. By means of this power, men who know the proper formula and rite can make rain or sunshine, wind or calm, cause sickness or remove it, know what is beyond the reach of common knowledge, bring good luck and prosperity, or blast and curse. No man has this power of himself, but derives it from a personal being, the ghost of a man deceased, or a spirit of a nature which is not human. By charms (certain forms of words muttered or chanted, which contain the names of the beings from whom the power is derived) this power becomes associated with the objects through which the power is to pass. These things are personal relics, such as hair or teeth, remains of food, herbs and leaves, bones of dead men, and stones of unusual shape. Through these objects wizards, doctors, weather-mongers, prophets, diviners, and dreamers do their work. There is no distinct order of magicians or medicine-men, just as there is no separate order of priests; the knowledge of one or more branches of the craft is handed down from father to son, from

uncle to sister's son, or, it may be, is bought and sold. Many men may be said to make a profession of magic, and to get property and influence thereby. A man cannot, it may be said, be a chief without a belief that he possesses this supernatural power. There is no doubt that those who exercise these arts really believe that a power resides in them, though, indeed, they are conscious of a good deal of deceit.
